BIOGRAPHY.

The names of those living at the time of the continuous publication of the 'English Cyclopædia of Biography,' are preceded by an asterisk.

AARON.

AARON, the first high-priest of the Jews. He was the elder brother of Moses, and was, by the express appointment of Heaven, associated with that illustrious legislator in the enterprise of delivering their countrymen from Egyptian bondage, and conducting them to the promised land. Under the direction of his brother, Aaron, who was a ready and eloquent speaker, announced the command of God to Pharaoh, and attested it by the series of miracles recorded in the earlier chapters of the book of Exodus. During the sojourn in the wilderness he was far from manifesting the steady confidence and undaunted disregard of popular clamour which characterised the conduct of Moses; but, notwithstanding his timidity and weakness, in yielding to the demand of the multitude that he would make them a golden calf to worship, he was consecrated to the priesthood, of which the highest office was made hereditary in his family. Having ascended the summit of Mount Hor, in company with Moses and his eldest son Eleazar, he died there, after Moses, as commanded by God, had stripped him of his sacerdotal robes, and put them upon his son. This event happened when Aaron was in the 123rd year of his age, forty years after the departure of the Israelites from Egypt, and, according to the commonly received chronology, in the year B.C. 1451, or 2553 years from the creation of the world. The history of Aaron is to be found in the book of Exodus, and the three following books of the Pentateuch.

ABA'NO, PIETRO DI, or *Petrus Apónus*, was born in 1250 at Abano, the Roman name of which was Apónus, a village which is 5½ miles from Padua. He studied first at Padua, then went to Constantinople to learn Greek, and afterwards to Paris, where he devoted himself to mathematics and medicine. He travelled in England and Scotland, whence he was recalled to Padua, in 1303 or 1304, to take the professorship of medicine, then vacant. His reputation was very great, and his charges for attendance very high. He combined astrology with astronomy, and perhaps made some pretence to magic. At all events he was regarded as a magician, and in 1306 he was brought before the tribunal of the Inquisition as a heretic and atheist; but defended himself so well as to obtain an acquittal. In 1314 he removed to Treviso, in compliance with the invitation of the inhabitants. In 1315 another accusation was brought against him before the Inquisition; but he died before the inquiry was completed, in the year 1316, at the age of 66. His judges however continued the inquiry after his death, found him guilty, and ordered his body to be burnt. Abano wrote several works on philosophy and medicine, and made translations of ancient and Arabic medical writers. In his expositions there is little of his own observation or of original thought; but in the knowledge acquired from the works of others he was not surpassed by any physician of his time.

ABA'TI, or ABBA'TI, NICCOLO', was born at Modena in 1512. He is more frequently called Dell' Abate, but erroneously according to the showing of Tiraboschi, as his family name was Abati. Before Tiraboschi, Niccolo's surname was supposed to be unknown, and the name of Dell' Abate was given to him from the circumstance of his being less known for his own works than as the assistant of Primaticcio, who was called L'Abate by the Italians, after he was made Abbé of St. Martin near Troyes, by Francis I. of France. Abati executed in fresco the Adventures of Ulysses and other works from the designs of Primaticcio, for the palace of Fontainebleau, the decoration of which was entrusted to Primaticcio after the death of Il Rosso. Prints from the Adventures of Ulysses, by Van Thulden, were pub-

lished in Paris in 1630: the original works were destroyed with the building in 1738, to make room for a new structure.

Abati's own works however, in Modena and Bologna, were productions of the greatest merit, according to the Carracci; and in a sonnet of Agostino, which is a sort of recipe for making a great painter, he is mentioned in conclusion as combining in himself all the required excellences. There are few of Abati's works remaining, and these are chiefly frescoes; he seems to have painted comparatively little in oil. It is not known who his master was, or whether he had any other master than his father Giovanni Abati, who was an obscure painter and modeller of Modena. From a similarity in his works to the style of Correggio, some have supposed that he was a pupil of Correggio; he is also said to have studied under the sculptor Begarelli: if so he was probably well acquainted with Correggio, with whom Begarelli was intimate.

His earliest essays upon his own account were in partnership with another painter, Alberto Fontana, a practice not unusual at that period in Italy, when there was little or no distinction between artists and artisans in the manner of employing them or estimating their works. In 1537 he painted with Fontana, at Modena, some frescoes in the butchers' market, by which he obtained some reputation; and he acquired great distinction by some frescoes in the Scandiano Palace, from Ariosto and the Æneid of Virgil, which are still extant; they have been engraved by Gajani. These with some conversation-pieces and concertos in the Institute of Bologna, a Nativity of Christ under the portico of the Leoni Palace, and a large symbolical picture in the Via di San Mamolo, in the same city, are the only frescoes now extant by Abati; and his oil-pictures are likewise very scarce.

Of the works in the Institute, Zanotti has written an account—'Delle Pitture di Pellegrino Tibaldi e Niccolo Abbati,' &c., in which there are engravings of them: Malvasia also has given a laudatory description of them: they have been compared with the works of Titian. The Nativity of the Leoni Palace, which has been engraved by Gondolfi, is mentioned in the highest terms by Count Algarotti, who discovered in it "the symmetry of Raphael, the nature of Titian, and the grace of Parmegiano." Of his easel-pictures in oil the most celebrated is the Martyrdom of St. Peter and St. Paul, a large picture on wood, which was painted for the Church of the Benedictines at Modena in 1546. It is now in the Dresden Gallery, and has been engraved by Folkema for the 'Recueil d'Estampes après les plus célèbres Tableaux de la Galerie de Dresde.'

From about 1546 until 1552, when he accompanied Primaticcio to France, Abati lived in Bologna, and his Bolognese works were painted during this interval: he died in Paris in 1571.

Abati's principal faculty was painting in fresco, in which he had surprising facility. According to Vasari he never retouched his works when dry, which cannot be said of many fresco-painters; yet, says Vasari, the paintings of an entire apartment were executed with such uniformity that they appeared to be the work of a single day. Abati excelled in landscape, for his period; there is a Rape of Proserpine in the Duke of Sutherland's collection, of which the background is an extensive landscape; it was formerly in the Orleans Gallery, and was sold at the sale in this country for 160*l*.

Several of Abati's relations also distinguished themselves as painters: his brother Pietro Paolo was a clever horse and battle painter; his son Giulio Camillo, his grandson Ercole, and his great grandson Pietro Paolo the younger, were all painters of ability, especially Ercole, who

was born in Modena in 1563, and died in 1613; he executed with B. Schidone the fresco of the council-hall of Modena. (Vodriani, *Vite de' Pittori di Modera*; Tiraboschi, *Notizie de' Pittori, &c., di Modena*.)

ABAUZIT FIRMIN, born 1670, died 1767, aged 87. His family was descended from an Arabian physician, who settled at Toulouse in the 9th century. He was born at Uzès, in Languedoc, of protestant parents in good circumstances, and lost his father when he was only two years of age. In 1685, after the revocation of the Edict of Nantz, he and his brother were seized by the authorities for the purpose of being educated in the Catholic faith. After some time however his mother was enabled to effect his escape, and send him to Geneva. For this she was imprisoned, until she also contrived to escape and follow her son. Abauzit applied himself to almost every branch of human knowledge. In 1695 he visited Germany, Holland, France, and England, and gained the esteem of many eminent men, among others of Bayle and Newton. King William wished to retain him in England, but he decided to return to Geneva. There he took part in the translation of the New Testament, which appeared in 1726, and received the thanks of the clergy for his exertions. In 1727 the government of Geneva bestowed on him the rights of citizenship. He is one of the most remarkable instances on record of a combination of universality and depth of learning. Every man who talked with Abauzit on his own particular study, imagined that, whatever his general learning might be, his special attention had been reserved for that which they were discussing. Newton addressed himself to Abauzit as a proper person to decide between him and Leibnitz. Poccocke, the Oriental traveller, thought he had passed his life in the East. Rousseau imagined that he had devoted himself to the study of ancient music. In his temper he was singularly mild and enduring to excess. For a man of his attainments we have not much remaining of Abauzit. With the exception of some antiquarian papers, in Spon's 'Histoire de la Ville de Genève' and the 'Journal Helvétique,' he printed nothing himself. Some theological works were published after his death, but the greater part of his manuscripts were burnt by his heirs, whose religious opinions differed from his own, which were Unitarian. (*Biographie Universelle*.)

ABBA THULLE, king of the Pelew Islands, became known to Europeans in consequence of the wreck of the East India Company's ship *Antelope*, on the island of Oroolong, one of the group of the Pelews, on the 10th of August, 1783. The unfortunate mariners were well treated by the natives, and were soon honoured with a visit from the king. As he had never seen a white man, nor any vessel larger than a canoe, his surprise was unbounded; but it was the effect of fire-arms which most attracted his attention. It was not long before he induced Wilson, the captain of the *Antelope*, to grant him assistance in his wars with the neighbouring islanders in four several expeditions, which were generally under the command of Abba Thulle himself. The novel mode of attack of the strangers proved so effective, that on the last occasion the people of Artingall, the island against which the attack was directed, submitted without resistance to the king of Pelew. While this was going on, the rest of the *Antelope's* crew, and all at other times, were engaged in building a vessel, their own having gone to pieces, in which they hoped to be able to take passage to China; and in this work Abba Thulle, who took a great interest in it, rendered them every assistance. When the vessel was completed, he declared his intention to confide his second son, Lee Boo, to his new friends, that he might accompany them and see the wonders of Europe. On the 12th of November, 1783, the *Oroolong* (so called from the island where it was built) proceeded on its voyage, in presence of the king and a large concourse of the people of Pelew, who took an affectionate leave of their friends, and loaded them with presents. Lee Boo, after a tender parting with his father, accompanied them; but a seaman, named Blanchard, delighted with his prospects at the islands, insisted on remaining behind. Before sailing, Abba Thulle had proclaimed *Oroolong* to be 'Englishman's Land,' and it was formally taken possession of in the name of King George III. Captain Wilson brought Lee Boo to England, but he unfortunately died soon afterwards. In 1790 the East India Company resolved to send out an expedition to Pelew, with the double object of informing Abba Thulle of the death of his son, and of testifying the Company's sense of his kindness to the *Antelope's* crew, by presenting him with a quantity of live stock, and useful seeds and implements. Accordingly the 'Panther' and 'Endeavour,' commanded by Captain McCluer, and having among their officers Messrs. White and Wedgeborough, who had been with Captain Wilson, arrived at Pelew on this service. Abba Thulle received the news of the death of Lee Boo with resignation, pausing for a time, and then exclaiming only "Weel, weel, weel, a trecoy!" (Good, good, very good). A great battle had been fought since the departure of the *Oroolong*, in which the people of Pelew had defeated those of Pelelew, with the loss of Ras Kook, the king's brother, Qui Bill, his eldest son, and many persons of distinction. Abba Thulle was highly delighted with the presents, most of which he distributed among his nobles; but it soon became his great object, as before, to obtain the assistance of the English in war. After one refusal it was conceded; but the appearance alone of the dreaded strangers before the capital of Artingall was sufficient to induce the enemy to capitulate, and the great cause of the war, a small stone to which some idea of sovereignty was attached,

was given up to Abba Thulle without bloodshed. The expedition left Pelew in 1791, but returned in 1793. Abba Thulle had died in the meantime, about three months after the expedition had left Pelew, or in August, 1791. He was supposed to be nearly seventy years of age, and was succeeded by his only surviving brother, who had been till then "clow arra kooker," or, general of the troops. Abba Thulle has been called the Peter the Great of Pelew, but it would be hard to say for what reason; his thoughts ran upon war, and war only, and much of his hospitality to Wilson and his crew may be attributed to the assistance they gave him against his enemies. (Keate, *Account of the Pelew Islands*.)

ABBAS THE GREAT, or, with his full name, *Shah Abbas Bahadur Khan*, was the fifth King of the Sufi dynasty which ascended the throne of Persia in the year 1501 of our era. During the latter part of the reign of Shah Mohammed Khodabende, his father, he filled the situation of governor in the province of Khorasan; and on the death of that prince in 1586 succeeded him in the government. Khorasan had just then been occupied by the Uzbeks, and it was the first object of Shah Abbas to recover possession of it. But his efforts proved for a time ineffectual. Not being able to take Herat, the capital of Khorasan, from the Uzbeks, he was obliged to content himself with leaving a garrison at Meshed, and even this town, considered as sacred by the Shiites on account of the tomb of a celebrated Mohammedan saint, Imam Ali Reza, fell again into the hands of the enemy. About the same time the internal peace of Persia was interrupted by a revolt at Istakhar, which was however soon repressed, and terminated with the execution of the prime mover, Yakub Khan. The year 1590 was distinguished by victories in Gilan and Azerbaijan over the Turks, who had collected a considerable force on the banks of the river Kur, and threatened Persia with an invasion. The Turks lost, through this campaign, their influence in Gilan, but retained for the present possession of the fortresses of Nuhavend, Tebriz, Tiflis, and almost the whole of Azerbaijan and Georgia. During this time, one of the generals of Abbas conquered the province of Lar in the south, and the Bahrein Islands in the Persian Gulf, important on account of their pearl fishery.

The Uzbeks still remained masters of Khorasan, and, owing to their desultory mode of carrying on their attacks, many attempts at bringing them to a regular action had failed. At last however in the year 1597, they were totally defeated by the Persian troops, near Herat, and Khorasan was for a long time released from their predatory incursions.

Two English knights, Sir Anthony, and his brother Sir Robert Shirley, arrived about this time as private travellers in Persia. They were honourably received by Shah Abbas, whose confidence they soon gained to such a degree, that while Sir Robert Shirley remained in Persia, his brother Sir Anthony was sent as envoy from the Persian court to the Christian princes of Europe, to offer them the Shah's friendship, chiefly with a view to some future common undertaking against the Turks, who were then the terror of Europe. [SHIRLEY.]

Between Persia and Turkey hostilities were still carried on. Nuhavend, Tebriz, and Baghdad were taken; a Turkish army of 100,000 men was defeated by about half that number of Persians; Abbas recovered Azerbaijan, Shirwan, part of Georgia, and Armenia; and subsequently also Kurdistan, Mosul, and Diarbekir; and the Turks were ever after this victory kept in check. They formed a league with the Tartars of Kaptehak, but the united forces of both were vanquished in a battle fought between Sultanich and Tebriz, 1618, the last memorable battle that occurred during the reign of Shah Abbas. Negotiations were then commenced between Abbas and the Sultan at Constantinople; but insurrections and conflicts in the frontier provinces, fomented and secretly instigated by the Turkish government, still continued for some time.

Shah Abbas encouraged the trade of Europeans with Persia: he protected the factories which the English, the French, and the Dutch had at Gombroon; but he looked with jealousy on the flourishing establishment of the Portuguese on the small island of Ormuz, situated near the entrance of the Persian Gulf, which had been in their possession ever since 1507, when Albuquerque occupied it, and had now become the emporium of an extensive commerce with India, Persia, Arabia, and Turkey. This settlement the Persians and the English East India Company agreed to attack with joint forces. The English furnished the naval, the Persians the military, forces; and the island was taken on the 22nd April, 1622. For this service the English received part of the plunder, and a grant of half the customs at the port of Gombroon; but their hopes of further advantages for their commerce in these parts were frustrated, and the mission of Sir Dodmore Cotton from England to the Persian court, in 1627, likewise failed in procuring them.

After a reign of upwards of forty years, Shah Abbas died at Kaswin in 1628. Like most of the monarchs of the Sufi dynasty, he was excessively cruel, and hasty in awarding capital punishment, often on very slight grounds. All his sons fell victims to his suspicion and jealousy; only one grandson survived him, who succeeded him on the throne as Shah Sufi. Abbas was a zealous Shiite, and used to make frequent pilgrimages to the tomb of Imam Ali Reza, at Meshed; but he showed great tolerance to those that professed other religions, and especially to Christians. His belief in astrology was so firm that he once even vacated the throne for a short period during which it had

been predicted that danger menaced the life of the Shah. He made Isfahan the capital of the empire, and embellished that town by magnificent gardens and palaces. He favoured commerce, and rendered the communications in the interior easier by caravanserais and high-ways.

(Malcolm, *History of Persia*.)

ABBASIDES. The name of this family of sovereigns is derived from their ancestor, Abbas ben Abd-al-Motaleb, a paternal uncle of the Arabian prophet Mohammed. On account of their descent from so near a relation of the prophet, the Abbasides had, ever since the introduction of the Islam, been held in very high esteem among the Arabs, and had at an early period begun to excite the jealousy of the Ommaiades kalifs, who, after the defeat of Ali ben Abi-Taleb, the son-in-law of Mohammed (A.D. 661), occupied the throne of the Arabian empire. The Abbasides had already for some time asserted their claims to the kalifat, in preference to the reigning family, when, in 746, they formed a strong party, and commenced open hostilities against the government of the Ommaiades in the province of Khorasan. Three years afterwards (749) the Abbaside Abul-Abbas Abdallah ben Mohammed, surnamed Al-Saffah, or 'the bloodshedder,' was recognised as kalif at Kufa. A battle on the banks of the river Zab, not far from Mosul (in the same neighbourhood where, more than a thousand years before, the battle of Gaugamela had made Alexander master of the Persian empire), decided (Jan. 750) the ruin of the Ommaiades. Merwan II., the last kalif of that lineage, fled before the advancing forces of Al-Saffah from Mosul to Emesa, thence to Damascus, and finally to Egypt, where he was overtaken and killed. So great was the hatred of the victorious party against the vanquished royal family, that not less than ninety Ommaiades were doomed to a cruel and ignominious death, while even the remains of those that were already dead were taken out of their tombs, and publicly insulted. A survivor of the fallen dynasty, Abd-alrahman, a grandson of the kalif Hesham, escaped to Spain, the westernmost province of the Arabian empire. There his name procured him a favourable reception; he was saluted as king, and an Ommaiade lineage continued to reign for nearly three centuries (756-1031) over the eight Mohammedan provinces of Spain.

Al-Saffah died in 753, and was succeeded in the kalifat by his brother Al-Mansur (753-774), who removed the seat of government from Damascus to the new-built city of Baghdad. He was successful in wars with the Turcomans, and with the Grecian empire in Asia Minor; but the internal tranquillity of his reign was often disturbed by insurrections in the distant provinces. In the reign of his son, Mohdi (774-784), a Mohammedan army, under the command of the youthful Harun-al-Rashid, penetrated the Grecian provinces of Lesser Asia as far as the Hellespont. During the short reign of Mohdi's son, Hadi (784-786), an attempt at an overthrow of the Abbaside dominion was made at Medina by Hossein, a descendant of Ali ben Abi-Taleb.

Hadi was followed by the celebrated Harun-al-Rashid, a grandson of Al-Mansur, whose early military exploits have already been alluded to. When called to the throne, he soon displayed a love of justice and peace, and a zeal for literature and the arts, which corresponded to his valour as a military commander. He opened friendly communications with Charlemagne; the presents which he sent him (among others a curious sort of clock, a description of which is given by Eginhard), while they show the regard which he entertained for his great European contemporary, afford at the same time an illustration of the progress which the mechanical arts must at that time have made among the Arabs. In conducting the internal affairs of his empire, Harun was chiefly guided by his two ministers, Yahya and Jafar, of the ancient Persian family of the Barmekides, whose ancestors had through many generations, previous to the introduction of the Islam, held the hereditary office of priests at the fire-temple of Balkh. But the high degree of popularity which the Barmekides enjoyed aroused Harun's jealousy, and the rashness and cruelty with which he indulged himself in his suspicion by putting to death not only the two ministers, but almost all their relations, form an odious exception to the praise of mildness and equity with which his memory is honoured by eastern chroniclers. The epoch of his reign has, in the remembrance of Mohammedan nations, become the golden age of their dominion. The wealth and the adopted luxury of the conquered nations had given to social life that refinement, and to the court of Baghdad that splendour, of which such lively pictures are exhibited in many of the tales of the 'Arabian Nights.' Flourishing towns sprung up in every part of the empire; traffic by land and by sea increased with the luxury of the wealthy classes; and Baghdad rivalled even Constantinople in magnificence.

To wage war against the infidels was with the Arabs a matter of religion and of faith; as soon therefore as a conquered nation embraced the Mohammedan belief, it was no longer regarded as subject to the victors, but was raised to an equality with them, and formed an integral part of the same body. The different elements of the empire were thus held together by the tie of a common religion, and the language of the Koran (which the Mahomedans have always deemed it unlawful to profane by translations) became the medium of communication for the nations from the banks of the Indus to those of the Tagus and the Ebro. The supreme pontificate and the secular sovereignty, the two elements whose conflict forms the prominent feature in the history of the Christian world during the middle ages, were in

the Mohammedan empire united in the person of the kalif, who, invested with the mantle, signet, and staff of the Prophet, and bearing the title of Emir-al-Mumenin (that is, Commander of the Faithful), wielded the supreme spiritual and temporal rule without any other restriction or control besides the ordinances of the established religion. The only formal recognition of the sovereignty of the kalifs (and subsequently of all other independent Mohammedan princes) was the prerogative of having the money of the state stamped with their name, and of having their name also introduced into the public prayers at the mosques. According to the ancient Persian plan, the several provinces of the empire were governed by delegates, with military and administrative powers. But this system soon proved fatal to the kalifat; for the lieutenants in the distant parts of the empire would often revolt, and aspire to independent authority. On an expedition to Khorasan, undertaken against such a disloyal satrap, Harun died at Tus, in 808.

The throne was for some years contested between his two sons, Amin and Mamun; but in 813 Mamun came to the sole and undisturbed possession of it. His reign (813-833) forms an important epoch in the history of science and literature, the cultivation of which was conspicuously patronised by that kalif. The Arabs were avowed borrowers in science; they were chiefly indebted to the Hindoos and the Greeks; and even what they received from these nations seems often to have exceeded their comprehension. Their claims to originality of invention, and to the merit of having made real additions to the stock of our knowledge, are not great; but they are entitled to our gratitude for having kept alive and diffused the light of letters, and for having preserved a sort of scientific tradition from classical antiquity, during an age when science and literature in Europe lay buried under ignorance and barbarism. Mamun founded colleges and libraries in the principal towns of his dominions, such as Baghdad, Bassora, Kufa, and Nishapur. Syrian physicians, and Hindoo mathematicians and astronomers, lived at his court; and works on astronomy, mathematics, metaphysics, natural philosophy, and medicine, were translated from the Sanscrit and Greek into Arabic. Mamun took personally a particular interest in astronomy. He built observatories, had accurate instruments constructed, improved by their means the astronomical tables, and caused a degree of the meridian to be measured in the sandy desert between Palmyra and Racca on the Euphrates. At his command, Mohammed-ben-Musa wrote an elementary treatise on algebra, the earliest systematic work extant on that branch of mathematics, for their knowledge of which, as well as for much of their astronomy, the Arabs seem to be chiefly indebted to the Hindoos. The investigation of the structure of their own language, and the systematic development of the Mohammedan theology and jurisprudence, both founded chiefly on the Koran, afforded an opportunity of applying practically the principles of the Aristotelian philosophy.

The period of prosperity which the Arabian empire enjoyed under Harun-al-Rashid and Mamun was only of short duration. The chivalrous enthusiasm with which Mohammed had inspired his nation became soon extinguished under voluptuousness and love of enjoyment. Many provinces in the west (Spain, Fez, and Tunis) had already shaken off their allegiance to the kalifat, and the attachment of others in the East was likewise doubtful. From the north the empire was threatened by the Turks, some tribes of whom had been compelled to adopt the Mohammedan religion. Turkish youths were soon brought as mercenaries to Baghdad, and Motasem (833-842), the brother and successor of Mamun, formed of them a body-guard, which, under the reign of Vathek (842-846), Motawakkel (846-861), and Montaser (861, 862), became to the kalifat what the prætorian guards had been under the Roman emperors. Mostain (862-866) was obliged to concede to them the privilege of electing their own commander, and thus lost much of his authority at home, while the provinces of his empire were infested by invasions from the Greeks. Under his successor, Motaz (866-868), a native of Sejestan, Yakub-al-Laith, surnamed Al-Soffar (that is, the brazier), made himself master of Khorasan, Kerman, Persia proper, and Khuzistan, and united these provinces into an independent kingdom, with Nishapur for its capital, which continued in the possession of his family (the Soffarides) till 917.

The successors of Motaz were Mohtadi (868, 869), Motamed (869-892), Motaded (892-902), Moktafi (902-907), Mottader (907-932), and Kabir (932-934). Under the reign of Radhi (934-940) the disorder of the empire had reached such a height, that the kalif, in order to restore public order and tranquillity, was obliged to call Mohammed-ben-Rayek, the governor of Wasith, to Baghdad, and to confide to him, with the title of Emir-al-Omara, or Commander of the Commanders, an almost unlimited authority in the government. From this time the kalifat became a mere nominal dignity; all the efficient power was in the hands of the mighty Emir-al-Omara. After the short reign of Mottaki (940-943), Mostakfi (943, 944) came to the kalifat; but he was soon dethroned by Moizzeddaula the Buide (properly Bawaidide), who, in concert with his two brothers, had rendered himself master of a great part of Persia and Irak. Moizzeddaula conferred the kalifat, now limited to the mere pontifical dignity and to the possession of the town of Baghdad, on Mothi Lillah (946-973), and reserved to himself the powerful office of Emir-al-Omara, which continued hereditary in his family during the kalifat of Tayi-lillah (973-991), and Kadir-billah (991-1031), till the year 1036, when, in the kalifat of Ka'im-biamr-illah

(1031-1074). Baghdad was occupied by the Seljuks under Toghrul Beg, whose family retained the authority of Emir-al-Omara till 1152, while the nominal sovereignty of the kalifat passed from Kaim-basm-illah successively into the hands of Muktadi (1074-1094), Mostajer (1094-1118), Mostarshid (1118-1134), Rashid (1134, 1135), and Moktafi (1135-1160). The sovereigns of these principalities into which the Arabian empire had now dissolved itself, either still recognised the kalif at Baghdad as Imam, or Supreme Pontiff, and thus showed him a sort of spiritual allegiance, or they were Shiites, that is, partisans of the cause of Ali ben Abi-Taleb and his descendants, and as such executed the dominion of the Abbasides. Of the first kind were the Tulunides and Ikshides in Egypt and Syria, and the Tahirides, Soffarides, Saminides, and Ganevides, in Persia and Khorasan; to the second description belonged the Assassines, and the Fatimides in Africa. Muktadi's son, Mostanjed (1160-1179), was succeeded in the kalifat by Mostadhi (1179-1179), and Nasir (1179-1226), during whose reign the Tartars under Gengis Khan invaded Persia. Dahir occupied the kalifat only for a few months. His successor, Mostanser (1226-1242), offered for a time a vigorous resistance to the advance of the Tartar conquest; but his son Mostasem was defeated and killed by the Tartar Hulaku, who took Baghdad, and put an end to the government of the Abbasides.

Ahmed, a son of the kalif Dahir, fled to Egypt, where Sultan Bibars, the Mamluk (1260), recognised him as kalif. But he soon met his death at Baghdad in an attempt to establish his right to the throne of his ancestors; and Bibars conferred the title of kalif on another Abbaside, Hakem-bi-amillah, whose descendants, under the protection of the Mamluks, retained possession of the almost nominal kalifat in Egypt till 1517, when the Osman Turks conquered Egypt. Sultan Selim took the last Abbaside kalif, Motawakkel, to Constantinople, where he kept him for some time as a prisoner, but afterwards allowed him to return to Egypt, where he lived at Cairo till his death, in 1538.

ABBOT, CHARLES. [COLCHESTER, LORD.]

ABBOT, CHARLES. [TENTERDEN, LORD.]

ABBOT, GEORGE, an English prelate of the 17th century. He was born in 1602, at Guildford, in Surrey, where his father was a poor clothworker. From the grammar-school of his native town he proceeded to Balliol College, Oxford, in 1578, and in 1597 obtained his first preferment by being elected Master of University College. After this he was three times appointed Vice-Chancellor of the University. The high standing which he enjoyed has been attributed as much to the zeal with which he opposed Popery and Arminianism as to his superior ability or learning. There had already commenced between him and Laud that violent opposition of theological sentiment, which, involving them eventually in political hostility and in a contest of personal ambition, made them rivals and enemies for life. The Master of University College, however, must have been in considerable esteem for his erudition as well as for his orthodoxy, seeing that we find him in 1604 among the persons charged with the new translation of the Bible. He was one of eight to whom the whole of the New Testament, with the exception of the Epistles, was intrusted. In 1608 he was appointed chaplain in the establishment of the Earl of Dunbar, at this time the king's chief favourite. Soon after the earl was despatched to Scotland in order to commence that attempt to bring about a uniformity between the two national churches which so greatly contributed to the disastrous fate of the line of Stuart. Abbot accompanied him on this mission, and gave himself to its object with so much zeal as to secure the highest approbation and favour both from the earl and the monarch. He had in 1609 obtained the deanery of Gloucester, and in December of the same year he was made Bishop of Litchfield and Coventry. In the February following he was transferred to the see of London, and, in little more than a month afterwards, was elevated to the archbishopric of Canterbury. Abbot, although his theology was of a different complexion from that of his predecessor Bancroft, soon showed himself scarcely less inclined to stretch to their utmost extent all the powers and prerogatives of his office. In the Court of High Commission his conduct was as arbitrary and oppressive towards certain descriptions of delinquents as that of any one who had ever presided over that ecclesiastical tribunal; and he manifested the most marked disposition to set up its authority as superior to that of both the statute and the common law. It is also an accusation brought against him, that, never having held a parochial charge himself, he was apt to be inattentive and overbearing towards the inferior or working clergy. In other respects, he was active and assiduous in the performance of the duties of his high station. Before obtaining the archiepiscopal dignity, he had professed the doctrines of divine right and passive obedience in their most comprehensive and slavish form. Now, however, when circumstances placed him in opposition to the rising influence of his old adversary Laud, he came to adopt and act upon principles in politics, as well as in religion, removed as far as possible from those of that headlong zealot of arbitrary power.

The bright fortunes of Abbot were, however, clouded by an occurrence of which his enemies took signal advantage. On the 24th of July, 1622, the archbishop was engaged in a stag-hunt in Lord Zouch's park at Haringworth, in Hampshire, when a barbed arrow from his cross-bow struck one of the park-keepers, Peter Hawkins, in the fleshy part of the left arm, and occasioned the man's death in less than an

hour. The party to whom Abbot was opposed, employed every effort to turn this accident to his disadvantage, both with the public and with the king; and James, although he very sensibly remarked that "an angel might have miscarried in this sort," found it necessary to appoint a commission to consider the case of the archbishop, and to determine whether he had not, by this act of chance medley, incapacitated himself, as Laud and his partisans asserted, for discharging the duties of his office. The adjudication of the commissioners was, that nothing more than an irregularity had been committed, but that it would be necessary for the archbishop to receive the king's pardon, and also a dispensation before he could resume the exercise of his functions. These forms were accordingly gone through; but the affair gave great vexation and distress to Abbot, both from the scandal to which it subjected him, and from the feelings with which he naturally contemplated the event of which he had been unintentionally the cause. It is said that, throughout the remainder of his life, he observed a monthly fast on the day of the week which had thus stained his hand with blood; and he also settled a pension of twenty pounds for life on Hawkins's widow. After this he withdrew for some time from his attendance at the Council Board, and took no part in public affairs. The following year, however, on hearing it reported that the king intended to proclaim a toleration to the Papists, he wrote a letter to his majesty, dissuading him from that measure. He also, soon after this, strenuously opposed in parliament the projected match between the Prince of Wales and the Infanta of Spain. On the 2nd of February, 1626, Abbot crowned Charles I. in Westminster Abbey, Laud officiating as Dean of Westminster. The new reign confirmed the ascendancy of Laud and Buckingham, and left the archbishop and his politics less influence at court than ever. In these circumstances he selected and steadily persevered in that independent path in which alone he was now to find either honour or safety. In 1627, when Dr. Manwaring was brought to the bar of the House of Lords, and sentenced to be fined, admonished, suspended, and imprisoned, for a sermon in which he asserted that "the king is not bound to observe the laws of the realm concerning the subject's rights and liberties, but that his royal will and command in imposing loans and taxes, without common consent in parliament, doth oblige the subjects' conscience upon pain of eternal damnation," Abbot, in reprimanding the culprit, by order of the House, expressed in energetic terms his abhorrence of so audacious a doctrine. He also refused to license another discourse of a similar description, which had been preached at Northampton by Dr. Sibthorp, and for this he was suspended from his archiepiscopal functions, and ordered into confinement in one of his country houses. This most arbitrary and oppressive treatment was mainly the work of his vindictive enemy Laud, whose character, accordingly, the archbishop has delineated with a pen dipped in gall, in a narrative of the affair which he drew up in his own vindication, and which Rushworth has printed. It was found necessary however, soon after, to restore him to favour, and he received his summons as usual to the parliament, which assembled in March, 1628. During the rest of his life he continued the same course of opposition to the arbitrary and oppressive measures of the court. He died at his palace of Croydon, on Sunday, the 4th of August, 1633, and was buried in Trinity Church, Guildford, where a costly monument was erected to his memory. He was the founder of a well-endowed hospital, which still exists in that town; and other instances are recorded of his charity and munificence.

Archbishop Abbot is the author of several literary productions, among which are an 'Exposition on the Prophet Jonah,' published in 1600, and 'A Brief Description of the whole World,' published in 1636.

ABDALLATIF, or, with his full name, *Mowaffikeddin Abu Mohammed Allatif ben Yusuf ben Mohammed ben Ali ben Abi Said*, a distinguished Arabic writer, whose name has become familiar to us chiefly through an excellent description of Egypt, of which he is the author. The Baron Silvestre de Sacy has appended to his French translation of this treatise, a notice of the life of Abdallatif, taken from the bibliographical work of Ebn-Abi-Osaibia, who knew Abdallatif personally, and to a great extent quotes an account of his life written by himself.

We learn from this notice that Abdallatif was born at Baghdad in A.H. 557 (A.D. 1161). From his earliest years he received a lettered education. Agreeably to the prevailing fashion of his age and country, which considered a thorough familiarity with the copious and classical Arabic language as the indispensable groundwork for every liberal acquirement, he was led to commit to memory the Koran, the much-admired *Makamat*, or novels of Hariri, and other compositions distinguished for the purity and elegance of their diction, besides several works professedly treating on style or grammar. Next to these philological studies, he had already bestowed some attention on Mussulman jurisprudence, when the arrival at Baghdad of Ebn-al-Tateli, a naturalist from the western provinces of the Arabian empire, attracted his curiosity towards natural philosophy and alchemy, of the illusory nature of which latter pursuit he seems not till late, and after much waste of time and labour, to have convinced himself.

Damascus, the residence of Saladin, had about this time, through the liberality of that celebrated sultan, become a rallying point for learned men from all parts of the Mohammedan dominions. It is here that we find Abdallatif commencing his literary career by the publication of several works, mostly on Arabic philology. But the celebrity of several scholars then residing in Egypt, among others the Rabbi Moses Maimonides, drew him to that country to seek their personal acquaintance. A letter from Fadhel, the vizir of Saladin, introduced him at Cairo, and he was delivering lectures there while Saladin was engaged with the crusaders at Acca (St. Jean d'Acre). Soon, however, the news of Saladin's truce with the Franks (1192) induced Abdallatif to return to Syria, and he obtained from Saladin a lucrative appointment at the principal mosque of Damascus. After the death of Saladin, which took place in the next year, we find Abdallatif going back to Cairo, where he lectured on medicine and other sciences, supported for a time by Al-Aziz, the son and successor of Saladin. It was during this residence at Cairo that Abdallatif wrote his work on Egypt. But the troubles of which Egypt now became the scene, induced Abdallatif to retire to Syria, and subsequently to Asia Minor, where he seems to have lived for a long time quietly at the court of a petty prince, Alaeddin Daud, of Arzenjan. After the death of that prince (1227) he went to Aleppo, to lecture there partly on Arabic grammar, and partly on medicine and on the traditions, an important branch of Mohammedan theology and jurisprudence. Four years after this, Abdallatif set out on a pilgrimage to Mecca, and took his route through Baghdad, to present some of his works to the then reigning kalif Mostanser, when he died there in 1231.

Ebn-Abi-Osaibia has given a list of the works composed by Abdallatif, which, in the Arabic appendix to Baron de Sacy's translation, fills three closely-printed quarto pages. The description of Egypt, through which his name has become so familiar to all friends of antiquarian research in Europe, and in which he displays an accuracy of inquiry, and an unpretending simplicity of description almost approaching to the character of Herodotus, is dedicated to the kalif Nasir-edin-illah. It is divided into two books: the first treats, in six chapters, on Egypt generally, on its plants, its animals, its ancient monuments, peculiarities in the structure of Egyptian boats or vessels, and on the kind of food used by the inhabitants; the second book gives an account of the Nile, the causes of its rise, &c., and concludes with a history of Egypt during the dreadful famines of the years 1200 and 1201.

The only manuscript copy of this work, of the existence of which we are aware, is preserved in the Bodleian Library at Oxford. From this manuscript the Arabic text was edited for the first time at Tübingen, in 1787, by Paulus, and again, with a Latin translation, by Professor White, at Oxford, 1800, 4to. The French translation published by Baron de Sacy, under the title 'Relation de l'Egypte,' &c. (Paris, 1810, 4to), besides its greater fidelity, has through the copious notes added to it become one of the most important works that the scholar can consult on the geography, the history, or the antiquities of Egypt.

*ABD-EL-KADER (*Sidi-el-Hadji-Ouled-Mahiddin*), formerly Emir and Bey of Mascara, and celebrated for his protracted resistance to the French arms in Algiers, was born in the early part of 1807, in the neighbourhood of Mascara, in what is now known as the province of Oran. [ALGÉRIE, L, in GEOGRAPHICAL DIVISION OF ENG. Cyc. vol. i. col. 206.] He was the third son of a marabout, of the Arab tribe of Hashem, named Sidi-el-Hadji-Mahiddin, who had acquired great influence on account of his sanctity as well as his rank. Over the early days of Abd-el-Kader has been thrown something of the romantic colouring which would seem of right to belong to an Oriental hero, and one who has figured so conspicuously in the annals of France. He had in infancy accompanied his father in a pilgrimage to the birth-place of the prophet. From his boyhood he had been carefully trained in both the secular and sacred learning of his race. By opening manhood he had obtained the reputation of a scholar well instructed in the history and the literature of Arabia; and he had crowned his study of the Koran and its commentators by a second pilgrimage, in 1828, to Mecca, and received in consequence the title of Hadji, or saint. At the same time, so far from neglecting equestrian and military exercises, though of small stature and little physical strength, he had rendered himself remarkable even in those arts in which all his countrymen excel—the management of the horse, the lance, and the yataghan.

When the French began seriously to push their conquests into the interior of Algiers, Abd-el-Kader was living in retirement with his wife and two children, distinguished by the austerity of his manners and his strict observance of all the precepts of the Koran. But when the severe measures of the Duke of Rovigo caused a general rising of the native tribes, he joined his countrymen in arms. The father of Abd-el-Kader had for some time been exerting all his influence to effect a union of the tribes; urging them to make a great and combined effort to drive the French out of the country, as then, from the humiliated condition to which the Turks had been reduced, the Arab might again with little trouble become the ruler of the land. The confederation of the tribes was formed, and the chiefs besought Mahiddin to take the direction of it. He refused however, pleading

that his advanced age unfitted him to act as a military leader at such a juncture; but he directed them to his son as one designated by nature and education for the purpose; and he repeated to them various omens which had marked his birth and childhood, and related how during the pilgrimage to Mecca an aged fakir had solemnly announced to him that he should become Sultan of the Arabs. The tribes acquiesced, and Abd-el-Kader was proclaimed Emir at Mascara.

Accompanied by his father he at once began to preach a Holy War, and to call on the faithful to assist in the expulsion of the infidels. By the spring of 1832 Abd-el-Kader found himself at the head of 10,000 warriors. His first blow was struck in May of that year against Oran, or Warran. The assault was several times repeated with great impetuosity during three successive days, but was each time repelled with heavy loss to the Arabs. Abd-el-Kader though unsuccessful as far as the capture of Oran was concerned, acquired great reputation by his personal skill and daring, and the siege is said to have done much towards accustoming the Arabs to face artillery, from which they had previously shrunk. Before making another determined effort to dislodge the invaders, he resolved to extend the basis of his power, by persuading or compelling the tribes of the interior to acknowledge his supremacy; and after some opposition he appears to have succeeded with both Kabyles and Arabs. The French on their part were chiefly anxious to secure the cities and strongholds along the coast, and left the Emir to take his own course in the interior. So strong indeed was the desire of the French governor of Oran, General Desmichels, to obtain a respite from any further attack while carrying out this purpose, that he entered into a treaty (February 26, 1834,) with Abd-el-Kader, by which he agreed, on his acknowledging the French supremacy, to recognise him as Emir of Mascara, including the sovereignty of Oran, except such portions of the coast as were in the possession of the French. Along with the sovereignty was also ceded to him the monopoly of the commerce with the interior. This treaty was disapproved in Paris, but to Abd-el-Kader it was of great advantage, from the vast accession of consequence he derived in the eyes of the natives from this formal recognition of his sovereignty by the French authorities. But it also aroused jealousy and fear among the chiefs, and several of them refused to submit to his pretensions. By one of these, Mustapha-Ben-Ismaïl, chief of the Douaires, he was surprised in a night attack, and his forces routed; the Emir himself only escaping with extreme difficulty. Other chiefs on receiving news of this defeat also rose against him, but he quickly collected a considerable body of troops, and General Desmichels having supplied him with muskets and powder, he soon forced them to succumb.

It has been disputed whether the French or Arab general first broke the terms of the treaty. Probably each regarded it as nothing more than a convenient armistice, to be kept only as long as suited his purpose. Certain it is, that Abd-el-Kader having availed himself to the utmost of the opportunity to secure his influence over the tribes, and to put his army into an efficient state—including the training for the first time among Arabs of a regular infantry corps, and an artillery service—crossed the Shellif and entered Medayah in triumph, announcing that he was about to expel the French. General Trézel who had succeeded Desmichels, at once took the field against him. The armies met on the banks of the Sig. That of the Emir was much the more numerous; but the superior discipline of the French amply compensated for the disparity of numbers, and Abd-el-Kader, after a resistance which extorted the admiration of his enemies, was compelled to fall back. Trézel was however in no condition to pursue his success. He had lost 240 men; and the army of the Emir though defeated, was still much the larger and well kept together. Trézel decided to retreat towards Arzew; and the Emir followed him. At the Pass of Makta, where Trézel, cumbered with wounded and baggage, was at a manifest disadvantage, the Emir fell upon him in force (June 28, 1835), and it was only by the most desperate exertions, and with a loss of 500 men, that the French general was able to extricate a portion of his army. This, the first serious check which the French had suffered in Africa, produced the greatest excitement among the native population. In Paris, on the other hand, it caused much irritation, and Marshal Clausel was despatched with imperative orders to inflict a striking punishment on Abd-el-Kader. On arriving in Algiers the Marshal appointed a Bey of Oran, with a view to weaken the authority of the Emir by raising up a native rival. Clausel then marched with a considerable force upon Mascara; but the Emir caused the inhabitants to quit the city, and when Clausel entered it, December 6, 1835, he found little more than bare walls. Unable to hold the city, Clausel completed the work of ruin by setting it on fire. Abd-el-Kader now made Tremecen, or Tlemsen, on the borders of Morocco, his head-quarters; but on the approach of Clausel he was forced to evacuate it, and retreat still farther into the interior. Clausel continued his pursuit, and the Emir was again compelled to break up his camp. Soon after a large auxiliary force, including several thousand horsemen, who had come from Morocco to unite with the Emir in the Holy War, was surprised and defeated; and Clausel returned to Algiers, boasting in his bulletins that he had effectually destroyed the power of the redoubtable Emir. But Abd-el-Kader had continued to follow at a distance the movements of the French, and he now showed that he was still formidable, by attacking and

detaching, with great loss, on the 21th and 25th of April, a convoy sent under General d'Arles, with supplies and reinforcements for the garrison at Tlemcen.

The French government now despatched General Bugeaud with instructions to reduce the Emir to quiet either by treaty or by force. Bugeaud made some pacific overtures, but they were unheeded; and so he proceeded to find that his indefatigable adversary was laying the country waste before him. But Bugeaud had provided a large number of camels and mules, and an ample supply of much-needed provisions for the garrison of Tlemcen, and his convoy exceeded 6000 men. He continued his march therefore, and Abd-el-Kader still retreating, permitted him to advance unmolested as far as the pass of Sikkah; but in that strong position the Emir resolved to offer battle. Bugeaud entered the pass on the 6th of July, 1836. At first the French were thrown into confusion, but they soon rallied, and though Abd-el-Kader at the head of his infantry, which he had kept under his own command as a reserve, made the most strenuous efforts to recover the day, he was compelled to a rapid retreat, leaving behind him above 1200 killed and wounded. He did not venture again to encounter the French in the open field; and they, on their part, had found a new and formidable opponent in the Bey of Constantine, whom from his proximity it was necessary to crush without delay. In order to prevent their two opponents from making common cause, General Bugeaud was soon after sent with direct proposals to Abd-el-Kader for an arrangement. A meeting accordingly took place on the banks of the Tafna, at which, after some discussion, a treaty was drawn up with all formality, and duly signed and sealed, May 30, 1837, by which Abd-el-Kader agreed to acknowledge the sovereignty of France, and to pay a tribute of a certain quantity of corn and cattle; and, on the other hand, he was confirmed in his title of Emir, and received a considerable accession of territory, his sovereignty now being extended over the whole of Oran and Titteri, and a portion of Algiers, except certain towns, including Oran, Mustigannim, Arzew, and some others along the coast, which were to remain in the hands of the French.

Abd-el-Kader's first care, on being released from the necessity of watching the proceedings of the French army, was to receive the submission of the tribes throughout the country assigned to him. Generally they readily gave in their allegiance, but against some he found it necessary to resort to severe measures; and one tribe, that of Oued Zeitoun, he was charged by his enemies with having massacred. Marshal Vallée, the French governor-general, took umbrage at these proceedings; and in order to overawe the Emir, and to re-assure the tribes in alliance with France, established a camp of 2000 men upon the heights of Khamis. In consequence of the strong remonstrances of the marshal, who charged him with a breach of the treaty, Abd-el-Kader sent an agent to Paris, bearing rich presents to Louis Philippe and the queen, and authorised to negotiate a modification or explanatory supplement to the treaty.

Matters being thus arranged, Abd-el-Kader addressed himself to the task of organising a system of administration for his territory. He made Medayah the centre of his government, placing it under a kalif; then apportioned the country into five divisions, in each of which he placed a subordinate chief; and these divisions he again broke up into smaller sections, each of which he placed under an aghir, with immediate civil and military command; thus providing as far as possible ready means of calling out the strength of his subjects, and checking any incipient insubordination. At the same time he is said to have endeavoured in every way to encourage the practice of agriculture and the industrial arts. It is certain however that he never for a moment relaxed his military preparations.

The peace lasted little more than two years. The French had observed with constant suspicion the efforts of the Emir to strengthen his position by the erection of a chain of fortresses, and to extend his influence over the tribes not directly subject to him. With a view, as it seemed, to counteract in some measure the increasing influence of the Emir, a powerful French army, with the Duke of Orleans at its head, was marched into the interior, and the prince received with great ceremony the submission of various chiefs. This was followed by an expedition, in which the army passed through a noted defile called the Diban, or Iron Gates, through which the Turks in the height of their power had never passed without paying tribute to the Arabs. The passing of the Iron Gates made, as was intended, a profound impression on the native races, and Abd-el-Kader availed himself of this and the other proceedings of the French to arouse their fanaticism into action. He is constantly said to have recommenced hostilities without warning, but he appears to have written a letter to Marshal Vallée, announcing that he could no longer restrain his people; that the entire Mussulman race had resolved on a Holy War against the French; and that his fidelity to the Koran obliged him to take his part in it. This announcement was speedily followed by a general attack on the French outposts. The farms and colonies were ravaged and burnt, and the Arabs remained masters of all the country outside the fortifications; but they were able to effect nothing against the fortified places.

This outbreak occurred in December, 1839. Marshal Vallée, though unprepared, put his forces in motion. Abd-el-Kader met with several reverses in the ensuing campaign, but the year 1840 passed over without any material success on either side. This protracted and desultory

warfare was causing a large expenditure of men and money, and loud murmurs were raised in France against the inefficient manner in which it was conducted. The government announced that it had determined no longer to bear with Abd-el-Kader, and in December 1840 it replaced Marshal Vallée by General Bugeaud. From this time the war was carried on with the utmost vigour. A very large body of troops was sent from France, and a half-indigenous corps, the Zouaves, was raised with a view to check the active irregular Arabs by soldiers possessing all their peculiar vivacity and rapidity of motion, but more scientifically trained. Bugeaud made it his object in the campaign of 1841 to secure in succession as many as possible of the strongholds of the Emir, to detach from him by promises and threats the native tribes, and wherever any refused their adhesion to France, to destroy their crops and ravage their villages. It was a merciless, but it was an effectual course. By the end of the year the general had overrun a considerable portion of the Emir's territory, and wherever the French arms had penetrated, the country had become an ally or a waste. In the speech to the Chambers, February 1842, it was formally announced that Algiers was annexed to the French crown; and from this time the Emir was treated as a rebel.

His condition seemed indeed to have become utterly desperate. The French occupied all his cities, most of his fortresses, and four-fifths of his territory; his regular army had been nearly destroyed; and a large proportion of the tribes had submitted to the enemy. But Abd-el-Kader seemed to gain energy from despair. No longer venturing to meet the French army in a regular encounter, he constantly harassed them by rapid descents upon outposts, detachments, and convoys, and by destructive inroads upon the countries of the friendly tribes; while the rapidity and unexpectedness of his movements baffled alike precaution and pursuit. But the lines were being drawn steadily more and more closely about him. His camp of reserve was already on the edge of the desert; and the French had now an army of 100,000 men accumulated in the country, besides a large body of auxiliaries. The razzias of the French continually destroyed his resources; more than once all his presence of mind and daring, and the devotion of his followers, had scarcely sufficed to prevent him from falling into the hands of his opponents. On one occasion, in May 1843, the Duke of Orleans, at the head of a body of cavalry, had even succeeded, by a brilliant imitation of the Emir's tactics, in surprising his smala, or camp, during the absence of the great body of his Arabs. Abd-el-Kader, as usual, escaped; but with the loss of almost everything. His Arabs and Kabyles however quickly rallied around him, and he contrived to inflict in numerous desultory attacks heavy blows upon the French, who indeed during this summer lost an unusual number of officers. But he was now unable to bring more than a small force into the field at any one time; and a defeat which he suffered at Oued-Malah, and in which his most-trusted lieutenant, Kalif-ben-Allah, the One-Eyed, was killed, completed his ruin, though it did not put an end to his efforts.

Forced to take refuge within the frontier of Morocco, he set about preaching there a new outbreak of hostilities against the infidels. The emperor, if he did not directly sanction, did not oppose his proceedings; and several members of the court entered with ardour into his views. An army was soon raised; but the French declared war against Morocco, bombarded several of its coast towns, defeated its army at Islay, and before the close of 1844 had compelled the emperor to agree to use his best efforts to prevent Abd-el-Kader from again annoying the French in Algiers. Abd-el-Kader once more took to the open country. He continued for above two years longer to evade the pursuit of the French; but every effort to make head against his foes proved unavailing. The Emperor of Morocco was at last compelled by the French to put in motion an army against him, and seized his kalif, Bou Hamedi, whom he had sent to endeavour to obtain terms. Abd-el-Kader in reprisal made a night attack (November 11, 1847) upon the Moorish camp, which by a daring stratagem he succeeded in throwing into confusion. But though he achieved a momentary success, the mass of troops was too great for him to produce a permanent impression. A body of natives who attempted to prevent his retreat he had little difficulty in defeating; but when he found the French cavalry had got between him and the desert, he acknowledged that, closely pressed as he was on every other side, it would be useless to offer further resistance, and sent messengers to General Lamoricière, the French commander, offering to surrender on condition of being sent to Alexandria or St. Jean-d'Acres. Lamoricière acceded to the terms; and on the 23rd of December Abd-el-Kader yielded himself with his family into the hands of the general.

The Duc d'Aumale, governor-general of Algiers, in the despatch in which he announced to the French government the surrender of the Emir and his arrival at Algiers, says, "I have ratified the promise given by General Lamoricière, and I firmly trust the government of his majesty will add its sanction. I announced to the Emir that he must embark the next day for Oran with his family; he submitted, but not without emotion and repugnance—it is the last drop in the chalice." Not quite the last drop. The French government refused to ratify the engagement, and the Emir was transferred, with his family, a prisoner to Fort Lamalgue, at Toulon. After the revolution of February 1848, Abd-el-Kader presented a formal requisition to the republican government for the performance of the engagement

upon which he had surrendered. His request was not acceded to, but he was removed to a healthier prison, first at Pau and then at Amboise, and his confinement was rendered much less irksome. When Louis Napoleon was elected president, Abd-el-Kader renewed his claim, and though he was not immediately successful, he received the most marked attention, and became a prisoner in little more than name. Finally, in October 1852, Napoleon granted him his freedom, on condition that he gave a solemn promise not to return to Algiers or to conspire against the French power in Africa; and Brussa in Asia Minor was named as his future residence. For that place he embarked in the beginning of 1853, and there he continued to reside until June 1855, when, in consequence of the destruction of that city by an earthquake, he received permission from the French government to remove to Constantinople. In the autumn of 1855 he paid a short visit to Paris to view the Exposition, and received from the Emperor a distinguished reception. He is said to have resigned himself to his fate with true eastern calmness, but his health has been permanently broken by his reverses and his imprisonment.

Abd-el-Kader is beyond question a man of remarkable ability and force of character. He has displayed many of the evidences of great military genius, self-reliance, activity, indomitable energy, marvellous resources in defeat as well as in victory, power of wielding the wills of others and of controlling his own; and he seemed to possess much of that administrative ability which men of superior military power often exhibit. But he had a rude and uncivilised people to govern and to employ, and he had the first and most highly trained military power in Europe to contend with; and all her greatest commanders were in succession sent against him, and all her resources called into exercise, and he failed where success was hardly conceivable. But for fifteen years he maintained this unequal struggle; he has borne his reverses manfully, and his old opponents are foremost in rendering homage to his great ability, and in testifying to his honourable fulfilment of his share of the final engagement.

*ABDU-L-MEJID, reigning Sultan of Turkey, was born April 23, 1823, and was the eldest son of Mahmud II., whom he succeeded on the 1st of July, 1839. As is customary with the sons of the sultan, the early years of Abd-ul-Mejid were spent in the harem. His father is said to have desired that he should receive a European education, but the repugnance of the Mohammedan priests to such an innovation compelled him to give way. The education of Abd-ul-Mejid has therefore been necessarily very imperfect; but he has done what he could to make up for his deficiencies by surrounding himself with men of attainments, and seeking to acquire the information which he believes himself to need.

Abdu-Mejid ascended the throne at a time when the affairs of Turkey were in a very threatening condition. The reforms of his father had hardly become sufficiently consolidated to withstand the strong tide of fanaticism which was setting in against them. The battle of Nezib, June 24, 1839, which had resulted in the total defeat of the Turkish army, by that of the Pasha of Egypt, had been followed within a week by the death of the Sultan, whose determined character and unflinching will had served hitherto to keep in awe the opponents of the new order of things; and these were now, it was believed, prepared to make common cause with Mehemet Ali, whom they, in common with the great bulk of the Mohammedan race, regarded as the true representative and champion of the ancient faith. The road to Constantinople was open to the Egyptian army; the inhabitants were in a disturbed state; and the new Sultan, a lad of sixteen, was scarcely seated on his throne when the Turkish fleet, by an unparalleled act of treachery on the part of its commander, was placed in the hands of the enemy. Fortunately the Pasha refrained from striking the blow which the weakness of the Sultan seemed to invite; and the leading European powers stepped in to offer their mediation, which Abd-ul-Mejid at once accepted. Mehemet Ali refused the terms proffered, and a treaty was signed in London, July 15, 1840, in accordance with which an Anglo-Austrian fleet bombarded several of the fortified towns on the coast of Syria, and compelled Mehemet Ali to submit. The ancient dynasty was saved, and the arrangement then made between the Sultan and the Pasha has not again been disturbed.

The dangers which threatened the young Sultan from domestic treason, though fomented, as was thought, by Russian agents, were as effectually averted. On his death-bed Mahmud had sent for his son, and earnestly entreated him to pursue the course of reform which he had commenced. The adherents of the old system, on the other hand, reckoned confidently on being able, under Mahmud's feeble successor, to uproot all which the late Sultan had so long laboured to effect. An end was soon put to all suspense. A hatt-i-sheriff, solemnly published at Gulhané on the 3rd of November 1839, gave to the civil reforms of Mahmud a definite and formal shape, and added somewhat to them. This measure guaranteed to all the subjects of the Sultan, without regard to rank or religion, security for person and property; and promised to introduce a regular and impartial system of taxation, public administration of justice, the right of free transmission of property, and the removal of many of the hardships of the conscription, as well as other improvements. Convinced that there was to be no recession from the path of reform, but rather a great advance, the more determined zealots organised a powerful con-

spiracy with the view to effect an entire revolution; and by the aid of the priests set about exciting the populace by assurances that the concessions to the unbelievers were an assault upon the true faith. But the conspiracy was detected, several of the leaders were put to death, and tranquillity was gradually restored. In two or three years Abd-ul-Mejid had outlived the suspicion with which he had at first been regarded, and become, as he has since remained, exceedingly popular with all classes of his subjects. Partial revolts occurred in 1840 and subsequent years in Syria, Bosnia, and Albania; but they were suppressed without much difficulty, and in their suppression it was that Omar Pasha first displayed his remarkable military skill. The tanzimat, as the system of reform is called, has been carried out in little more than name beyond the immediate circle of the capital; but Abd-ul-Mejid has always evinced a strong desire to improve the condition of his subjects, though the general spread of rapacity and corruption among the ruling classes, and the progress of decay throughout the kingdom, have almost rendered it a hopeless task. Among the objects on which the attention of the Sultan is said to have been most fixed, is that of the extension of education in Turkey. In 1846 he established a council of education, and he at that time, or subsequently, founded a university, extended the system of primary schools, and established military, medical, and agricultural colleges. The privileges conceded to Christians by the tanzimat, the Sultan has always firmly defended; and when opportunity served he has shown his readiness to extend them. The Earl of Shaftesbury, speaking in the House of Lords, March 10, 1854, as the representative of several of the leading Protestant religious societies, bore warm testimony to the liberality with which Protestants have been, during the present Sultan's reign, on all occasions treated by the Sublime Porte; and in the almost continual disputes between the Latin and Greek churches, the Sultan appears to have endeavoured to act strictly as a mediator, or arbitrator, aiming to satisfy the wishes of each party as far as was compatible with the demands of the other. Since the commencement of the war with Russia the Porte has directed that the evidence of Christians shall be received in courts of justice, and issued other orders, which altogether have gone as far as the prejudices of his Moslem subjects would at present allow in the path of tolerance, and much farther than many Christian states have advanced. The army reforms and other changes, some of which, unquestionably, in the present state of the country, have been of very doubtful advantage, have also been steadily persevered in.

We have not dwelt on the great historic events which have occurred during the reign of Abd-ul-Mejid, they having been already fully noticed under TURKEY, in the GEOGRAPHICAL DIVISION OF THE ENGLISH CYCLOPEDIA, vol. iv., cols. 927-8. Here it may be enough to mention, that after having continually advanced step by step towards reducing Turkey to the position of a dependent state, the Emperor Nicholas of Russia availed himself, in the early part of 1853, of a difference respecting the guardianship of the 'Holy Places' to claim the protectorate over the Greek Christians in Turkey; and when this was refused by the Porte, though with every effort at conciliation compatible with the retention of sovereignty, the Russian troops were at once sent to occupy the principalities of Moldavia and Wallachia as a 'material guarantee.' War was declared by the Porte on the 5th of October, 1853, with the full accord of the governments of England and France, whose assistance had been formally invoked. In November following the Turkish fleet in the Black Sea was attacked off Sinope by an overwhelmingly superior Russian fleet and totally destroyed. Before Silistria, however, at Giurgevo, and elsewhere, the Russian army was on several occasions defeated by the Turks. In March 1854, England and France, in order to "support the sovereign rights of the Sultan," declared war against Russia, and soon after despatched armies to the assistance of the Porte. On the 14th of September, 1854, an Anglo-French army landed in the Crimea, and, after winning the battle of the Alma on the 20th, proceeded to invest Sebastopol on the 26th. The army, strengthened by very large reinforcements from France and England, by a Turkish army, and by a Sardinian contingent (that power having joined the alliance in the early part of 1855), has continued the siege up to the end of 1855; and during this time has defeated the Russians in every engagement in the open field, and, in September 1855, succeeded in compelling them to evacuate the southern side of Sebastopol, thereby inflicting on them an enormous loss of men and property. The successes of the Anglo-French fleets in the Black Sea, the Sea of Azof, and the Baltic call only for a reference. In Asia, the Turkish army met, during the early part of the campaign, with several serious reverses, and endured much suffering, chiefly, as is believed, through the incompetency and peculation of the Turkish officers. Subsequently, chiefly by the skill and energy of an English officer, General Williams, the Turkish garrison of Kars, about 12,000 strong, notwithstanding the most terrible privations, succeeded during several months in sustaining a close siege by a Russian army of 35,000 men; and repulsed, in the most brilliant manner, a grand assault made by it, causing a loss to the Russians of more than 6000 killed. Somewhat later, Omar Pasha defeated a strong Russian force which opposed his progress towards the interior. But the garrison of Kars were compelled by famine to surrender in November, 1855.

However great may be the effect of this war on the future destiny

of Turkey, it owes but little of its conduct, determination, or probable continuance to the character of the Sultan. When he appealed to such powers as France and England, and they embarked in a war of such tremendous magnitude, its management, as a necessary consequence, passed into their hands; but it may be hoped, that when it shall be brought to a satisfactory conclusion, an important result of it will be to ensure to the Sultan what the Western Powers declared to be a leading object of their interference—his rights as a sovereign within his own territory; due security being taken for the establishment of those equal rights which have been promised to all classes of his subjects.

Abdul Mejid is described as somewhat above the middle height; slender in early manhood, but now inclining to corpulence; slightly marked with the small pox, pale, with black beard and moustache, and large black eyes. In manner he is said to be calm and mild, with an appearance of settled melancholy. The Earl of Carlisle ('Diary in Turkish and Greek Waters,' p. 62) speaking of an interview with him in 1839, says, "The impression his aspect conveys is of a man gentle, unassuming, feeble, unstrung, doomed: no energy of purpose gleamed in that passive glance; no surging of victory sat on that still brow." But this placidity of bearing at an interview, is the first lesson in etiquette which the young Turk has to learn, and through life he is always careful to maintain it; its exhibition therefore at the formal reception of a distinguished English nobleman, when there was nothing to excite passion of any kind, is certainly no evidence of feebleness of purpose. It would appear however, from what is said by those who have had opportunities of fairly estimating his character, that the Sultan is of an habitually mild disposition, and prone to leave the management of affairs to his ministers and the relatives who surround his person; but that when aroused he can display sufficient energy and decision of purpose. The refusal to surrender the Hungarian and Polish refugees, after the Hungarian revolution of 1848, is generally said to have been the personal act of Abdul-Mejid; and he persisted in that refusal, despite the imperious demands of Russia and the threats of Austria, until Lord Palmerston, then foreign minister, backed his support of the Sultan's resolution by moving the English fleet into the Dardanelles, and thus settled the dispute. During the continuance of the present war, so trying to the resources of his kingdom, the conduct of the Sultan has been invariably firm, frank, and honourable alike towards his subjects and the allies.

ABEL, the second son of Adam. His history is contained in the fourth chapter of Genesis, where we are informed, that, he being a keeper of sheep, while Cain was a tiller of the ground, the two brothers offered sacrifices together to the Lord; the former bringing of the fruit of the ground for that purpose, and the latter of the firstlings of his flock. The offering of Abel alone was accepted; and the preference thus shown so excited the envy of Cain, that, as they were together in the field, he rose up against his brother and slew him; thus for the first time staining the earth with human blood. Abel's offering was an act of faith. (Heb., ii. 4.) It had respect to the announcement previously made of the suffering and glory of the Saviour of the World. This obediency of faith pervaded his life. Our blessed Lord (Matt., xxiii. 25) designates him "righteous Abel," and we are told (John, viii. 12) that Cain slew his brother "because his own works were evil, and his brother's righteous."

ABEL, CHARLES FREDERICK, a native of Germany, and a pupil of Sebastian Bach, was much distinguished as a composer and performer in the middle and towards the close of the last century. He served for some years in the celebrated band of the electoral king of Poland, at Dresden; but his talents being very inadequately rewarded, he quitted that service in 1758, with only three dollars in his pocket, and reached England the following year, where he soon met with encouragement that did not end in empty praise. When the queen of George III. had her establishment fixed, Abel was appointed chamber musician on it, at a salary of 200*l.* per annum; and shortly after he united with J. Christian Bach in forming a weekly subscription concert, which for many years continued to be highly patronised and liberally supported. His chief instrument was the viol da gamba, a small violoncello with six strings, now fallen into disuse. With this he produced an effect on his auditors which scarcely any one since has been able to achieve on bowed instruments, and principally by means of his adagios, or slow movements. "His compositions," Dr. Burney tells us, "were easy and elegantly simple; for he used to say, 'I do not choose to be always struggling with difficulties, and playing with all my might.'" In nothing was he so superior to all other musicians, the historian of music adds, "as in writing and playing an *adagio*, in which the most pleasing yet learned modulation, the richest harmony, and the most elegant and polished melody were all expressed with such feeling, taste, and science, that no musical production or performance with which I was then acquainted seemed to approach nearer perfection." ('Hist. of Music,' vol. iv.) The critic however of the present day, who has comparisons of the same kind by Haydn, Mozart, Beethoven, Clementi, Dussek, Cramer, &c., fresh in his memory, will not deny the vast superiority of these latter productions. Abel—judging him by his remains—possessed more taste than imagination; more knowledge of his art, and elegance in his manner of performance, than vigour of conception. Even Dr. Burney admits that "his later productions,

compared with those of younger composers, appeared somewhat languid and monotonous." But we suspect the fact to be, that they were more accurately estimated when compared with the productions of a more advanced age. Abel was intemperate in the use of fermented liquors, and brought his life to a hasty close in the year 1787.

ABEL, NIELS HENRIK, was born August 5th, 1802, in Norway, at Findeø, in the diocese of Christiansand, of which parish his father was then minister. He was sent in 1815 to the cathedral school of Christiania, where he did not show any remarkable sign of progress, until 1818, when M. Holmboe, a newly-appointed professor of mathematics, afterwards the writer of Abel's life, and editor of his works, discovered his talent for mathematics, and aided him in pursuing those sciences beyond the elements. In July, 1821, he went to the University of Christiania, where, his father having died and left him without the means of continuing his studies, he was first maintained by a subscription of the professors, and afterwards, for two years, by a pension from the government. His earliest mathematical essay was an attempt at the old question of the solution of the equation of the fifth degree, in which, after discovering his own failure, he determined either to find a solution, or to show the impossibility of finding any; and produced his celebrated paper on the last point, of which we shall presently speak. In July, 1825, he obtained an increased pension from the government to enable him to travel. He first went to Berlin, where he formed an acquaintance with Crelle, which became an intimate friendship. The mathematical journal, now so well known, which bears the name of the latter, was commenced in 1826, and Abel was one of the earliest and principal contributors. Abel continued his travels through Germany, Italy, and Switzerland: he arrived at Paris in July, 1826, where he made acquaintance with the most distinguished French mathematicians. He returned home by way of Berlin, in January, 1827, and continued his private studies (which his journey had not interrupted) with an activity of which there is the most extraordinary evidence. In December, 1828, he went to the iron-foundries of Froland, near Arendal, where resided the family of a lady to whom he was betrothed. He was there seized with illness, in January, 1829, and died of consumption on the 6th of April of the same year. M. Holmboe gives the most direct contradiction to the statement which has several times been made, that Abel was neglected by the Swedish government, and died in extreme poverty. He was, when he died, *pro tempore* professor of mathematics, during the absence of Hansteen in Siberia, and would have succeeded to the first vacant chair. A few days after his death, a most honourable invitation arrived from the Prussian government, to remove his residence to Berlin. In the obituary published by Crelle, in his 'Journal,' he states distinctly that the large number of important memoirs which Abel had ready for publication was the immediate reason of the 'Journal' being undertaken.

The Swedish government published the works of Abel in 1839, in two volumes, 4to, and in the French language. The first volume contains all that he published himself (in 'Crelle's Journal' and elsewhere, mostly in German), translated, as just remarked. The second volume contains all that he left in manuscript, finished or unfinished. Nothing can be a severer trial to a mathematician's character than the publication of his loose papers; but, however crude the speculation, Abel is never lowered. He had read comparatively so little, that all which he has left bears the stamp of his own most original power.

The great point to which Abel turned his attention was the theory of elliptic functions. Legendre, who had devoted a large part of his life to the development of these functions, and to the formation of tables by which to use them, found himself, when his toil was just finished, completely distanced by the young Norwegian, of whom no one had ever heard. The frankness of the acknowledgment made by Legendre, and the spirited manner in which the old man set to work to incorporate the new discoveries into his own books, will never be forgotten by any biographer of Abel. It is unnecessary to specify the particular methods of the latter; all who study the subject of elliptic functions are fully aware how much is due to him.

The number of different ways in which Abel turned aside from this subject into questions of development, definite integration, &c., makes the sum total of his labours an astonishingly large quantity, if the age at which he died be considered. He appears to have fully developed in his own mind the subject of the separation of symbols of operation and quantity, not indeed to the extent of founding its results upon an algebraical theory, but to that of giving the theory a wider amount of application. He was a daring generaliser, and sometimes went too far: had he lived, he would have corrected some of his writings. And yet he appears to have been deeply impressed with the notion that a great part of mathematical analysis is rendered unsound by the employment of divergent series.

The celebrated attempt at the proof of the impossibility of representing under one formula the five roots of an equation of the fifth degree involves some rather obscure considerations. It can hardly be said to be generally admitted; perhaps it has not been generally read; for proofs of negative propositions, when complicated, are not usually of a high order of interest. Sir W. Hamilton ('Trans. R. I. A.,' vol. xviii.) has examined Abel's proof at great length, and arrives at the same conclusion, though with some degree of departure from his principle.

ABELARD, or ABAILARD, PIERRE, was born in 1079, at Palais, in Brittany. His father was a man of some rank and property, and spared no expense in the education of Abelard. He left Palais before he was twenty years of age, and went to Paris, where he became a pupil of Guillaume de Champeaux, a teacher of logic and philosophy of the highest reputation in those times. At first the favourite disciple, by degrees Abelard became the rival, and finally the antagonist of Champeaux. To escape the persecution of his former master, Abelard, at the age of 22, removed to Melun, and established himself there as a teacher, with great success. Thence he removed to Corbeil, where his labours seem to have injured his health; and he sought repose and restoration by retirement to his native place, Palais, where he remained a few years, and then returned to Paris; the controversy between the two antagonists was then renewed, and the contests continued till Champeaux's scholars deserted him; and he retired to a monastery. Abelard having paid a visit to his mother at Palais, found on his return to Paris in 1113, that Champeaux had been made bishop of Chalons-sur-Marne.

The dialectic conflicts having now ceased, Abelard commenced the study of divinity, under Anselm, at Laon. Here also the pupil became the rival of his master, and Anselm at length had him expelled from Laon, when he returned to Paris, and established a school of divinity, which was still more numerous than his former schools had been. Guizot says, "In this celebrated school were trained one pope (Celestine II.), nineteen cardinals, more than fifty bishops and archbishops, French, English, and German; and a much larger number of those men with whom popes, bishops, and cardinals, had often to contend, such as Arnold of Brescia, and many others. The number of pupils who used at that time to assemble round Abelard has been estimated at upwards of 5000."

Abelard was about thirty-five or thirty-six years of age, when he formed an acquaintance with Heloise, the niece of Fulbert, a canon in the cathedral of Paris. She was probably under twenty years of age. Abelard fell in love with Heloise, and got himself introduced into the house of Fulbert as the tutor of his niece. The result was a criminal intercourse between the two lovers, which was at length discovered by Fulbert, and Heloise was removed by Abelard to the residence of his sister in Brittany, where she gave birth to a boy.

Fulbert insisted that the wounded honour of his niece should be repaired by a marriage, to which Abelard assented willingly; but Heloise with more reluctance, probably from a fear that his prospects would be ruined, the highest dignities of the church in those days being exclusively bestowed on unmarried ecclesiastics. The marriage took place at Paris, and it was agreed to be kept secret; but Fulbert took pains to make it public, while Heloise, who resided with him, denied it; the consequence of which was that her uncle treated her with great harshness, and Abelard took her away and placed her in the convent of Argenteuil, near Paris. Fulbert, who seems to have thought that he intended to make her a nun in order to get rid of the incumbrance of a wife, vowed a cruel revenge, which he soon found means to execute. The valet having been bribed, admitted Fulbert and his party into Abelard's bed-room by night, when they performed a mutilation upon his person. The perpetrators fled, but the valet and another were taken, and were punished by putting out their eyes and the infliction of a similar mutilation. The canon Fulbert was banished from Paris, and all his property was confiscated. Abelard recovered from the wound; but as the canon law rendered him incapable of holding any ecclesiastical preferment, he entered the abbey of St. Denis as a monk, and Heloise became a nun in the convent of Argenteuil.

The abbot and monks of St. Denis were dissolute, and Abelard reproved them in a course of lectures which he delivered in a cell detached from the abbey; the monks got up a charge of heresy against a work which he wrote on the Trinity, and by a council held in 1121 at Soissons, in which he was not permitted to defend himself, the book was condemned and ordered to be burnt. Abelard had also denied that the abbey of St. Denis was founded by Dionysius of Athens, the Areopagite, as the monks asserted. This enraged the monks and abbots still more, and by a series of persecutions and threats Abelard was compelled to fly from St. Denis and place himself under the protection of the Count of Champagne. In a solitary spot of the territory of Troyes he erected a small oratory of wickerwork and thatch, and commenced giving lectures, to which numerous scholars crowded from far and near; the wickerwork was then changed into a building of stone and timber, and Abelard named it Paraclete, or the Comforter. But persecution still attending him, he left the Paraclete to become superior of the monks in the abbey of St. Gildas of Ruys, near Vannes, in Brittany.

Heloise too was not without her share of troubles. The convent of Argenteuil, of which she had been made prioress, was claimed by an abbot as belonging to his abbey, and Heloise and her nuns were ordered to leave it. Abelard gave them the oratory of the Paraclete, and there they were established, Abelard himself, after eleven years of separation from Heloise, officiating in the ceremony of consecration.

Bernard, abbot of Clairvaux, whose monastery was not far from the Paraclete, having objected to some of the forms of prayer used by Heloise and her nuns, Abelard defended them; and this led to a controversy with the abbot, who eventually accused Abelard of heresy.

Abelard appealed to a council, which was held in the year 1140, in the cathedral of Sens, in Champagne, where he defended himself. But the influence of Bernard was more powerful than the logic of Abelard; he was condemned by the assembly; but he appealed to the Pope, and set out on his journey to Rome, which however he never reached, having been induced by Peter the Venerable to remain in his monastery at Cluni, near Maçon. The Pope confirmed the sentence of the council of Sens, and Abelard was ordered to be confined, all his works to be burned, and he himself was prohibited from writing anything more. Peter the Venerable addressed a remonstrance to the Pope, Innocent II., and the sentence was suspended. During this suspension Abelard was removed to the priory of St. Marcel, near Chalons, for change of air, and there he died April 21, 1142, in the sixty-third year of his age. He was at first interred by the monks of Cluni in their monastery, but his remains were afterwards removed to the Paraclete.

Heloise lived twenty years afterwards as prioress of the Paraclete, and when she died was buried, at her own request, in Abelard's tomb. The remains of Abelard and Heloise continued undisturbed for upwards of 300 years, till in 1497 they were removed to the church of the abbey, and were afterwards shifted to other places. In 1800 they were removed to the garden of the Musée Français at Paris, and in 1817 were placed in the cemetery of Père la Chaise, where they still remain beneath their gothic tomb.

Abelard was a proficient in the scholastic learning of the times, a dexterous dialectician, and a subtle thinker. His theological works gave an impulse to the age, and though his writings are of little value now, they belong to the history of philosophy and the progress of the human mind. The disputes of that age turn largely on verbal trifles, but these disputes form part of the effort of philosophy to emancipate itself from the fetters of religious intolerance. Though Abelard possessed a large share of the learning of the times, it is probable that he knew little of Greek or Hebrew, and yet Heloise, according to his testimony, knew Latin, Greek, and Hebrew. The personal character of Abelard is best shown by his letters and those of Heloise. When he had once transgressed the bounds of his duty by his illicit commerce with Heloise, he lost all self-control, and appears a sensualist. When his misfortunes drove him from the world, he became cold and unfeeling towards the noble-minded woman, whose passion and ardent attachment show that she was capable of the most unbounded devotion to him whom she loved. The most complete edition of their works is 'Petri Abelardi et Heloisæ Conjugis ejus Opera, nunc primum edita ex MSS. Codd. Francisci Ambrosii,' Paris, 1616, 4to. M. Victor Cousin has also published 'Ouvrages Inédits d'Abailard,' Paris, 1836. There are several other editions, some of which have portions, such as the 'Letters,' translated.

(*Biographical Dictionary*, published by the Useful Knowledge Society; *Biographie Universelle*; Bayle, *Dictionary*.)

ABEN ESRA, or with his complete name, *Abraham ben Meir ben Ezra*, a celebrated Jewish scholar, was born at Toledo, probably in 1119, and died about 1194, at the age of seventy-five years. A considerable portion of his life was spent in travelling. He visited Mantua in 1145, and the island of Rhodes in 1156; in 1159 he was in England, and in 1167 at Rome. His celebrity among his contemporaries, as a scholar and as an accomplished writer of the Hebrew language, was very great. Among ourselves Aben Esra has become known chiefly through his great commentary on the Old Testament, which it seems he wrote at different periods, between the years 1140 and 1167. It has been printed in the great Rabbinical editions of the Bible, which have appeared at Venice, Bale, and Amsterdam; and there have been besides many separate editions of single parts of it. Aben Esra wrote also on mathematics, astronomy, philosophy, medicine, philology, and astrology. His treatise in verse on the game of chess, translated by Thomas Hyde (Oxford, 1667, 1694), affords us a specimen of his skill in poetic composition. For an enumeration of the works of Aben Esra, which are still preserved in manuscript in several of the libraries of Europe, see the article ABEN ESRA, by Hartmann, in Ersch and Gruber's 'Encyclopædia.'

ABENCERAGES (*Beni Serraj*), is the name given by Spanish chroniclers and romance writers to a noble family in the Arabic kingdom of Grenada, several members of which distinguished themselves during the period immediately preceding the fall of the Mohammedan empire in Spain. The history of the Abencerages is intimately connected with that of the then reigning dynasty of Grenada. In the year 1423 of our era, died Yussuf III., a wise and valiant prince. He was succeeded by his son Mohammed VII., surnamed Al-Haizari, or the Left-Handed, who followed the example and advice of his father in maintaining friendly relations with the Christian court of Castille, and with the Arab princes on the northern coast of Africa, but lost the affection of his subjects by his pride and tyranny. The discontent which soon manifested itself against the youthful monarch, was for a time kept in check by the watchfulness of his principal chamberlain, Yussuf-ben-Zerragh, then the chief of the noble family which probably derived from him the common designation of the Abencerages. But, in 1427, an open revolt broke out, which had been incited by one of the king's cousins, Mohammed-al-Zaghir. The royal palace, called the Alhambra, was invested by the conspirators. Mohammed VII., disguised as a fisherman, escaped to Africa, where the King of Fez, Mulei-ben-Fariz, kindly received him, while Mohammed-al-

Zaghar accepted the throne of Grenada. Yusuf-ben-Zerragh, with most of the Abencerages, fled from his persecutions to Castile; and some members of the family who had remained at Grenada were put to death. John II, then King of Castile, yielding to the representations and entreaties of Yusuf-ben-Zerragh, negotiated through him a treaty with the King of Tunis, to replace Mohammed VII. on the throne of Grenada. This plan succeeded. Mohammed VII., supported by his two allies, recovered his paternal dominions, and Al-Zaghar suffered death for his treason. But the friendly relations between Grenada and Castile were soon interrupted, in consequence of the refusal of Mohammed VII. to fulfil certain engagements which he had entered into with John II. Hostilities broke out, and John declared himself in favour of Yusuf-ben-Alhamar, an aspirant to the throne, who had formed a strong party in the kingdom of Grenada. Yusuf-ben-Zerragh led the troops of Mohammed VII. to encounter the united forces of his opponents. But he fell in a decisive battle, which he lost, and Yusuf-ben-Alhamar occupied Grenada, while Mohammed VII. fled to Malaga. This second interruption of Mohammed's reign was however only of short duration. He regained his throne a second time after the death of Yusuf-ben-Alhamar, which took place within six months. Fresh hostilities with Castile soon commenced. The frontier provinces of Grenada were much infested by the incursions of the Castilian commander Cazorla. A son of Yusuf-ben-Zerragh, at the head of a select band of valiant knights, drew out his troops against Cazorla, and fell in a battle (1438), in which the Castilians sustained much loss. New disturbances soon broke out in the interior of Grenada. Mohammed VII. was (in 1444) once more dethroned by one of his nephews, Osman-al-Ahnaf. But the claims of the latter to the throne were contested by another aspirant, Mohammed-ben-Ismael, who was supported by John II., and finally, in 1453, prevailed over his opponent. Soon after this, John II. was succeeded in the government of Castile by Henry IV., who was adverse to Mohammed-ben-Ismael, and renewed the hostilities, which, from this time, took a turn decidedly unfavourable to the kingdom of Grenada. The Spanish historians mention that, about this time, an attempt at a revolution was made in Grenada by the Abencerages, which had for its object to confer the crown on one of their own family, Mohammed-ben-Zerragh, and that the Castilian commander, Medina Sidonia, took advantage of these disturbances to occupy the fortress of Gibraltar. The Arabic chronicles say nothing of such an event, and the whole story appears doubtful. If there be any truth in the report, it may be, that the Abencerages made another effort to place Mohammed VII. once more upon the throne, which, from their steady attachment to the cause of that unfortunate prince, seems not improbable.

Of the feuds of the Abencerages with the Zegries, another noble Arabian family in the kingdom of Grenada, who traced their descent from the Mohammedan kings of Cordora, of the massacre of thirty-six Abencerages, caused through the perfidy of their opponents, and how the survivors of the family ultimately embraced the Christian religion, and entered the service of Ferdinand of Castile, a highly interesting story is told in the 'Guerras Civiles de Granada,' by Gines Perez de Hita, a work which professes to be a translation from an Arabic manuscript, but is of doubtful authenticity. The work properly consists of two volumes, but in most editions only the first is reprinted, and copies of the second are said to be now extremely rare even in Spain. An English translation of the first part, by Thomas Rodd, appeared under the title of 'The Civil Wars of Granada,' &c. London, 1863, 8vo.

(Code. *Historia de la Dominacion de los Arabes en España*, vol. iii.)

ABERCROMBIE, JOHN, M.D., Fellow of the Royal Colleges of Physicians and Surgeons of Edinburgh, &c., was born on the 11th of November, 1781. He was the son of the Rev. Mr. Abercrombie, for many years one of the town-ministers of Aberdeen. Abercrombie studied medicine in Edinburgh, and took his degree there on the 6th of June, 1803. He entered into practice subsequently in Edinburgh, and became a Fellow of the Royal College of Surgeons in the year 1805, thus qualifying himself to teach surgery, and taking the highest professional rank in that class. However, though he so far combined the practice of a surgeon with that of a physician even in his early career, according to a common Scottish custom, his disposition was better suited to the pursuits of the pure physician; and into these he fell altogether soon after the decease of the celebrated Dr. Gregory, in 1821. From that time Dr. Abercrombie began to occupy the most prominent position as a practising and consulting physician, not only in Edinburgh but in all Scotland, and he was often called to great distances in the country. He became a licentiate of the Royal College of Physicians in 1823, and in 1824 was admitted a Fellow of the body. While receiving subsequent honours from his colleagues, his high position in after-life also gained for him many complimentary distinctions from other quarters. In 1834 the University of Oxford marked their estimation of his character and talents by conferring on him the honorary degree of Doctor of Medicine—a somewhat rare mark of respect to the alumni of Scottish universities. In the year 1835 Dr. Abercrombie was elected Lord Rector of the venerable Marischal College of Aberdeen. Of the other honours bestowed on him by public and private bodies, we need only notice his appointment to the vice-presidency of the Royal Society of Edinburgh, and

to the office of physician in ordinary to her Majesty for Scotland. In the numerous religious and benevolent societies of Edinburgh he held a high and honourable position. Dr. Abercrombie died suddenly, on Thursday, November 14, 1844, at his house in York Place, Edinburgh. The immediate cause of his death was the bursting of the coronary artery of the heart.

The writings of Dr. Abercrombie contributed no less to the establishment and maintenance of his fame than his very useful career as a practical member of his profession. In the early part of his course he confined his literary labours to the 'Edinburgh Medical and Surgical Journal,' and other periodicals in his own department of science. His first distinct work of moment, leaving out of consideration published cases of disease and similar minor treatises, was one entitled 'Pathological and Practical Researches on Diseases of the Brain and the Spinal Cord,' Edinburgh, 1828, 8vo. In this work, which is characterised by no ordinary degree of purely scientific knowledge, he also gave an indication of the bent of his genius to the study of mind and its relations to the body. He published about the same time another professional volume, and one which elevated him still more highly among the modern cultivators of medicine, styled 'Pathological and Practical Researches on the Diseases of the Intestinal Canal, Liver, and other Viscera of the Abdomen,' Edinburgh, 1828, 8vo. He now began to throw together the medical facts accumulated in the course of his extensive experience and reading, and to examine their bearings on the various metaphysical and moral systems that have been established. The result of his labours is to be found in two works: the one entitled 'Inquiries concerning the Intellectual Powers and the Investigation of Truth,' Edinburgh, 1830, 8vo; and the other called 'The Philosophy of the Moral Feelings,' London, 1833, 8vo. The latter is in some measure a sequel to the first, and the whole composes a view of human nature intellectually and morally, in which the facts of science and the revelations of religion are shown to harmonise. Dr. Abercrombie also published several tracts or essays on religious topics, which manifest the depth of his piety and his earnestness in the promotion of the welfare of his fellow-men. In the disruption of the Scottish Established Church, in 1843, Dr. Abercrombie took part with the Free Church, of whose eldership he was, as he had been for many years in the Established Church, one of the most active and exemplary members. For range of acquirements Dr. Abercrombie perhaps stood unequalled among the Scottish physicians of his day. He earned by his writings a name that will not soon be forgotten, and he will long be remembered, as a private individual, for his piety and benevolence.

ABERCROMBY, SIR RALPH, a British general, distinguished for many gallant and important services. He was the son of George Abercromby, Esq., of Tullibodie, in Clackmannanshire, where he was born in 1738. After receiving a liberal education, he entered the army in March, 1756, as a cornet in the 3rd regiment of Dragoon Guards. By the year 1787 he had reached the rank of major-general. When the war with France broke out, in 1793, Abercromby was sent to Holland, with the local rank of lieutenant-general, in the expedition commanded by the Duke of York. His bravery during the prosperous commencement of this attempt was not more conspicuous than the humanity with which he exerted his best energies in the disastrous sequel to alleviate, as far as possible, the miseries of the sick and wounded troops, whom he was charged to conduct in their retreat.

Soon after his return to England, in April, 1795, he was made a Knight of the Bath; and in August of the same year he was sent out to the West Indies, as commander-in-chief of the forces there, and by February, 1797, he had taken in succession Grenada, Demerara, Essequibo, St. Lucia, St. Vincent, and Trinidad. He then returned to Europe, having been previously raised to the rank of lieutenant-general, and on reaching England he received the command of the Scots Greys, and the appointment of lieutenant-governor of the Isle of Wight. In 1798, on the breaking out of the rebellion in Ireland, Sir Ralph proceeded thither as commander-in-chief; but after a short time he was transferred to the chief military command in Scotland, and the governorship of Fort Augustus and Fort George. He was soon however called again to active service abroad, on occasion of the second expedition sent against the French in Holland, in August, 1799, with the conduct of which he was entrusted before the arrival of the Duke of York. It proved, as is well known, equally unfortunate with the former; but it did not the less afford many opportunities to General Abercromby of displaying his activity, intrepidity, and high military talent. In 1801 he was employed to command the English forces despatched for the relief of Egypt; and, in spite of the utmost exertions of the French to prevent his design, he effected the landing of his troops, on the 8th of March, at Aboukir, though not without the loss of 2000 men. A few days after, the enemy made a general attack upon the invading forces, as they lay encamped near Alexandria, but were speedily repulsed. On the 21st was fought, on the same ground, the more obstinate and sanguinary engagement, usually designated the battle of Alexandria, in which the French were again driven back at all points. Sir Ralph was unhurt and severely wounded at an early period of the action, by one of the enemy, whom notwithstanding he disarmed, delivering his sword to Sir Sidney Smith, whom he soon after met. Then remounting his

horse, he concealed his situation from those about him till long after the action was over, when he fainted through weakness and loss of blood. The injuries which he had received, and which he thus nobly bore in silence, were past the skill of surgery: he was immediately conveyed to the ship of the Admiral, Lord Keith, and there lingered till the 28th, when he expired. His body was interred in the burial-ground of the Commandery of the Grand Master, under the walls of the Castle of St. Elmo, near the town of La Valetta, in Malta. A monument has since been erected to his memory, by order of the House of Commons, in St. Paul's Cathedral. Sir Ralph Abercromby, whose private character was as excellent as his public merits were great, left four sons. His widow was created Baroness Abercromby, with remainder to her issue male by her late husband. A pension of 2000*l.* a year was also settled upon Lady Abercromby and the three succeeding inheritors of the title, of whom the present baron is the last.

***ABERDEEN, GEORGE HAMILTON GORDON, EARL OF**, was born January 28, 1784, and succeeded to the title on the death of his grandfather in 1802: he was created Viscount Gordon in the peerage of the United Kingdom in 1814, and it is by this title that he sits in the House of Lords. After completing his education, the Earl of Aberdeen spent some time in travelling. Both in Greece and Italy he paid considerable attention to the study of the remains of antiquity; and he was one of the original members of the Athenian Club. These circumstances gave the point, such as it was, to Lord Byron's notice, in his 'Hours of Idleness,' of "the travell'd thane Athenian Aberdeen." The result of the earl's antiquarian pursuits was given to the world in an 'Introduction' to Wilkins's translation of Vitruvius's 'Civil Architecture,' 1812; and this 'Introduction' having been revised and extended, his lordship published as a distinct work in 1822 under the title of 'An Inquiry into the Principles of Beauty in Grecian Architecture.' In 1813 the earl was sent to Vienna on a special mission, and he was instrumental in obtaining the adhesion of Austria to the alliance against France, the preliminary treaty for which he signed as the representative of England, at Töplitz, in October of that year. As the English Ambassador-Extraordinary to the Emperor Francis I., he shared in the negotiations which preceded and followed the return of Napoleon to France from Elba. Subsequently to his retirement from the embassy, the Earl of Aberdeen was known in politics as a steady adherent of the tory party, and on the formation of the Duke of Wellington's first administration in January, 1828, the earl accepted the office of Secretary of State for Foreign Affairs, which he held till the resignation of the ministry in November, 1830. His first act in office was to express his disapproval of the policy which led to the destruction of the Turkish fleet at Navarino; and the passage in the king's speech (January 29, 1828), which termed that an "untoward event," and expressed the determination of the government to uphold the independence of Turkey, has been generally attributed to him. In this his first term of office it fell to the lot of the earl to assist in establishing the independence of Greece, and to acknowledge the "constitutional monarchy" of France as the result of the revolution of 1830: and the prompt and frank recognition of both of these measures did much to secure the good-will of those countries. In the short-lived administration of Sir Robert Peel (November 1834 to April 1835) the Earl of Aberdeen held the office of Colonial Secretary. When Sir Robert Peel was restored to office, September 1841, the Earl of Aberdeen again received the appointment of Foreign Secretary, and continued to hold it until the defeat of the ministry in July 1846. His administration of foreign affairs may be said generally to have been marked by a cautious pacific policy, but at the same time there is no other evidence than the heated language of political opponents to show that he was ever neglectful of the honour and dignity of the country. In the dispute with the United States on the Oregon question he took a firm yet conciliatory position, and the credit of the satisfactory settlement, of what at one time threatened to be a serious difficulty, is due to him. At a very early period, as is shown by his despatch to Lord Heytesbury, the English ambassador at St. Petersburg, dated Oct. 31, 1829, the Earl of Aberdeen had suspected if he had not clearly penetrated the designs of the Emperor Nicholas upon Turkey; and it was probably with a view more effectually to counteract those designs, that he laboured, during his possession of office, to strengthen as much as possible the alliance with Austria. From his long connection with Sir Robert Peel, the Earl of Aberdeen had come to be regarded not merely as the exponent of that statesman's views on foreign policy, but as, next to the Duke of Wellington, his chief supporter and representative in the House of Lords; and on the death of Sir Robert, the earl was selected as the president of the great public meeting of his friends and admirers held at Willis's Rooms, July 23, 1850. From this time the Earl of Aberdeen may be regarded as virtually the head of what was known as the Peel party; and on the defeat of the Derby ministry, in December 1852, he was entrusted with the formation of the new administration. This he effected by inducing a number of the leaders of the whigs to unite with his own followers, thus forming a coalition ministry which lasted rather more than two years, and is likely to remain long a theme of as much controversy as other coalition ministries, whose acts and policy have so often exercised the pens and tongues of political writers and debaters. As

at every other period of his political life, the earl was as prime minister earnestly bent on the maintenance of peace; yet, despite of his best efforts, "the country drifted into war," and a war, the magnitude of which few probably better appreciated than himself. But Lord Aberdeen, even after war was officially declared, clung to an early restoration of peace, and rested for that purpose on his favourite expedient of the Austrian alliance, more than was probably wise or justifiable—at any rate more than the public liked to see; and this, with the general feeling that the war was not being prosecuted with the vigour which its importance and the character of the country demanded, deprived the Aberdeen ministry of all support, except from their immediate followers; so that when the earl resolved to treat Mr. Roebuck's motion (January 29, 1855) for an inquiry into the state of the army before Sebastopol, as a vote of want of confidence, and Lord John Russell seceded from the Cabinet, the motion was carried by a majority greater probably than ever before defeated the most unpopular ministry. The earl at once resigned, and has not during the remainder of 1855 taken any prominent part in public affairs. The war overturned all the earl's calculations, and arrested most of those measures of social and political improvement, which he had taken an early opportunity of announcing as the basis of his system of policy. Yet his administration will be remembered as having effected an important change in the government of India; largely and beneficially modified the exclusive system of Oxford University; carried several measures tending to improve the condition of the people; extended still further the principles of free trade; and laid the foundation of a better system of admission to, and improved management of the civil service of the country.

The Earl of Aberdeen has never been eminent as an orator. His influence in the House of Lords has been due to his high personal character, administrative ability, and social position. With foreign potentates, with whom he has been brought into contact as a minister, he has always been a favourite. Since the publication of his work on Grecian architecture, the Earl of Aberdeen has not publicly evinced any partiality for literature or its practitioners; and his government is rather badly distinguished by his having appropriated to decayed members of aristocratic families the larger portion of the fund previously set apart for the reward of persons eminent in literature and science. His lordship, however, holds various honorary offices usually bestowed on the patrons of intellectual pursuits: he is Chancellor of King's College, Aberdeen, President of the British Institution, and a governor of Harrow School and the Charterhouse; and for some years he was President of the Society of Antiquaries.

ABERNETHY, JOHN, a distinguished surgeon, born in the year 1763-4, either at the town of Abernethy in Scotland, or at that of Derry in Ireland, for each claims the honour of having been the place of his birth. He died at Enfield, after a protracted illness, on the 18th of April, 1831, in the sixty-seventh year of his age. In early youth he removed from the place of his birth, and resided with his parents in London, in which city his father was a merchant. He received the elements of grammatical and classical instruction at a day-school in Lothbury, and also attended school at Wolverhampton. At the usual age he was apprenticed to Sir Charles Blick, surgeon to St. Bartholomew's Hospital, under whom, and especially in the wards of that hospital, he had ample opportunities of acquiring a thorough knowledge of his profession, of which he availed himself with diligence. Competent judges, who observed at this early period the qualities of his mind and his habits of study, predicted that he would one day acquire fame, if not fortune. Though he appeared before the public early as an author, and though his very first works stamped him as a man of genius, endowed with a philosophical and original mind, yet he did not rise into reputation nor acquire practice with rapidity. In 1786 he succeeded Mr. Pott as assistant-surgeon to St. Bartholomew's Hospital, and shortly afterwards took the place of that gentleman as lecturer on anatomy and surgery. For a considerable time he had but few pupils, and he was at first by no means a good lecturer, his delivery being attended with a more than ordinary degree of hesitation. On the death of Sir Charles Blick, his former master, he was elected surgeon in his room; and subsequently St. Bartholomew's Hospital obtained under him a reputation which it had never before acquired. On the 9th of January, 1800, Abernethy married Miss Ann Threlfall.

Abernethy was a pupil of John Hunter, and the earnestness and delight with which, at an early age, he received the lessons of this his great master, were indications of the soundness of his own judgment. It was from this profound and original thinker, who exercised an extraordinary influence over the understanding, tastes, and pursuits of his young pupil, that Abernethy derived that ardent love of physiology, by the application of which to surgery he was destined to convert a rude art into a beautiful science. He made himself thoroughly acquainted with anatomy, but it was that he might be admitted into the then new world of physiology; he studied structure, but it was that he might understand function; and the moment he had obtained a clear insight into these two sciences, he saw the applications of which they were capable to the treatment of disease. From that moment he looked with contempt on the empiricism then almost universal in surgery; he ridiculed its jargon; he exposed the narrowness of its principles, if it be at all allowable to designate by

such a term the ignorant dogmas which alone regulated the practice of the surgeon. But he did not content himself with deriding what truly deserved contempt; he laid the foundation of, and mainly contributed to build up a new edifice. By the diligent study of nature, and by continual reflection on what he saw, and, as he himself expressed it, the concatenation of what he saw, he reduced to order what he found a chaos. Hitherto the surgeon had looked upon the class of diseases which it was his part to treat, diseases which almost always have a local seat, as diseases which have also a local origin, and consequently as diseases which are to be cured by local applications. To Abernethy belongs the great merit of first perceiving, in its full extent, the utter incompatibility of this notion with the true phenomena of disease, and the inertness, or, when it ceased to be inert, the mischievousness of the treatment that grew out of it. In a work abounding with acute and original observation, and exhibiting comprehensive and philosophical views, entitled, 'The Constitutional Origin and Treatment of Local Diseases,' he lays down and establishes this great principle:—That local diseases are symptoms of a disordered constitution, not primary and independent maladies; and that they are to be cured by remedies calculated to make a salutary impression on the general frame, not by topical dressing, nor any mere manipulations of surgery. This single principle changed the aspect of the entire field of surgery, and elevated it from a manual art into the rank of a science. And to this first principle he added a second, the range of which is perhaps somewhat less extensive, but the practical importance of which is scarcely inferior to that of the first—namely, that this disordered state of the constitution either originates from, or is rigorously allied with derangements of the stomach and bowels, and that it can only be reached by remedies which first exercise a curative influence upon these organs. The benefit daily and hourly conferred upon mankind by the elucidation and establishment of these two principles, both by the prevention and the mitigation of disease and suffering, it were vain to attempt to estimate, and it is not easy to pay to their author the debt of gratitude which is his due.

Further, the same philosophical view of the structure and functions of the human frame, which enabled this acute physiologist so greatly to improve the theory and practice of surgery, suggested, and at the same time armed him with the courage to perform, two operations in surgery bolder than any that had ever before been achieved, and the reputation of which has since been attended with splendid success—namely, the tying the carotid and the external iliac arteries. The announcement of the performance of these capital operations at once established his reputation as a surgeon, and increased the esteem of the English school throughout Europe.

Great however as was the reputation which this distinguished man acquired as an anatomist, physiologist, and surgeon, it is probable that he owed his celebrity chiefly to his success as a teacher. Gifted with the genius to master and extend his science, he was endowed with the still rarer capacity of communicating to others in a clear, succinct, impressive, and fascinating manner, whatever he himself knew. Easy and fluent, yet not inelegant—abounding with illustration and anecdote, yet methodical—logical, yet often witty, and occasionally humorous almost to coarseness—seldom impassioned, yet always impressive, and never allowing the attention of his audience to flag for a single moment,—it was rare, indeed, that he failed to convince whoever heard him, and as rare that he failed to make whoever was convinced a decided partisan. Nevertheless, a highly competent witness, speaking apparently from a careful and mature examination of the impression made upon his own mind by the prelections of his master, gives the following account, which, if true, is decidedly unfavourable as to the ultimate result of the mode and spirit of his lecturing. "He so eloquently expounded some of the highest truths," says Dr. Latham; "he so nicely disentangled the perplexities of many abstruse subjects; he made that so easy which was before so difficult,—that every man who heard him feels perhaps to this day that for some important portion of his knowledge he is indebted to Mr. Abernethy. But he reserved all his enthusiasm for his peculiar doctrine; he so reasoned it, so acted it, and so dramatised it (those who have heard him will know what I mean); and then in his own droll way he so disparaged the more laborious searchers after truth, calling them contemptuously 'the Doctors,' and so disported himself with ridicule of every system but his own, that we accepted the doctrine in all its fulness. We should have been ashamed to do otherwise. We accepted it with acclamation, and voted ourselves by acclamation the profoundest of medical philosophers, at the easy rate of one half hour's instruction. The great Lord Chatham, it is said, had such power of inspiring self-complacency in the minds of other men, that no man was ever a quarter of an hour in his company without believing that Lord Chatham was the first man in the world, and himself the second; and so it was with us poor pupils and Mr. Abernethy. We never left his lecture-room without thinking him the prince of pathologists, and ourselves only just one degree below him."

If this were, indeed, the ordinary result, then it must be admitted that the excellence of Mr. Abernethy, as a teacher, was, after all, but of a secondary order. He only teaches well who sends his pupil away thirsting after truth, determined to search for it, feeling that he has a clear conception of the manner in which he is to get at it, and

at all events in no mood to be satisfied with anything but the entire truth.

The private character of Mr. Abernethy was blameless. He was highly honourable in all his transactions, and incapable of duplicity, meanness, artifice, or servility. His manners in the domestic circle were gentle, and even playful; he gave to those about him a large portion of what his heart really abounded with—tenderness and affection; and on his part he was tenderly beloved by his children and by all the members of his family. In public, and more especially to his patients, his manners were coarse, capricious, churlish, and sometimes even brutal. It would not be difficult to account for this anomaly were there any use in pursuing the investigation: his conduct in this respect merits unqualified censure.

For a list of the various Tracts published by Mr. Abernethy, see Watt's 'Bibliotheca Britannica.' A collected Edition of his Surgical Works appeared in 1815, 2 vols. 8vo. ('Memoirs of Abernethy,' by George Macilwain. 2 vols. 8vo. London, 1853.)

ABINGER, LORD. *James Scarlett* was a native of Jamaica, where his family was wealthy and of long standing. He was the second son of Robert Scarlett, Esq., and was born in or about the year 1769. His mother's name was Elizabeth Anglin. The family estates went, it may be presumed, to the eldest son; a third son, who also remained at home, and followed the profession of the law in Jamaica, became Sir William Anglin Scarlett, and Chief Justice of Jamaica, and died there, after having held that office for many years. James was at an early age sent to England. Having finished his elementary education, he was, about the year 1786, entered a Fellow Commoner at Trinity College, Cambridge; and he was also, a year or two after, admitted a student of the Inner Temple. He took his degree of B.A. in 1790; was called to the bar 8th July, 1791; and graduated M.A. in 1794. His success at the bar was very decided from the first, and every year added to his reputation and his emoluments. It was soon discovered that, from whatever cause, no young barrister gained so large a proportion of verdicts. Even while he was still a junior counsel, he was very frequently entrusted with the sole conduct of important cases. At last, in 1816, he received a silk gown; and from that date he was recognised as the leader of his circuit (the Northern), and as occupying also a foremost place in Westminster Hall.

He had made an attempt to be returned to parliament for the borough of Lewes at the general election in October, 1812, but was defeated by Mr. George Shiffner, who was brought in, as second member, by a majority of 164 to 154; and he failed also in a second attempt on the same borough when a vacancy was occasioned in 1816 by the death of the other member, Mr. T. R. Kemp, being then defeated by Sir John Shelley. He was first introduced to the House of Commons in 1818, as one of the members for the city of Peterborough, under the patronage of Earl Fitzwilliam. He did not however make a figure in parliament corresponding to his eminence at the bar; nor was he a frequent speaker, although he supported both Sir Samuel Romilly and Sir James Macintosh in their efforts to mitigate the severity of the criminal law, and also occasionally took part in debates on financial subjects.

He was returned again for Peterborough at the general election in 1820; but he resigned his seat in 1822 to stand for the University of Cambridge, when, however, he was left at the bottom of the poll. Upon this he was re-elected for Peterborough, but not till after a contest with Mr. Samuel Wells. Up to this time he had been considered as distinctly belonging to the Whig party, although to the most moderate section of it; but his opinions gradually assumed more of a Conservative complexion, and when the new Tory or mixed administration of Canning came into power in April, 1827, Mr. Scarlett, having been again returned for Peterborough at the general election in the preceding year, accepted the office of attorney-general. He was at the same time knighted. Having been once more returned for Peterborough he retained his place throughout the administration of Lord Goderich; was succeeded by Sir Charles Wetherell when the Duke of Wellington became premier in January, 1828; but was reinstated in May, 1829, upon the dismissal of Sir Charles for his opposition to the Roman Catholic Emancipation Bill; and, having been returned for Maldon at the general election in 1830, he remained attorney-general till the accession to office of the Whigs in November of that year, when he was succeeded by Mr. (afterwards Lord) Denman.

At the general election in May, 1831, Sir James Scarlett was returned to parliament for Cookermouth. At the next, which took place after the passing of the Reform Bill, in December, 1832, he was returned, after a contest, for Norwich, along with Lord Stormont (now Earl of Mansfield). When this parliament was dissolved in December, 1834, on Sir Robert Peel being appointed premier, Sir James Scarlett was made Chief Baron, and a peer by the title of Baron Abinger, of Abinger, in the county of Surrey, and of the city of Norwich.

Lord Abinger died of a sudden attack of illness at Bury St. Edmunds, while on the circuit, on the 7th of April, 1844. He had been twice married; first in August, 1792, to the third daughter of Peter Campbell, Esq., of Kilmorey, in Argyleshire, who died in March, 1829; secondly, in September, 1843, to Elizabeth, daughter of Lee Steere Steere, Esq., of Jays, Surrey, and widow of the Rev. H. J. Ridley, of Ockley. By his first wife he had three sons and two daughters. His eldest son succeeded to his title and estates; his eldest daughter, the

wife of Lord Campbell, was created a peeress in 1836 by the title of Baroness Stratheden.

Lord Abinger was a skilful and dexterous rather than an eloquent advocate, and while on the bench he was more distinguished for the clearness with which he summed up a case to a jury than for the profoundness or subtlety of his legal views. Yet he was considered also a sound and good lawyer. In the great art of gaining verdicts he was unrivalled; and no practitioner at the bar had ever before received so large a sum in fees in any year as he drew in the height of his practice. His conduct as attorney-general under the Tories in 1829, when he filed a number of criminal informations against the opposition newspapers, naturally exposed him to some severe animadversions from those who still continued attached to the more democratic political creed which he had originally been accustomed to profess.

(*Genl. Mag.* for June, 1844.)

ABINGTON, FRANCES, was born in 1731, or, according to some, in 1738. Her maiden name was Barton, and her father, although of respectable descent, is said to have been only a common soldier. Early in life she obtained her livelihood by running on errands, and one of her places happening to be at a French milliner's, she soon contrived to pick up the language. She was afterwards a flower-girl in St. James's Park, London. Her first appearance on the stage was as Miranda in the 'Busy Body,' at the Haymarket Theatre, on August 21st, 1755. Not making much impression on the public, she went to Dublin, previously to which she was married to Mr. Abington, who had become known to her as her music-master, and from whom she separated in a few months. At Dublin she made her first step to fame, as Kitty, in 'High Life below Stairs,' which was brought out for the benefit of Tate Wilkinson, who has left an animated account of her great success. The more fashionable theatre in Crow-street was soon deserted for the obscure house in Smock Alley; the head-dress that Mrs. Abington wore was copied by every milliner, and the "Abington cap" in a few days figured in every shop window, and on the head of every lady who had any pretensions to fashion. Mrs. Abington continued a first-rate favourite at both the Dublin theatres until her return to England, in 1765, when she was warmly welcomed by Garrick. In a few seasons, by the retirement of Mrs. Pritchard and Mrs. Clive, the field was left open to her, and she quickly became the first comic actress of her day; a station which she long retained. Her last public appearance was on the 12th of April, 1799. She died at her house in Pall Mall, London, 4th March, 1815. She left a legacy to each of the theatrical funds.

ABLANCOURT, PERROT NICOLAS D', one of the most esteemed French translators of the classic authors in the 17th century, was born at Chalons-sur-Marne, in Champagne (now in the department of Marne), in 1606, and died at Ablancourt in November, 1664. Ablancourt commenced his career at the bar, but quitted it almost immediately for literary pursuits; and at the same time abandoned the Protestant creed, in which he had been brought up. He returned however to his first belief; for six years afterwards he studied with the deepest attention, under the learned Stuart for three years, at the end of which time he abjured the Roman faith, and immediately after retired into Holland, to be near the learned Saumaise, and enjoy the society of that famous scholar; perhaps also to let the scandal of his second abjuration die away. From Holland he repaired to England, and thence to Paris, where he became intimately acquainted with Patru, one of the most celebrated writers and distinguished lawyers of that day, and also with other eminent literary characters. In 1637 he was received a member of the French Academy, and gave his whole attention to the translation of the works of Tacitus; but being soon obliged to quit Paris on account of the war which broke out, he went to reside at his seat at Ablancourt, in Champagne, for the remainder of his life, with the exception of the time he spent in Paris during the printing of his works. Of his numerous translations, those most known are, the whole of Tacitus, of which there have been ten editions; four orations of Cicero; Cæsar; the Wars of Alexander, by Arrian—the most esteemed of his translations as regards the style; Thucydides; the Anabasis of Xenophon; and an imitation, rather than a translation, of Lucian. During his life he appears to have been held in general estimation as a translator, but his versions are very far from accurate, and are now obsolete.

In 1662 Colbert proposed him to Louis XIV. as the historian of his reign, but Louis would not have a Protestant to commemorate its events. However, he did not deprive him of his pension of 120*l.* per annum, which had been granted to him as historiographer. Ablancourt's life was written by his friend Patru.

ABRAHAM (originally *Abram*), the great ancestor and founder of the Jewish nation, and the first depository of the divine promises in favour of the chosen people. He was the son of Terah, the eighth in descent from Shem, the eldest son of Noah, and was born probably at Ur, a town of Chaldaea, about 2000 years before the Christian era. His history occupies about a fourth part of the book of Genesis, namely, from the 11th to the 25th chapters inclusive. Having married Sarah (originally Sarai), the daughter of his brother Haran, he accompanied his father and his nephew Lot to Haran, where Terah died; and then, at the command of God, taking Lot along with him, he left Haran, and proceeded towards the south till he reached the plain of Moreh, in Canaan. The epoch of the commencement of this

journey, which happened when he was 75 years old, is called by chronologists the Call of Abraham. Soon after, a famine forced the patriarch to make a journey into Egypt, from which country, when he had returned to the place of his abode in Canaan, he found that the increase of his own flocks, and those of his nephew, made it necessary that they should choose separate settlements; and accordingly, by mutual consent, Lot withdrew towards the east, and established himself among the cities in the plain of Jordan, while Abraham removed to the plain of Mamre, in Hebron. He had reached his 99th year, and his wife (who had been hitherto barren) her 89th, when God appeared to him, and declared that there should yet spring from them a great nation—a promise which was confirmed by the birth of Isaac the following year. The severe trial of Abraham's faith, in the command given him to sacrifice this beloved son, so beautifully related in the 22nd chapter of Genesis, is familiar to every reader. Some time before this he had given another striking proof of his submission to the divine will and his implicit reliance on the promises of God, in his dismissal of his son Ishmael, whom he had by Hagar, the Egyptian bondswoman, on the assurance of his Heavenly Father, that of him too would he make a nation, because he was the patriarch's seed. The Arabs claim to have sprung from Ishmael, as did the Hebrews from Isaac. After the death of Sarah, at the age of 127, Abraham married Keturah, and by her had six other sons. The venerable patriarch died at the age of 175, and was buried, by Isaac and Ishmael, in the tomb which contained his first wife in Mamre.

ABU-BEKR, properly called *Abdallah-Atik-ben-Abi-Kohafah*, but better known under the name of *Abu-Bekr* (that is, 'Father of the Maiden,' in allusion to his daughter Ayesah, whom the Arabian prophet married very young), was the first kalif or successor of Mohammed in the government of the new empire founded by him. Mohammed died in A.D. 632, without leaving any male issue. The succession to the sovereignty was at first contested between his father-in-law, Abu-Bekr, and Ali-ben-Abi-Taleb, his cousin-german, who was also, through marriage with the prophet's daughter Fatima, his son-in-law. Between the two rivals themselves the dispute was settled without an appeal to arms. Abu-Bekr prevailed, and Ali, though disappointed, submitted to the authority of his successful opponent. But among the Mohammedans the respective claims of the two competitors became a point of perpetual controversy, and gave rise to the great division of the whole Mohammedan community into Sunnites and Shiites; the former asserting the right of Abu-Bekr and his two successors, Omar and Othman, while the Shiites condemn these three kalifs as unlawful intruders, and maintain the exclusive right of Ali-ben-Abi-Taleb and his lineal descendants to the commandship over the Faithful. [ALI-BEN-ABI-TALEB.]

After the death of Mohammed, only the three important towns of Mecca, Medina, and Tayef declared themselves for Abu-Bekr. It was the first and principal object of the newly-appointed sovereign to establish his authority in the other parts of Arabia, especially in the countries of Yemen, Tehama, Oman, and Bahrain. In reducing to obedience these refractory provinces, Abu-Bekr was powerfully supported by Omar, afterwards his successor, and especially by Khaled-ben-Walid, a military commander of extraordinary courage and presence of mind. Besides this rebellion of some of its members, the Mohammedan state had to encounter other difficulties from several new pretenders to prophetship. Mosailamah seems to have been the most formidable of these enemies of the Islam. He was however defeated by Khaled, and killed in a battle near Akrah. This conflict is memorable on another account. The precepts promulgated at different times by Mohammed had till then been in a great measure preserved by oral tradition, or handed about in fragments written on palm-leaves, or pieces of parchment. Many of the personal associates of Mohammed, who were from memory familiar with his doctrine, fell in the war with Mosailamah; and Abu-Bekr, in order to obviate any future uncertainty about the genuine text of the ordinances, caused all the fragments to be collected, the passages remembered by heart to be written out, and the whole to be embodied in the volume known under the title of the Koran.

Abu-Bekr, anxious to increase the Mohammedan dominions, dispatched Khaled into Irak, where he subdued several of the frontier provinces along the Euphrates. Two other commanders, Yezid-ben-Abi-Sofyan and Abu-Obeidah, entered Syria and defeated the troops of the Grecian emperor Heraclius. After a decisive victory over a Greek army of 70,000 men, near Ajnadin, the capture of Damascus by the united forces of Abu-Obeidah and Khaled established the dominion of the Arabs over Syria, and in fact over the whole country between the Euphrates and the Mediterranean.

On the day of the capture of Damascus (August 23rd, 634) Abu-Bekr died, at the age of 63 years. Not one of his three sons, Abdallah, Abd-al-rahman, and Mohammed, survived him; and in his will he appointed Omar as his successor. Eastern writers praise the simplicity of his habits and manners, and his disregard of wealth and the luxuries or even comforts of life. Every Friday he distributed all the surplus of his income among such persons as he thought deserving of it. His short reign, of little more than two years, forms an eventful epoch in the history of Mohammedanism; and oriental authors have vied with one another in recording details about the early conquests of the armies of the Faithful. The volume of the great Arabic

chronicle of Tabari, edited and translated by Koegarten (Greifswald, 1831, 4to), is entirely occupied with only the earlier part of Abul-Fakr's reign; the latter part, or the history of the conquests of Irak and Syria, still remains unpublished. A highly interesting account of the siege and capture of Damascus, derived chiefly from the Arabic chronicle of Wakedi, may be found in Oockley's 'History of the Saracens.'

ABULFARAGIUS (properly *Mar Gregorius Abulfaraj*, also called *Gregorius Barhebraeus*), was an oriental writer of much celebrity, who lived in the 13th century of our era. He was born in 1226, at Malatia, or Melitè, a town situated near the western bank of the Euphrates in Lesser Asia, where his father, Aaron, followed the profession of a physician. Though the offspring of a Jewish family, he embraced the Christian belief, to which, notwithstanding a surmise to the contrary, he continued faithful till his death. Abulfaraj studied theology, philosophy, and medicine. He spent the greater part of his life in Syria. At the early age of twenty he was appointed bishop of Guba, and subsequently of Aleppo. In 1266 he was elected Primate of all the Jacobite Christians in the East. He died at Meragha in Azerbaijan, in 1294.

Abulfaraj was the author of a great number of Arabic and Syriac works, but the composition through which his name has become best known among us is a universal history, written in Syriac, but translated by the author himself into Arabic, to which he has given the title of 'History of the Dynasties.' It is divided into ten sections: the first of which gives some account of the patriarchs; the second, of the Jewish commonwealth under the judges; and the third, of the Jews under the kings; the fourth contains the history of the Chaldeans; the fifth, of the Persians; the sixth, of the Greeks; the seventh, of the Romans; the eighth, of the Christian Grecian empire; the ninth, of the Mohammedan Arabs; and the tenth, of the Mogols. In the early part of the work many errors are observable, into which the author has fallen through his ignorance of the classical languages and literature. Though written by a Christian, this work is held in high esteem among Jews and Mohammedans in the East. To us its chief interest consists in the curious details which it contains concerning the history of science among the Arabs, particularly under the three Abbassid kalifa, Mansur, Harun-al-Raschid, and Mamun. An edition of the Arabic text of the 'Dynasties,' accompanied with a Latin translation, was published by Edward Pococke, at Oxford, in 1693, 4to.; the Syriac text, likewise with a Latin version, was edited by Bruns and Kirsch, at Leipzig, in 1789, 4to.

ABUL-FAZL, son of Sheikh Mobarik, was the vizir of the celebrated Mogul emperor Akbar, who reigned from A.D. 1555 to 1605. In 1602, when returning from an expedition to the Deccan, he was murdered in the district of Nurwar by banditti, and, it was suspected, by the contrivance of Akbar's son Selim, who afterwards succeeded his father on the throne, under the name of Jehangir. The extensive and valuable works which Abul-Fazl found leisure to write, have insured him a conspicuous place among the best authors, as well as among the most enlightened statesmen, of the East. His principal work is the 'Akbar-Nameh,' which exists as yet only in manuscript, and contains a history of the reign of the sovereign whom he served, and to whom he was most devotedly attached; this history Abul-Fazl carried down till very near the time of his own death, and it was afterwards continued by Sheikh Enaïetullah in a supplement, entitled 'Takmilah-i-Akbar-Nameh.' But the work which has most contributed to make his name familiar to us is the 'Ayn-i-Akbari,' or Institutes of Akbar, a statistical and political description of the Mogul empire, and of the several branches of its administration. Abul-Fazl was a friend to the oppressed Hindoos. In his Persian prose translation of the great Sanscrit heroic poem, the 'Mahabharata,' Abul-Fazl has left us a curious and valuable monument of the persevering diligence which a Mohammedan statesman deemed it worth his while to bestow on the literature of the conquered nation, in the government of which he was called to assist by his counsels. Another of his works, less interesting to us, though much esteemed in the East on account of its refined and florid style, is the 'Ayari-Danish,' or Touchstone of Intellect, a Persian translation from the Arabic of the well known fables of Æsop, or Pilpay.

ABUL-FEIDA, or, with his full name, *Emad-eddin Abulfeda Ismail-ben-Abi*, was the descendant of a collateral branch of the Ayubite dynasty, which Saladin (Salah-ed-Deen) in 1192 appointed to the sovereignty of the three towns, Hamah, Maarrah, and Barin, in Syria, and which continued to hold that dignity even after the Bahrite Mamluks under Azz-eddin Itek, had in 1254 put an end to the Ayubite dominion over Syria and Egypt. Abulfeda was born in 1275 at Damascus, whether his family had fled before the Mogols, who then threatened Syria with an invasion, but were successfully repelled by the Bahrite sultan Ibarak. Mohammed ben-Bassel, once sent as ambassador to the German emperor Frederick II., is mentioned as having been one of his teachers. He began at an early age to display a warlike disposition, and to join in the expeditions against the remains of the Christian kingdom founded in Syria by the Crusaders. In 1295 he was present at the siege of Markeb; in 1299 at that of Tripoli; and in 1291 at the taking of Akka (St. Jean d'Acree); at a later period (1299) he accompanied his cousin, Modhaffar then the reigning prince

of Hamah, on an expedition against the Mogols. After the death of Modhaffar, in 1299, the Bahrite sultan Nasir declared the fief which the Ayubites held under him to have become extinct, and assigned a small pension for their maintenance. When however, ten years afterwards, Sultan Nasir became personally acquainted with Abulfeda, he not only restored to him (1310) the former dignity of his family, but soon after, as an acknowledgement for his services, raised him to the rank of malik, or king. In 1316 Abulfeda was obliged to give up the town of Maarrah and its territory to the Arab Emir Mohammed-Ben-Ism, who demanded this boon as a reward for his defection from the Mogols; but he retained Barin and Hamah, and with his troops often rendered military services to Sultan Nasir. He continued on the most friendly terms with Nasir till he died in 1331. The numerous works which he has left behind attest the extent and variety of his information. Among them we find mentioned works on medicine, Mohammedan jurisprudence, mathematics, and philosophy: those most commonly known are—a treatise on geography, entitled 'Takwim-al-boldan,' or 'Disposition of the Countries;' and an historical work called 'Mukhtasar fi akhbar al-bashar,' that is, 'A Compendium of the History of Mankind.' The geographical treatise consists of an introduction and twenty-eight sections on particular countries, each containing, first, a table, showing the latitudes and longitudes of the most remarkable places, and afterwards detailed statistical and topographical notices respecting them. In the description of such places as he had not seen himself, he takes care to name the authorities from whom he draws his information. The descriptions of single countries have been edited by Gravius, Reiske, Rommel, Kœhler, Michaelis, and others. The historical work is a chronicle after the usual comprehensive plan of oriental works of this kind. Its main object is the history of Mohammed, and of the Arabian empire, which it carries down as far as the year 1328. The earlier centuries of the Mohammedan power are but briefly treated. Farther on the narrative becomes fuller and richer in interesting details. For the history of the Crusades it is one of the most important oriental sources which we possess. The latter part of the work, or the history of Mohammedanism, was translated by Reiske, and edited with the Arabic text by Adler, at Copenhagen, in five volumes, 4to, 1789-1794; an edition and translation of the ante-Islamitic part has been published by Fleischer, Leipzig, 1831, 4to.

ABYDE'NUS ('Αβυδώνης), a Greek historian who wrote a history of Assyria ('Ασσυριακή), of which some fragments are preserved by Eusebius, Cyrillus, Syncellus, and Moses of Chorene. His work was valuable for chronology, and a fragment found in the Armenian translation of the Chronicon of Eusebius settles some difficulties in Assyrian history. The time at which he lived is not certain; he must however belong to a later period than Berosus, one of his authorities, who lived about B.C. 250. The fragments of his history are collected in Scaliger's work, 'De Emendatione Temporum,' and more completely in J. D. G. Richter, 'Berosi Chaldaei Historiæ quæ supersunt,' &c., Leipzig, 1825, 8vo, p. 38, &c., and p. 85, &c.

ACHARD, FRANÇOIS-CHARLES, a chemist and experimental philosopher, supposed to have been of French extraction, was born at Berlin in 1753 or 1754, and died in 1821. He was the author of various works, written in the German language, on experimental physics, chemistry, and agriculture; and he was long an active contributor to different scientific journals, particularly the 'Memoirs' of the Academy of Berlin. In 1780 he published at Berlin a work entitled 'Chymisch-Physische Schriften,' which contains a great number of experiments on the subject of the adhesion of different bodies to each other. Tables containing the results of these experiments, which seem to have been conducted with great care, may be seen in the 'Encyclopédie Méthodique (Chimie),' tom. 1., p. 469.

Achard is however chiefly known for his proposal to extract sugar from beet-root. Another Prussian chemist, Margraff, had discovered the existence of a certain portion of sugar in this root as early as 1747. He communicated his discovery to the Scientific Society at Berlin; but he himself thought it of little practical importance, as he declared he could not produce sugar under 100 francs the pound. Achard, who in this particular appears to have been somewhat of a visionary, on the contrary, described the beet-root as "one of the most bountiful gifts which the divine munificence had awarded to man upon the earth." He affirmed that not only sugar could be produced from beet-root, but tobacco, molasses, coffee, rum, arrack, vinegar, and beer. The Institute of Paris, in 1800, gave Achard the honour of a vote of thanks; but after a series of careful experiments they reported that the results were so unsatisfactory, that it would be unwise to establish any manufacture of sugar from beet-root. But Napoleon I. in 1812 succeeded in forming an imperial manufactory of sugar at Rambouillet, when his decrees had deprived France of the produce of the West Indies. The sugar made at home was sold at a great price; and consequently, after the peace, when foreign sugar was once more introduced, its cheapness put an end to the beet-root establishments. The government of France however chose to levy high duties upon the sugars of English colonies to protect those of Martinique, Guadaloupe, and Bourbon; and the tax upon English colonial sugar, being 95 francs the 100 kilogrammes, or about half a franc per pound, amounted to a prohibition. The beet-root manufacture therefore was revived, and, with some fluctuations, has continued to increase. The same duty is now levied upon beet-root sugar as upon French colonial sugar, but the consumption of

sugar in France is very limited in comparison with that of England. In 1850, 160,917,000 lbs. of beet-root sugar were made in France. The average yearly consumption in France is less than 10 lbs. for each individual; in the United Kingdom, in 1850, it exceeded 30 lbs. each. Beet-root sugar is also made extensively in Belgium, Russia, Prussia, and Germany. The improvements in the processes for the manufacture of beet-root sugar have led to attempts being made to introduce its use into the United Kingdom. A company carries on operations in Ireland on a scale of some magnitude.

ACHILLES, one of the most celebrated characters of the mythic age of Greece; a distinction due rather to his having been selected by Homer as the hero of the 'Iliad,' than to the number or wonderful nature of the exploits ascribed to him. He belongs to that intermediate period between truth and fiction, during which it is generally hard to say how much is real, how much imaginary. In the circumstances of his life however, as they are told by Homer, there is scarcely anything impossible, or even improbable, allowing for poetical embellishment.

The story of Achilles, as we find it in Homer, is soon told. He was the son of Peleus, king of Phthia, and the adjoining parts of Thessaly, and of Thetis, a sea-goddess, daughter of Nereus. He was educated by Phœnix, a refugee at his father's court. From his mother he learned that his fate was to gain renown before Troy, and die early; or to enjoy a long but inglorious life. He chose the former alternative, and joined the Grecian army, in which he was pre-eminent in valour, strength, swiftness, and beauty. During the first nine years of the Trojan war we have no minute detail of his actions; in the tenth year a quarrel broke out between him and the general-in-chief, Agamemnon, which led him to withdraw entirely from the contest. The Trojans, who before scarcely ventured without their walls, now waged battle in the plain, till they reduced the Greeks to extreme distress. The Greek council of war sent its most influential members to soothe the anger of Achilles, but without effect. He allowed his friend and companion Patroclus, however, clothed in the celestial arms which Hephaestus (Vulcan) gave his father, Peleus, to lead the Myrmidons, his followers, out to battle. Patroclus was slain, and stripped of these arms by Hector. Rage and grief induced Achilles to return to battle. Thetis procured from Hephaestus a fresh suit of armour for her son, who at the close of a day of slaughter killed Hector, and dragged him at his chariot-wheels to the camp. Here ends the history of Achilles, so far as it is derived from Homer, except that we may infer, from a passage in the last book of the 'Odyssey,' that he was slain in battle under the walls of Troy. But the genuineness of the last book of the 'Odyssey' has, on good grounds, been disputed by some excellent ancient and modern critics.

By later authors a variety of fable is mixed up with this simple narrative. Thetis is said to have dipped him, while an infant, in the Styx, which rendered him invulnerable except in the heel, by which she held him, and he was killed at last by a wound in the heel. The centaur Chiron is made his tutor instead of Phœnix, and feeds him upon the marrow of lions and other wild beasts, to improve his strength and courage. From this singular instructor he learned music and a number of sciences, even before the age of nine years; at which time Thetis, anxious to prevent him going to Troy, removed him, disguised as a girl, to the court of Lycomedes, king of the island Scyros. Here he became the father of Neoptolemus, or Pyrrhus, by the king's daughter, Deidamia, rather precociously; for he had not been a year on the island when Ulysses was sent by the confederate Greeks to seek him, in consequence of an oracle which declared that Troy could not be taken without the help of Achilles. Ulysses arrived at the island, discovered him among the females of Lycomedes's household, and carried him away to join the army. He was betrothed to Iphigenia, daughter of Agamemnon. The manner of his death is variously told. Some make him fall in battle; others say that he was treacherously slain in a temple, on the occasion of his nuptials with Polyxena, daughter of Priam; but it is generally agreed that he was killed by Paris, Apollo directing the arrow. He was entombed on the promontory of Sigæum, and a mighty barrow raised over his remains, which still rivets the attention of travellers; though it must always remain doubtful to whose memory this mound of earth was really raised. Here Alexander of Macedon celebrated splendid games in honour of the hero whom he affected to emulate.

ACHILLES TATIUS, a Greek astronomer, who lived probably in the first half of the 4th century of our era, and wrote a treatise on the sphere. There is still extant a fragment of Achilles Tatius, entitled 'An Introduction to the Phenomena of Aratus;' it may be seen in the 'Uranologion' of Petavius. Suidas confounds this Achilles Tatius with another, called by him Achilles Statius, who wrote a Greek romance, 'The History of Leucippe and Clitophon.' This Achilles was a native of Alexandria, and must have been later than Heliodorus, whose romance he imitated. He probably wrote near the close of the 5th century. His romance is in eight books, and is preferred by some of the earlier critics to that of Heliodorus. This latter, however, appears to us one of the most tedious stories that ever was written. The Greek romance writers give us no vivid picture of their own times, but a distorted image of earlier forms of society, without any of the spirit of historic truth. (Schoell, *Hist. Greek Litt. ; Foreign Quarterly Review*, No. 9.)

ACOSTA, JOSEPH D', a Spanish writer of the 16th century. He was born at Medina del Campo in Leon, about the year 1539; and, before attaining the age of fourteen, entered the Society of the Jesuits, to which his four elder brothers already belonged. He was remarkable for his rapid progress both in literature and science; and on finishing his course, he became professor of theology at Oran. In 1571 he went as a missionary to South America, and became eventually provincial of his order at Peru. During his residence in South America, till 1588, he wrote an account of that continent, which was published at Seville, in 4to, in 1590, under the title of 'Historia Natural y Moral de las Indias.' This work, which is highly esteemed as an authority on the early condition of South America, has been translated into French, Italian, German, Dutch, and English. There is a Latin translation of the work in Part IX. of De Bry's 'Collectiones Peregrinationum in Indiam.' Acosta, after his return to his native country, became a great favourite of Philip II., and had successively the dignities of Visitor of his order for Arragon and Andalusia, Superior of Valladolid, and Rector of the University of Salamanca. He died February 15th, 1600. Besides the work we have mentioned, he is the author of another on the same subject, published in 1589 in Latin, under the title of 'De Natura Novi Orbis Libri Duo,' which was translated by himself into Spanish, and inserted in his History. He is also the author of several theological treatises; and, among the rest, of a volume of sermons, in Latin. (Moreri; *Biog. Univ.*; Robertson, *America*; *Biblioth. Scriptor. Soc. Jesu, a Ribadeneira Allegambe, et Sotello.*)

ACTON, JOSEPH, the prime minister of the court of Naples for several years, was the son of an Irish gentleman who practised medicine at Besançon, in France. He was born in 1737. He was originally in the French naval service; but subsequently obtained the command of a frigate from Leopold, Duke of Tuscany. In an unsuccessful expedition against Algiers, in 1774, in which the government of Tuscany co-operated with that of Spain, Acton commanded the Tuscan vessels; and by his gallant conduct succeeded in saving 3000 or 4000 Spanish soldiers, who must otherwise have perished. His good conduct here was the cause of his advancement. He was recommended to the service of the King of Naples. His intriguing disposition secured him the favour of the King and Queen of Naples; and he was successively minister of the navy, of war, of finance, and ultimately became prime minister. In his policy he was constantly opposed to the French party in Italy. Many of the persecutions for political opinions, and the violations of justice, which occurred at Naples subsequent to the period of the French invasion in 1799, are ascribed to the power or the influence of Acton. He is said to have died in obscurity in Sicily, in 1808.

ADAIR, SIR ROBERT, was the son of Robert Adair, sergeant-surgeon to George III., by a daughter of the second Earl of Albemarle, through whom he became connected with many families of political influence. He was born in London on May 24, 1763, and was educated at Westminster school, whence he proceeded to Göttingen to complete his studies. On his return in 1780 he became acquainted with Mr. Fox, took his side in politics, and wrote a pamphlet or two, one of which, a letter to Mr. Burke, brought on him the ridicule of Canning in the Anti-Jacobin. But in February 1806, when Fox succeeded to power, he was sent as minister to Vienna, where he conducted himself ably, and of which mission he published a memoir in 1845; and in 1808, Canning, when in office, though he had ridiculed his appointment to Vienna, selected him for a special mission to the Porte, with Mr. Canning (now Lord Stratford de Redcliffe) and Mr. Morier as assistants, where he negotiated the treaty of the Dardanelles, concluded in 1809, and of this mission he has also published an account. On its successful termination he was made a Knight Grand Cross of the Order of the Bath. In April 1809 he was appointed ambassador at Constantinople, which office he held till 1811. In July 1831 he was despatched by Earl Grey on a special mission to Belgium, where Prince Leopold, recently elected to the throne of that kingdom, was besieged in Liege by the Dutch troops under William Prince of Orange. Sir Robert urged Prince Leopold to fly; but he declined, saying, that "flight ought not to be the first act of his reign; he was ready to fight, but would allow him to negotiate," and Sir Robert, fastening a handkerchief to a ramrod, sought the hostile army, and in an interview with Prince William, succeeded in gaining his connivance for Leopold to withdraw to Malines, whither he accompanied him. In this port he remained till 1835, when he retired with the rank of privy councillor, and a pension of 2000*l.* per annum. He died on October 3, 1855, after a short illness. Sir Robert had represented Appleby in 1802, and Camelford in 1806 and 1807. In 1805 he had married Angelique Gabrielle, daughter of the Marquis of Hazincourt, but left no issue. Sir Robert possessed a wide range of information, and his views with regard to Russia have been remarkably confirmed by recent events.

ADAM, the first man, and progenitor of the human race, whom God formed of the dust of the ground, on the sixth and last day of the creation, as related in the first and second chapters of Genesis. The whole of the authentic history of Adam is contained in the first five chapters of that book. His loss of the state of innocence and felicity which he originally enjoyed, is commonly known by the name of 'The Fall.' It was after this event, and his expulsion from the

Garden of Eden, or the terrestrial Paradise, that his eldest son Cain was born. His second son was Abel, and his third Seth, or Sheth, who was born when he was 130 years old. He is also stated to have had other sons and daughters, whose names are not given. He died at the age of 930, and therefore, according to the commonly received computation, in the year 3074 before the birth of Christ. Many fables have been invented, and idle questions raised, by the rabbinical writers and others, respecting Adam, for which there is no warrant whatever in Scripture. The reader who may be curious to see some of these may consult the articles in Bayle, and in Calmet's 'Dictionary of the Bible.' The word Adam means 'to be red,' and it is supposed that in allusion to the signification of this Hebrew verb, the earth out of which Adam was made was called 'Adamah;' while others think that the name 'Adam' contains an allusion to the reddish colour of a healthy person. See the use of the word 'adom' in the 'Song of Solomon,' v. 10. According to Ludolf, 'Adamah,' in the Ethiopic, means 'beautiful, elegant,' &c.; denoting man to be the chief work of God. In the New Testament the expressions "the last Adam," "the second man," are used to designate our Saviour, as the head of the new creation, in the kingdom of heaven.

ADAM, ALEXANDER, LL.D., an eminent teacher of Latin, who was born in June, 1741, at Coats of Burgie, in the parish of Rafford, Morayshire, Scotland. Having acquired the ordinary knowledge of Latin in the parish school, he proceeded to Aberdeen, in the hope of obtaining one of the bursaries which are open for annual competition at King's College. Disappointed in this expectation, he entered himself at the University of Edinburgh in the winter of 1758. His difficulties and privations while attending college were very great; but although sometimes reduced to such destitution as not to know where to obtain a mouthful of bread, he manfully persevered till he gained the reputation of being one of the best scholars in the University. His merits were at length rewarded by his appointment, in 1761, to the office of one of the teachers in Watson's Hospital, an institution in Edinburgh for the education and support of the sons of decayed burghesses. In 1767 he was chosen assistant to the Rector of the High School, the chief classical seminary of the city. In 1771, on the death of the Rector, Adam was elected by the magistrates as his successor; and in this honourable post he remained throughout the rest of his life. The first years of his rectorship however were somewhat stormy. In 1772 he published a little work entitled, 'The Principles of Latin and English Grammar,' and introduced it into the school as a substitute for 'Ruddiman's Grammar.' The four under-masters resisted this innovation, and, after repeated applications to the magistrates, as patrons of the school, obtained, in 1786, a prohibition against the Rector's book. It has nevertheless gone through several editions, and has been to some extent used in the other schools of Scotland. Dr. Adam also published the following works:—In 1791 a volume entitled 'Roman Antiquities,' which has gone through several editions, and been translated into German, French, and Italian; in 1794, a 'Summary of Geography and History,' also several times reprinted; in 1800, a Dictionary of Classical Biography; and, in 1805, a Latin Dictionary, under the title of 'Lexicon Lingue Latine Compendiarium,' being an abridgment of a larger work on which he had been long engaged. A second edition of this last has been published since the author's death, with very considerable alterations, both in the way of addition and of curtailment. Both this dictionary and the 'Roman Antiquities' are much used in the schools of Scotland. No person filling a public situation was more universally respected and esteemed in Scotland than Dr. Adam in his latter days. His character was one of great manliness; so much so, as to make him sometimes perhaps indiscreetly bold in the expression of whatever he felt. His political opinions were of a strongly liberal complexion; and he has been accused of not scrupling sometimes to give them vent with considerable emphasis in the presence of his class. But such was the general regard felt for him, that this charge, which, especially at the time when it was made, would have seriously injured almost any other schoolmaster, scarcely affected his influence or usefulness. He was carried off by apoplexy on the 18th of December, 1809, in his sixty-ninth year, and was honoured by his fellow-citizens with a public funeral. A memoir of his life was published in 8vo, in 1810.

Of the four works just enumerated, the most valuable and the best known is the treatise on Roman Antiquities. Few books in so small a compass contain so large a mass of useful information; and the matter, multifarious as it is, is in general well digested and arranged. The chief defect, perhaps, and it is one which pervades many parts of the work, is an inattention to the effects of time in changing the customs of the Romans. Not perceiving how the meaning of terms varied in the different ages, he has often so arranged the passages extracted by him from Latin authors on this subject, as entirely to mislead both himself and his reader. Some corrections and many additions are required in the section on the Roman year, particularly for the periods prior to the Julian correction. No little caution should be observed in reading the remarks on Roman money, a subject of especial difficulty, in which it is often more prudent to be satisfied with ignorance, than to adopt the ordinary interpretations. The value and names of the Roman coins were constantly changing, and this not consistently. Besides, the numerical notation employed by the Romans is particularly liable to corruption in the manuscripts;

and, even where the text is not corrupted, the interpretation is uncertain. With all these drawbacks, the work is of great value to all who read the history or the literature of Rome, and does great credit to Dr. Adam. It ought not to detract from his reputation that he has not anticipated the important discoveries made by the Germans since he wrote.

The treatise on classical biography is intended chiefly for the illustration of Roman history. It deserves a much more extensive circulation than we believe it possesses in England. We may say the same of Dr. Adam's Latin dictionary, notwithstanding its inconvenient arrangement, which often neglects the alphabetical order to bring together words etymologically connected. The summary of history and geography, published by Dr. Adam, has in parts great merit, but it aims at much more than can be fairly executed within the limits. We need only say that it professes to give,—1st, A summary of all history, ancient and modern, Grecian, Roman, Persian, English, French, German, Indian, American, &c. &c., with the manners and customs of these nations; 2ndly, the mythology of the Greeks; 3rdly, the geography of all ages and all countries, not excluding even the local situations of remarkable cities; 4thly, an account of the progress of astronomy and geography, from the earliest periods to the present time, with a brief account of the planetary system. Not satisfied with all this, the publishers have added an extensive index of geography, and 13 maps of little value. When we look at all that Dr. Adam did, we can fairly say, that no writer in the British Islands has ever done more to assist the young student of Latin, or, what is perhaps still more important, to connect that study with the attainment of general knowledge.

ADAM, JAMES, an architect, who is chiefly known as the partner and associate of his brother Robert, the subject of the following article. He died in 1794.

ADAM, ROBERT, was born at Kirkaldy, in Fifeshire, according to some authorities, and, according to others, at Edinburgh, in the year 1728, and was the son of William Adam, Esq., of Maryburgh, near Kirkaldy, who is said to have furnished the designs for Hopetoun House and the Royal Infirmary of Edinburgh; but whether he was himself professionally an architect or not does not appear. Robert received his literary education at the University of Edinburgh; and, from his father, William Adam, it seems most likely that he derived instruction in the principles and practice of his future profession.

When he was in his 26th year Mr. R. Adam went to Italy, and remained there several years. His contemporaries, James Stuart and Nicholas Revett, were, at the time of Adam's residence in Italy, engaged in exploring, and preparing for publication, the architectural remains of Athens; but so little was Grecian architecture known and appreciated, that he went, instead, to Spalatro in Dalmatia, to measure and delineate the ruins of the palace of Diocletian there, a structure indicating alike the decline of civilisation and the progress of barbarism. In this tour he was accompanied by Clérissseau, a French architect, whose name is connected with a work on the remains of a Roman temple at Nîmes, in Languedoc. Mr. Adam returned from the continent about the year 1762, and settled in London, and shortly after published there, in a large folio volume, engraved representations and descriptions, with attempted restorations, of the Dalmatian palace.

About the same time, 1763-4, Mr. R. Adam was appointed architect to the king. In the course of a very few years he designed, and, in conjunction with his brother James, executed a great many public and private buildings in England and in Scotland. In 1773 the brothers commenced the publication of their works, in large folio engravings, with letter-press descriptions and critical and explanatory notes, in numbers, which were continued at intervals down to 1778. The principal designs included in these are, the screen fronting the high road, and the extensive internal alterations of Sion House, a seat of the Duke of Northumberland, near Brentford in Middlesex; Lord Mansfield's mansion at Caen-Wood, or Kenwood, also in Middlesex; Luton House, in Bedfordshire, erected for Lord Bute; the screen to the Admiralty Office, London; the Register Office, Edinburgh; Shelburne House, now Lansdowne House, Berkeley-square, London; the parish church of Mistley in Essex, &c. &c. At a later period the Messrs. Adam designed the Infirmary at Glasgow, and some extensive new buildings in the University of Edinburgh, though their practice, after the year 1780, lay principally in London, where a great many of their productions still exist, and are easily recognised by any one accustomed to discriminate architectural design. Portland, Stratford, and Hamilton Places, the south and east sides of Fitzroy-square, and the buildings of the Adelphi, are the most extensive of their works. Their interest in, and connection with, this last-mentioned expensive undertaking, is intimated by the name Adelphi, which is the Greek term for 'brothers.' The Messrs. Adam were among the first, if they were not themselves the very first, to make use in London of a stucco in imitation of stone, for external architectural decorations.

The style of architecture introduced by the Messrs. Adam was peculiar to themselves, and very faulty; but there is nevertheless an air of prettiness, and some good taste in it; and the credit may certainly be claimed for its authors of having done much to improve the street architecture of London, for which species of composition their style was better adapted than for detached and insulated structures.

Mr. R. Adam did not retain the appointment of architect to the king more than four or five years, for he resigned it on being returned to parliament for the county of Kinross in 1768. This latter circumstance however does not appear to have interrupted his professional avocations, for we find that he continued to be actively engaged in business down to the period of his death, which took place in March 1792. He was buried in Westminster Abbey, in the south transept of which is a tablet to his memory.

As an architect Mr. Adam displayed an original and independent mind; for it required in his day no small degree both of originality and independence to break through the trammels which had been imposed upon architecture. This Adam did nevertheless, and though the result was that he became a mannerist, after a very peculiar and not very elevated or classical style of his own, the effect on English architecture was on the whole good. With Mr. Adam we believe originated the idea of giving to a number of unimportant private edifices the appearance of one imposing structure, by external architectural arrangements; and he certainly has the credit of having carried this principle extensively into effect in several of the instances we have mentioned.

ADAM (Sculptors). There were three brothers of this name, who all enjoyed some reputation as sculptors in France in the early part of the last century. They were the sons of a sculptor named Jacob-Sigisbert Adam, who lived at Nancy. The eldest, Lambert-Sigisbert, was born there in 1700, and made his first appearance at Paris in 1719. After remaining in that city for four years, he gained the first prize in the Academy, and proceeded to Rome on a pension allowed him by the king. Here he spent about ten years, and among other works furnished the design which was adopted by Clement XII., one of sixteen which were presented for the intended fountain of Trevi. The offers of the French government then induced him to return to Paris. On the 25th May 1737 he was admitted a member of the Academy, and he was afterwards appointed professor in that institution. The two best known of this sculptor's productions are—a group of Neptune and Amphitrite, which he executed for the basin of Neptune at Versaille, and on which he spent five years; and a figure of St. Jerome, originally intended for the Hospital des Invalides, but now placed in the church of St. Roch at Paris. They are fair specimens of the French school of that age, which however was one of the least brilliant periods in the history of modern art. Adam published in 1754 a work entitled 'Recueil de Sculptures Antiques Grecques et Romaines.' He died in 1759. Nicolas Sebastian, the next brother, was born in 1705. He came to Paris at the age of 18, and went to Rome in 1726, where, two years after, he obtained one of the prizes at the Academy of San Luca. Having remained there for nine years, he returned to Paris; and after some time was also, like his elder brother, received into the Academy. Among the designs which he produced was one for the Mausoleum of the Cardinal de Fleury. His two principal works were a tomb for the wife of King Stanislaus of Poland, and his Prometheus chained to the Rock (which has been commonly assigned by mistake to his elder brother). For the latter work he had an offer from the King of Prussia of 30,000 francs; but he declined accepting it, on the ground that the sculpture belonged to his own sovereign, for whom it had been at first intended. He died in 1778. The third brother, François-Gaspard, was born in 1710. He made his way, like his elder brother, to Rome, and also on his return from Italy fixed his residence in Paris. He worked for some years at Berlin, in the service of the King of Prussia, and died at Paris in 1795. (*Biographie Universelle*.)

ADAMS, JOHN, a distinguished American statesman. He was born in the town of Braintree, near Boston, in Massachusetts, on the 19th October 1735, of a family which had come from England at the first settlement of the colony. At the usual age he was sent to Harvard College, in the neighbouring town of Cambridge; after leaving which, he proceeded to study the law, and was in due time called to the bar. He soon raised himself in the profession which he had thus chosen to great reputation and extensive practice. In 1765, when the first opposition of the people of America was excited by the Stamp Act, Mr. Adams took an active part in those measures of constitutional opposition which eventually forced the repeal of that obnoxious statute. An offer of the lucrative office of Advocate-General in the Court of Admiralty, made to him the following year by the Crown, with the view of detaching him from the popular cause, was instantly rejected. He was one of the select men, or state-representatives, deputed by the several towns of the province, who in 1770 met in convention at Boston, on the announcement of the intention of the British government to station a military force in that town, in order to control the populace, exasperated by the new Act imposing duties on glass, paper, tea, &c., which had been passed in 1767, and by the other measures which indicated a determination in the mother-country to maintain at least the principle of her late aggression. Soon after this however Mr. Adams gave a proof both of his intrepidity and of the moderation which was associated with his zeal, by undertaking the defence of Captain Preston and his men, who, on the 5th of March 1770 had killed several of the people of Boston in a riot—a transaction which used to pass under the name of the Boston massacre. He delivered a very powerful speech on this occasion, when the jury acquitted all the prisoners of murder, and only found two of them guilty of man-

BIOG. DIV. VOL. I.

slaughter. To the honour of his countrymen, the part he had thus taken did not diminish his popularity or influence; and he continued, during the remaining first years of the struggle, to exert himself conspicuously in the front rank of the friends and supporters of the colonial cause. In 1773, and again in 1774, he was returned by the House of Assembly a member of the Council of the State; but on both occasions the governor, General Gage, put his negative on the nomination. The latter year however he was elected one of the four representatives from the province of Massachusetts Bay to the General Congress, which met at Philadelphia on the 26th of October, and which, among other proceedings, entered into a resolution to suspend the importation of British goods; and he was also a member of the second assembly of the same nature, held some time after, which took measures to enrol the people in an armed national militia. In 1775 he was offered the appointment of Chief Justice of his State; but this he declined, feeling that he could better serve his country in another sphere. It had already become evident to many indeed that the contest with Great Britain must finally be decided by the sword; and Adams seems to have been one of the first who adopted this conviction. He was accordingly one of the chief promoters of the Declaration of Independence, passed on the memorable 4th of July 1776. The motion was made by Mr. Lee of Virginia, and seconded by Mr. Adams; who, along with Mr. Jefferson, was appointed the sub-committee to prepare the declaration. It was actually drawn up by Mr. Jefferson. In November 1777 Mr. Adams proceeded to Paris as a Commissioner from the United States to that court; and after remaining for a short time in France returned to America, when he was elected a Member of the Convention for preparing a new constitution for Massachusetts. In 1780 he was sent by the United States as their ambassador to Holland; from which country, about the end of 1782, he proceeded to France, to co-operate with Dr. Franklin and his brother commissioners in the negotiations for peace with the mother country. In 1785 he was appointed the first ambassador from the United States to Great Britain; and he had his first audience with his Majesty in that character on the 2d of June. He remained in England till October 1787. In 1789, when Washington was elected President of the Union, Mr. Adams was elected Vice-President, and he was re-elected to the same office in 1793. In 1797, on the retirement of Washington, he was chosen President; but he failed to be re-elected on the expiration of his first term of four years, his competitor, Mr. Jefferson, who had also been opposed to him on the former occasion, having a majority of one vote. The general tone of the policy of Adams had been opposed to that of the democratic party, which was represented by Jefferson; but he does not appear to have given complete satisfaction to the other great party whose leading principles he espoused. On failing in being re-elected President, he retired from public affairs to the quiet of his country residence at Quincy; declining, although nominated, to stand candidate at the next annual election for the governorship of Massachusetts. The rest of his life he spent in retirement. For some years before his death his health had become extremely feeble, and at last little more remained of the once active and eloquent statesman than the mere breath of life. In this state he was when the morning arrived of the 4th of July, 1826, the fiftieth anniversary of the Declaration of Independence. Awakened from sleep by the ringing of bells and other rejoicings of that grand jubilee, the venerable patriot was asked if he knew the meaning of what he heard. "Oh, yes," he replied, the glow of old times seeming to return to him for a moment, "It is the glorious 4th of July!—God bless it—God bless you all!" Some time after he said,—"It is a great and glorious day,—adding, after a pause apparently of deep thought, "Jefferson yet survives." These were the last words he was heard to utter. About noon he became alarmingly ill, and at six in the evening he expired. The same day also terminated the career of Jefferson, his fellow-labourer in laying the foundations of the independence of their common country, and afterwards his successful rival. Except for a short time, however, these two distinguished men were friends throughout life. Mr. Adams was the author of a work first printed in 3 vols. 8vo., in 1787, while he was in this country, under the title of 'A Defence of the Constitution and Government of the United States,' but afterwards remodelled and reprinted in 1794, with the new title of a 'History of the Principal Republics of the World.' It is designed to serve, by an ample induction from history, as a vindication of the federal principles of the American Constitution, an attachment to which, indeed, has always been considered the distinctive characteristic of this statesman and his party.

ADAMS, JOHN, sometimes called 'the Patriarch of Pitcairn's Island.' When H.M.S. 'Bounty' was seized by a part of her crew, in April, 1789, John Adams was one of the mutineers. He had not been previously aware of the intentions of the ringleader, Christian, and was in his hammock when the mutiny broke out, where he remained until the distribution of arms among the men, when he joined the rest, and assisted in keeping watch over the officers on deck, while Captain Bligh was secured below. [BLIGH.] After Bligh and those who adhered to him had been set adrift in an open boat, the cry was raised "Huzza for Otaheite!" and the 'Bounty' shaped her course accordingly. Provisions having been obtained there, the mutineers sailed for the island of Toobooi, on which they intended to settle; but the hostility of the natives preventing this, they

returned to Otaheite. Most of the men resolved to remain at that place, but Christian foreseeing the danger, in case Fligh should reach Europe, persevered in the plan of founding a colony in some of the numerous islands of the South Seas, out of the usual track of voyagers. Eight of his companions, among whom was Adams, joined with him, and the rest offering no objection to their taking the vessel, they set sail in the 'Bounty,' carrying with them six male and ten female natives of Otaheite. Arriving at Pitcairn's Island, which is in 25° 3' 37" N. lat., 130° 8' 9" W. long., they found a fruitful soil, plenty of wood and water, and mountain fastnesses capable of defence against any numbers; and here they resolved to fix their abode. They landed their stores, and on the 23rd January, 1790, set fire to the 'Bounty,' and thus cut off all communication with the world: a village was built, and the whole land of the island was distributed among the white men. The Otaheitans were treated as slaves. Discension soon broke out among them, which commenced in consequence of the wife of one of the Otaheitans being seized by a white man, whose own wife had died. This led to a plot among the Otaheitans for the destruction of their masters, which was discovered and foiled, and two of the Otaheitans were killed. The oppression of the whites continued to be so galling, that a second attempt to destroy them was made, which resulted in the death of Christian and four of his companions. On this occasion Adams was shot through the body, and otherwise desperately wounded, but he escaped to the mountains, and only returned upon a promise of the Otaheitans to spare his life. He soon recovered of his wounds. The men of the two races were now equal in number, but the whites, by taking advantage of quarrels among the Otaheitans, and by treachery, succeeded at length in killing the Otaheitans, the last two being butchered in cold blood by Adams and another white man, on the 3rd of October, 1793. Even after this, the death of the white men was repeatedly plotted by the Otaheitan women, but without effect. During 1798, one of the men discovered a method of distilling spirit from a root, which gave rise to continual drunkenness, and was the cause of his own death. Shortly after, one of the three remaining original settlers having attempted the lives of the other two, they put him to death.

The two survivors, Adams and Young, disgusted at the scenes which they had witnessed, and reflecting deeply on their situation, resolved to effect a thorough change. During Christian's lifetime divine service had been performed only once; they now determined to introduce daily morning and evening prayers, with divine service every Sunday, and to train up the children in habits of piety and virtue. Young, who had been an officer on board the 'Bounty,' was very useful in the execution of this scheme, but he died one year after the plan was commenced. John Adams felt the death of his companion deeply, but it only confirmed him in his resolution. There were now nineteen children on the island, many of them between eight and nine years of age. His exertions were attended with great success; the Otaheitan women displayed an unexpected docility in receiving the doctrines of Christianity, and the children were so ardent in the pursuit of scriptural knowledge, that he had soon no further trouble than to answer their questions. They grew up in habits of strict morality, and became, under the guidance of Adams, a model of a well-regulated society.

In 1805 the American whaler-ship 'Topaz' accidentally touched at Pitcairn's Island; but the accounts which the captain, Folger, gave of this community attracted little attention, until in 1814 the British frigates 'Briton' and 'Tagus' also visited the island. In an interview with the captains, Adams expressed a wish to be taken to England, in order, as he expressed it, to see his native land once more, although he felt convinced he should be hanged for his share in the mutiny; and it was only on seeing the pain which his determination caused, especially to his daughter, that he gave up the design. In December, 1825, Captain Beechey, in the 'Blossom,' anchored at Pitcairn's Island, where he remained sixteen days, most of which he passed on shore with Adams. The account of Adams and his colony in the narrative of Beechey's voyage is the most complete that we possessed till the appearance of Mr. Murray's interesting little volume. A long grace was said before and after every meal by John Buffet, a seafaring man, who had recently settled on the island, and the utmost care was taken that not even a bit of bread should be eaten without prayer. On Sunday divine service was performed five times, the prayers on each occasion being exceedingly long, and the exhortation and hymns in proportion. At this time Buffet acted as a sort of chaplain, and when Captain Beechey attended, read the sermon three times over, to be certain of making an impression; but Adams himself read prayers, which were selected from the English liturgy, and included all the occasional prayers, whether appropriate or not. Captain Beechey describes the attention of the congregation as most exemplary; and says that even the smallest children showed the greatest seriousness. At sunset every evening service was also performed, and hymns sung, and again at a later hour. Marriage was strictly regulated; the ceremony was performed by Adams, who had with one ring united all the couples then on the island. His own conscience was so troubled on this point, that he requested Captain Beechey to read the service to him and the Otaheitan woman with whom he lived, and who was now old and bedridden, which was done to his great satisfaction, and the marriage duly registered by Buffet.

The islanders were exceedingly tall, strong, and muscular; the women

scarcely less so than the men, though feminine in appearance, and with considerable pretensions to beauty. They were fully occupied in attending to their crops of yams and taro-root, on which they chiefly subsisted, in fishing, repairing their houses, nets, &c., and in their religious duties. Adams spent several days on board the 'Blossom,' the wind not serving for his return to land; and among his countrymen he displayed his cheerfulness without restraint, joining with great spirit in all the songs and dances of the fore-castle. He still retained the habits of a man-of-war's-man, stroking down his bald forehead whenever addressed by an officer, and showing much embarrassment when spoken to familiarly by those whom he had of old been accustomed to consider so much above him.

On leaving the island, presents of useful articles were made to all the inhabitants, and Captain Beechey became the bearer of a request from Adams to the British government to give its aid in removing them to some larger island, as the population, then amounting to 66, had already begun to press on the means of subsistence. The proposition was favourably considered; but before any determination could be come to John Adams died, in March 1829, at the age of 69. An Englishman named Nobbs, who had recently come to the island, became his successor, and is now a regularly ordained minister. In 1854 the population amounted to 200, nearly all descendants of the original settlers, and all speaking and reading English.

There is a characteristic portrait of Adams in Beechey's 'Voyage,' with a fac-simile of his hand-writing, as attached to his own narrative of the mutiny and its consequences. The name John Adams, by which he is universally known, was an assumed one; his real name was Alexander Smith. The change was made after Captain Folger had touched at the island, in order probably to avoid recognition, although he seems never to have concealed his share in the mutiny. The incidents of his life have been frequently made the subject of dramatic representation. The subsequent history and present condition of the island are noticed in the article PITCAIRN'S ISLAND, in the GEOG. DIV. ENG. CYC.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*; Rev. E. Murray, *Pitcairn*, London, 1853.)

*ADAMS, JOHN COUCH, one of the discoverers of the planet Neptune, was born at a farm-house on the Bodmin Moors, Cornwall, about 1817. He entered at St. John's College, Cambridge, in 1839, where he soon distinguished himself in those studies which have since placed him in the foremost rank of modern astronomers. In July, 1841, he formed a design of investigating the irregularities in the motion of Uranus, and commenced his task, after taking his degree, in 1843. In September of 1845, and 1846, he communicated the results of his calculations to the astronomer royal, and in November of the latter year a paper to the Astronomical Society, entitled 'An Explanation of the Observed Irregularities in the motion of Uranus,' &c., in which the existence of the supposed remoter planet (Neptune) was mathematically demonstrated. But as Le Verrier's investigation of the same subject was first made public, he is regarded as the first discoverer. There is however no doubt that each one made his discovery perfectly ignorant of what the other was doing.

Other valuable papers by Adams are printed in the 'Memoirs of the Astronomical Society.' In 1853 he sent to the Royal Society a paper 'On the Secular Variation of the Moon's Mean Motion,' in which a question left "essentially incomplete" by Laplace is rectified. This paper appears in the 'Philosophical Transactions.'

In November, 1845, Adams was elected a Fellow of the Astronomical Society, was made Vice-President in 1848, and President in 1851. In 1848 the Royal Society gave him their highest scientific award—the Copley medal. He was elected a Fellow of that society in 1849, and was named of the Council the same year. He is a Fellow also of other scientific societies.

ADAMS, JOHN QUINCY, the eldest son of John Adams, the second President of the United States, was born in Massachusetts, June 11, 1767. Some of his early years were spent in Europe, whither he accompanied his father. In 1801 and 1802 he was minister plenipotentiary from the United States to Berlin, and during this time he travelled through Silesia, which country, its manufactures, and more particularly its educational establishments, were described by him in a series of letters addressed to his brother at Philadelphia. These letters, which were originally published in a journal called 'The Portfolio,' were collected in a volume and published in 1804. During the presidency of Jefferson, Adams was recalled from his embassy at Berlin. Upon his return he became a professor in Harvard College, and was subsequently elected a deputy to Congress for Massachusetts. Having been previously attached to the federalist party, he now allied himself to the democratic party. He was next charged with a mission to Russia, and in 1814 joined the Congress at Vienna as plenipotentiary of the United States. In 1815 he was ambassador at the Court of St. James's. In 1817 he became secretary of state for the interior; and in 1825 he succeeded Mr. Monroe as President of the Union. He was not however re-elected, his place being supplied by General Jackson. In 1830 he was elected deputy to Congress, where he distinguished himself until his death by his advocacy of the abolition of slavery. He died at Washington, February 17, 1843.

ADAMS, SAMUEL, a conspicuous actor in the American revolution. He was born at Boston on the 27th of September, 1722, and received

his education at Harvard College. On the first outbreaking in his native province of the irritation and disturbances occasioned by the Stamp Act in 1765, Adams threw himself with zeal and determination on the popular side. From that moment the forwarding and maintaining the cause of his country's independence became the business of his life. His name appears subscribed to the Declaration of Independence in 1776. After the conclusion of the war he was nominated a member of the convention for settling the constitution of Massachusetts; and he afterwards occupied a seat in the senate of that state, and presided over it for some years. In 1789 he was elected to the office of lieutenant-governor, and in 1794 to that of governor, to which he was re-elected annually till 1797, when he retired from public life. He died at Boston on the 2nd of October, 1803. Samuel Adams was one of the firmest and most active patriots of the revolution, and powerfully contributed to the happy termination of the great cause to which he devoted his life. But he was not a politician of very enlarged views; and useful as he proved in the subordinate sphere in which he acted, there can be little doubt, from many parts of his conduct, that the national struggle would hardly have been brought to the successful issue with which it was eventually crowned, if it had not been guided by wiser heads than his. He was actuated in the whole course of his political career almost exclusively by one idea or feeling—jealousy of delegated power, however guarded. "Samuel Adams," says one of his friends and admirers, "would have the state of Massachusetts govern the Union, the town of Boston govern Massachusetts, and that he should govern the town of Boston, and then the whole would not be intentionally ill-governed."

ADANSON, MICHAEL, a French naturalist of high reputation, was born at Aix in Provence, April 7, 1727. He was of Scotch extraction, but his family had become exiles in consequence of the troubles that distracted Scotland in the early part of the 18th century. At a very early age he was placed in the University of Paris, under the care of the celebrated Réaumur and of Bernard de Jussieu; and it is supposed that from these preceptors he imbibed that love of the study of natural history by which he afterwards became distinguished in so eminent a degree. His successes in carrying off the academical prizes from his competitors soon attracted attention, and Needham, the well-known microscopic observer, having upon one occasion been witness to his triumph, presented him with a microscope, accompanied, it is said, by these prophetic words—"Young man, you have studied books enough; your future path will be among the works of nature, not of man." At this time great originality of thought and a strong bias for systematic arrangement had already begun to develop itself. Emulous of the reputation of Linnæus, which had already found its way among the French, young Adanson is said, when only 14, to have sketched out not less than four methods of classifying plants. His friends had destined him for the church, but a feeling that his pursuits, and perhaps his temper, were but ill adapted to the duties of the priesthood, induced him to resolve upon seeking some other employment, in case his slender patrimony should prove insufficient for his wants.

The genius of Adanson was much too active to allow him to remain in the walks of quiet life. An opportunity occurring of visiting the country whence ivory, and gums, and frankincense were procured, he eagerly embraced the occasion, although at the expense of a considerable portion of his fortune. At that time the natural history of Africa was almost unknown, except from such of its commercial products as were brought to Europe. In 1743 he embarked for Senegal, being then 21. Five years were spent by him in this colony, during which time he succeeded in forming considerable collections in every branch of natural history. Not only were botany and zoology the objects of his attention, but he amassed a large store of meteorological observations; he made himself acquainted with the language of the native tribes, and carefully preserved their respective vocabularies; he traced the river Senegal to a considerable distance in the interior, formed charts of the country, and finally returned to Paris in 1748, rich in knowledge, but impoverished in worldly means. His 'Natural History of Senegal,' published at Paris four years afterwards, is a mass of original views, and of valuable practical information. Among other things, it contained the first attempt upon record of classifying shells according to the animals they contain, instead of their external forms alone. The opinions that Adanson had early held of the insufficiency of the classifications in natural history at that time received in Europe, had become confirmed by his discoveries in Africa. He saw that however easy and complete the systems of Linnæus and Tournefort might seem to those acquainted with the European Flora only, they were both essentially defective when applied to vegetation in a more extended manner. He perceived that the sexual system of Linnæus was founded upon incomplete and partial views. To the method of Tournefort the objections appeared fewer, and accordingly he determined to attempt a classification of his own, of which that of Tournefort might serve as the basis. This appeared in 1768, in two volumes 8vo, under the name of 'Families of Plants.' In this work Adanson particularly insisted upon the indispensable necessity of a system being so far in accordance with nature, that all those objects which most resemble each other may be classed together; he demonstrated that, to effect this, it is absolutely necessary for a system to be founded upon a consideration of all the parts of the objects which it

comprehends, and that it cannot be confined to differences in the nature of a few organs only; the artificial system of Linnæus he for that reason most justly considered inferior to the method of Tournefort. In many respects this work of Adanson's deserves the eulogium passed upon it by one of his historians, who pronounces it a production not more brilliant than profound. Unfortunately for its author, and still more for science, his views were more advanced than those of his contemporaries; his perceptions of botanical truths, however just, were of a nature not to be valued by those who had less experience or acuteness than himself; he also attempted to introduce a barbarous nomenclature, which, it must be confessed, was at variance with common sense; and what was worse than all, he had unceremoniously rejected that system of Linnæus which had become the basis of the botanical creed of almost all Europe. For these reasons, notwithstanding the high character of Adanson's 'Families of Plants,' they have scarcely had any circulation beyond France; and when, in 1789, the 'Genera Plantarum' of Jussieu made its appearance, the utility of his work generally ceased.

From this period we have little to record concerning the scientific career of Adanson. A few miscellaneous papers, a chimerical project of a vast 'Encyclopædia of Natural History' to contain 40,000 figures, and a portion of the early part of the botanical division of the 'Supplement to the French Encyclopædia,' are all that he has executed. Up to the period of the French revolution, he appears to have been chiefly occupied in amassing collections for the stupendous work he had in contemplation, and in making experiments upon vegetable physiology. That political catastrophe overwhelmed him in the ruin it brought for a time upon his country; the little that remained of his fortune was annihilated; he had the mortification to see his plantations of mulberry-trees, which had been long the object of his simple care, destroyed by a ferocious rabble; and he fell into so lamentable a state of destitution, that when, upon the establishment of the Institute of France some years after, he was invited to become one of the earliest members, he was obliged to refuse the invitation to attend "because he had no shoes." In his latter days he enjoyed a small pension from the French government; but his constitution was broken by the calamities he had undergone: a complication of maladies tormented him, a softening of the bones confined him to his bed, and on the 6th of August 1806 he was finally released from his afflictions by the hand of death, in the 80th year of his age.

As a philanthropist, his name will always be respected by every friend of civil liberty; for he was among the first to plead the cause of the slaves, and to insist upon the impolicy, as well as injustice, of forced labour. In 1753 a plan, very like that upon which the new American colony of Liberia has been established, was presented by him to the French government, for the whole of the French provinces in Africa. The ministers of such a sovereign as Louis XV. were not the men to listen favourably to a project of this nature, and it fell to the ground. Such was his love of his country, that, although his circumstances do not seem ever to have been very good, he had firmness enough to resist offers from the Emperor of Austria, Catherine of Russia, and the King of Spain, to enter into their service. Under the cruel misfortunes that attended his latter days he is represented to have exhibited great patriotism and magnanimity, which was the more to be commended because he was of an impetuous and irascible temper.

ADDINGTON. [SIDMOUTH, LORD.]

ADDISON, JOSEPH. This eminent writer was the son of the Rev. Lancelot Addison, a clergyman of considerable learning, who eventually obtained the deanery of Lichfield, but was at the time of the birth of his son rector of the parish of Milston, near Amesbury, in Wiltshire. Here Addison was born on the 1st of May, 1672. After having been put first to a school in Amesbury taught by the Rev. Mr. Nash, and then to that of the Rev. Mr. Taylor at Salisbury, he was sent to the Charterhouse, at which seminary he first became acquainted with his afterwards celebrated friend Steele. From this school he went about the age of fifteen to Queen's College, Oxford, and removed to Magdalen College upon obtaining a scholarship two years afterwards. He is said already to have obtained considerable facility in the writing of Latin verse; and this talent, which he continued to cultivate and exercise, first brought him into reputation at the university. Several of his Latin poems, most of which were probably produced before he had attained his 26th year, were afterwards published in the second volume of the collection entitled 'Musarum Anglicanarum Analecta.' The first composition which he gave to the world in his native language was a copy of verses addressed in 1694 to Dryden, which procured him the acquaintance and patronage of that distinguished poet. He soon after published a translation in verse of part of Virgil's Fourth 'Georgic,' and he had also the honour of writing the critical discourse on the 'Georgics,' prefixed by Dryden to his translation, which appeared in 1697. But before this Addison had made himself known to one of the most enlightened and influential patrons of literature in that day, the Lord Keeper Somers, by a poem which he addressed to him on one of the campaigns of King William. He was also introduced by Congreve to the Chancellor of the Exchequer, Mr. Montague, afterwards Lord Halifax. The advantageous connections which he had thus formed seem, together with other considerations, to have

induced him to abandon his original intention of going into the church. In 1699 Lord Somers procured him a pension of 300*l.* a year from the crown, and he then set out on a tour to Italy. Here he remained till the death of King William, in the spring of 1702, deprived him of his pension, and also put an end to his expectation of being appointed to a place near the person of Prince Eugene, then commanding the imperial troops in Italy. Meanwhile he had addressed from that country his well-known political 'Letter' to Lord Halifax, which was greatly admired both in England and Italy, and was translated into Italian by the Abbate Salvini, Greek professor at Florence. Soon after his return home he also published his 'Travels,' which he dedicated to Lord Somers. His friends being out of power, he now remained for some time without employment; but at length the victory of Blenheim, in August, 1704, excited a wish in the ministers to find some poet who might adequately celebrate its glories; and the Treasurer Godolphin having mentioned the matter to Lord Halifax, the latter recommended his friend Addison as the fittest person to execute the task. He was immediately applied to, and the consequence was the production of his poem entitled 'The Campaign,' which appeared before the close of the year. Godolphin, upon seeing it when little more than half finished, was so much pleased with the performance that he immediately made the author a Commissioner of Appeals. In the following year Addison accompanied Lord Halifax to Hanover; and in 1706 he became under-secretary to Sir Charles Hodges, on the appointment of the latter as secretary of state. He continued to hold the same place under the Earl of Sunderland, by whom Sir Charles was in a few months succeeded. But although he had thus fairly entered upon a political career, he did not desert literature. His next production was his English opera, entitled 'Rosamond;' and he also assisted his friend Steele in his play of the 'Tender Husband,' not only with a prologue to the piece, but with several of its most effective scenes. In 1707 an able anonymous pamphlet appeared under the title of 'The Present State of the War, and the Necessity of an Augmentation considered,' which has since been printed among Mr. Addison's works, and was no doubt the production of his pen. In 1709 he went over to Ireland as secretary to the new Lord Lieutenant, the Marquis of Wharton; the Queen also bestowed upon him the office of Keeper of the Records in that kingdom, with an increased salary of 300*l.* He was in Ireland when the first number of 'The Tatler' appeared on the 12th of April (o.s.) in that year—the happy idea of Steele, whose connection with the publication Addison is said to have detected from an observation on Virgil which he had himself communicated to his friend. The active part which he immediately took in the conduct of this periodical work is well known. The change of ministry in 1710, by releasing him from his official duties, and allowing him to return to England, enabled him to make his contributions still more frequent. In the course of this and the following year he is also understood to have contributed several papers to the political work, 'The Whig Examiner,' which was started about this time in opposition to the famous Tory print, 'The Examiner,' in which Swift exercised his powerful pen. These papers, which are five in all, are printed among his collected works. 'The Tatler' terminated on the 2nd of January, 1711; but on the 1st of March following appeared its still more celebrated successor, 'The Spectator,' which was continued till the 6th of December, 1712, and of which during the whole of that time Addison was undoubtedly the chief support. 'The Spectator' was followed by 'The Guardian,' of which the first number was published on the 12th of March, and the 175th and last on the 1st of October, 1713; and in this also his pen was actively employed. An anonymous pamphlet directed against the commercial policy of the ministry, and bearing the title of 'The late Trial and Conviction of Count Tariff,' which appeared this year, is likewise believed to be Addison's, and has been printed among his works. The same year he acquired still greater fame than any of his former productions had brought him by his celebrated tragedy of 'Cato,' which was received with extraordinary applause, both on the stage and when it issued from the press. It was played thirty-five nights in succession—a run of popularity for which it was doubtless in part indebted to its political as well as to its poetical merits; and it was also translated soon after into French, Italian, Latin, and German. On the 18th of June, 1714, appeared the first number of a continuation of 'The Spectator,' in which Addison also assisted till its termination on the 20th of December in the same year. His elegant postical address to Sir Geoffrey Kneller on his picture of the king was also published about this time; and on the 23rd of December, 1715, soon after the breaking out of the Rebellion, he commenced a periodical publication in support of the government, under the title of 'The Freeholder,' which he continued without assistance, at the rate of two papers a week, till the 29th of June in the following year. He had now indeed for some time been again engaged in public affairs, having on the death of Queen Anne, in August 1714, been appointed their secretary by the Lords Justice; and after the coming over of the new king, having again gone to Ireland as secretary to the Lord-Lieutenant, the Earl of Sunderland. The earl was soon after recalled, and Addison was then made a Lord of Trade. In 1716 he married the Dowager Countess of Warwick, and in April the following year he was nominated one of his Majesty's principal secretaries of state. He soon however found it necessary to resign this high employment—retiring professionally on the ground of

ill health, but in reality, as has been generally understood, in consequence of his entire inaptitude both for debate in parliament and for the ordinary business of his office. His health however had also been for some time impaired by attacks of asthma, the effects of which were probably in no slight degree aggravated by a habit of over-indulgence in wine. He left office in March, 1718. It was hoped at first that his release from business would have brought about his restoration, and for some time the expected effect seemed to follow. In the course of the year 1719 he was so far recovered as to be able to engage in a somewhat acrimonious controversy with his old friend Steele on the subject of the bill for the limitation of the peerage, then under discussion in parliament, which Steele had attacked in a paper called 'The Plebeian.' Addison's defence of the measure appeared in two successive anonymous pamphlets, bearing the title of 'The Old Whig.' They are not printed among his collected works, but are undoubtedly his. He again however fell ill, and after lingering for some time, at last expired at Holland House, Kensington, on the 17th of June, 1719, when just commencing his forty-eighth year. He left a daughter by the Countess of Warwick.

Soon after Addison's death his works were collected and published in four volumes quarto by his friend Mr. Tickell, upon whom he had expressly devolved that duty. Besides the compositions already mentioned, and some translations from Ovid and other poetical pieces, this edition contains a 'Treatise on Ancient Medals,' in the form of dialogues, which is understood to have been prepared by the author many years before his death; and a portion of a work which he had commenced in defence of the Christian religion, being that which is commonly known by the name of his 'Evidences.' The comedy of 'The Drummer, or the Haunted House,' which had been published anonymously in his lifetime, with a preface by Sir Richard Steele, was soon after reprinted by Sir Richard, and declared to be Addison's.

Addison however has been charged with having been the author of a poetical translation of the first book of the 'Iliad,' which was published in 1715 by Mr. Tickell, then his private secretary; and by which it has been said he intended to aim a covert blow at the popularity and success of Pope's 'Iliad,' the first volume of which had then just issued from the press. The celebrated character of Atticus, now inserted in the 'Epistle to Dr. Arbuthnot,' is said to have been composed by Pope after this, and sent by him to his former friend. The clearest examination which this story has received will be found in a long and elaborate note in Dr. Kippis's edition of the 'Biographia Britannica,' (vol. i. p. 86, &c.) which is known to have been contributed by Sir William Blackstone. The learned judge has undoubtedly sufficiently refuted many points in the common statement; but still it is certain that a coolness did arise between Addison and Pope not long after the appearance of Tickell's book, and there is also reason to believe that their separation was not unconnected with that somewhat injudicious and ill-timed publication. As for the authorship of the translation however, it was probably Tickell's own.

Anecdotes of Addison's private life, and traits of his habits and character, have been handed down in great abundance by Spence and others. The strongest testimony has been borne by those who knew him intimately to the charms of his conversation when he felt himself free from all restraint. "He was," says Steele, "above all men in that talent called humour, and enjoyed it in such perfection that I have often reflected, after a night spent with him apart from all the world, that I had had the pleasure of conversing with an intimate acquaintance of Terence and Catullus, who had all their wit and nature, heightened with humour more exquisite and delightful than any other man ever possessed." (Preface to 'The Drummer.') Lady Mary Wortley Montague told Spence that "Addison was the best company in the world." ('Anecdotes,' p. 232.) Dr. Young's account was, that, though he was rather mute in society on some occasions, "when he began to be company, he was full of vivacity, and went on in a noble stream of thought and language, so as to chain the attention of every one to him." (p. 335.) "Addison," said Pope, "was perfect good company with intimates; and had something more charming in his conversation than I ever knew in any other man." (p. 50.) But this was only when there was no one by of whom he was afraid. "With any mixture of strangers," Pope added, "and sometimes only with one, he seemed to preserve his dignity much, with a stiff sort of silence." Young admitted that "he was not free with his superiors." Johnson quotes Lord Chesterfield as somewhere affirming that "Addison was the most timorous and awkward man that he ever knew." Coarser minds, again, from the formality and stiffness of manner in which he wrapped himself up from their inspection, were led to set him down for a mere piece of hypocrisy and cant. Mandeville, the author of the 'Fable of the Bees,' after an evening's conversation with him, characterised him as "a parson in a tye-wig;" and Tonson, who hated parsons in any kind of wigs as much as Mandeville, and who, besides, had quarrelled with Addison, and did not like him, used to say of him after he had quitted his secretaryship, "One day or other you'll see that man a bishop! I'm sure he looks that way; and, indeed, I ever thought him a priest in his heart." (Spence, p. 200.) It must be acknowledged that this caution and cowardice spoiled Addison's character in some points of great importance; he was not a man on whom his friends could rely; and the way in which he lost or offended more than one of them was not to his credit. In his conduct both to Pope

and to Steele, there was something underhand and treacherous—something of the “willing to wound, but yet afraid to strike,” which the former had imputed to him. To Gay, again, he seems to have behaved ill without having been either detected or suspected at the time. A fortnight before his death he sent Lord Warwick for Gay, who had not gone to see him for a great while; and when they met, Addison told him “that he had desired this visit to beg his pardon; that he had injured him greatly; but that if he lived he should find that he would make it up to him.” (Spence, p. 150.) Here again we see the conscientiousness of the man struggling with, and, in the end, very nobly mastering, his more ignoble propensities; for it would be a great mistake to conclude from these instances of deceit and littleness, that the regard he professed for virtue was not both real and deeply felt. The pious composure in which he died, as evinced by the anecdote of his parting interview with the young nobleman, his stepson,—first told by Dr. Young in his ‘*Conjectures on Original Composition*,’ published in 1759, though previously alluded to by Tickell in his *Elegy on Addison*—is known to most readers. Dr. Young’s words are:—“After a long and manly but vain struggle with his distemper, he dismissed his physicians, and with them all hopes of life. But with his hopes of life he dismissed not his concern for the living, but sent for a youth nearly related, and finely accomplished, but not above being the better for good impressions from a dying friend. He came; but, life now glimmering in the socket, the dying friend was silent: after a decent and proper pause, the youth said, ‘Dear Sir, you sent for me; I believe and hope that you have some commands: I shall hold them most sacred.’ May distant ages not only hear but feel the reply. Forcibly grasping the youth’s hand, he softly said, ‘See in what peace a Christian can die.’ He spoke with difficulty, and soon expired.” Lord Warwick did not long survive his step-father.

Addison’s writings present something of the same struggle of opposite principles or tendencies which we find in his character as a man, resulting likewise in the same general effect, of the absence of everything offensive combined with some qualities of high, but none perhaps of the highest excellence. Notwithstanding all the hesitation and embarrassment he is said to have shown on some occasions in the performance of his official duties, so that a common clerk would have to be called in to draw up a dispatch which could not wait for his more scrupulous selection of phraseology, he usually wrote easily and rapidly. “When he had taken his resolution,” Steele has told us, “or made his plan for what he designed to write, he would walk about a room and dictate it into language with as much freedom and ease as any one could write it down, and attend to the coherence and grammar of what he dictated.” (Preface to ‘*The Drummer*.’) Pope told Spence however that, though he wrote very fluently, “he was sometimes very slow and scrupulous in correcting.” “He would show his verses,” said Pope, “to several friends, and would alter almost everything that any of them hinted at as wrong. He seemed to be too diffident of himself, and too much concerned about his character as a poet; or, as he worded it, ‘too solicitous for that kind of praise, which, God knows, is but a very little matter after all.’” (‘*Anecdotes*,’ p. 49.)

The literary greatness of Addison in the estimation of his contemporaries probably stood upon somewhat different grounds from those upon which it is now usually placed. In his own day he was looked upon as a dramatist and a poet of a very high order; and appears to have been not so much admired for anything else as for being the author of ‘*Cato*.’ That stately but frigid tragedy has long ceased to give the same pleasure, by its sonorous declamation and well-expressed common-places, which it seems to have afforded to our ancestors. The taste which then prevailed in poetry was the most artificial which has distinguished any age of English literature. The quality which chiefly drew admiration was a cold and monotonous polish—the warmth of genuine nature was accounted rudeness and barbarism. The return of the public mind to truer principles of judgment in such matters has been fatal both to the dramatic and to the poetical fame generally of Addison; and although his verses are still read with pleasure as the productions of an elegant and accomplished mind, they are not felt to possess any high degree of that power which we now look for in poetry. His glory is now that of one of our greatest writers in prose. Here, with his delicate sense of propriety, his lively fancy, and above all, his most original and exquisite humour, he was in his proper walk. He is the founder of a new school of popular writing; in which, like most other founders of schools, he is still unsurpassed by any who have attempted to imitate him. His ‘*Tatlers*,’ ‘*Spectators*,’ and ‘*Guardians*,’ gave us the first examples of a style possessing all the best qualities of a vehicle of general amusement and instruction; easy and familiar without coarseness, animated without extravagance, polished without unnatural labour, and from its flexibility adapted to all the varieties of the gay and the serious.

(*Biographia Britannica*; *Life* by Johnson; Spence’s *Anecdotes*; *Works* by Tickell.)

ADELUNG, JOHANN CHRISTOPH, grammarian and universal linguist, was born at Spantekon, a village near Anklam in Pomerania, on the 8th of August, 1732. He received his first education at the town school of Anklam, and at Kloster-Berge, near Magdeburg; and afterwards visited the university of Halle. In 1759 he was appointed a professor in the evangelical gymnasium at Erfurt; but he held this situation only till 1761, when, in consequence of a dispute with the

Catholic town-magistrates about a point of difference in religion, he found himself under the necessity of leaving Erfurt. Adelong now went to Leipzig, where he continued to reside till 1787. He supported himself by literary labours, and chiefly by translations of valuable works of foreign literature. The number of volumes which he thus prepared for the press and many of which he enriched with extensive additions of his own, is surprisingly great. The works by which he is best known in this country, are ‘*Deutsche Sprachlehre für Schulen*,’ Berlin, 1781, 8vo., and ‘*Umständliches Lehrgebäude der Deutschen Sprache*,’ Leipzig, 1782, 2 vols. 8vo., &c. In 1787 Adelong was called to Dresden, and appointed principal librarian to the electoral library there. Adelong died on the 10th of September, 1806.

ADOLPHUS, JOHN, was born in 1770 and died July 17, 1845. Mr. Adolphus was a barrister of high standing in the criminal courts, and at his decease was father of the Old Bailey bar. He was a keen advocate, a fluent speaker, and a good lawyer. His practice, previously very considerable, was highly increased by the manner in which he distinguished himself as leading counsel for Thistlewood and the other prisoners charged with a treasonable conspiracy in 1820, though he was retained on their behalf only a few hours before the trial. As a literary man Mr. Adolphus is best known as the author of the ‘*History of England from the Accession of George III.*,’ originally published in 3 volumes in 1805, but which he subsequently revised and greatly extended. Of this enlarged edition the seventh volume appeared just before his death, but it left the work unfinished, and the conclusion has not been published. It is a work of considerable research and very carefully executed, but it does not exhibit very high historical powers. He was also the author of ‘*Biographical Memoirs of the French Revolution*,’ ‘*Political State of the British Empire*,’ 4 vols., 1818; ‘*Memoirs of John Bannister*’; and some fugitive pieces and pamphlets.

ADONIS, the name of a personage of considerable importance in Pagan mythology, of whose story the following is a brief sketch:—Adonis, son of Myrrha, daughter of Cinyras, king of Cyprus, was born in Arabia, whither his mother had fled in consequence of certain transactions which it is not necessary to relate. Before the birth of her son she was transformed into a tree which produces the fragrant gum called by her name; this however did not hinder his being brought into the world in due season; he grew up a model of manly beauty, and was passionately beloved by Aphrodite (Venus), who quitted Olympus to dwell with him. Hunting was his favourite pursuit, until, having gone to the chase against the entreaties of his mistress, he was mortally wounded in the thigh by a wild boar. After death he was said to stand as high in the favour of Persephone (Proserpine) as before in that of Aphrodite; but the latter being inconsolable, her rival generously consented that Adonis should spend half the year with his celestial, half with his infernal mistress. The fable has been variously interpreted. One explanation makes the alternate abode of Adonis above and under the earth, typical of the burial of seed, which in due season rises above the ground for the propagation of its species; another, of the annual passage of the sun from the northern to the southern hemispheres. In the time of Pausanias, in the 2nd century of our era, there existed an ancient temple of Adonis and Aphrodite, at Amathus, in Cyprus.

The story of Adonis appears to have been introduced into Greece from Syria. According to Pausanias, Sappho sung of Adonis; and his name, with allusion to his rites, occurs in a fragment of Alcæus. But it is by the Greek poets of later date, Theocritus and Bion, and their Latin imitators, Ovid and others, that his story has been expanded, and invested with the elegance which is the peculiar character of Grecian mythology. The Adonia are mentioned by Aristophanes among the Athenian festivals, and this is, we believe, the earliest mention of them, except some notice in the poems attributed to Orpheus (the epoch of which is however too doubtful to be received as authority), and the songs attributed to Sappho and Alcæus. The rites began with mourning for the death of Adonis—(thus Ezekiel, viii. 13, “He brought me to the door of the Lord’s house . . . and behold, there sat women weeping for Thammuz”); then changed into rejoicing for his return to life and to Aphrodite; and concluded with a procession, in which the images of Adonis and Aphrodite were carried, with rich offerings, in separate couches; after which the former appears to have been thrown into the sea. (See Theocritus, ‘*Idyll*,’ xv.) In the time of Pausanias, the women of Argos, in the Peloponnesus, lamented Adonis.

In Syria we know the worship of Adonis (if, according to the received notion, he be the same personage as Thammuz) to be probably of much older date. We know, from the passage in Ezekiel already quoted, that the adoration of the latter was one of the abominations of Judah six centuries before Christ. Whatever resemblance there may have been between the early Syrian and Grecian rites, the former were far more deeply polluted by the atrocities of a brutish superstition, to which the natives of Syria were unusually prone.

Adonis (Nahr-el-Ibrahim) is also the ancient name of a river in Syria, which rises in the mountains of Lebanon. Byblos, a town near the river Adonis, was one of the chief seats of the worship above mentioned, which was intimately connected with a peculiarity incident to the river. Its waters, at a certain period of the year, assume a deep red, and were said to be discoloured by the blood of Adonis.

"Thammus came next behind,
Whose annual wound in Lebanon allured
The Syrian damsels to lament his fate
In amorous ditties all a summer's day,
While smooth Adonis from his native rock
Ran purple to the sea, supposed with blood
Of Thammus yearly wounded."

'Paradise Lost,' l. 445.

The phenomenon has been observed by modern travellers, and is attributed to the rains, which bring a quantity of red earth into the stream. (See Maundrell's 'Travels.') This, which probably is the true solution, was suggested even in the time of Lucian ('De Dea Syria,' § 5).

ADRIAN. [HADRIANUS, ELIUS.]

ADRIAN I., Pope, born at Rome, succeeded Stephen III. in 772. Like his predecessor, he had to struggle against the power of the Longobards, who had invaded the Exarchate and other provinces bestowed by Pepin, king of the Franks, on the Roman see. Devastating with fire and sword Sinigaglia, Urbino, and other cities, they advanced as far as Otricoli, on the Tiber, and threatened Rome with the same fate. Desiderius, king of the Longobards, had taken under his protection the two sons of Carloman, the deceased brother of Charlemagne, and he wished Adrian to consecrate them as kings of the Franks, in opposition to their uncle. Adrian refused to do this, and hence arose the bitter enmity of Desiderius. Adrian applied to Charlemagne for assistance. The king of the Franks crossed the Alps by the way of Susa, defeated Desiderius, and overthrew the kingdom of the Longobards in Italy, in 774. Charlemagne then went to Rome, where he arrived on Easter eve, and was received by Adrian with great honour. They repaired together to the Basilica of St. Peter, where Adrian acknowledged Charles as king of Italy, and 'Patrician of Rome,' and the latter renewed the grant of the provinces bestowed on the Roman see by Pepin. Charlemagne paid another visit to Adrian at Rome in 787 when his son Pepin was christened by the Pope. In 787 the seventh general council of the church was held at Nicea, in Bithynia, where Adrian sent his legates, and in which the worship of images was confirmed, and the iconoclasts were excommunicated. In 791 there was a dreadful inundation at Rome caused by the overflowing of the Tiber, and Adrian exerted himself in supplying the inhabitants with provisions, by means of boats, which plied to the various parts of the city. He also rebuilt the walls and towers of Rome, and was liberal to the poor. He died after a long pontificate of nearly 24 years, on Christmas-day, 795. Charlemagne was much grieved at the news of his death, and wrote his epitaph in Latin verses, in which he affectionately calls him 'father.' Adrian was a man of talent and dexterity. Under him Rome began to breathe again after the continual alarms caused by the Longobards, the last of the barbarian invaders of the Western Empire. (See 'Anastasius' in Muratori's *Rerum Italicarum Scriptores*, tom. iii.)

ADRIAN II., born at Rome, succeeded Nicholas I. in the papal chair, in 867. He had been married, and had a daughter by his wife Stephanina, from whom he afterwards separated in order to live in celibacy. After his election, his wife and daughter continued to live at Rome in a separate house, when an unprincipled man, called Eleutherius, carried off the girl by violence, and on the pontiff retaking his child, forced his way into the house and murdered both mother and daughter. The murderer was tried and sentenced to death by the imperial commissioners, who still exercised the high judicature at Rome. It was during Adrian's pontificate that Photius, patriarch of Constantinople, withdrew from the Church of Rome, thus forming the schism between the Greek and Latin churches, which continues to this day. Adrian died in 872, and was succeeded by John VIII.

ADRIAN III., born at Rome, succeeded Marinus in 884, and died the following year on his journey to attend the imperial diet at Worms, after a pontificate of only fifteen months.

ADRIAN IV., an Englishman, whose name was Nicholas Breakspere, succeeded Anastasius IV., in 1154. He had been a monk, and was made Bishop of Albano by Eugenius III., who sent him as his apostle, as a legate was then called, to Denmark and Norway. On his return he was elected Pope much against his inclination. Rome was then in a very disturbed state. Arnaldo of Brescia, a monk and a disciple of Abelard, had begun to preach a reform in the church as early as 1139, but being driven out of Rome by Pope Innocent II., had taken refuge at Zurich. In 1143 however he was recalled by the Roman people, who had revolted against Innocent, and had proclaimed a Roman republic, which Arnaldo contributed to constitute. Several successive Popes, Celestin II., Lucius II., and Eugenius III. kept up a sort of desultory struggle against this popular reformer. Lucius in an affray was pelted with stones, and died of the injury received. His successor, Eugenius, was obliged to leave Rome and retire into Sabina. During the confusion that prevailed in the city, the populace plundered and afterwards pulled down the houses of many nobles, cardinals, and citizens, and committed other acts of violence. Adrian IV., after his election, placed Rome under interdict on account of these disorders, and caused all religious services to cease; which measure led the citizens to banish Arnaldo, who took refuge with some barons of Campania; and Adrian then came to

reside in the Lateran palace. Frederic of Hohenstauffen, known in Italian history by the name of Barbarossa, had lately been elected emperor by the German Diet, and was on his way to Rome to be crowned. The Pope's legates met him on the road, and among other remonstrances, requested that the heretic Arnaldo should be given up by the Viscount of Campania, in order to be tried. Frederic assented to this, and issued orders in consequence; others say that Cardinal Gerard took Arnaldo prisoner, after an obstinate resistance. He was brought to Rome, and delivered to the prefect of the city, by whose sentence he was hanged, his body burnt, and the ashes scattered to the winds, in the year 1155. Meantime Frederic approached Rome with his army, and Adrian went to meet him near Sutri, where, on the latter dismounting, Frederic refused to hold his stirrup, a ceremony on which the popes always insisted, as a mark of respect for their spiritual supremacy. The Pope, on his side, refused to salute the Emperor with the 'kiss of peace,' upon which the cardinals were terrified and ran away to Civitã Castellana. The question of the ceremonial was debated for two days, when Frederic, having ascertained that such had been the practice with his predecessors, agreed to conform to it. They met, therefore, again at Nepi, and Frederic having held the stirrup, Adrian gave him the 'osculum pacis,' and both proceeded towards Rome. Frederic with his army took possession of the Leonine city on the north bank of the Tiber, and of St. Peter's church, where he was crowned by the Pope on the following day. The Romans took no part in the ceremony, but after having held a council in the Capitol, sallied out and attacked the German soldiers unawares. A general battle took place, and continued with great slaughter on both sides, till night separated the combatants. The city continuing in a disturbed state, both the Pope and Emperor withdrew to Tivoli, whence Frederic returned towards Lombardy. Adrian went afterwards to Benevento, where he made peace with William I., king of Sicily, whom he had excommunicated; and upon their reconciliation he agreed to give him the investiture of Sicily, Calabria, and Apulia, in 1156, on condition of the latter paying a yearly tribute to the see of Rome. The Pope returned loaded with rich presents of silks, gold, and silver, and passing through Rome, went to reside at Orvieto, which was subject to the Roman see. Frederic now complained that the Pope had violated his faith, by receiving ambassadors and entering into treaties with the King of Sicily and the Greek Emperor, without his participation. He also resented the pretensions of the Pope and his legates, who seemed to assume that the imperial crown was granted as a *beneficium*, or fee of the see of Rome. Adrian, on his part, complained of the exactions of the imperial commissioners who were sent to administer justice at Rome without his participation; he maintained that the patrimony of the church should be exempt from paying *fodrum*, or feudal tribute to the Emperor; and, lastly, he claimed the restitution of the lands and revenues of Countess Matilda, of the duchy of Spoleti, and even of Corsica and Sardinia. Thus arose that spirit of bitter hostility between the popes and the house of Hohenstauffen, which lasted until the utter extinction of the latter. Adrian died in the beginning of September, 1159, in the town of Anagni, and was succeeded by Alexander III. From the above sketch it may be seen that Adrian IV. stretched the papal prerogatives as far as any of his predecessors had done, Gregory VII. not excepted. (See Fleury, *Histoire Ecclésiastique*, and Raumer, *Geschichte der Hohenstauffen und ihrer Zeit*.)

ADRIAN V., a Genoese, succeeded Innocent in 1276, and died five weeks after his election. He was succeeded by John XX.

ADRIAN VI., born at Utrecht in the Netherlands, of an obscure family, advanced himself by his talents to the post of vice-chancellor of the University of Louvain. The Emperor Maximilian chose him as preceptor to his grandson, afterwards Charles V. Ferdinand of Spain gave him the bishopric of Tortosa. After Ferdinand's death he was co-regent of Spain with Cardinal Ximenes. He was elected pope in 1522, after the death of Leo X., chiefly through the influence of Charles V. whose authority was then spreading over Italy. Adrian endeavoured to reform the numerous abuses of the court and clergy of Rome, practised a severe economy, and lived frugally. By so doing he displeased the Romans, who had been accustomed to the luxury and prodigality of Leo; and when he died, in September, 1523, after a short pontificate, the people could not conceal their joy. They styled his physician, 'the saviour of his country.' He was succeeded by Clement VII. Adrian appears to have been an honest conscientious man, who fell upon evil times, and was unequal to the difficulties which he had to encounter. He was desirous of maintaining peace, and of stopping, if possible, the schism of the Lutherans by reforming the church, but he did not live long enough to effect anything essential. Burmann published his life at Utrecht, in 1727.

ÆGINHARD. [ÆGINHARD.]

ÆLFRIC, an eminent Saxon prelate. He is said to have been the son of an Earl of Kent, but at an early age he embraced a devotional life, and assumed the habit of the Benedictines, in the monastery of Abingdon. In 963, when Athelwold, the abbot of that house, became Bishop of Winchester, he took Ælfric along with him, and made him one of the priests of his cathedral. Here he remained till 987, when he removed to Cerne Abbey. Next year he was made Abbot of St. Albans, and soon after was promoted to the bishopric of Wilton.

Finally, in 994, he was translated to the archbishopric of Canterbury, over which see he presided with great ability till his death, on the 16th of November 1005. Ælfric was one of the most learned ecclesiastics of that age, and distinguished himself throughout his life by a very praiseworthy zeal and activity in the diffusion of knowledge. The following are the principal works which have been attributed to him:—1. A Latin and Saxon Glossary, printed by Somner at Oxford, in 1659. 2. A Saxon translation of most of the historical books of the Old Testament, part of which was printed at Oxford in 1698. 3. A charge to his clergy, in articles, commonly called his Canons, which was published by Spelman in the first volume of his 'English Councils.' 4. Two volumes of Saxon Homilies, translated from the Latin fathers. 5. A Saxon Grammar in Latin. There were however other Saxon ecclesiastics of his name, and it has been doubted if all the works enumerated were the productions of the Archbishop of Canterbury.

ÆLIA'NUS. A person of this name wrote a book on the military tactics of the Greeks, which he dedicated to the Emperor Hadrian. There are several editions and translations of this work. A German translation, by A. H. Baumgärtner, appeared in his complete collection of the Greek writers on military tactics, Frankenthal and Mannheim, 4to., 1779. There is an English translation by Lord Dillon, 4to., 1814.

ÆLIA'NUS, CLAUDIUS, a Roman citizen and a native of Præneste (Palestrina), probably lived about the middle of the 3rd century of the Christian era. Like Cicero, Atticus, and many other Romans, he made himself so completely master of the Greek language as to write it with ease and correctness. There is extant a work of his in fourteen books, entitled 'Various or Miscellaneous History,' which is a compilation or collection of extracts made by the author in his extensive reading. The value of it does not consist in what the compiler has written, but in the passages of lost writers that he has been the means of preserving. An edition of this work was published at Paris in 1805, 8vo., with Heracles of Pontus and Nicolaus of Damascus, by the learned Greek Coray. There is a French translation of Ælian's work, by M. B. T. Dacier, Paris, 1772, 8vo., with notes.

Another work of Ælian's, in seventeen books, also written in Greek, is entitled 'On the Peculiarities of Animals.' Though the author cannot claim the merit of being a scientific naturalist, he has preserved a number of curious facts, collected from the works he had read. Some critics are of opinion that the two works belong to different authors. (Schoell, vol. ii. 'Greek Lit.'). J. G. Schneider published an edition of the work on animals in 1784; but the latest edition of the Greek text is by F. Jacobs, Jena. There are also twenty Greek letters extant attributed to Ælian.

ÆMILII, the name of a patrician gens, or clan, in ancient Rome, who pretended to derive their origin from Mamercus, the son of Pythagoras. Of the families included in this gens, the most distinguished were the Pauli, or Paulli, the Lepidi, and the Scauri. [LEPIDI; SCAURUS.] Among the Paulli the most worthy of notice was Lucius Æmilius Paulinus, the son of the consul bearing the same name, who fell in the battle near Cannæ (B.C. 216), after using his utmost efforts to check the rashness of his colleague. Young Æmilium was a mere boy at the death of his father, yet by his personal merits and the powerful influence of his friends he eventually attained to the highest honours in his country. His sister Æmilia was married to Publius Cornelius Scipio, the conqueror of Hannibal, who was consul for the second time B.C. 194; and this very year Æmilium, though he had held no public office, was appointed one of three commissioners to conduct a colony to Croton, in the south of Italy, a city with which he might claim some connection on the ground of his descent from the Pythagoreans. Two years after, at the age of about thirty-six, he was elected a curule ædile, in preference, if we may believe Plutarch, to twelve candidates of such merit that every one of them became afterwards consul. His ædileship was distinguished by many improvements in the city and neighbourhood of Rome. The following year, B.C. 181, he held the office of prætor, and in that capacity was governor of the south-western part of the Spanish peninsula, with a considerable force under his command. The appointment was renewed the year after, with enlarged powers, for he now bore the title of Proconsul, and was accompanied by double the usual number of lictors. In an engagement however with the Lusitani, 6000 of his men were cut to pieces, and the rest only saved behind the works of the camp. But this disgrace was retrieved in the third year of his government by a signal defeat of the enemy, in which 18,000 of their men were left upon the field. For this success a public thanksgiving was voted by the senate in honour of Æmilium. Soon after he returned to Rome and found that he had been appointed, in his absence, one of the ten commissioners for regulating affairs in that part of western Asia which had lately been wrested by the two Scipios from Antiochus the Great. Æmilium was a member also of the college of augurs from an early age, but we do not find any means of fixing the period of his election. As a candidate for the consulship he met with repeated repulses, and only attained that honour in B.C. 182, nine years after holding the office of prætor. During this and the following year he commanded an army in Liguria, and succeeded in the complete reduction of a powerful people called the Ingauni, who have left their name in the maritime town of Albenga, formerly Albium Ingaunum. A public thanksgiving of three days was immediately voted, and on his

return to Rome he had the honour of a triumph. For the next ten years we lose sight of Æmilium, and at the end of this period he is only mentioned as being selected by the inhabitants of Farther Spain to protect their interests at Rome, an honour which at once proved and added to his influence. It was at this period, B.C. 171, that the last Macedonian war commenced, and though the Romans could scarcely have anticipated a struggle from Perseus, who inherited from his father only the shattered remains of the great Macedonian monarchy, yet three consuls, in three successive years, were more than baffled by his arms. In B.C. 168 a second consulship, and with it the command against Perseus, was entrusted to Æmilium. He was now at least sixty years of age, but he was supported by two sons and two sons-in-law, who accompanied him to the war in Macedonia, and contributed in a marked manner to his success. Perseus was strongly posted in the range of Olympus to defend the passes from Perrhæbia into Macedonia, but he allowed himself to be outmanœuvred. Æmilium made good his passage through the mountains, and the two armies were soon in view of each other near Pydna. On the night before the battle an eclipse of the moon occurred. The Roman soldiers, forewarned of its occurrence, regarded it with amusement rather than fear. In the Macedonian camp, on the other hand, superstition produced the usual effect of horror and alarm; and on the following day the result of the battle corresponded to the feelings of the night. In a single hour the hopes of Perseus were destroyed for ever. The monarch fled with scarcely a companion, and on the third day reached Amphipolis. Thence he proceeded to Samothrace, where he soon after fell into the hands of the conqueror. The date of the battle of Pydna has been fixed by the eclipse to the 22d of June. After reducing Macedonia to the form of a Roman province, Æmilium proceeded on his return to Epirus. Here, under the order of the senate, he treacherously surprised seventy towns, and delivered up to his army 150,000 of the inhabitants as slaves, and all their property as plunder. On his arrival in Rome however he found in this army, with whom he was far from popular, the chief opponents of his claim to a triumph. This honour he at last obtained, and Perseus with his young children, some of them too young to be sensible of their situation, were paraded for three successive days through the streets of Rome. But the triumphant general had a severe lesson from affliction in the midst of his honour. Of two sons by a second wife (he had long divorced Papiria), one, aged 12, died five days before the triumph; the other, aged 14, a few days after; so that he had now no son to hand down his name to posterity. Æmilium lived eight years after his victory over Perseus, in which period we need only mention his censorship, B.C. 164. At his death, B.C. 160, his two sons, who had been adopted into other families; Fabius and Scipio, honoured his memory in the Roman fashion by the exhibition of funeral games; and the 'Adelphi' of Terence, the last comedy the poet wrote, was first presented to the Roman public on this occasion. Æmilium found in his grateful friend Polybius one willing and able to commemorate, perhaps to exaggerate, his virtues. Few Romans have received so favourable a character from history. (Polybius; Livy; Plutarch.)

ÆNEAS, a Trojan prince of the royal blood, son of Anchises and Venus. According to Homer he commanded the Dardanians, and his name occurs frequently in the 'Iliad,' but not in the first rank of heroes. He owes his celebrity to those stories which make him the founder of the Roman empire in Italy, and to his being the hero of Virgil's poem. According to the Latin poets, on the night when Troy was taken, or, as others say, before its capture, Æneas quitted the city, bearing on his shoulders his aged father, and the images of his household gods, accompanied by his wife Creusa, who perished by the way, and his son Iulus, also called Ascanius. The older authors do not speak of the multitude of followers and number of ships with which Virgil has adorned his narrative. According to them he quitted the Trojan shores in a single ship to seek his fortune in the unknown regions of the west. After many wanderings he reached the coast of Latium with 100 followers, and was favourably received by Latinus, king of the country, who assigned a small tract of ground as a settlement for the Trojans. But war soon broke out between the strangers and the natives. Turnus, prince of the Rutuli, joined Latinus to expel the foreigners; but the allied princes were defeated, and Latinus was slain in the first battle. Lavinia, his daughter, became the bride of the victor, and the citadel of Laurentum fell into his hands. Æneas now built the city of Lavinium, which was hardly completed when Turnus again appeared in arms, assisted by Mezentius, king of Cære. Another battle ensued, in which Turnus fell; but the Latins were defeated, and Æneas was drowned, or at least disappeared in the river Numicius. He was afterwards adored as Jupiter Indiges: a temple was raised to him on the bank of the river; and the Latins, and in later ages the consuls of Rome, offered yearly sacrifices to him under that name. Iulus, his son by Creusa, succeeded to the throne, and founded a city, celebrated in the history of Latium, called Alba Longa. He was succeeded by Sylvius, son of Æneas and Lavinia, from whom a long line of Latin kings descended. Such is a sketch of the chief traditions about this reputed Trojan prince and his settlement in Italy, (Niebuhr, *Roman History*, vol. i. p. 176. Hare and Thirlwall's translation.)

The only allusion in Homer to the history of Æneas after the Trojan war, is a prediction that he and his children shall reign for centuries

over the Trojans; nothing is said of the place of their settlement. Some have supposed that he remained in the Troad, and that the story of his emigrating to Italy is entirely destitute of foundation.

ÆPINUS, FRANCIS MARIA ULRIC THEODORE, a celebrated electrician of the 18th century, who was born at Rostock in Lower Saxony, December 12, 1724, but of whose life few particulars have been preserved; he died at Dorpat in Livonia, in 1802.

Several memoirs by Æpinus, relating to mathematical and philosophical subjects, were printed in the 7th, 8th, 9th, and 10th volumes of the 'Novi Commentarii Petropol,' and in the 'Mémoires' of the Berlin Academy for 1755 and 1756. In the volume for the latter year, and also in a 'Recueil de Mémoires,' published at St. Petersburg in 1762, is his paper entitled 'De quibusdam Experimentis Electricis,' &c., which contains the discovery of the electrical polarity of tourmaline, a mineral which has since been so much noticed on account of its properties with respect to polarised light. Æpinus found that on exposing a piece of the mineral to a heat between 99½° and 212° Fahr., one extremity of it acquired the vitreous and the other the resinous electricity. In the 10th volume of the 'Novi Comment.' is his paper concerning the effect of parallax on the duration of a transit of Venus over the disc of the sun, in consequence of the position of the observer on the earth's surface; and in the same volume is one on the accidental colours produced by looking directly at the sun. Also, in the 12th volume of the same work there is contained an account of the electrical properties of the Brazilian emerald, a crystal which has been since found to be merely a variety of tourmaline. In 1758 he published at St. Petersburg an academical discourse concerning the similarity of electricity and magnetism; and in 1761, at the same place, a treatise entitled 'Cogitationes de Distributione Caloris per Tellurem.'

But Æpinus is chiefly distinguished by his 'Tentamen Theoriz Electricitatis et Magnetismi,' which, in 1759, was published also at St. Petersburg. In this work he sets out by assuming that there exists in all bodies a fluid whose particles mutually repel one another with forces decreasing as the distances between them increase, and, according to the same law, attract the particles of the bodies with which they are in combination. He assumes also that the electrical fluid penetrates with difficulty through the bodies called electric, as glass, resin, &c.; and that it meets with no sensible obstruction in passing through such as are called non-electrics or conductors, as the metals, unbaked wood, &c.; and he has succeeded in showing, by the strict process of mathematical analysis, that the phenomena of electricity depend chiefly on the tendency of the fluid to attain a state of equilibrium, by passing from a body which contains an excess to those about it which may have less than the natural quantity. The intricate subject of the distribution of electricity and magnetism on the surfaces of bodies of given forms, as spheres or spheroids, is however left untouched; and though the results of the investigations, so far as they extend, accord satisfactorily with phenomena, yet there remains an unsurmountable difficulty in the fact that, when a body is deprived of the electrical fluid, its particles are held together by cohesion, while the theory requires that in such a state the particles should exert on one another repulsive forces.

In the 'Philosophical Transactions' for 1771, there is an elaborate paper containing a mathematical theory of electricity, on the same principles as those assumed by Æpinus, which was written by Mr. Cavendish without any knowledge of what had been previously done by the continental philosopher; and an abridgement of the Theory of Æpinus was published by M. Hauy in 1787, under the title 'Exposition de la Théorie de l'Electricité.'

Æpinus discovered the means of charging a plate of air with electricity, when it is confined between two boards. He appears to have directed his attention to mechanical subjects; for he discovered that when any forces, acting upon the arms of a balance, keep them in equilibrium, the sum of the forces, decomposed in the direction of the arms, is a maximum.

(*Biographie Universelle.* The brief notices of the discoveries of Æpinus are taken from the works named above.)

ÆSCHINES, the Philosopher, was one of the scholars of Socrates, and, as the story goes, the son of a sausage-maker. Three dialogues, still extant, that have usually gone under his name, after passing through the furnace of modern criticism, have been declared not to be written by him. The language of these dialogues proves them however to belong to an age when Greek was still written with great purity.

ÆSCHINES, commonly called the Orator, was born at Athens, B.C. 393. The name of Æschines's father was Atrometus. According to the account of his enemies, he had been a slave, and had obtained his freedom; but his son asserts that he was a true-born Athenian. However this may be, he was poor enough to be a schoolmaster, with which Demosthenes upbraids his rival as if it were a low and sordid profession. Æschines, when he was a little older, if we trust the testimony of Demosthenes, became a kind of clerk to some of the inferior magistrates. His next step was somewhat bolder: having a good voice and a fine person, he tried his fortune on the stage. Whether he stepped from the stage direct into the more busy theatre of public life, we do not know; but he did finally come forward, though not at an early age, as a public man. By having discharged

his functions as a clerk, and having been in the service of the orators Aristophanes and Eubulus in some similar capacity, he had acquired some knowledge of the laws of his country. In short, he was a bold adventurer, gifted with many of those qualities that are calculated to insure success in the dubious game of political warfare.

Only three orations of Æschines are extant, all of which relate to important events in his public life. He was accused by Demosthenes, one of his fellow ambassadors, of malversation and corruption in his second embassy to King Philip, the object of which was to obtain Philip's ratification of the treaty of peace, and to this attack he replied in his oration entitled 'On Malversation in his Embassy.' Timarchus, a friend of Demosthenes, had joined in the attack on Æschines; but the orator speedily rid himself of this adversary by prosecuting him for a disreputable course of life. Æschines gained his cause, and Timarchus, according to some accounts, concluded the affair by hanging himself. The oration on this subject is called 'Against Timarchus.' The delay caused by the prosecution of Timarchus deferred the prosecution of Æschines till about three years after his return from the second embassy, which was no doubt favourable to the accused, as it tended to destroy the popular feeling against Æschines, who finally escaped from a verdict against him. The third oration is entitled 'Against Ctesiphon,' but is in fact an attack on Demosthenes, who replied in his famous oration called 'The Crown.' The pretext on which Æschines attacked Ctesiphon was this:—For some public services which Demosthenes had rendered to the state, it was proposed by Ctesiphon that he should receive a golden crown, but this proposition was considered by Æschines to contain clauses contrary to existing laws. He also denied the claim of Demosthenes on the ground of public services. As early as B.C. 338, Æschines had declared his intention to prosecute Ctesiphon, but the cause was not tried till B.C. 330, after the death of Philip, whilst Alexander was in the midst of his Asiatic conquests. Æschines lost his cause, and not having obtained one-fifth part of the votes of the jury, he was compelled to leave Athens, being unable to pay the penalty in that case required by the law. He retreated to the island of Rhodes, where, it is said, he resumed the profession of his earlier days, by opening classes for instruction in elocution, and became the founder of a school of eloquence. He is said to have died at Samos, B.C. 317. [DEMOSTHENES.]

The Greek and Roman critics considered the Rhodian school of eloquence, of which Æschines was the reputed founder, to be characterised by a happy mean between the florid Asiatic and the dry and more sententious Athenian style. The style of Æschines is distinguished by great perspicuity and correctness of language. His narrative and descriptive powers deserve high praise, nor are we disposed to undervalue his powers of abuse, though in this he falls far below his great rival. We have the strongest testimony to his personal qualifications as an orator, in the reluctant but unambiguous manner in which Demosthenes acknowledges his own inferiority.

There are numerous editions of Æschines: the latest and best, as far as the mere text is concerned, is included in Bekker's edition of the 'Attic Orators,' Oxford, 1822. One of the best editions of Æschines alone is by J. H. Bremius, 1824, 2 vols. 8vo. The Abbé Auger translated the orations and letters of Æschines into French, and inserted them in the second volume of his 'Demosthenes.' The oration of Æschines against Ctesiphon, with the reply of Demosthenes, was translated into Latin by Cicero, and into German by Fr. Raumer, 1811. The oration against Ctesiphon has been translated into English by Portal and Leland.

There are twelve letters extant attributed to Æschines, the genuineness of which, we fear, would not stand the test of a thorough examination. It was usual, in the later ages of Greek literature, for teachers of rhetoric to employ themselves on fictions of this kind.

ÆSCHYLUS, the son of Euphorion, and a native of Eleusis in Attica, was born about B.C. 525, and died in Sicily probably about B.C. 456. As the great father of the Athenian drama, Æschylus occupies one of the most prominent places in the history of the literature of his country. The particulars of his life that have come down to us are however few and unimportant, with the exception that he fought bravely in the battles of Marathon and Salamis. At 25 years of age he contended for the prize of Tragedy. In his 41st year he gained his first victory, which was followed by twelve similar triumphs. In his 57th year, indignant at the prize being awarded to his younger rival, Sophocles, he retired to the court of Hiero, king of Syracuse, who, being a patron of poets and learned men, had collected around him the most illustrious writers of that day, such as Pindar and Simonides. An odd story is told of the cause of the poet's death: an eagle carrying off a tortoise let it fall on the great dramatist's head, mistaking the bald pate for a stone.

Seven tragedies of Æschylus, out of a very large number that he wrote, still remain, entitled respectively, 'The Prometheus Bound,' 'The Seven against Thebes,' 'The Persians,' 'The Female Suppliants,' 'The Agamemnon,' 'Choëphori' (libation-bearers), and 'Eumenides,' or 'Furies.' The three last form a continuous drama or action, which contains (1) the return of Agamemnon from Troy, and his murder by his wife Clytemnestra; (2) the revenge of Orestes, the son of Agamemnon, who kills his mother and the adulterer Ægisthus; and (3) the persecution of Orestes by the Furies, and his release therefrom by

the sentence of the high court of Areopagus, and the casting vote of Minerva. It was usual with the candidates for the dramatic prize at Athens to write three tragedies on some connected subject, to which they added a fourth, called a satyric drama, on some subject treated in a tragi-comic style. The 'Prometheus Bound' of Æschylus belongs to a set of this description, for we know that there was a play entitled 'Prometheus the Fire-stealer,' and a third named 'Prometheus Loosed.'

The Greek drama, in its origin, consisted simply of a chorus or company, who celebrated the festivals of a deity or hero by appropriate songs and dances. The introduction of a personage to tell some story or history was an innovation, and the connecting this narrator more closely with the chorus was another step towards the *drama*, a Greek word, which signifies an action, or, in its more technical sense, the representation of a series of events ending in some striking catastrophe. But Æschylus carried improvements still further, by introducing a second speaker, and thus making the dialogue, as it really is, the essential part of tragedy. To the chorus however Æschylus still allowed a great degree of importance, as we may see from his extant plays, in which the choral songs occupy a large part. He adds also to stage effect by improving the dress of the actors, and giving them masks. Thespis, his predecessor, went about the country in a waggon, and daubed the faces of his company with lees of wine.

The plot or plan of his plays is exceedingly simple; the personages are few in number, and the events follow one another without any complexity or occasioning any great surprise. His language is always forcible, and the dialogue clear where the Greek text has escaped damage; but unfortunately few works of ancient writers have suffered more serious injury from frequent copying than the plays of Æschylus. In consequence of this the choral parts are often exceedingly obscure, and this obscurity is increased by the wild and gigantic conceptions of the poet, which often seem as if they strove with the imperfections of language, and endeavoured to find utterance by a heaping together of strong epithets and the use of long compound words. In spite of these defects, which make the poetry of Æschylus at times border on bombast, and afforded a fair subject of ridicule to Aristophanes in his play called the 'Frogs,' we may often admire a real sublimity of conception, a boldness of imagination, and a power to paint what is grand and terrific, in language which for force, simplicity, and truth, has never been surpassed.

The play of the 'Persians' derives a peculiar interest from being the only extant Greek tragedy which treats of a subject contemporaneous with the age of the writer. It was written or acted probably about eight years after the battle of Salamis, and may be considered as the most durable monument of the defeat of the Asiatic invader. The poet writes as he fought, with a noble spirit of patriotism.

There are numerous editions of the works of Æschylus. The first was printed at Venice in 1518, 8vo, at the press of Aldus, after his death; but the 'Agamemnon' and 'Choëphori' are both incomplete in this edition, and what there is of the 'Agamemnon' is oddly enough tagged to the 'Choëphori,' which has lost its beginning, consequently this edition contains only six plays. The best recent editions are by Wellauer, Lips., 1823; W. Dindorf, Lips., 1827; and Scholefield, Camb., 1830. There is an English poetical version of Æschylus by John Potter, and also several poetical versions of the 'Agamemnon.' A prose version is published in 'Bohn's Classical Library.' The Germans have several poetical translations of Æschylus; the latest is by Voss, 1826. There is a translation of the 'Agamemnon' (1816) by William Humboldt.

ÆSCULAPIUS, or, according to the Greek form of his name, *Asclepius*, was the god of medicine in ancient mythology. Several Æsculapii are said to have existed; and it would not be easy to determine whether tradition pointed to so many distinct persons, or merely handed down different versions of the parentage of the same man. Cicero mentions three: the first, son of Apollo, invented the probe, and the art of bandaging wounds; the second, son of Mercury, was struck dead by lightning; the third was of mortal parentage, son of Arrippus and Arsinoë, and first practised purging and tooth-drawing. The Egyptians also had their Æsculapius (as the Greeks call him), the son of Hermes. Of the most important of these we proceed to give a brief sketch.

Asclepius was the son of Apollo by Coronis, daughter of Phlegyas. His mother, having succeeded in concealing her pregnancy, exposed the child upon Mount Myrtium, afterwards called Titthium, in Argolis, near Epidaurus. A shepherd, missing his dog and one of his goats, sought the wanderers throughout the country; and at last found them, the dog keeping watch over a child enveloped in flames, which the goat was suckling. The herdsman, "thinking that it was something divine," and being frightened, went away; but he spread the marvel abroad, and it was soon noised over all the globe that Asclepius could heal every disease, and besides bring the dead to life.

Another version of the story says that Apollo, in a fit of jealousy, having caused the mother's death, the unborn child was snatched by Mercury (or, according to Pindar, by Apollo himself) from her funeral pile. This circumstance may be connected with the other story, which assigns the parentage of Æsculapius to Mercury.

According to Pindar, Apollo sent the child to be educated by the

Centaur Chiron, who instructed him in medicine, as at an after-period he did Achilles. Having reached manhood, he went with Castor and Pollux on the Argonautic expedition. Returning to Greece, he practised with eminent success; not merely curing all diseases, but recalling the dead to life. Among others, he did this service to Hippolytus, son of Theseus. The gods regarded this as an invasion of their privileges, and at last Zeus (or Jupiter) struck the bold practitioner dead with lightning, in consequence of a complaint lodged by Pluto, that the infernal regions were depopulated by these new proceedings. Apollo revenged the death of his son by killing all the Cyclopes, who forged thunderbolts for Zeus. Finally, Asclepius was raised to heaven, and made a constellation, under the name of Ophiuchus, the serpent-holder; though some say that Ophiuchus is Hercules.

In the latter ages of paganism, when scepticism was very prevalent, and it was the fashion to see allegory in every mythological story, the whole was thus explained:—Æsculapius signified the air, the medium of health and life. The Sun was his father, because the sun, shaping his course agreeably to the changes of the seasons, produces a healthy state of the atmosphere. The same spirit is visible in the names given to his daughters, which all but one bear reference to the father's art:—Hygieia, health; Panakeia, universal remedy; Iaso, healing; Aigle, splendour.

In Greece, the original seat of Asclepius's worship was in the neighbourhood of his birthplace at Epidaurus, where a splendid temple was erected to his honour, adorned with a chryselephantine (or gold and ivory) statue. He was represented sitting; one hand holding a staff, the other resting on a serpent's head; a dog couched at his feet. In coins and other ancient remains he is commonly seen with a long beard, holding a staff with a serpent twined about it. Often he is accompanied by a cock; sometimes by an owl. The cock was commonly sacrificed to him. These animals seem meant to typify the qualities which a physician should possess; the owl being emblematic of wisdom, the cock of vigilance, the serpent of sagacity, and, besides, of long life. The serpent was especially sacred to Asclepius. At Epidaurus there was a peculiar breed of yellowish-brown snakes, of large size, harmless, and easily tamed, which frequented the temple, and in the form of which the god was supposed to manifest himself. In this shape he was conveyed to Sicily, and at a later period, about B.C. 400, to Rome, when that city, being afflicted by pestilence, sent an embassy, at the command of an oracle, to fetch Asclepius to their help. On the ambassadors being introduced into the temple, a serpent came from under the statue, and glided through the city, and on board their ship. Arriving in the Tiber, he swam ashore to the island upon which his temple afterwards was built. A few inscriptions have been found in this island relating cures, and the means employed. The means are of such a nature that the cures must have been impostures, or have been wrought by the force of imagination. It was customary to place similar inscriptions in all temples of Asclepius. At Epidaurus there were stones in the sacred precinct erected in commemoration of cures performed by the god, recording in the Doric dialect the names and diseases of the patients, and detailing the methods of cure employed. Six of these remained when Pausanias visited the place, and, besides, an ancient pillar, commemorating the gift of twenty horses by Hippolytus, in gratitude for his restoration to life.

Of the extent of Asclepius's knowledge, and of his method of practice, or rather of that which prevailed in the early ages before the Trojan war, we know little. His sons, Machaon and Podaleirios, who fought before Troy, and are often mentioned in Homer, seem only to have meddled with external injuries. Pindar, in a passage of rather doubtful meaning, seems to confine the father's skill within the same limits, when he speaks of him as healing those afflicted with self-produced ulcers, wounds from brass or stone, or injuries from summer heat or cold. His remedies, on the same authority, were incantations, soothing drinks, external applications, and the knife. There is a remarkable passage in which Plato ('Rep.' iii. § 14), inveighing against the effeminacy of his own times, contrasts the attention of physicians to diet, exercise, &c., with the negligence of the sons of Asclepius in these respects; quoting a passage from Homer, in which Machaon, returning from battle severely wounded, partakes immediately of a mess of meal and cheese, mixed up in strong Pramnian wine. ('Il.' xi. 639.)

For some centuries after the Trojan war medical science, if it deserves that name, seems to have been confined to the temples of Asclepius, in which his descendants, the Asclepiadæ, who formed the priesthood, were alone allowed to practise; until in later times pupils were admitted into the brotherhood, having been solemnly initiated, and sworn to conform to its rules. The most celebrated temples, besides that at Epidaurus, were those of Rhodes, Cnidos, and Cos, where Hippocrates, a native of the island, is said to have profited by the records preserved in the temple. Croton and Cyrene also possessed schools of medicine. The practice seems to have been intended chiefly to work on the imagination. The god often gave his own prescriptions in dreams and visions, and the patients were to be prepared by religious rites for this divine intercourse.

ÆSO'PUS, now commonly called *Æsop*, a Grecian author, who lived about the middle of the 6th century before Christ, contemporary with Solon and Pisistratus. He is usually acknowledged as the inventor of those short moral fictions to which we especially appropriate the

name of 'Fables.' The popular stories of him are derived from a 'Life,' written and prefixed to a collection of Fables, bearing the name of Æsop, by Maximus Planudes, a Constantinopolitan monk, about the middle of the 14th century. This contains a distorted view of the few incidents in his history which can be said to be known, mixed with a long series of dull buffoonery, and improbable or impossible adventures; and represents Æsop himself as a monster of personal deformity, apparently for the sake of contrasting his wit and acuteness with his bodily defects. This life is now given up, by general consent, as totally unworthy of credit. There is no allusion to these personal peculiarities in any classical author, and strong negative reasons have been urged for believing that none such existed. See Bentley's 'Dissertation upon Æsop,' subjoined to that upon Phalaris.

The place of his birth, like that of Homer, is matter of question; Samos, Sardis, Cotinum in Phrygia, and Mesembria in Thrace, laying claim alike to that honour. The early part of his life was spent in slavery, and the names of three of his masters have been preserved:—Dinarchus, an Athenian, in whose service he is said to have acquired a correct and pure knowledge of Greek; Xanthus, a Samian, who figures in Planudes as a philosopher; and Iadmon, or Idmon, another Samian, by whom he was enfranchised. He acquired a high reputation in Greece for that species of composition which, after him, was called Æsopian, and in consequence was solicited by Croesus to take up his abode at the Lydian court. Here he is said to have met Solon, and to have rebuked the sage for his uncourtly way of inculcating moral lessons.

Æsop is said to have visited Athens during the usurpation of Pisistratus, and to have composed the fable of 'Jupiter and the Frogs' for the instruction of the citizens. (Phædrus, i. 2.) Being charged by Croesus with an embassy to Delphi, in the course of which he was to distribute a sum of money to every Delphian, a quarrel arose between him and the citizens, in consequence of which he returned the money to his patron, alleging that those for whom it was meant were unworthy of it. The disappointed party in return got up a charge of sacrilege, upon which they put him to death. A pestilence which ensued was attributed to this crime, and in consequence they made proclamation at all the public assemblies of the Grecian nation, of their willingness to make compensation for Æsop's death to any one who should appear to claim it. A grandson of his master Iadmon at length claimed and received it, no person more closely connected with the sufferer having appeared. This singular tale rests on the authority of Herodotus.

The time of Æsop's death is uncertain. Some place it as early as the 53rd Olympiad, about B.C. 565. If however there be any truth in the scattered notices which we have combined, he was at Athens during the usurpation of Pisistratus, and met with his death in the service of Croesus, and therefore before the capture of Sardis and fall of the Lydian kingdom. This, according to Newton's chronology, would fix his death in the 57th or 58th Olympiad, between the years B.C. 550 and 554. The Athenians erected to his honour a statue from the hand of the celebrated sculptor Lysippus.

There is abundant proof that fables passing under the name of Æsop were current and popular in Athens during the most brilliant period of its literary history, and not much more than a century after the death of the supposed author. The 'drolleries of Æsop' (*Αἰσώπια γέλοια*) are mentioned by Aristophanes in terms which lead us to suppose that they were commonly repeated at convivial parties. Socrates, in prison, turned into verse "those that he knew;" and Plato, who banishes the fictions of Homer from his ideal republic, speaks with high praise of the tendency of those of Æsop. Demetrius Phalereus made a collection of Æsopian fables; and we hear of two metrical versions of them of still later date, one by an anonymous author, the other by Babrius. Phædrus published a collection of fables in Latin verse in the time of Tiberius, the materials of which he professes to have taken from Æsop; and it is not improbable that the nearest approach to the substance of the original apologues may there be found. Another collection was written in elegiac verse, in the 4th century, by Avianus.

There is no ground whatever for believing that the Greek prose fables which pass under the name of Æsop are really of his composition—at least, that they came from his hands in their present state. Those which are substantially the same with the fables of Phædrus, the oldest to which we can assign a certain date, may be believed, for the reasons already assigned, to have originally emanated from the Grecian author. The total number of them is about 290 or 300, and they may be divided into two principal parcels: those published by Planudes, in number 144, which contain internal evidence that, as far as composition is concerned, they are of late date, and probably written by Planudes himself; and a second collection, of 136, first published in 1610 by Nevelotus from manuscripts at Heidelberg. It is to be observed that not one of these manuscripts contains the fables published by Planudes; and that the editor expresses his belief that they are the work of different hands. Some he attributes to the monks, because they contain allusions to the monastic life, which is at least sufficient evidence of their late date. This edition, which is a sort of *corpus fabularum*, contains 297 fables ascribed to Æsop, and 40 of the rhetorician Aphonius, who lived in the 3rd century; besides various metrical versions in Greek and Latin.

The eastern philosopher and fabulist Lokman is supposed by many

to have been the same person as Æsop. The former, by the Mohammedan authorities, is made contemporary with David and Solomon; but his history is too uncertain for us to speculate upon it. The same fables are to be found current under the names of each, and the correspondence between their personal histories, as commonly told, is too close to be entirely accidental. [BABBUS; LOKMAN.] Many translations of the fables attributed to Æsop have been made in most modern languages: the most recent English translation is by the Rev. Thomas James.

ÆTION (*Æτίων*), a celebrated Greek painter, and, according to Lucian, one of the best ancient colourists. That writer mentions Ætion, Apellea, Euphranor, and Polygnotus, as the most successful of the ancient Greek painters in the mixing and laying on of colours. Ætion's exact time is uncertain, although, from the manner in which he is mentioned by Lucian, notwithstanding the names he is associated with, he lived probably in Lucian's own time, or at most very shortly before him. He speaks of him as the most distinguished painter of his time, and describes a very celebrated picture by him of the marriage of Alexander and Roxana, which the painter exhibited at the Olympic games, and which pleased Proxeniada, one of the judges, so much that he gave Ætion his daughter in marriage. "It may be asked," says Lucian, "what was there so marvellous in that painting, as should induce a man of such high rank to reward the painter, who withal was a stranger, by bestowing on him his daughter? The picture is still in Italy, and I am able to speak of it from personal inspection. It represents an extremely magnificent bed-chamber with a nuptial bed. In it is seen sitting Roxana, the most beautiful virgin that can be conceived. Her eyes are modestly fixed on the ground before Alexander, standing near her. She is surrounded by several smiling Cupids. One of them behind her lifts up the bridal veil from her forehead, and shows it to the bridegroom. Another, in the attitude of a slave, is officiously employed in drawing off her shoes, that she may no longer be detained from lying down. A third has hold of Alexander's robe, pulling him with all his might towards Roxana. The king presents the maiden with a crown, and beside him stands Hephestion as a bridegroom, holding a lighted torch in his hand, supported by a wonderfully fine youth, whom I guess to represent the god of marriage, for the name is not beneath. On the other side of the piece are drawn several more Cupids, playing with the arms of Alexander. Two of them carry his spear, and seem almost overburdened with the weight of it. Another couple take his buckler, with a figure like the king stretched upon it, trailing it along by the handles. Another creeps backwards into the coat of mail, where he seems to lurk in order to frighten the two little porters as they come on." "These collateral incidents," continues Lucian, "are by no means the mere wantonness and idle sport of the artist's fancy; they are to show the martial disposition of the bridegroom, and that his love for Roxana had not effaced his passion for arms and military glory." (Tooke's Translation.)

From this description Raphael is said to have made a design, of which there are duplicates or copies, and it was executed in fresco in the so-called Villa of Raphael, in the garden of the Villa Borghese at Rome; but the composition is puerile, and does not at all merit the praises which Lucian has given to the ancient performance of Ætion: it has been several times etched or engraved by J. Caraglio, Volpato, and others.

Lucian in the above description remarks, that he guesses a fine youth to represent the god of marriage, as "the name is not beneath." He alludes to an ancient custom which prevailed among the Greeks, of attaching the names in their pictures to the figures represented; and the names in most cases were probably written below the feet of the figure. In the pictures on vases we find the name sometimes written by the side of the figure, but the practice was not universal. In this case, from Lucian's remark, it would seem that some of the figures had names attached to them, as he speaks of the other characters with certainty, and guesses only at the god of marriage, because there was no name attached. It was a practice however seldom if at all had recourse to in later times, and in case of its employment the name was probably so placed as not to disturb the pictorial effect. Sometimes sentences were inscribed on pictures, as for instance Zeuxis wrote upon his picture of Helen three lines from Homer, celebrating her extraordinary beauty. ('Iliad,' iii. 156-158; Valerius Maximus, iii. 7 § 3.) There are similar examples on works of the middle ages, and also of much later times: inscriptions below allegories are very common.

The circumstance that Pliny has not mentioned Ætion is an additional reason for concluding that he lived about Lucian's own time, or in the early half of the 2nd century of our era, subsequent to Pliny. Some however have supposed that the Echion of Pliny and Cicero is the Ætion of Lucian, especially as the former was celebrated for a picture of a bride distinguished for the modesty of her expression; but this implies a great blunder in Lucian, who speaks of him as a painter of his own time, and there is no sufficient reason for such a supposition.

(Lucian, *Herodotus or Ætion, De Mercede Conductis*, 42, and *Imag.* 7; Pliny, *Hist. Nat.* xxxv. 10, 36; Cicero, *Brutus*, 18; *Parad.* v. 2.)

ÆTIUS (*Æτίος*), of Amida in Mesopotamia, a Greek writer on medicine, who probably lived about the end of the 5th and the begin-

ning of the 6th century of our era, as we may infer from the persons whom he mentions in his work. He studied medicine at Alexandria, then the seat of the most celebrated medical school, and afterwards he went to Constantinople, where he appears to have been raised to a high office at the court, since Photius ('Biblioth. Cod.' 221) calls him *καμης ὀψικίου, comes obsequii*, a title belonging to the principal officer attending on the emperor. Aëtius was a Christian, but not free from the superstitions which at that time were introduced into Christianity from Egypt, and which were connected with his profession. His work contains some curious examples of the pretension to cure diseases by means of superstitious ceremonies. The work of Aëtius which has come down to us entire bears the title of *Βιβλία ἰατρικὰ* or *βιβλίον ἰατρικόν*, and consists of 16 books. The whole however was afterwards divided by some editor into four sections, each of which contained four books, from which the work is also called *Tetrabibli (Τετραβιβλοι)*. According to Photius (l. c.), who gives a brief summary of the work, it is a compilation made from the writings of Oribasius, Galen, Archigenes, Rufus, Dioscorides, Herodotus, and other eminent medical authors; but the compilation is made with judgment, and Aëtius appears to have introduced into it some original matter. The book is a kind of systematic encyclopædia of medicine, embracing the whole range of medical and surgical knowledge of the ancients. A complete edition of the Greek original has never been published. The first eight books appeared at Venice (1534, fol.), and particular chapters have been edited at different times. Complete translations of the whole work appeared at Venice (1534, 4to., 1543, &c., 8vo.), Basle (1534 and 1539, fol.), Lyon (1549, fol.), and at Paris (1567, fol.) among H. Stephens's '*Medicæ Artis Principes*.'—(Fabricius, '*Biblioth. Græc.*' i. p. 228, &c., where a full account of the modern literature on Aëtius is given.)

AFFRE, DENIS AUGUSTE, archbishop of Paris, was born at St. Rome, in the department of Tarn, Sept. 27, 1793. At an early age he evinced a desire to devote himself to the Church, and he became a student at the seminary of St. Sulpice. He was ordained priest in 1818, and discharged a variety of ecclesiastical functions till he became archbishop of Paris in 1840. Although a man of ability and learning, and the author of several treatises (amongst which was one on Egyptian hieroglyphics), he would scarcely have found a place in the history of his times, but for the lamentable circumstance of his death on the 27th June, 1848. Paris was then the scene of a fearful contest between the soldiery and a vast body of insurgents. The archbishop was induced to apply to General Cavaignac, proposing to stand between the contending bodies as a messenger of peace. The general told him that the course was full of danger. "My life," he replied, "is of small consequence." Some hours afterwards the firing of the soldiery having ceased at his desire, the archbishop mounted a barricade erected at the entrance of the Faubourg St. Antoine: he was preceded by M. Albert, a national guard, wearing a workman's dress, carrying in his hand a green branch as an emblem of peace; and he had at his side a faithful servant named Pierre Sellier. The devoted ecclesiastic was not received with the confidence that he expected to inspire. Some indeed of the combatants stretched out their hands, but others remained silent, while others groaned and hooted. The prelate endeavoured to speak a few words; but the insurgents, fancying themselves betrayed, opened a fire upon the Garde Mobile, and the archbishop fell. Then a cry of horror went up from the crowd, and many, even of the insurgents, rushed to his aid. Albert and Sellier were leading him away, when Sellier was also struck by a ball. The insurgents who surrounded the archbishop cried out that the Garde Mobile had inflicted the wound, and that they would avenge him. "No, no, my friends," he replied; "there has been blood enough shed; let mine be the last that is spilt." He was carried to the archiepiscopal palace, and died the same day. The National Assembly issued a decree announcing its profound grief at the event of his death, and his public funeral took place on the 7th of July, amidst the deepest feelings of popular regret. (*Nouvelle Biographie Universelle*, 1852.)

AFRICANUS, LEO. [LEO, JOHN.]

AFRICANUS, SEXTUS CÆCILIUS, a Roman jurist. Many excerpts from his Nine Books of 'Quæstiones' are contained in the 'Digest.' He was a pupil or friend of Salvius Julianus, whose opinions he often cites. ('Digest' 25, tit. 3, s. 3.) This fixes the period of Africanus to the reign of Hadrian, who died A.D. 138, and to that of his successor Antoninus Pius. As Julianus belonged to the legal sect of the Sabiniani, it is probable that Africanus also did. Aulus Gellius (xx. 1) has given the substance of a discussion between Sextus Cæcilius, a distinguished jurist, and Favorinus, a philosopher, on the Twelve Tables; and the date of the Twelve Tables is fixed in this discussion as near 700 years prior to the time of Gellius. As Gellius probably was not living later than A.D. 170, and the Laws of the Twelve Tables were finally enacted B.C. 449, the number of 700 is too much by a century for the age of Gellius. This error is no objection to our concluding that the Sextus Cæcilius mentioned by Gellius is Sextus Cæcilius Africanus. Lampridius ('Alex. Sev.' 68) makes Africanus a disciple of Papinian and a friend of Alexander Severus, but Cujacius exposes the anachronism by an extract from Africanus founded on a legal maxim which was no longer in force in the time of Papinian. The Excerpts of Africanus

treat of many subtle legal points, and have been well illustrated by Cujacius ('Opera,' tom. i., tract 9).

AFRICANUS, SEXTUS JULIUS, a Christian writer of the 3rd century, is considered by some authors to have been a native of Africa, and was, according to Cave, bishop of Emmaus, A.D. 232. Clavier, in the '*Biographie Universelle*,' makes him the descendant of an African family, and born in Palestine. Between 218 and 222 Africanus was employed in an embassy to the Emperor Heliogabalus for the restoration of Emmaus, which city, in consequence of his entreaties, was rebuilt under the name of Nicopolis. He attended the lectures of Bishop Heraclius at Alexandria before the year 231.

Eusebius ascribes to Africanus a work which contains, under the title 'Kesti' (embroidered girdles), a collection of passages from various authors, chiefly on physical and mathematical questions, and topics which belong to domestic economy; medicine, botany, mineralogy, and the military sciences. Fragments of this work are printed among the '*Mathematical Veteres*,' Paris, 1693, folio, and reprinted in the 7th volume of the works of Meursius, Florence, 1746, but it is not quite certain whether this work contains the real 'Kesti' of Africanus. The section on the military art has been translated by Guischart, in his '*Mémoires Militaires des Grecs et des Romains*,' 1758, 4to. There is a translation by Africanus of the book of Abdias of Babylon, under the title '*Historia Certaminis Apostolici*,' 1566, 8vo.

Africanus wrote a chronological work in five sections under the title of '*Pentabiblos*,' containing, as some learned men think, an abridgment and a continuation of Manetho's work. The '*Pentabiblos*' was a sort of universal history, composed to prove the antiquity of true religion and the novelty of paganism. Fragments of this chronology are extant in the works of Eusebius, Syncellus, Malala, Theophanes, Cedrenus, and in the '*Chronicon Paschale*.' The '*Pentabiblos*' commences with the creation, B.C. 5499, and closes with A.D. 221. The chronology of Africanus places the birth of Christ three years before the commencement of our era. But under the reign of Diocletian ten years were taken from the number which had elapsed, and thus the computation of the churches of Alexandria and Antioch were reconciled. According to Fabricius, '*Bibl. Gr.*' ed. nova, viii. p. 9, there exists at Paris a manuscript containing an abstract of the '*Pentabiblos*.' Scaliger has borrowed, in his edition of Eusebius, the chronology of Africanus extant in '*Geo. Syncelli Chronographia ab Adamo ad Dioclesianum*,' à Jac. Goar, Gr. et Lat., Paris, 1652, fol.

Africanus wrote a learned letter to Origen, in which he disputes the authenticity of the apocryphal history of Susannah. This letter has been printed at Basle, in Greek and Latin, 1674, 4to. A great part of another letter of Africanus to Aristides, reconciling the disagreement between the genealogies of Christ in Matthew and Luke, is extant in Eusebius's '*Ecclesiastical History*.' In order to reconcile the difference between the genealogies, he has recourse to the law of adoption among the Jews, by which brothers were obliged to marry the wives of their brothers who died without children.

The fact of a man so learned and intelligent as the chronologer Africanus being a Christian, refutes the error of those who think that all Christians in the first centuries of our era were illiterate. The criticisms of Africanus upon the apocryphal books seem to attest that he did not receive the canonical writings of the New Testament without previous examination; and from his manner of reconciling the different genealogies of Christ, it appears certain that he recognised the authenticity of the Gospels in which they occur.

AGAMEMNON, king of Mycenæ, and commander-in-chief of the Grecian army at the siege of Troy. According to the fabulous genealogies of the poets, he was fourth in descent from Jupiter, and grandson to Pelops, who came from Asia into Greece, and laid the foundation of a new dynasty of princes, which soon supplanted the older race of the Danaï. Pelops acquired the kingdom of Pisa by marriage. Atreus, son of Pelops, being banished from his father's house for having slain his brother Chryseippus, fled to Mycenæ, where his sister's son Eurystheus, grandson of Perseus, then reigned. He ingratiated himself so much with the people, that he was chosen king on the death of Eurystheus, and left the sceptre to his eldest son (or, some have said, grandson) Agamemnon. The dominion of Mycenæ comprehended the northern part of Argolis, Corinth and Sicyon, with the territories annexed to them, and Ægialos, afterwards called Achaia; thus including the whole northern coast of Peloponnesus. Menelaus, second son of Atreus, obtained the kingdom of Lacedæmon by marriage with Helena, daughter of Tyndareus and Leda. The southern and larger portion of Argolis, though governed by a monarch of its own, was probably dependent to a great degree on its more powerful neighbour of Mycenæ. It does not appear who inherited the kingdom of Pisa after Pelops; none of the four chiefs who led the Eleians to Troy were of his family, so that the degree of influence which the Pelopid princes possessed over Elis can hardly be ascertained. A large portion of Messenia, according to Strabo, was occupied by colonists who followed Pelops from Asia. Thus, in at least four, probably in five, of the six principal divisions of Peloponnesus (Arcadia being the one excepted), the house of Atreus had a direct family interest and influence.

The history of Agamemnon, before the Trojan war, is comprised in two sentences: he was the son of Atreus, whence he and his brother were called Atridæ; and he married Clytemnestra, sister of Helen.

The Trojan war arose out of the abduction of Helen by Paris, otherwise called Alexandros, son of Priam, king of Troy. It is commonly said, that a number of the princes of Greece having been drawn together as suitors by the extraordinary beauty of Helen, Tyndareus exacted an oath from them, that on whomsoever the choice should fall, if the maid should be carried off all the rest should unite to recover her; and that, in virtue of this oath, the confederate princes assembled under the command of Agamemnon. In reference to this story, Thucydides has expressed his belief, "that Agamemnon got together that fleet, not so much for that he had with him the suitors of Helena, bound thereto by oath to Tyndareus, as for this, that he exceeded the rest in power." In continuation, the historian lays great stress upon his naval power, as evinced by his being, in Homer's words, "king of many islands," and by his leading sixty ships to the Arcadians, besides conducting a hundred filled with his own followers, a larger number than was led by any other chief.

The assembled fleet was detained at Aulis by contrary winds. The seer Calchas, being consulted how the anger of the gods might be averted, and the delay obviated, declared that Iphigenia, daughter of Agamemnon, who had incurred the displeasure of Diana by killing her favourite stag, must be sacrificed to the goddess. The natural reluctance of the father was overcome by importunity and ambition; and the intended victim was summoned to Aulis, under pretence of betrothing her to Achilles. At the point of death she was miraculously saved by Diana, whose priestess she afterwards became among a savage people of Asia, called the Tauri. This story is related neither by Homer nor Hesiod; it rests however on the early authority of Pindar ('Pyth., ii.) and Æschylus; and is pregnant with too important consequences to be omitted, since the alienation of Clytemnestra from her husband is said by those authors to have originated in her horror of this unnatural action. The siege of Troy was protracted for ten years. The most memorable event of it is the quarrel between Agamemnon and Achilles, the subject of the 'Iliad,' in which Agamemnon placed himself completely in the wrong. Homer represents him as brave, and expert in arms, insomuch, that when a Grecian warrior was selected by lot who should contend with Hector in single combat, it was the general prayer that the lot might fall on Ajax, Diomedes, or Agamemnon. Still it is as the commander, rather than as the soldier, that he is presented to our notice, and usually with some reference to his wealth and power: 'king of men' is the distinguishing epithet constantly added to his name, as 'swift-footed' is to the name of Achilles. Hesiod also ('Fragm.,' 48) says that the Olympian god has given strength to the descendants of Æacus, wealth to those of Atreus. Returning from Troy, with Cassandra, the daughter of Priam, he was murdered by his wife, who had formed an adulterous attachment to Ægisthus, son of his uncle Thyestes. This catastrophe is the subject of the 'Agamemnon' of Æschylus, one of the most sublime compositions in the range of the Grecian drama. Orestes, son of Agamemnon, then a child, was saved by the care of his tutor. After passing seven years in exile, he returned in secret, avenged his father's death by the slaughter of his mother and of Ægisthus, and recovered his paternal kingdom, which he ruled with honour. These legends of the house of Agamemnon formed a favourite subject with the Greek tragedians.

AGASSIAS, a Greek sculptor of Ephesus, whose age is not accurately known. The statue now at Rome called the Borghese Fighter, which is a fine specimen of skill in representing a figure in action, and also shows a careful study of external anatomy, is the work of this Agassias. On the support behind the figure is the following inscription in Greek:—"Agassias the son of Demetrius of Ephesus made it."

*AGASSIZ, LOUIS, one of the most distinguished naturalists of the present day. He was born about the beginning of the present century, in Switzerland, and was for many years Professor of Natural History at Neuchâtel. About the year 1847 he accepted an invitation to become professor in an American college, and he is now Professor of Natural History at Cambridge, Massachusetts. His public career as a naturalist dates from 1828, in which year he published descriptions of two new fishes in the 'Isis' and 'Linnæa,' two foreign periodicals devoted to natural history. In 1829 he assisted Spix and Martius in describing the genera and species of fishes found in the Brazils. In the same year also we find the great transcendental anatomist, Oken, bringing Agassiz's discoveries before the Berlin meeting of German naturalists. From this time till now his publications upon various departments of ichthyology have been constant and most important. Amongst the most valuable of these contributions to the knowledge of fishes, may be reckoned his researches upon fossil fishes. The results of these researches have been published in various forms in the natural history journals of the day, and in the Transactions of scientific societies. The most important of these labours have been directed to the strata of Great Britain, so many of which are rich in the remains of fishes belonging to the past periods of the world's history. In 1834 he published a paper on the 'Fossil Fish of Scotland,' in the 'Transactions of the British Association for the Advancement of Science.' Since that time he has published several valuable papers in the same Transactions. In 1843 appeared in the same place his 'Synoptical Table of British Fishes,' arranged in the order of the geological formations. [FISH, in NAT. HIST. DIV.] In the volume for 1842, a report appeared on the 'Fishes of the Old Red Sandstone,' and in 1844 a report upon those found in

the London Clay. Agassiz was the first to propose the division of fossil fishes according to the forms of their scales, and has thus placed in the hands of the palæontologist a ready means of distinguishing, by their scales alone, fishes belonging to the Cartilaginous and Osseous tribes. His papers on this subject will be found in the 13th and 14th volumes of the second series of the 'Annales des Sciences Naturelles,' in the 'Comptes Rendus' for 1840, and in the 28th volume of the 'Edinburgh New Philosophical Journal.' His researches have not however been confined to fossil fishes; and numerous papers scattered through the scientific periodicals of Europe and America attest his knowledge of recent as well as fossil forms.

Another family, in both their recent and fossil forms, has attracted the attention of Agassiz, and these are the Star-Fishes, or *Echinodermata*. His researches upon this family have resulted in a great work containing illustrative figures, entitled 'Monographes d'Echinodermes Vivans et Fossiles,' and published in parts, from 1837 to 1842. Several papers on this family attest the zeal and care with which he has studied these animals, which have through successive periods of time played an important part amongst the organic beings of the globe.

Although the attention of Professor Agassiz has been chiefly directed to objects not requiring microscopic investigation, he has successfully investigated many of the forms of *Infusoria*, which are only seen by means of this instrument. He was not only one of the earliest to confirm Mr. Shuttleworth's curious discovery of the existence of animalcules among the red snow of the Alps, but also to point out the existence of higher forms of animal life (such as the *Rotifera*) than had been suspected by that observer. [SNOW, RED, in NAT. HIST. DIV.] In some recent researches upon the habits and structure of animalcules, he has even proposed to abolish the class of *Infusoria* altogether, endeavouring to show that all these beings may be placed amongst the *Polypifera*, *Rhizopoda*, plants, and ova of higher animals. [INFUSORIA, in NAT. HIST. DIV.]

His researches upon fossil animals would naturally draw his attention to the circumstances by which they have been placed in their present position. The geologist has been developed as the result of natural history studies. Surrounded by the ice-covered mountains of Switzerland, his mind was naturally led to the study of the phenomena which they presented. The moving glaciers, and their resulting moraines, furnished him with facts which seemed to supply the theory of a large number of phenomena in the past history of the world. He saw in other parts of the world, whence glaciers have long since retired, proofs of their existence in the parallel roads and terraces, at the bases of hills and mountains, and in the scratched, polished, and striated surface of rocks. Although this theory has been applied much more extensively than is consistent with all the facts of particular cases by his disciples, there is no question in the minds of the most competent geologists of the present day that Agassiz has, by his researches on this subject, pointed out the cause of a large series of geological phenomena. His papers on this subject are numerous, and will be found in the 'Transactions of the British Association' for 1840, in the 3rd volume of the 'Proceedings of the Geological Society,' in the 18th volume of the 'Philosophical Magazine' (third series), and in the 6th volume of the 'Annals and Magazine of Natural History.'

In his writings Professor Agassiz shows a strong tendency to generalisation; and if a suspicion has grown up of the unsoundness of his views in certain departments of natural history inquiry, it has arisen from this peculiar mental disposition. He has embraced the doctrine of the successive creation of higher organised beings upon the surface of the earth, and a paper of his on this subject will be found in the thirty-third volume of the 'Edinburgh New Philosophical Journal.' A more detailed account of his views on this subject will be found in the 'Outlines of Comparative Physiology,' written by Professor Agassiz in conjunction with Mr. A. A. Gould. This work, originally published in America, has been republished in England, with notes and additions by Dr. T. Wright. It is unnecessary to say here that these views have upholders and opponents in England. Amongst the most distinguished of the former are Professor Owen and Professor Sedgwick, whilst the latter number amongst them the late Professor Edward Forbes and Sir Charles Lyell. Both parties are equally opposed to the theory of organic development, as proposed in an anonymous work called 'The Vestiges of the Natural History of Creation.' Professor Agassiz has written in this controversy with great sagacity, and brought his researches on the 'Embryology of the Salmonidæ' to bear upon the argument. This work was published at Neuchâtel in 1842.

Another general subject on which Professor Agassiz has entered with his usual enthusiasm, is the question of the origin of the human race from a single pair. Although the doctrine of a multiplicity of stocks must always be received with more than usual suspicion when coming from persons living in communities where slavery is legalised, it is only fair to Professor Agassiz to say that, before his residence in America, he maintained the theory of the creation of the same species in several distinct centres, both in time and space. It is therefore not to be wondered at that he should uphold the same theory with regard to man. His views on this subject will be found most distinctly enunciated in a paper forming part of a volume published in America in 1854 under the title of 'Types of Mankind,' and edited by Dr. Nott and Mr. Gliddon.

Amidst all his original labours, Professor Agassiz has found time to devote himself to the general literature of natural history. In 1842 he published his 'Nomenclator Zoologicus,' which contains the systematic names of the genera of animals both living and fossil, with references to the authors and the books in which they are described. He also laid the foundations of the great work entitled 'Bibliographia Zoologica et Geologica,' which has been published in England, edited by the late Hugh E. Strickland and Sir W. Jardine, Bart., in the series of works issued by the Ray Society. It consists of four volumes, comprising an alphabetical list of all writers on Geology and Zoology, with a list of their works. We must refer to this work for a complete list of Professor Agassiz's own writings up to the time the first volume was published in 1848.

When the chair of natural history in Edinburgh became vacant by the death of the late Professor Edward Forbes, it was offered to Professor Agassiz; but he declined accepting it, preferring his honourable and wide sphere of usefulness in the New World to returning to Europe, where he won the first triumphs of his great reputation.

AGATHARCHIDES, a Greek writer on geography, a native of Cnidos in Asia Minor. He lived in the time of Ptolemy Philometer, king of Egypt (who reigned from B.C. 181 to 145), and wrote numerous works on geography, and among them one on the Erythraean Sea.

This work is only known to us by extracts from the first and fifth books preserved by the Greek patriarch Photius, and some extracts in Diodorus. The works of Agatharchides contained a great deal of useful information, as we may fairly infer from the fragments which remain. He is the earliest writer who attributes the annual rise of the Nile to the periodical rains in the upper regions of that river. (Diodorus, i. 41.) He has left a very minute account of the mode of working the gold-mines which lay between the Nile and the Red Sea; and he is the first writer who mentioned the giraffe, a quadruped peculiar to the African continent. His remarks on the mode of hunting elephants, and on the inhabitants of the Red Sea coasts, prove him to have been an inquisitive and careful writer.

What remains of Agatharchides may be seen in Hudson's 'Minor Greek Geographers,' vol. i. The description of the gold-mines is also to be found in Diodorus, iii. 12.

AGATHARCHUS, a Greek painter, who apparently, from a passage in Vitruvius, may be considered, if not the inventor, at least the first artist who applied the laws of perspective practically in painting. He painted a dramatic scene for Æschylus in perspective, which was the first work of the kind exhibited to the Greeks; as the contemporary of Æschylus therefore, he was a man of mature years about B.C. 480.

The words "scenam fecit," in the passage in Vitruvius referred to, have been interpreted, "he constructed a stage," but this interpretation is shown by the context to be incorrect. The whole passage is as follows:—"When Æschylus was exhibiting tragedies at Athens, Agatharchus made a scene, and left a treatise upon it. With the assistance of this treatise, Democritus and Anaxagoras wrote on the same subject, showing how the extension of rays from a fixed point of sight should be made to correspond to lines according to natural reason, so that the images of buildings in painted scenes might have the appearance of reality; and although painted upon flat vertical surfaces, some parts should seem to recede and others to come forward."

This kind of scene-painting was termed Scenography (*σκηνογραφία*) by the Greeks, and was sometimes practised by architects; Diogenes Laertius mentions Clisthenes of Eretria as scenographer and architect. Aristotle gives Sophocles the credit of introducing scene-painting; he may have first treated it as indispensable in a dramatic representation, and rendered the practice common, or Vitruvius may have erroneously ascribed its introduction to Æschylus instead of Sophocles.

There was another Greek painter of the name of Agatharchus, who lived about half a century later than the above. He was contemporary with Zeuxis, and Plutarch relates an anecdote of the two, how Zeuxis reproved Agatharchus for boasting in company of the rapidity with which he painted, by quietly observing that he (Zeuxis) painted very slowly. This Agatharchus is the painter whom Alcibiades shut up in his house until he had painted certain pictures in it. The circumstance is noticed by Plutarch and by Andocides, but they give different accounts of the conclusion of the affair.

(Vitruvius, vii., *Prof.*; Diogenes, ii. 125; Aristotle, *Poetic.*, iv.; Plutarch, *Pericles*, 13, *Alcib.*, 16; Andocides, *Orat. in Alcib.*, 7.)

AGATHEMERUS, a Greek writer who lived about the middle of the 3rd century, and wrote a short treatise on general geography. His work, as we possess it, is a collection of heads, or rather a kind of syllabus for a set of lectures. There are two books extant, of which the second is so confused and contradictory, that critics are disposed to assign it to a pupil of Agathemerus. His first chapter contains a sketch of the history of geography, with the names of those who had rendered the most eminent services to the science. His sixth chapter treats of the spherical figure of the earth, and what is now called the doctrine of the sphere, &c. (Hudson, *Minor Geographers*, vol. ii.)

AGATHIAS, a Greek historian and poet, who lived under the emperors Justinian and Justinus the Younger. He was a son of Memnonius, and born at Myrina in Asia Minor, about A.D. 536, but

he received his education at Alexandria, whence he went in A.D. 554 to Constantinople, where his father seems to have settled during his son's stay at Alexandria. Agathias now commenced studying the law, and afterwards distinguished himself as a speaker in the courts of justice. The title of Scholasticus (*Σχολαστικός*), which some writers give him, and which appears in the manuscripts of his work, refers to his profession of advocate, for Scholasticus at that time signified an advocate. But notwithstanding the great reputation he acquired, he never liked his profession, which he practised, according to his own account, only for the sake of gaining a livelihood: his favourite pursuits were poetry and history. He was esteemed by many of the most distinguished men of the time, and seems to have been rather given to courting the great. Some of his epigrams contain incontrovertible proofs that Agathias was a Christian. He died a short time before the death of Tiberius Thrax and the accession of Mauritius, A.D. 582.

Agathias was the author of the following works:—'Daphniaca' (*Δαφνιακά*), or a collection of erotic poems in hexameter verse. It consisted of nine books, but is completely lost. He calls it a juvenile production. 2. 'Cyclus' (*Κύκλος*), a poetical anthology, in which he collected the poems of his contemporaries, especially of his illustrious friends, and also many of his own. The collection is lost, with the exception of the introduction. His epigrams, which are still extant in the 'Greek Anthology,' may have formed a part of the 'Cyclus': they show that Agathias had considerable poetical talent and wit. 3. 'History of his Own Time,' is the most important among his works, and is complete. It breaks off abruptly in the 25th chapter of the fifth book, probably in consequence of the author's death; for he states that this history was commenced at a late period of his life. It contains the history of the short period from A.D. 553 to 559. He appears throughout this work as a good and honest man, and as a faithful writer, but wanting in historical and geographical knowledge, especially with regard to the West of Europe. His language is a compound of nearly all the dialects of ancient Greece, in which however the Ionic predominates. Among the editions of this work the most important are that of Bonaventura Vulcanius (Lugdun. 1594), those in the Paris and Venice collections of the Byzantine writers, and above all that of B. G. Niebuhr, which forms the third volume of the 'Corpus Scriptorum Historiæ Byzantinæ' (Bonn, 1823, 8vo.), and contains a good account of the life of Agathias, and also his Epigrams.

AGATHOCLES, a Syracusan of low extraction, who became ruler of Syracuse and great part of Sicily. The principal events in his life range between B.C. 330 and 289. He was the son of a potter, and is said to have worked at his father's trade. He was remarkable for beauty, strength, and capacity for enduring labour. In the outset of life he belonged to a band of robbers; afterwards he served as a private soldier, and in that capacity gained the favour of a patron named Damas, who, being chosen general of Agrigentum, advanced him to the rank of chiliarch, or commander of a thousand men. On the death of Damas, who bequeathed his great wealth to his wife, Agathocles married the widow, and became one of the richest citizens of Syracuse. In this state of his fortune he distinguished himself by his eloquence in the assembly of the people. But his conduct now was as seditious as his former life had been profligate.

The constitution of Syracuse, as established by Timoleon, was democratical; but in the outset of Agathocles' political life, the aristocratical party, headed by Sosistratus, a personal enemy of his own, drove him into exile; and he retreated into Italy, where for some time he lived as a soldier of fortune. The restoration of democracy, and the banishment of Sosistratus and his friends, enabled him to return. The Carthaginians interfered in behalf of these new exiles; and a war ensued, in which Agathocles bore a distinguished part: but he was suspected of aiming at the tyranny, and was a second time compelled to quit Syracuse. In banishment he collected an army which overawed both Carthage and Syracuse. After frequently defeating the troops of the former, he was recalled, under the pledge of an oath that he would attempt nothing against the democracy; and he was chosen general and protector, for the ostensible purpose of reconciling or putting down faction. Strong in the support of his own mercenary troops, united with some of the poorest and most desperate of the citizens, he proceeded to arrest and execute by military process the leaders of the aristocratical party, and gave up their adherents to the fury of his soldiery. Four thousand persons are said to have been murdered, and six thousand to have fled. The wives and children of the latter, those of them who were unable to accompany the fugitives, fell victims to the soldiery.

Agathocles now declared his intention of retiring into private life; but he knew that the partners of his crimes could not maintain themselves without his countenance. At their call he consented to retain his office, on condition of holding it without a colleague (B.C. 317). He did not assume the state of a monarch, but exercised the powers of the most absolute king, with the title of 'autocrat'; that is, ruler according to his own pleasure. He had risen as the champion of the poor; and he fulfilled his promises by the abolition of debts and the distribution of lands. He aimed at the dominion of the whole island; and succeeded in reducing all except the subjects of Carthage. But the Carthaginians made a strong effort to crush him. He was defeated with great slaughter (B.C. 309), his subjects nearly all revolted, and he was obliged to shut himself up in Syracuse. In the following

year he adopted the bold plan of carrying the war into Africa: but money was required for this purpose; and his contrivance for raising it seems borrowed from the habits of his early life. He offered to let all who feared the hardships of a siege retire from Syracuse, and he sent an armed force to plunder and murder those who availed themselves of the permission. By this atrocious act he at once gained supplies, and revenged himself upon his enemies.

On his landing in Africa he burnt his ships, that his soldiers might have no hope but in victory. He took several towns, defeated a powerful Carthaginian force sent to oppose him, and threw Carthage itself into great alarm. But a new danger threatened the rule of Agathocles, from the powerful city of Agrigentum, which profited by the exhaustion of Carthage and Syracuse to invite the Sicilians to shake off the dominion of both. Agathocles returned in haste, and reduced some of the revolted cities. But the forces of the rest under the command of Deinocrates, a Syracusan, proved too strong for him. Moreover, his presence was again required in Africa, where the Carthaginians had repaired their losses, and regained their ascendancy. He saw the probability that the Syracusans might call in Deinocrates in his absence. In this dilemma he took advantage of a public festival to ascertain who were his enemies, and put to death the chief men of the party to the number of 500.

He was received on his return to Africa by a mutiny among his troops, in consequence of his son Archagathus having been dilatory in furnishing their pay. He harangued the soldiery, saying that they must get their pay from the enemy, and that the booty should be in common. But the necessity of recovering the good will of his army betrayed him into imprudences. He attacked the Carthaginians unadvisedly, and lost the battle, and a large portion of his men. He was compelled to retreat to his camp, where he saw that his rashness had set the soldiers against him; and he had reason to fear that they would renew the mutiny on account of the arrears of pay. He therefore fled in the night, accompanied by Archagathus. They were pursued, and the son was taken: the father, with better fortune, reached the ships in which he had returned from Sicily, and escaped. All his sons were murdered by the enraged soldiers, who then made terms with the Carthaginians. Agathocles avenged himself in kind on the murderers of his sons, by slaying the kindred of those who had served with him in Africa.

On his return to Sicily, he found that a large portion of the troops, and several of the cities, had gone over to Deinocrates, who himself aspired to the sovereignty. He therefore made peace with the Carthaginians, and commenced a war against the exiles, whom he defeated, and treacherously slew to the number of 7000, after they had laid down their arms under assurance of safety. But he received Deinocrates with favour, and appointed him his general. After this he undertook an expedition into Italy against the Brutii, laid the Lipari Islands under contribution, and made himself master of Crotona, but was obliged by severe illness to leave his main designs uncompleted. His ambition was to render Sicily a great naval power; and he had advanced far in the prosecution of this attempt when he died, by one account of a miserable and wasting sickness, by another of poison administered by Menon, one of his associates, in concert with his own grandson. His death took place in the year B.C. 289, at the age of 72, after a reign of 28 years.

AGATHODEMON, of Alexandria, a map-maker, and apparently the author of the maps found in the oldest manuscripts of the geography of Claudius Ptolemæus. There can be no doubt that the work of Ptolemæus was accompanied by maps; if indeed it is possible that a tabular system of geography like his could be without them. Maps on plates of copper are mentioned by Herodotus, who wrote above 500 years before Ptolemæus. But as we know nothing at all about the age of Agathodæmon, we cannot conclude, as some do, that the maps of Ptolemæus were constructed by him. It is more likely that he was a later editor or amender of them. In the Vienna and Venetian manuscripts the following note in Greek is found at the end of the maps:—"According to the eight books of the Geographical works of Claudius Ptolemæus, Agathodæmon of Alexandria delineated the whole earth." It has been inferred from this, that Agathodæmon was a contemporary of Ptolemæus. But this does not seem to be quite conclusive. The shape which Agathodæmon gave to the different countries of the earth maintained its ground on modern maps till the system of regular surveys became in use: and indeed till of late years, many features of our maps were only the traditional delineations of the old map-makers of Alexandria. (Schoell, vol. ii.; Heeren, *De Pontibus Ptolemæi*; PTOLEMÆUS, CLAUDIUS.)

AGATHON, a native of Sicily, succeeded Domnus in the see of Rome A.D. 678. The Emperor Constantine Pogonatus having convoked a general council at Constantinople, A.D. 680, Agathon sent legates to it, who concurred in condemning the heresy of the Monothelites, who contended that, in consequence of the union of the two natures in the person of Christ, there was in him only one will and one operation, an opinion which appears to have been till then countenanced by many prelates, and even by Pope Honorius I. These subtle metaphysical distinctions, to which the minds of the Orientals were prone, seem to have puzzled at times the more sober and matter-of-fact divines of the West. Constantine remitted in favour of Agathon the usual fine which the see of Rome paid to the emperor at every

new election previous to obtaining the imperial confirmation of the bishop elect. The confirmation itself however continued to be required for a considerable time after, if not from the emperor, at least from the exarch of Ravenna, who was the emperor's representative in Italy. Agathon died A.D. 682. He is numbered by the Church of Rome among his saints. (Saundini, *Vita Pontificum Romanorum ex Antiquis Monumentis Collecta*.)

AGESILA'US, younger son of Archidamus, king of Lacedæmon, succeeded his brother Agis, B.C. 398, to the exclusion of his nephew Leotychides, who laboured under the stigma of bastardy, being believed to be the son of Alcibiades, and not of Agis, his reputed father. As the crown descended in direct line from father to son, the succession of Agesilaus seemed, in his youth, to be barred; and his education was conducted as that of a private person, in all the strictness of Spartan discipline. He was lame, and advantage was taken of this to excite a prejudice against him; yet so high was his personal character, or so general the belief in the spurious birth of Leotychides, that by a vote of the general assembly, the heir-apparent was passed over, and Agesilaus was appointed king.

In the first year of his reign a plot was formed to effect a change of government. The political constitution, established by Lycurgus, had degenerated into an oligarchy of a peculiar kind. Almost all political power, with the exclusive right to hold high civil or military office, was engrossed by those families who boasted to be of pure Spartan blood, the term Spartan being opposed to Lacedæmonian. The Lacedæmonians are conjectured to have been the progeny of enfranchised Helots, strangers associated into the citizenship, a remnant of the Achæi, and in a word, all who could not trace an unblemished line of Spartan descent to the early ages of the monarchy. Foreigners might become members of the community and Lacedæmonians; but they could never become Spartans; at least, Herodotus only knew of two instances up to this time (ix. 33, 35). The object of Cinadon's conspiracy, who complained that he counted only forty Spartans in the agora, or place of assembly, and that these were all official persons, was to extend the right of holding their high offices to all citizens. The plot was discovered before it was ripe; Cinadon, the author and ringleader, was executed, and the Spartans held fast their monopoly.

In order to prosecute more effectually the war with Persia (A.C. 396), Agesilaus was sent to command in Asia. At setting out, he pledged himself either to conclude an honourable peace, or to disable his enemies from giving any further disturbance to the Greeks. His first object was to conciliate the Asiatic cities by prudent management and liberality; and he succeeded in reconciling their factions. It may be doubted whether the design of Agesilaus was limited to the protection of the Greek states of Asia. But the war that broke out in Greece, after he had been about two years in Asia, did not allow him to follow up his successes.

The intrigues of the Persians and the hatred of the Spartan influence had occasioned a dangerous league to be formed against Sparta. Thebes, Argos, and Corinth declared against the Lacedæmonians, and Athens followed the example at the pressing instance of the Thebans. The ephori ordered Agesilaus home; in the height of his glory, and with the prospect of victory, he instantly obeyed. The Lacedæmonians and their enemies met near Coronæia in Bœotia, and a fierce battle took place (August, B.C. 394). The Thebans alone made a gallant resistance. The Spartan king was wounded, and obtained only a doubtful victory. He returned to Sparta, not importing with him the luxuries of Asia, but adhering to the temperance and frugality characteristic of his country's discipline. The probability of Athens recovering her former power after her walls were rebuilt (A.C. 392), induced the Spartans to send Antalcidas (B.C. 387) with proposals to Persia, favourable to themselves, but disadvantageous to the rest of Greece. The bearer of these offers was the personal enemy of Agesilaus, and was supposed to have a mean pleasure in lessening his power and tarnishing his glory. The Persians dictated the treaty in the language of conquerors (Xen. *Hellen.* v. i. 31), and Artaxerxes concluded with denouncing war against those who should not submit to his terms. The Thebans refused; but their steadiness was shaken by preparations for coercion on the part of the ephori, invidiously recommended by Agesilaus, in revenge for a former affront. Sparta had now, though not worthily, recovered her power in Greece. Her virtues, indeed, were to be found rather in adversity than prosperity; nor did she profit by her own experience, that tyranny leads to the destruction of the tyrant. Phobidas, one of her generals, on his march into Thrace against Olynthus, was encamped in the neighbourhood of Thebes, while parties were so nearly balanced, that Ismenias and Leontiades, the heads of opposite factions, exercised the chief magistracy together. Leontiades, who courted the friendship of Lacedæmon, secretly introduced Phobidas and his troops into the Cadmeia, the citadel of Thebes (A.C. 382). This at once gave the superiority to that party of which he was the head; Ismenias was apprehended, and 400 of his friends immediately fled to Athens. Complaint was made at Sparta of this treacherous aggression in time of peace. Agesilaus was, in general, more just and liberal than the rest of his countrymen; but he contended that it was necessary to examine whether the possession of the Cadmeia was of advantage to Sparta. The decree of the Spartans was, as we might expect, in their own favour. The assembly resolved to keep the citadel, and to

bring Ismenias to trial. But a counter-revolution was soon effected; and the Spartans were compelled to evacuate the citadel.

That the Lacedæmonians, when now at the height of power, were all at once involved in a train of misfortunes which effectually broke their supremacy, is ascribed by Xenophon to the divine anger against their perfidious seizure of Thebes. Agesilaus probably had come round to the same opinion; for he excused himself from the command of the army sent to reduce the Theban revolutionists, on the plea of being weighed down by age. His colleague, Cleombrotus, was appointed in his stead. The events which occurred during the absence of Agesilaus, form no part of the present subject. On returning home, Cleombrotus left Sphodrias at Thespia, in command of part of his army. Sphodrias, whether from his own folly, or, as many believed, induced by Pelopidas, made a most unwarrantable and faithless inroad upon Attica. The Athenians complained to Sparta, and Sphodrias was recalled, and brought to trial. Unfortunately, Agesilaus was persuaded to exert his influence in the delinquent's favour, and he was acquitted; at which the Athenians were so much offended, that they immediately concluded an alliance with Thebes against Sparta. Agesilaus then resumed the command and held it through two successive campaigns, till obliged to resign through failing health.

The battle of Leuctra (B.C. 371), in which the Lacedæmonians under Cleombrotus were overcome by inferior numbers, produced a striking instance of Spartan character. The news arrived at Sparta during a religious festival, but the ephori did not allow the celebration of it to be interrupted. The list of the slain was sent to the houses of their kindred, and the women were told to bear their sorrows in silence. Those parents whose children had met with a glorious death went abroad the next day to receive congratulations; the friends of the survivors kept their houses, as if in shame and sorrow. On this occasion, a number of the combatants having fled, Agesilaus was allowed to suspend the law which visited cowardice with disgraceful punishment. He prudently announced that it might sleep for one day only, and then resume its power.

There was a proverb, frequently repeated by Agesilaus, that "a Spartan woman had never seen the smoke of an enemy's camp;" but he had the mortification to see his proverb belied. The Theban army increased daily by the defection of the allies of Sparta; it penetrated into Laconia, and laid waste the whole country; the city however was saved by the prudence of Agesilaus, who shut himself up in Sparta, and avoided an engagement. Epaminondas did not venture to assault the city; and at last, his allies growing weary of the service, the winter approaching, and relief coming to Sparta from Athens, the Theban general found it necessary to retreat.

After the death of Epaminondas, at the battle of Mantinea (B.C. 362), the weariness of all parties produced a partial cessation of hostilities. Agesilaus was now above eighty years old, but he had still vigour enough left to lead an army into Egypt, to assist the Egyptians who had rebelled against the Persian king. According to Plutarch, Agesilaus went expressly to help Tachos against his master King Artaxerxes II.; but a rival to Tachos starting up in the person of Nectanebos, another Egyptian, Agesilaus found it convenient to change sides. After establishing Nectanebos in the government of Egypt, the old king set out on his voyage homewards, loaded with money and presents, the reward of his services and his treachery. Being driven by contrary winds on the coast of Africa, he died there at the advanced age of eighty-four. His attendants preserved the body in melted wax, and took it to Sparta to be buried, consistently with the usages of their country, which did not allow the body of a king to rest in a foreign land.

The character of Agesilaus is exalted by Xenophon far above its merits. The historian was on terms of personal intimacy with the Spartan king, and was besides no great admirer of the constitutional forms of Athens, his native city, which he loved to contrast disadvantageously with those of Sparta. We may admire the energy and vigour of Agesilaus, and grant him a full share of those peculiar virtues which characterised his country. He may have been temperate in his habits, kind to his friends, and not cruel to his enemies; but more than one public act of his life throw suspicion on his integrity as an individual and a statesman.

(Plutarch, *Life of Agesilaus*; Xenophon, *Hellenica*, and *Panegyric on Agesilaus*; Pausanias, iii. 9.)

AGIS I., king of Sparta, was the son of Enrysthene, and grandson of Aristodemus, to whom Laconia was allotted after the Heracleid invasion. Aristodemus had two sons, Eurysthene and Procles; and this Agis was, therefore, the second in one of the series of that double race of kings, which reigned conjointly. His reign is said to have commenced about B.C. 1032, but no certain dates can be assigned to these early times. Agis deprived the conquered people of the equal political rights to which his father had admitted them. The inhabitants of the town of Helos having attempted to regain their freedom were reduced by him to the abject bondage so long endured by the class of the Helots. (Pausanias, iii. 2.)

AGIS II., the son of Archidamus II., reigned from B.C. 427 or 426 to 397. In the fourteenth year of the Peloponnesian war the Lacedæmonians endeavoured to recover their influence in Peloponnesus, and marched out with all their force under Agis. The Argeian army, against which his operations were directed, was completely hemmed

in. Two Argeians went privately to Agis, and pledged themselves to effect a reconciliation if he would grant a truce of four months. To this he consented. The order to retreat was heard with astonishment by the army of Agis, and the Argeians, on their part, were highly incensed against their countrymen for having defrauded them of an opportunity, as they thought, of destroying the enemy. Agis was called to account, and it was proposed to fine him, and demolish his house; but his humble demeanour and earnest entreaty prevailed, and he was allowed to resume the command, under the mortifying restriction of a superintending council. He made amends, a short time after, by defeating the Argeians, and their allies the Athenians, in the great battle of Mantinea. (Thucydides, v.; Pausanias, iii. 8.) At the siege and surrender of Athens, B.C. 404, accompanied with the mortifying demolition of the long walls, and the fortifications of Peiraus, Pausanias and Agis, the two kings of Sparta, conducted the operations by land, while Lysander blockaded the city with his fleet. In B.C. 401 Agis conducted an army into Elis, which yielded him abundant spoil, since, as the scene of the Olympic games, it had usually been held sacred, and exempted from the ravages of war. Having gone to Delphi to dedicate a tenth of the spoil, he fell sick on his return, and died a few days after he reached Sparta. Agis was succeeded by his brother Agesilaus.

AGIS III., the son of Archidamus III., reigned from B.C. 338 to 331 or 330. At the time of the battle of Issus (333) he communicated with the Persian commanders in the Ægean, to obtain supplies for carrying on the war against Alexander in Greece. While Alexander was engaged in his fourth campaign in Asia, Agis laid siege to Megalopolis, a town in Peloponnesus, which held out till the arrival of Antipater, the governor of Macedonia. A bloody battle was fought, in which the Lacedæmonians behaved with their accustomed gallantry, but were overpowered by superior numbers. Agis fell after his phalanx was broken, and with him above 5300 of the Lacedæmonians and their allies. The Lacedæmonians sued for peace, and obtained it; giving hostages that they would submit to Alexander's decision on their fate. (Pausan., iii. 10; Arrian, ii. 13.)

AGIS IV., son of Eudamidas II., reigned from B.C. 244 to 240. The year after his accession he was defeated in an engagement with Aratus, the general of the Achæan league. But the chief interest of his reign lies in the attempt he made to restore the institutions of Lycurgus. Public manners had degenerated from their ancient severity; the privileged class, to whom the name of Spartans was confined no longer, enjoyed the equal portion of land prescribed by the ancient discipline. Of 700 families, to which their number was now reduced, not more than 100 possessed estates. These were rich, haughty, and licentious; the poor were oppressed and burdened with debt. The two great features of the proposed reformation were, a new partition of the lands, and the abolition of all debts. Agis also proposed to abolish the distinction between Spartans and Lacedæmonians, retaining that between the Lacedæmonians and the Periœci, or people of the smaller towns. These latter, however, were to be trained in the strict discipline of Lycurgus, and to succeed to the privilege of citizenship as vacancies occurred. In laying his proposals before the senate Agis recommended them by the offer of the first personal sacrifice, in the contribution of his own lands and money to the common stock. His mother and his kindred followed his example. The multitude applauded; but his colleague Leonidas and the rich men opposed the plan, and persuaded the senate to reject it; the question was lost by a majority of only a single vote. To rid himself of Leonidas, Agis contrived to get Lysander appointed one of the ephori; who forthwith accused Leonidas of having violated the laws, by marrying a stranger, and residing for a time in a foreign land; two acts forbidden to the race of Hercules. Leonidas could not venture to make his appearance; he was therefore deposed, and his crown devolved to his son-in-law, Cleombrotus, who co-operated with Agis in his measures of reform. On the expiration of Lysander's office, a reaction took place. As the reformers despaired of succeeding by mild means, Agis and Cleombrotus went to the place of assembly, plucked the ephori, now of the anti-reforming party, from their seats, and placed others in their room. The life of Leonidas, who had returned into the city during the short triumph of his faction, was threatened; but Agis himself protected him from assassination, meditated against him by Agesilaus, who was the uncle of Agis. The want of sincerity in this unworthy relation of the reforming king occasioned the failure of the scheme, when all its difficulties seemed to have been nearly overcome. Agesilaus was deeply involved in debt; he therefore persuaded the two kings to burn all deeds, registers, and securities in the first instance. When the division was proposed he devised repeated pretexts for delay. Before the first measure, owing to these underhand practices, could be completed, the Achæans, who were allies of Sparta, applied for assistance against the Ætolians, who threatened to lay waste the country of Peloponnesus. Agis was sent to command the army, and exhibited the same republican virtues in his military office as in his civil administration. He joined his forces to those of Aratus, whose over-caution gave no opportunity for enhancing the glory of the Lacedæmonian soldiery; but the conduct of the troops, and the rigid performance of every duty on the part of their commander, impressed both the allies and the enemy with respect for the commonwealth.

On the return of Agis, he found that a change had taken place in the condition of his country. The poor, disgusted by finding, that although Agesilaus was again one of the ephori, the lands were not divided according to promise, had thrown themselves into the party of their own enemies, and suffered them to dethrone Cleombrotus and restore Leonidas to power. Agis was compelled to fly to sanctuary. Some treacherous friends entrapped him, and dragged him to prison. Being questioned by the ephori, whether he did not repent of having introduced innovations, he replied, that in the face of death he would not repent of so worthy an enterprise. He was condemned, and executed with indecent haste; the plea for this was the danger of a rescue. One of his executioners was moved to tears. Agis said to him, "Lament me not; suffering unjustly, I am happier than my murderers." The cruelty of the victorious party did not end here: his mother and grandmother were strangled on his body. His widow was forcibly taken out of her house by Leonidas, and married against her will to his son Cleomenes. Though a husband by compulsion, Cleomenes was attached to his wife, whose conversation inspired him with the desire of accomplishing the projected reform. [CLEOMENES.] (Plutarch, *Life of Agis*.)

AGLAOPHON. There were two distinguished Greek painters of this name, who were probably related. Bottiger supposes that the younger was the grandson of the elder, and the son of Aristophon the brother of Polygnotus.

The elder Aglaophon lived about B.C. 500, and was a native of the island of Thasos, where his son Polygnotus was also born. Aglaophon's greatest distinction is that of having been the father and the instructor of Polygnotus, who is the first painter recorded in history who attained great fame. Quintilian is the only writer who speaks of the style of Aglaophon, but he indiscriminately couples him with Polygnotus. He says, "Notwithstanding the simple colouring of Polygnotus and Aglaophon, which was little more than the crude beginning of what was afterwards accomplished, many have, certainly with some affectation, preferred their works to those of the greatest masters who succeeded them." There can be as little doubt that this passage refers to the elder, as that the following, from Cicero, refers to the younger: Cicero says, speaking of styles, Aglaophon, Zeuxis, and Apelles were all different in their several styles, yet each was perfect in his own style.

None of the works of the elder Aglaophon are particularly mentioned, unless the winged Victory spoken of by the scholiast on the 'Birds' of Aristophanes (v. 573) may be attributed to him.

The two pictures of Alcibiades mentioned by Athenæus must have been by the younger. After Alcibiades, says Athenæus, returned to Athens a victor at the Olympic games, he exhibited two pictures of himself, one representing Olympias and Pythias crowning him, and in the other he was painted extremely beautiful, lying on the knees of Nemes. Plutarch attributes the latter of these pictures to Aristophon, the brother of Polygnotus, and the supposed father of the younger Aglaophon; but as the account of Athenæus accords better with the time, it is more probably correct, at least under the supposition that there were two artists of this name. The beautiful horse spoken of by Ælian was probably the work of the younger Aglaophon.

(Suidas; Quintilian, *Inst. Orator.* xii. 10, 3; Athenæus, xii. 534; Plutarch, *Alcibiades*, 16; Cicero, *De Orat.* iii. 7; Ælian, *De Anim. in Epilogo*.)

AGNESI, MARIA GAETANA, was born at Milan in 1718. When very young, she distinguished herself by the acquisition of the Latin, Greek, Hebrew, French, German, and Spanish languages. She then turned her attention to mathematics and philosophy, and at the age of 19 wrote in defence of 191 theses, which were published in 1738, under the title of 'Propositiones Philosophicæ.' In 1748 she published her most celebrated work, 'Institutioni Analitiche ad Uso della Gioventù Italiana,' in two volumes 4to. The first volume contains the elements of Algebra, with the application of Algebra to Geometry; the second contains an excellent treatise on the Differential and Integral Calculus. In 1760, her father, who was then a professor of the university of Bologna, being ill, she obtained permission from the Pope Benedict XIV. to supply his place. She ended her career, but in what year we cannot ascertain, by retiring into a convent, and taking the veil. She died in January, 1799, aged 81.

The second volume of the 'Analytical Institutions' was translated into French by D'Antelmy, with additions by Bossut, and published at Paris in 1775. The whole was translated into English, and published at the expense of Baron Maseres in 1801.

AGNOLO, BACCIO D', a Florentine, was at first a wood-engraver, and afterwards an architect. He was born in 1460, and had already acquired considerable reputation in the practice of his earlier profession at Florence, when he was attracted to the study of architecture, and went to Rome to pursue it among the remains of antiquity there. He appears, nevertheless, during his residence in Rome, to have continued to employ himself in his art and business as a wood-engraver, probably for the means of subsistence, and his studio, or workshop, was frequented by the most eminent men of taste and learning then in Rome. Among these were Raffaele, Michel Angelo, Sansovino, and the brothers Sangallo.

On settling himself as an architect in Florence, Baccio was engaged in several works of importance there, and acquired notoriety of a disagreeable nature through deviations from the ordinary practice of

the time. He adorned the windows of a mansion or palazzo (as the Italians term the large town-house of a distinguished person), in the Piazza di Santa Trinità, with frontispieces, and put a frontispiece, consisting of columns with a regular entablature, to the portal, in the manner, indeed, which has been so commonly practised ever since, and is at the present time in vogue, but which had been restricted to churches up to this time. All the wits in Florence set upon poor Baccio, who was lampooned and ridiculed in every possible way, for making, as it was said, a palace into a church; indeed, he was almost induced to retrace his steps, but being conscious that he had done well, "he took heart and stood firmly." It was a novelty, and as the biographer of all the architects says, "like almost all other novelties, it was at the first scorned and afterwards worshipped." But the same writer is somewhat severe on him for making perhaps too bold a crowning cornice to the front of this identical edifice, saying that it looked like a boy with a huge hat on his head.

Baccio had been engaged to complete the architectural arrangements about the tholobate or drum of the cupola of the metropolitan church of Santa Maria del Fiore, which were left incomplete by Brunelleschi, and whose design for that part was lost. Baccio was about to supply what was wanting after his own invention, and had begun to cut away the toothings left by Brunelleschi in the work because they did not suit what he proposed to do. At this juncture Michel Angelo happened to come to Florence from Rome, and attacked him so violently on the unfitness of his design, that Baccio was stopped, and in consequence of subsequent disputes on the subject, the edifice, in that particular, still remains incomplete.

Baccio d'Agnolo died in 1543, being eighty-three years of age, and left a son Giuliano, an engraver and architect, who succeeded to the direction of his father's works. The most esteemed of Baccio's productions are the villa Borghesini, near Florence, and the campanile or bell-tower of the church di Santo Spirito (a production of Brunelleschi's), in Florence. By some writers, the great palazzo Salviati, in the Transtiberine portion of Rome, is attributed to this architect, but it is more commonly referred to Nanni di Baccio Bigio, a man of far inferior merit and reputation to Baccio d'Agnolo.

AGRICOLA, CNÆUS JULIUS, was born June 13, A.D. 37, at Forum Julii, now Fréjus, in Provence. His father was Julius Gracurus, a writer of some eminence on agriculture, and distinguished as a senator for his eloquence and integrity. His virtues were the cause of his destruction. The emperor Caligula, desirous to get rid of his father-in-law, M. Silanus, called upon Gracurus to undertake the accusation which was to be the pretext for his destruction. Gracurus refused, and met with the same fate as the unfortunate Silanus. Agricola was an infant at the time of his father's death. His mother was Julia Procilla, who appears to have watched with great care over the education of her son. After having studied philosophy at Massilia, now Marseilles, the principal seat of learning in Gaul, Agricola was sent to Britain, where he served under the immediate eye of Suetonius Paulinus, the period of his service including the grand insurrection under Boadicea, in 61. In 62 he returned to Rome, where he married Domitia Decidiana, a lady belonging to one of the first families. In 63 he went as quaestor to Asia, where he proved his integrity by refusing to unite with the proconsul Salvius Titianus in the system of extortion so common in the Roman provinces. During the latter part of Nero's reign he was tribune and praetor, but from a regard to the jealousy of the emperor remained comparatively inactive. On the accession of Galba in 68 he was appointed to examine the property of the temples, and to restore whatever had been taken away by Nero. In the contests between Otho and Vitellius his mother was murdered by a detachment from Otho's fleet, which landed in Liguria and ravaged the estates of the family near Intemelium (Vintimiglia). On his way from the funeral of his mother, he learned that Vespasian had been proclaimed by the legions of the east. He declared in his favour, and was rewarded by the command of the 20th legion in Britain. On his return to Rome about 73 he was enrolled by the emperor among the patricians, and appointed governor of Aquitania, a province which included the south-western part of Gallia, from the Pyrenees to the Loire. After a successful administration of nearly three years, he was recalled to receive the still higher honour of the consulship. His daughter was now betrothed to the historian Tacitus, and the next year she was given to him in marriage. Agricola, at the expiration of his consulship, was appointed governor of Britain, and proceeded thither about 78. He passed seven or perhaps eight summers in Britain; in the first of which he added North Wales and the sacred island of Anglesey to the Roman province. By the end of the fourth campaign the whole island south of the Clyde and the Forth was secured to the Romans by a line of forts running from the one estuary to the other. Every summer extended the dominion of the Roman arms, but it was only in the last year of his government that he entirely broke the spirit of the Britons by the defeat of Galgacus on the Grampian Hills. At the close of this campaign a Roman fleet, for the first time, sailed round the island. Agricola taught the Britons to settle in towns, to improve their dwellings, to erect temples, and to cultivate the arts of civilised life. He set up a system of education for the sons of the chiefs, who adopted in time the language and the dress of Rome. By these means he in a great measure reconciled the natives to the yoke which they had previously so ill endured. These splendid successes were unpalatable to

the suspicious Domitian, and Agricola was honourably recalled, under the pretext of being sent as governor to Syria. By order of the emperor he entered Rome at night, and, after a cold reception, retired into private life. When his consular rank a few years after entitled him to the proconsulship of Asia or Africa, he wisely declined an appointment which had been fatal to the previous possessor. He died on August 23, A.D. 93, in the 56th year of his age, not without suspicion of poison. The emperor could not endure the presence of one who was universally regarded as the only man equal to the exigency of the times. Dion Cassius asserts that he was killed by Domitian. His property was left between his wife Domitia, his only child the wife of Tacitus, and the emperor Domitian. All that we know of Agricola, with the exception of a single chapter in Xiphilin (66, 20), which is very inaccurate, is from the pen of Tacitus, whose interesting narrative exhibits him in the character of a great, wise, and good man. (Tacitus, *Agricola*.)

AGRICOLA, RODOLPHUS, one of the most learned and remarkable men of the 15th century, was born at a village variously written Baffon, Baffeln, Baffen, Baffel, or Bafflo, two or three miles from Groningen, in Friesland, about the end of August, 1443, not in 1442, as often stated. (See the inscription on his tombstone as given in M. Adam's 'Apograph. Monument. Haidelburgens,' p. 22.) In a short notice of Agricola by M. Guizon, in the 'Biographie Universelle,' it is said, but we do not know upon what authority, that his name was properly Huesmann. His first master is also there said to have been the famous Thomas à Kempis. After distinguishing himself at school he proceeded to the college of Louvain, where he remained till he took his degree of Master of Arts. He was then solicited to accept a professorship in that college, which he declined, and set out on his travels. He went to Paris, whence, after remaining some time, he proceeded to Italy, and arrived in 1476 at Ferrara, where he resided during that and the following year, and attended the prelections of Theodorus Gaza on the Greek language. He also extended his own reputation by giving a similar course on the language and literature of Rome. The favour of the duke, Hercules D'Este, and the admiration of the most famous scholars of Italy, were liberally bestowed upon the accomplished foreigner, who used to contend, we are told, in amicable rivalry with the younger Guarino in writing Latin prose, and with the Strozzi in verse. After visiting Rome and some of the other cities of Italy, he left that country, probably in 1479. On his return to Holland he appears to have occupied a chair for a short time in the university of Groningen, and he was also chosen a syndic of that city, in which capacity he spent about half a year at the court of the emperor Maximilian I. In the year 1482 he removed to Heidelberg on the invitation of Joannes Dalburgius, the bishop of Worms, whom he had taught Greek, and by whom he was appointed to one of the professorships in the university of Heidelberg. The remainder of his life seems to have been spent partly at Heidelberg and partly at Worms, where he lodged in the house of his friend the bishop. At the request of the Elector Palatine, who greatly delighted in his conversation, he composed a course of lectures on ancient history, which he delivered at Heidelberg, the Elector being one of his auditors. He also, after coming to reside in the Palatinate, commenced the study of the Hebrew tongue. In this new study Agricola had made great progress, when a sudden attack of illness carried him off at Heidelberg on October 23, 1485, at the early age of 42. There was certainly no literary name out of Italy so celebrated as that of Agricola during his age; and, if we except Politian and Mirandola, perhaps not even Italy could produce a scholar equal to him. The most eminent cultivators of classical learning in the next age have united in placing Agricola among the first of his contemporaries. We need only mention Cardinal Bembo, Ludovico Vives, the elder Scaliger, and, above all, Erasmus. Agricola indeed may be regarded as the immediate forerunner of the last great writer, and in some degree as the model on which he was formed. Agricola, in the same manner as Erasmus, appears to have clearly discerned many of the ecclesiastical abuses of his time, and to have anticipated the revolution in the opinions of men that was at hand, although he refrained from doing anything to urge on the crisis. Besides his skill in ancient learning, Agricola was a skilful practitioner of the arts of music and painting. His collected works were published, as it is commonly stated, in two volumes 4to at Cologne, in 1539, under the title of 'R. Agricola: Lucubrations aliquot,' &c. According to Gesner's 'Bibliotheca Universalis,' and the 'Bibliotheca Belgica' of Foppens, the principal contents of this collection are his three books 'De Inventione Dialectica'; some letters, orations, and poems; and some translations from Aphthonius, Lucian, Isocrates, and other Greek authors. It does not appear to contain, as commonly stated, his abridgment of 'Universal History.' The work 'De Inventione Dialectica' is the most celebrated of Agricola's performances. It has been repeatedly printed with ample scholia: in 1534 a compendium of it, by Joannes Visorius, appeared at Paris; and an Italian translation of it was published in 4to at Venice, in 1567, by Oratio Toscanella. It is considered to have been one of the earliest treatises which attempted to change the scholastic philosophy of the day. Morhof speaks of it as having anticipated in several respects the 'Logic' of Peter Ramus. In the injunctions given by Henry VIII. to the University of Cambridge in 1535, the 'Dialectics' of Agricola and the genuine 'Logic' of Aristotle are ordered to be taught instead of the works of Scotus and Barlaeus;

and in the statutes of Trinity College, Oxford, founded some years later, we find a similar recommendation.

(Besides the works already mentioned, the following authorities may be referred to for further information respecting Agricola:—Bayle, *Dictionnaire*; Baillet, *Jugemens des Savans*; *Vita Germanorum Philosophorum*, a Melchiori Adamo; *Vie d'Erasmus*, par Burigny, Paris, 1757, vol. i., p. 17; *Vita R. Agricola*, autore Ger. Geldenhaurio Noviomago, in *Vivorum Eruditione et Doctrina Illustrum Vitae*, Frankfurt, 1536, p. 83, &c. See also an interesting letter on the habits and character of Agricola, from Melancthon, dated Frankfurt, March 28, 1539, in the edition of Agricola's works published at Cologne.)

AGRIPPA, HENRY CORNELIUS, a remarkable personage, who may be ranked with his contemporaries, Paracelsus and Cardan, as at once a man of learning and talent, and a quack. Agrippa was born at Cologne, of a noble and ancient family, on September 14, 1486. His first employment was as secretary at the court of the Emperor Maximilian, after which he served in the wars in Italy, where, having repeatedly signalised himself by his bravery, he obtained the honour of knighthood. About his 20th year he seems to have assumed the character of a scholar, and to have commenced a wandering life. The profession which he took up was that of a physician; but he allowed himself also to be regarded as an alchemist, an astrologer, and even as a practitioner of magical arts. Not satisfied with this extensive range, he thought proper to set up likewise for a great theologian, as well as to indulge himself with occasional excursions into other departments of literature and science. The effect of all this pretension, supported as it was by unquestionable talent and by real acquirements of great extent, was to raise Agrippa, for a time at least, to high estimation and importance. Pressing invitations were sent to him by several monarchs that he would enter into their service—by our Henry VIII. among the rest. He appears to have visited England before this, one of his pieces being dated from London in 1510. His excessive imprudence however was continually involving him in difficulties; and especially, having by some of the effusions of his satiric spirit provoked the enmity of the monks of the church, he experienced the consequences to the end of his days. After having led for many years what may almost be called a fugitive life, he died at Grenoble, in 1535. He had been thrice married, and had several children. The works of Agrippa were published in two volumes, 8vo., at Leyden, in 1550, and also at Lyon in 1600. The most remarkable of them, and the only one which is now remembered, is his treatise 'On the Vanity of the Sciences,' which is a caustic satire on the kinds of learning most in fashion in that age.

(Bayle, *Dictionnaire Historique*, art. *Agrippa*; Gabriel Naudé, *Apology for the Great Men who have been suspected of Magic*.)

AGRIPPA, HEROD. [HEROD.]

AGRIPPA, MARCUS VIPSIANUS, was born B.C. 63, within a few months of Octavius, afterwards the Emperor Augustus, with whom throughout life he was so intimately associated. They studied together at Apollonia in Illyria. The death of Julius Cæsar brought them both to Rome, and Agrippa was charged by Octavius to receive the oath of fidelity from the legions that were favourable. In B.C. 43 he was chosen consul, and conducted the prosecution of Cassius, one of the murderers of Cæsar. Two years later he had a command as prætor, in the war against Lucius Antonius, whom he besieged in Perusia. In B.C. 40 the town was taken by him, and towards the close of the same year he recovered Lipontum from M. Antonius. In B.C. 38 he added to his reputation by a victory over the Aquitani, and rivalled the glory of Julius Cæsar by leading a second Roman army across the Rhine. Octavius, now Octavianus, offered him a triumph, which he declined; but the consulship was conferred on him in B.C. 37. Sextus Pompeius, being at this time master of the sea, Agrippa was charged with the construction of a fleet. By cutting a passage through the barrier of Hercules, which separated the Lucrine Lake from the sea, he converted that lake and the interior lake of the Avernus into a serviceable harbour, giving it the name of Portus Julius. Having there prepared a fleet and exercised his mariners, he, in B.C. 36, defeated Sextus Pompeius at Myla, and completely broke his naval supremacy at Naulochus, on the coast of Sicily. For these victories he received a naval crown, and was most probably the first on whom that honour was conferred. In the year B.C. 33, though of consular rank, he accepted the office of ædile, his administration of which was distinguished by the restoration of the numerous aqueducts, and the erection of fountains throughout the city. The victory of Actium, B.C. 31, which left Augustus without a rival, was mainly owing to the skill of Agrippa as admiral of the fleet. In reward for his services, he shared with Mæcenas the confidence of Augustus, who associated him with himself in the task of reviewing the senate; and in B.C. 28 again raised him to the consulate, giving him, at the same time, in marriage his own niece, the sister of the young Marcellus. Agrippa had been previously married to the daughter of Cicero's friend, Atticus, by whom he had Vipsania, afterwards the wife of Tiberius, may have been dead, or it is not improbable that he divorced her to make room for Marcella. A third consulate awaited him the year following, in which he dedicated to Jupiter, in commemoration of the victory near Actium, the celebrated Pantheon, which remains to the present day, perhaps the most beautiful specimen of Roman architecture. It is now called, from its form, Santa Maria della

Rotonda, but still bears the inscription, "M. Agrippa L. F. Cos. tertium fecit." In B.C. 23 he assisted Augustus in the reduction of the Cantabri, and afterwards had the honour of representing the emperor at the marriage between the unfortunate Julia and Marcellus, who seemed thus marked out as the successor of Augustus. Yet the notion of any claim, founded upon hereditary descent, was not yet established among the Romans; and the splendid deeds of Agrippa, independently of his connection with Marcellus, gave him in some respects a superior title. A rivalry sprang up between them, which was encouraged by the ambiguous conduct of Augustus, more especially during his severe illness in B.C. 22, when, apparently on his death-bed, he publicly sent his ring to Agrippa. On the recovery of the emperor, Marcellus regained his influence, and Agrippa was sent by Augustus into honourable exile as governor of Syria. Death in a few months removed his rival, and he was not merely recalled to Rome, but, at the request of the emperor, divorced his wife Marcella to marry the young widow Julia. In B.C. 19 he finally subdued the Cantabri, who had again been in arms for more than two years. Agrippa was now looked upon as the undoubted successor of Augustus; and in the following year was so far associated in the imperial dignity as to share the tribunician power with the emperor for five years. In B.C. 17 he proceeded a second time to the East, where his administration seems to have given general satisfaction, more especially among the Jewish nation, who benefited largely by his protection. On his return he received the tribunician power for a second period of five years. His last military duty was to quell an insurrection among the Pannonians, for which his presence was sufficient. After this expedition he returned to Campania, where he died suddenly in March, B.C. 12. His family by Julia were Cains and Lucius, whom Augustus adopted, Julia, Agrippina, and Agrippa Postumus, born, as his name imports, after the death of his father. It has been observed that every one of these came to a premature end. (Appian, Plutarch, Dion, Suetonius, &c.)

AGRIPPINA, the daughter of M. Vipsanius Agrippa and Julia, the only child of Augustus, married Germanicus, the son of Drusus, and nephew of Tiberius, to whom she bore nine children. Of these three died in their infancy, but among the remaining six were Caligula, afterwards emperor, and the second Agrippina, the mother of Nero. On the death of Augustus, A.D. 14, Germanicus and his wife were with the army on the banks of the Rhine, where they had much difficulty in restraining the soldiery from proclaiming Germanicus in opposition to his uncle. On this occasion Agrippina, by her determined bearing, showed herself worthy of her descent from Augustus, and the following year she had an opportunity of evincing the same spirit, in a panic occasioned by a report that the army of Cæcina had been cut off by Arminius, and that the victorious Germans were on the point of crossing the Rhine and invading Gaul. It was proposed to destroy the bridge; but Agrippina, in the absence of her husband, prevented the disgraceful expedient, and herself received the worn-out troops of Cæcina, supplying them with clothing, and all that was necessary for the cure of their wounds. In A.D. 17 Agrippina accompanied her husband to the East, and was with him in Syria when he fell a victim, as he suspected, to the arts of the emperor and his mother, Livia. Disregarding his entreaty that she would restrain her resentment, she proceeded to Italy, and landing at Brundisium with two of her children, and bearing herself the funeral urn of Germanicus, seemed to court the attention of the people, who received her in crowds. Two prætorian cohorts, sent by Tiberius for the purpose, accompanied her to Rome, where she was met by the consuls, the senate, and a large body of the citizens. The subsequent tenor of her conduct was such as to exasperate Tiberius, and when her cousin Claudia Pulchra (A.D. 26) was about to be the object of a prosecution encouraged by the emperor, she ventured to express her resentment to him in person in no measured terms. Agrippina had now remained in widowhood for seven years, when she asked his permission to choose another husband. But Tiberius knew too well that the husband of Agrippina would be a dangerous enemy, and he parted from her without giving any answer. The artifices of Sejanus completed the breach between them. By his agents he induced her to believe that Tiberius intended to remove her by poison, and Agrippina fatally offended the emperor by openly exhibiting her suspicions. She was banished to the island of Pandataria, and at last closed her life by starvation October 18, A.D. 33. Her two eldest sons, Nero and Drusus, were also the victims of Tiberius. (Tacitus; Suetonius.)

AGRIPPINA, the daughter of Germanicus and the Agrippina of the preceding article, was born in the chief town of the Ubii, which she afterwards raised to the rank of a Roman colony, calling it after herself Colonia Agrippinensis, now Cologne. She was but fourteen years of age when Tiberius gave her in marriage, A.D. 23, to Cn. Domitius Enobarbus, by whom she had a son, who at first bore the name of his father, but afterwards under that of Nero became Emperor of Rome. After the death of Domitius, A.D. 40, her disgraceful conduct was made by her brother Caligula a pretext for banishment; but on the accession of Claudius, she was recalled from exile, and became the wife of Crispus Passienus. By assassinating her husband Passienus she soon made herself again a widow, and now directed her efforts to gaining the affections of her uncle, the Emperor Claudius. Such a connection was held to be incestuous, but on the death of

Messalina it was legalised by a decree of the senate, and Agrippina became the fifth wife of the emperor. Her first object was to secure to her own son those expectations to which Britannicus, the son of Claudius by the infamous Messalina, was more equitably entitled. The marriage of Domitius to Octavia, daughter of the emperor, and his adoption by the emperor himself, from which he derived the name of Nero, at once placed him above Britannicus; and in the year 54 Agrippina completed the object of her ambition by poisoning her imperial husband. Her power over her son, who was now at the head of the empire, soon disappeared; and though for a time she partially recovered it by means of an incestuous intercourse with him, the beauty of Poppæa destroyed even this influence; and in the sixth year of his reign Nero determined, under the encouragement of Poppæa, to remove his mother by her own arts. But it was not easy to poison one, who, familiar herself with poison, was ever on her guard. Nero therefore changed his course. After an unsuccessful attempt to effect her death near Baie by means of a vessel with a false bottom, she was dispatched by assassins in March in the year 60. Her last words, as she presented herself to the sword of her murderer were, "Ventrem feri," strike the womb (which gave birth to such a son). To enumerate all her debaucheries, murders, and other crimes, would require a much larger space than we think it necessary to assign to them. Agrippina wrote some commentaries concerning herself and her family, which Tacitus says he consulted. They are also quoted by Pliny, vii. 8. (Tacitus; Suetonius; Dion.)

AGUESSEAU, HENRI FRANÇOIS D', a chancellor of France. He was born November 27, 1668, at Limoges, the principal town of the then province of Limousin, and now the chief town of the department of Haute-Vienne. His father, who was intendant of that province, devoted himself to the education of his son. The abilities of Aguesseau brought him early into notice. At the age of twenty-one he was admitted an advocate at the Châtelet; and, three months after, he was made one of the three advocates general. It has been said that this high office was conferred upon him through the recommendation of his father, in whom Louis XIV., the then reigning monarch, placed great confidence. During ten years that he filled the situation, he obtained the great reputation which secured his future elevation.

In the year 1700 he was appointed Procureur-Général (Solicitor-General). His opposition to the registration in parliament of the papal bull Unigenitus, which he considered as an assumption of the papacy inconsistent with the rights of the French nation, and destructive of the independence of the Gallican church, had nearly caused his disgrace with the king. But he maintained his position by the force of his talents and integrity. He employed his authority as Procureur-Général in most cases wisely and honestly. He reformed the system of the management of public hospitals; improved the discipline of courts of justice; and instituted a quicker mode in the investigation of criminal cases previous to their being brought to judgment. Aguesseau aspired through life to the high but difficult reputation of a legal reformer: and it is in this particular that his character has the greatest claim upon our respect. His principal objects were to define the limits of particular jurisdictions; to introduce uniformity in the administration of justice through the various provinces; and to secure the right to the subject of a just testamentary disposition of his property. His praiseworthy attempts were resisted no doubt by all those whose mistaken interests suggested to them that the attainment of justice ought to be kept expensive and uncertain, instead of being rendered cheap and secure. He is said to have confessed that he did not go so far as he wished, because he did not like to reduce the profits of his professional brethren. This was a mistake even in mere worldly policy; for when law, as well as any other article of exchange, is dear and worthless, the purchasers will be few. D'Aguesseau was not much before his age, probably, in the knowledge of political economy, or he yielded to popular clamour. During the famine which afflicted France in 1709, he carried on vigorous prosecutions against what were called forestallers and monopolists, that is, holders of corn—a class of persons who, by equalising the price of corn, by buying in times of plenty, and selling at a profit in times of scarcity, have done the only thing which could relieve the pressure of bad harvests upon the people.

In 1717 Aguesseau succeeded Voysin in the chancellorship. His appointment to this high office by the Regent (Duc d'Orléans), in the minority of Louis XV., gave general satisfaction. However he did not retain it long, for he was dismissed and exiled the following year, on account of his opposition to Law's financial system. His perception of the fallacy of this adventurer's schemes for substituting fictitious wealth for real capital showed that in some points of political philosophy his views were sound. His recall, two years afterwards, at the moment of the great crisis brought about by Law's system, was a signal triumph for Aguesseau. His high sense of integrity and justice would not allow him to hear of a national bankruptcy; he insisted on making good the government obligations, or at least allowing those who held its paper to lose only a proportionate part; and, by thus preventing a bankruptcy, he contributed in some degree to restoring general confidence.

New agitations were again raised on account of the bull Unigenitus, the registering of which parliament still opposed. Aguesseau, by

endeavouring to conciliate both parties, exposed himself to the charge of a change of opinion in this matter. The parliament were on the eve of being exiled to Blois, when they at last consented to register the bull with modifications.

Cardinal Dubois, the unworthy favourite of the Regent, claimed precedence in the council; and Aguesseau retired from office in 1722, rather than yield to him. He lived in the quiet cultivation of his literary tastes at Fresne, until 1727, when he was reappointed chancellor. From his reappointment to office, till 1750, he continued to administer justice uninterruptedly; he was then eighty-two years of age, and feeling himself unable to discharge the high duties of his station, he sent in his resignation to the king, who accepted it, and granted him an annuity of 100,000 francs. This he did not enjoy long, as he died the following year, on the 9th of February. Aguesseau was buried by the side of his wife, in the churchyard of his parish church; but during the first French revolution the remains of the chancellor were removed to another place, into which they were thrown with the bones of thousands. A statue of him was erected in front of the Palais Législatif, by command of Napoleon, by the side of the one erected in honour of L'Hôpital.

The principal features of Aguesseau's character, says the Duc of St. Simon, were much natural talent, application, penetration, and general knowledge; gravity, justice, piety, and purity of manners. According to Voltaire, he was the most learned magistrate that France ever possessed. Independently of his thorough acquaintance with the laws of his country, he understood Greek, Latin, Hebrew, Italian, Spanish, Portuguese, &c. His knowledge of general literature, assisted by his intimacy with Boileau and Racine, gave an elegance to his forensic speeches which was previously unknown at the French bar. His works now extant form 13 vols. 4to: they consist principally of his pleadings and appeals ('réquisitoires'), when advocate and solicitor-general, and of his speeches at the opening of the sessions of parliament.

AHASUERUS, or **ACHASHVEROSH**, is the name of the Persian monarch whose feasting, revelry, and decrees are recorded in the book of Esther. The apocryphal additions to that book, as well as the Septuagint, and Josephus, call him Artasasath or Artaxerxes. He is probably the same king as the Artaxerxes Longimanus of the Greek historians, whose reign commenced B.C. 465. The name Achashverosh occurs also, Dan. ix. 1, where some interpreters take it for Astyages, king of the Medes; and Ezr. iv. 6, where Cambyses seems to be meant by it. (Eichhorn's 'Repertorium für Biblische und Orientalische Literatur,' vol. xv. p. 1, seq.) The word Achashverosh has been explained by means of the modern Persian as signifying 'an excellent or noble prince.' (Winer's 'Lexic. Hebr.,' s. v.) This would nearly agree with the explanation given by Herodotus (vi. 98) of the name Artaxerxes, which according to him means a great warrior. The signification of the name accounts for its being given to various monarchs.

AHAZ, or **ACHAZ**, the son of Jotham (2 Kings, xv. 38; xvi. &c.), a king of Judah, who reigned B.C. 742-726, and was contemporary with the prophets Isaiah, Hosea, and Micah. (Isaiah, i. 1; vii. 1, Hos. i. 1, Mich. i. 1.) He made the dial mentioned Is. xxxviii. 8. Another Ahas is mentioned, 1 Chron. viii. 35; ix. 42.

AHAZIAH, also written **ACHAZIAH** or **AHAZIAHU**, the son of Ahab, a king of Israel, who reigned B.C. 897-896 (1 Kings, xxii. 40; 2 Chron. xx. 25). Another Ahaziah, the son of Jehoram, was king of Judah, B.C. 884-883 (2 Kings, viii. 24; ix. 16), who occurs also under the name of Jehoahaz (2 Chron. xxi. 17) and Azariah (xxii. 6). The name, according to its Hebrew etymology, is interpreted as signifying 'the property or possession of the Lord.'

AHMED I., the fourteenth sultan of the Ottoman empire, was the son of Sultan Mohammed III. He came to the throne in the year 1603, and contrary to the practice of many of his predecessors, spared the life of his brother Mustafa. He was unfortunate in a war with Shah Abbas of Persia, during which he lost the important town of Erivan. [ABBAS.] He at the same time supported an insurrection in Hungary and Transylvania against the German emperor, Rudolph II.: in 1606 however a treaty of peace was concluded at Komorn and Situarok between the two monarchs. The efforts of Ahmed's government were then directed towards the suppression of revolutionary movements in the Asiatic part of the Ottoman dominions, which had been instigated chiefly by two daring adventurers, Kalender Oglu and Janbulad-zade: both were finally subdued, and in 1609 tranquillity was restored in the interior of the empire. Ahmed I. died in 1617. He was of a mild and moderate disposition, and fond of the enjoyments of a quiet and luxurious life: it is said that his seraglio contained 3000 women, and that not less than 40,000 falconers were in his pay. A magnificent mosque, which he built at Constantinople, and a richly-ornamented curtain which he sent to the sanctuary at Mecca, attest, at the same time, that he was not indifferent about the Mohammedan religion.

AHMED II., the son and successor of Sultan Soleiman III., occupied the throne of the Ottoman empire from 1691 till 1695. He owed his elevation to the throne chiefly to the influence of the celebrated grand-vizir Kiuprili or Kiuperli, who soon afterwards fell in a battle against the Austrians near Salankemen or Slankement. Ahmed II. was a weak and superstitious prince. His reign is marked by many

disastrous events. The plague, a famine, and an earthquake desolated the empire, and the capital was afflicted with a destructive fire. The Beduins of the Arabian desert, in defiance of the imperial safeguard, dared to attack the caravan of the Mecca pilgrims; and at sea the Turkish empire was infested by the Venetians, who took possession of the island of Chios, and even threatened Smyrna. Ahmed II. died, it is said, from grief, in 1695, at the age of 50 years. His successor was Mustafa II., who reigned from 1695 till 1702.

AHMED III., the son of Sultan Mohammed IV., was raised to the throne of the Ottoman Empire in consequence of a revolt of the Janissaries, in 1702. When, after the loss of the battle of Pultowa (1709), King Charles XII. of Sweden took refuge at Bender in the Turkish dominions, he was well received by Ahmed, who even made him a present of ready money to the amount of 16,000 ducats. Charles XII. succeeded in kindling a war between the Ottoman Porte and Russia, which turned out favourably for the Turks. During several days Czar Peter the Great was cut off, and placed in a most embarrassing situation on the banks of the river Pruth, almost within the grasp of the Turkish army; and though the unskillfulness of the Turkish commander Battaji Mohammed let him escape from this difficulty, he was yet soon afterwards obliged to resign to the Turks the important town of Azof. Ahmed III. was also fortunate in a war with the Venetians, who were compelled to quit the Morea, and to give up the islands of Cerigo and Cerigotto, and their possessions in Candia. But he failed in an attempt to take Hungary from the Austrians. Prince Eugene of Savoy won an important victory over the Turks near Belgrade, and by the subsequent peace (made at Passarowitz, in 1718) that town, as well as Orsova, and part of Servia and Wallachia, came under the Austrian dominion. In 1723 Ahmed entered into a treaty with Russia, and soon afterwards commenced a war with Persia, which brought the frontier towns and provinces of Erdilan, Kermanshak, Hamadan, Urmia, Ardebil, and Tebriz into the possession of the Turks, and a peace subsequently concluded with the Persian king, Ashraf Khan, secured to the victors the possession of their conquests: but Nadir Shah, the successor of Ashraf Khan, disregarded these stipulations, and by degrees retook the conquered provinces. The news of the capture of Tebriz by the Persians caused a revolt at Constantinople, in consequence of which Ahmed III. abdicated the throne in favour of his nephew, Mahmud I. (1730). He died six years afterwards in prison at the age of 74.

AIKIN, ARTHUR, the eldest son of John Aikin, M.D., the subject of the following article, was born in 1784. Arthur Aikin began his literary career, we believe, as editor of 'The Annual Review,' upon the title-page of the first six volumes of which—1803-1808—his name appears as editor. His earliest scientific work was 'The Manual of Mineralogy,' of which the first edition was published in 1814. Besides these he is the author of a 'Tour in North Wales,' a 'Dictionary of Chemistry and Mineralogy,' and a 'Dictionary of Arts and Manufactures;' and also of numerous papers in various scientific journals. For a long series of years Mr. Aikin was the resident secretary of the Society of Arts, and a frequent contributor to its 'Transactions.' He was also one of the oldest fellows of the Linnæan and Geological societies. Mr. Aikin was a man of quiet retiring habits, and outlived his scientific reputation; but was well known in scientific circles as one of the most regular frequenters of the meetings of the learned societies in the metropolis, and was generally esteemed. He died at his house in Bloomsbury April 15, 1854, in his eighty-first year.

AIKIN, JOHN, M.D., born in 1747, was the only son of the Rev. John Aikin, D.D., for many years tutor in divinity at the dissenting academy at Warrington, in Lancashire. He was educated chiefly at Warrington, and having chosen the medical profession, he studied at the University of Edinburgh, and was subsequently a pupil of Dr. William Hunter. As a surgeon, he first settled at Chester, and afterwards at Warrington; but finally took the degree of Doctor of Medicine at Leyden, and established himself as a physician in London. He is now chiefly remembered as a popular author; and to him, in conjunction with his sister, Mrs. Barbauld, we owe some of the first and best attempts to take science out of the narrow confines of the professionally learned, and to render it the means of enlarging the understandings and increasing the pleasures of the general body of readers. The most popular as well as the most useful of Dr. Aikin's works still maintains its reputation, 'Evenings at Home.' The volumes of this work appeared successively, the sixth and last in June, 1795. This was the joint production of Dr. Aikin and Mrs. Barbauld, whose contributions however did not exceed half a volume in the whole. The object of these volumes was a favourite one with their authors, who desired to teach things rather than words. In the execution of their task they presented, in a manner sufficiently attractive to engage the attention of young persons, a good deal of natural history, with some of the elements of chemistry and mineralogy; but the principal charm and value of the work consist in its just views of human character, and in the uncompromising integrity visible in every line. Another work of Dr. Aikin's has been the foundation of many descriptions of the appearances of nature; but none have surpassed 'The Natural History of the Year' in conciseness and accuracy.

The professional success of Dr. Aikin seems to have been impeded by his zealous endeavours to obtain a recognition from the state of the great principle of liberty of conscience; he was, moreover, of delicate

health. In 1798 he relinquished his profession, and passed the remainder of his life at Stoke Newington, constantly employed in various literary undertakings, of which the entire number was very large. He died of a stroke of apoplexy, December 7, 1822.

AIMOIN, a benedictine monk, and a historian. He was a native of Ville-Franche, in the province of Perigord. He wrote, or rather began, a history of the French, which he dedicated to his patron and principal, Abbon, abbot of Fleuri-sur-Loire. It is said in his preface that he intended to give an account of the origin of the French nation, and to bring his narrative down to Pepin-le-Bref, father of Charlemagne (711); but what we have of the work brings us down only to the sixteenth year of Clovis II. (650). Two books were afterwards added by an unknown writer. This history of Aimoin is incorrect, and he does not dwell sufficiently on the events he has to relate. His best and most interesting work is an account of the life of Abbon. Aimoin died in 1008.

AINSWORTH, ROBERT, the author of a well-known 'Latin Dictionary.' He was born at Woodvale, about four miles from Manchester, in September, 1660. Having completed his education at Bolton, he afterwards taught a school for some time in that town. He then came to London, and formed an establishment at Bethnal Green, from which he removed, first to Hackney, and afterwards to other villages in the neighbourhood of the metropolis. About 1714 he was induced by the offers of the booksellers to commence the compilation of his Dictionary; but the execution of the work was frequently suspended, and it did not appear till 1736. Ainsworth died near London on the 4th of April, 1743, and was buried at Poplar, where an inscription of his own composition, in Latin verse, was placed over his remains and those of his wife. Having acquired a competency, he had retired from teaching for some time before his death. Dr. Kippis, in his edition of the 'Biographia Britannica,' says, from private information, that in the latter part of his life he used to be fond of rummaging in the shops of the low brokers; by which means he often picked up old coins and other valuable curiosities at little expense. He is said to have written some Latin poems; and he also published 'Proposals for making Education less Chargeable,' and some other treatises, the list of which may be seen in Watt's 'Bibliotheca;' but his Dictionary is the only work for which he is now remembered. A second edition of it, edited by Mr. Samuel Patrick (with a notice of Ainsworth's life prefixed), appeared in two volumes, 4to, 1746, and it has since been frequently republished. One edition, which came out in 1752, is in two folio volumes, and used to be in some request as a handsome specimen of typography. It was superintended by the Rev. William Young, the supposed original of Fielding's Parson Adams. Another, in two volumes, 4to, was published in 1773, by Dr. Thomas Morell. Both Young and Morell also edited abridgments of Ainsworth's Dictionary, which, until lately, were much used in schools. The best edition of the larger work is that which appeared in 1816, in one volume, 4to, under the care of Dr. Carey. This Dictionary, regarded as a mere word-book, is a laborious and useful work; but it has no claim to be considered as a philosophical exposition of the etymology of the Latin language, or as anything like a complete exhibition of the usage of words by Latin authors. Notwithstanding the corrections which it has received from the labours of its successive editors, it still remains disfigured by many errors and deficiencies, which leave the book a great way behind the present state of philological learning.

AINSWORTH, WILLIAM HARRISON, was born at Manchester, in February 1805. He was originally intended for the profession of a barrister, but he at an early age quitted his legal studies for the more attractive pursuits of literature. For some time he was chiefly known as a prolific contributor of essays and sketches to the Magazines; but his first novel, *Rockwood*, published in 1834, at once gave him a place among the most popular novel writers of the day. His peculiar popularity arose mainly from the circumstance of his having selected as the heroes of his tales Jack Sheppard and others who figure in the annals of crime. Hence also his novels were seized upon with avidity by a certain class of dramatists as furnishing the stimulating condiment so much in request at the lower suburban theatres—and thus Mr. Ainsworth's reputation came to be coupled in the public mind with his heroes rather more unpleasantly than the novels alone would perhaps have effected. In later tales, as the 'Star Chamber,' the 'Tower of London,' and the like, he went beyond the Newgate Calendar for his materials. A collected edition has been published, in a cheap form, of Mr. Ainsworth's novels and romances.

AIRY, GEORGE BIDDELL, the present Astronomer-Royal, was born at Alnwick, Northumberland, in July, 1801. He received his early education at various private schools, ending with the Grammar school of Colchester, and at the age of 18 entered Trinity College, Cambridge, as Bizar. He took his degree of B.A., and won the distinction of Senior Wrangler, in 1823. In the following year he was elected Fellow of the College; and, after taking his degree of M.A. in 1826, was appointed to the Lucasian Professorship, of which chair he may be said to have re-created the duties by delivering courses of public lectures on Experimental Philosophy, among which the prelections on the Undulatory Theory of Light are especially remarkable. Mr. Airy resigned this appointment in 1828, on being elected Plumian Professor of Astronomy—a post which, retaining the Experimental Lectures,

involved also the management of the then newly-erected Cambridge Observatory. He devoted himself earnestly to that work, and devised a system of calculation and publication of his observations so much more complete and serviceable than any preceding that it has been adopted by other observatories; and he introduced many important improvements in the mounting of the instruments.

In 1835, on the resignation of Mr. Pond, then Astronomer-Royal, Mr. Airy was appointed to the honourable post, which he has since held, with signal advantage to science and to our national reputation. Under his administration, the observatory at Greenwich has become second to none in the world. The yearly observations are published in a form and with a regularity never before attempted; and, zealous for the cause of science, Mr. Airy has reduced and published the long-neglected observations of the Moon and Planets from 1750 to 1830, "by which"—to quote the words of Admiral Smyth—"an immense magazine of dormant facts, contained in the annals of the Royal Observatory, are rendered available to astronomical use," and from which "we may perhaps date a new epoch in planetary astronomy." The observatory itself, with new methods and new instruments, is more efficient than ever; and since 1843 magnetical and meteorological observations have been taken, as well as astronomical, and regularly published.

A long list might be written of Mr. Airy's claims to scientific distinction. His writings on mechanics and optics are well known. He wrote the articles 'Figure of the Earth' and 'Tides and Waves' for the 'Encyclopædia Metropolitana,' and 'Gravitation' for the 'Penny Cyclopædia;' and, to mention but a few of his labours which have a national character: he has been for many years Chairman of the Commission for the Restoration of the Standards of Weight and Measure; he reported on the comparative merits of the broad and narrow gauge of railways, and on the national clock to be erected at Westminster; he has undertaken the determination of longitude by means of the electric telegraph; has suggested a remedy for the deviation of the compass in iron ships; and has accomplished a series of pendulum experiments for the determination of that difficult question, the density of the earth. On the two latter subjects he has communicated elaborate papers to the Royal Society; and the 'Philosophical Transactions,' the 'Memoirs of the Astronomical Society,' and the 'Transactions of the Cambridge Philosophical Society,' contain numerous highly valuable papers from his pen.

Mr. Airy was elected a Fellow of the Astronomical Society in 1823, and became President in 1835, since when he has repeatedly filled the Chair and sat on the Council. He has received two of the Society's medals—one for the planetary observations before mentioned; the other, "for his discovery of the long inequality of Venus and the Earth," the investigation of which was published in the 'Philosophical Transactions.' He was elected a Fellow of the Royal Society in 1836, has received their Copley and Royal medals, and has been often chosen into the Council. He has also received the Lalande medal of the French Academy of Sciences; he is a corresponding member of the Academy, and a member of other scientific societies in Europe and America.

AJAX, a son of Telamon, and third in direct male descent from Jupiter, was one of the most renowned heroes of the Trojan War. According to Homer and Pindar, he was next in beauty and in warlike prowess to Achilles. He is said by later poets to have been invulnerable. Pindar (Isthm. 6) relates the story fully; but, as in the case of Achilles, it is not found in Homer. Telamon, banished from Ægina by his father Æacus, for killing his brother Phocus, retired to the island of Salamis, and was chosen king. During his father's life, Ajax led the forces of Salamis to Troy, in conjunction with the Athenians. His chief exploits, recorded in the 'Iliad,' are his duel with Hector, in the 7th book, when the Trojan prince challenged any of the Greek army to single combat; and his obstinate defence of the ships, in the protracted battle described in the 13th, 14th, 15th, 16th, and 17th books. In the funeral games of Patroclus he contended for three prizes: in wrestling with Ulysses, single combat with Diomedes, and throwing the quoit; but without obtaining the prize in any. Blunt in manners, rugged in temper, and somewhat obtuse in intellect, his strength and stubborn courage made him a most valuable soldier, but no favourite; and his confidence in these qualities induced him to despise divine aid, by which he roused the anger of Pallas, the author of his subsequent misfortunes. After Achilles's death, the armour of that hero was to be given as a prize to him who had deserved best of the Greeks. Ajax and Ulysses alone advanced their claims: the former depending on his pre-eminence in arms; the latter, on the services which his inventive genius had rendered; and the assembled princes awarded the splendid prize to Ulysses (Ovid's 'Met.' b. 14.) Ajax was so much mortified at this, that he went mad, and in his fury attacked the herds and flocks of the camp, mistaking them for the Grecian leaders, by whom he thought himself so deeply injured. On recovering his senses, and seeing to what excesses he had been transported, he slew himself with the sword which Hector had given him after their combat. This catastrophe is the subject of that noble tragedy of Sophocles, 'Ajax the Scourge-Bearer.' The circumstances of his death are differently told by other authors. The Greeks honoured him with a splendid funeral, and raised a vast tumulus on the promontory of Rhæteum, opposite that of Achilles, on the pro-

montory of Sigeum. He left a son named Eurysaces, who succeeded Telamon on the throne of Salamis. One of the Attic tribes was named after Ajax. Some of the most illustrious Athenians, as Miltiades, Cimon, and Alcibiades, traced their descent from him. He was worshipped as the tutelary hero of Salamis, where there was a temple to him with a statue; and with all the Æacids, or descendants of Æacus, was honoured as a demi-god in Attica. The traditions concerning him supplied not only themes to the poets, but subjects to the painters and sculptors of antiquity. (Herod., viii. 64, 65.)

AJAX, son of Oileus, a leader in the Trojan War, remarkable for swiftness of foot, and skill in using the bow and javelin. He is called the Lesser Ajax, and fills a less important part in the 'Iliad' than his namesake, though he is distinguished by his defence of the ships in company with Ajax, son of Telamon. At the sack of Troy he offered violence to Cassandra in the temple of Pallas. For this profanation, the goddess, on his voyage home, raised a tempest, which wrecked his vessel, with many others of the Grecian fleet. Ajax escaped to a rock, and might have been preserved, had he not said he would escape in spite of the gods. Neptune cleft the rock with his trident, and tumbled him into the sea. ('Od.' iv. 502.) Virgil relates his death differently. ('Æn.' i. 39.) Some authors say that the charge of violating Cassandra was a fiction of Agamemnon's, who wished to secure her for himself.

AKBAR, JALAL-UD-DIN MOHAMMED, the greatest and wisest of all the monarchs who have swayed the sceptre of Hindustan. At the early age of 13 he succeeded his father Humayun, Feb. 15, 1556. About the time of Akbar's birth, his father Humayun, a mild and lenient prince, was deprived of his kingdom through the restless ambition of his brothers Kamran and Hindal. The dissensions thus excited enabled Sher Khan, a Patan, or Afghan chief, to usurp the government of India. Humayun, attended by a few faithful adherents, became a wanderer and an exile. In his flight through the western desert towards the banks of the Indus, he and his little band experienced a train of calamities almost unparalleled. The country through which they fled being an entire desert of sand, they were in the utmost distress for water. Some went mad, others fell down dead. At length those that lived reached the town of Amerkote, where, on Oct. 14, 1542, the wife of Humayun gave birth to a son, Akbar. Humayun sought shelter in Persia, where he was hospitably received by Shah Tahmasp. After twelve years' exile, he was once more restored to his throne at Delhi, but in less than a year died from the effects of a fall down the palace stairs. When Akbar ascended the throne the whole empire of India was in a very distracted state; and though he was possessed of unusual intelligence for his age, he was incapable of administering the government. Sensible of his own inexperience, he conferred on Bahram Khan, a Turkoman noble who had ever proved faithful to his late father, a title and power equivalent to that of regent or protector. Bahram for some time proved himself worthy of the young king's choice; but he was more of the soldier than the statesman, and there were numerous complaints of his arbitrary if not cruel disposition, though these qualities were essential for maintaining subordination in his army, which consisted of licentious adventurers, and for quelling the rebellious chiefs who abounded in every province of the empire. In the course of a few years the energy of Bahram succeeded in restoring the country to comparative tranquillity. Hitherto his domination was submitted to even by Akbar himself, because the general safety depended on his exercise of it; but now that tranquillity was restored, the pressure of his rule became less tolerable. Akbar therefore, in 1558, made a successful effort to deliver himself from the thraldom which he had hitherto endured. He concerted a plan with those around him, and took occasion, when on a hunting party, to make an unexpected journey from Agra to Delhi on the plea of the sudden illness of his mother. He was no sooner beyond the reach of his minister's influence than he issued a proclamation announcing that he had taken the government into his own hands, and forbidding obedience to any orders not issued under his own seal. The proud Bahram perceived, when too late, that his authority was at an end. He endeavoured to establish an independent principality in Malwa; but, after two years of unsuccessful rebellion, he came, in the utmost distress, to throw himself at the feet of his sovereign. Akbar, mindful of his former services, raised him with his own hands, and placed him in his former station at the head of the nobles. He gave him his choice of a high military command in a distant province or an honoured station at court. Bahram replied that the king's clemency and forgiveness were a sufficient reward for his former services, and that he now wished to turn his thoughts from this world to another. He therefore begged that his majesty would afford him the means of performing the pilgrimage to Mecca. The king assented, and ordered a proper retinue to attend him, at the same time assigning him a pension of 50,000 rupees.

The first objects of Akbar's attention were to establish his authority over his chiefs, and to recover the various portions of his empire that had been lost during so many revolutions. When he ascended the throne his territory was limited to the Panjab and the provinces of Agra and Delhi. In the fortieth year of his reign, according to Abu-l-Fazl, the empire comprised fifteen fertile provinces, extending from the Hindu-Coosh to the borders of the Deccan, and from the Brahmputra

to Candahar. These provinces were not recovered without great efforts and the sacrifice of many lives, yet we have no reason to attribute this career of conquest to mere restless ambition on the part of Akbar. The countries which he invaded had been formerly subject to the throne of Delhi, and he would have incurred more censure than praise among his contemporaries if he had not attempted to recover them. To every province thus recovered a well-qualified subahdar, or viceroy, was appointed, whose duty it was to administer justice and give protection to all, without any regard to sect or creed. Thus his conquests, when once concluded, were permanent, for good government is the surest safeguard against rebellion. Of the vigilance with which Akbar watched the proceedings of his viceroys, and the extreme attention which he paid to the administration of his more remote provinces, we have ample proofs in his letters preserved by Abu-l-Fazl. Unlike most eastern princes, his fame is founded on the wisdom of his internal policy, not on the vain-glorious title of subduer of regions. One of the most striking traits in his character as a Mohammedan prince was the tolerant spirit which he displayed towards men of other religions, and he felt great interest in all inquiries respecting the religious belief and forms of worship prevalent among mankind. In the summer of 1582 he wrote a letter to the "wise men among the Franks," that is, the Portuguese ecclesiastics at Goa, requesting them to send him a few of their more learned members, with whom he might converse respecting the Christian religion. This curious document is preserved in Abu-l-Fazl's collection, and was translated by Fraser in his 'History of Nadir Shah.' Fraser makes a mistake however in saying that it was addressed to the king of Portugal. Accordingly, on the 3rd of December following, three learned padres, by name Aquaviva, Monserrate, and Enriques, departed on this important mission. Travelling by easy stages by way of Surat, Mandoo, and Ougein, they reached Agra in about two months. They were immediately admitted into the presence of Akbar, who gave them a most gracious reception. The missionaries then solicited a public controversy with the mullas, or doctors of the Mohammedan religion, which was readily granted. Of this disputation the Christians and Mohammedans give different accounts. Akbar, who is strongly suspected to have sought amusement as well as instruction from these discussions, informed the padres that an eminent mulla had undertaken to leap into a fiery furnace with a Koran in his hand, to prove by this ordeal the superior excellence of his faith; and he trusted that they would do the same with the Bible. The worthy fathers, who had during the discussion made some pretensions to supernatural powers, were considerably embarrassed by this proposal, which however they wisely declined. Abu-l-Fazl says that "the disputants having split on the divinity of their respective scriptures, the Christian offered to walk into a flaming furnace bearing the Bible, if the Mohammedan would show a similar confidence in the protection of the Koran; to which the Moslems only answered by a torrent of abuse, which it required the emperor's interference to stop. He reproved the mullas for their intemperate language, and expressed his own opinion that God could only be worshipped by following reason, and not yielding implicit faith to any alleged revelation." The missionaries seeing that Akbar showed so little partiality to the Mussulman religion, naturally concluded that they had made him a convert. At that time however his attention was distracted by disturbances in Cabul and Bengal, and his visitors returned under a safe conduct to Goa, which they reached in May, 1583. It appears that Akbar requested and received two other similar missions in the course of his reign, which, after going through the same round as their predecessors, returned without any further result. It would appear also that at Akbar's request one of the missionaries, Jeronimo Xavier, remained at Agra, for the purpose of translating the Gospels into Persian. He was assisted in his task by Mulana 'Abd-ul-sitar-ben-Kasim of Lahore, and the work was completed in 1602. It is very much on the plan of our Diatessaron, and divided into four books. The first book is entirely occupied with the history and life of the Virgin Mary, and our Saviour's infancy. These puerile legends have been long declared apocryphal even by the Church of Rome, and it is difficult to conceive why the worthy padre should have ventured to interweave them with the sublime truths of the Gospel: yet this compilation, such as it is, has had considerable circulation among the Moslems of India, who have naturally viewed it as a standard authority in judging of the Christian religion, from the circumstance of its being issued forth under the patronage of Akbar.

Of the encouragement which general literature received under this enlightened monarch there are numerous monuments extant. He established schools throughout the country, at which Hindoo as well as Moslem children were educated, each according to his circumstances and particular views in life. He encouraged the translation of works of science and literature from the Sanscrit into Persian, the language of his court. In this he was ably seconded by the two brothers Faizi and Abu-l-Fazl; the former the most profound scholar and the latter the most accomplished statesman then existing. Faizi was the first Moslem who applied himself to the language and learning of the Brahmans. Assisted by qualified persons, he translated into Persian two works on algebra, arithmetic, and geometry, the 'Vija Ganita' and 'Lilavati,' from the Sanscrit of Bhaskara Acharya, an author of the 12th century of our era. Under Faizi's able superintendence were also translated the Vedas, or at least the more interesting portions of

them; the great epics of the Mahabharata and Ramayana; and also a curious history of Cashmere during the 4000 years previous to its conquest by Akbar, remarkable as the only specimen of historical composition in the Sanscrit language. Abu'l-Fazl long held the highest rank, both military and civil, under Akbar. His great work, the 'Akbar Nama,' is a lasting monument of his master's fame, and of his own distinguished talents and industry. Manuscript copies of it have been multiplied in abundance, particularly the third volume called the 'Ain-i-Akbari,' which is descriptive of the Indian empire.

For a more ample and detailed account of the many admirable works, original and translated, which were written under the patronage of Akbar, the reader is referred to the first volume of Gladwin's translation of the 'Ain-i-Akbari.' But of all the measures of Akbar's reign, perhaps there is none which redounds more to his true glory than his humane and liberal policy towards the Hindoos, who formed, as already stated, the majority of his subjects. This injured race had long been subjected to a capitation tax, imposed upon them by their haughty conquerors as a punishment for what they were pleased to call their infidelity. This odious impost, which served to keep up animosity between the people and their rulers, was abolished early in Akbar's reign. He at the same time abolished all taxes on pilgrimages, observing "that it was wrong to throw any obstacle in the way of the devout, or of interrupting their mode of intercourse with their Maker." But though Akbar showed every indulgence to the Hindoos in the exercise of their religion, he was not blind to the abuses of the Brahminical system. He forbade trials by ordeal, and the slaughter of animals for sacrifice. He also enjoined widows to marry a second time, contrary to the Hindoo law. Above all, he positively prohibited the burning of Hindoo widows against their will; and used every precaution to ascertain, in the case of a suttee, that the resolution was free and uninfluenced. It is stated in the 'Akbar Nama' that on one occasion, hearing that the raja of Joudpour was about to force his son's widow to the pile, he mounted his horse, and rode with all speed to the spot in order to prevent the intended sacrifice. It may be observed, that all those cases in which Akbar interfered with the religion of the Hindoos were really abuses originating with the corrupt priestcraft of later times. Such prohibitions, being of a purely benevolent nature, would nowise affect the loyalty and attachment of the great body of the people. In fact, we have an interesting memorial of the impression made upon the Hindoos by the mild sway of Akbar in a spirited remonstrance, addressed a century after to the bigoted Aurungzebe, by the descendant of the very raja of Joudpour above mentioned. The then raja says:—"Your ancestor Akbar, whose throne is now in heaven, conducted the affairs of his empire in equity and security for the space of fifty years. He preserved every tribe of men in ease and happiness, whether they were followers of Jesus or of Moses, of Brahma or of Mohammed. Of whatever sect or creed they might be, they all equally enjoyed his countenance and favour; inasmuch that his people, in gratitude for the indiscriminate protection which he afforded them, distinguished him by the appellation of 'Guardian of Mankind.'"

In the revenue department Akbar effected vast reforms. He established a uniform standard of weights and measures, and caused a correct measurement of the land to be made throughout the empire. He ascertained the value of the soil in every inhabited district, and fixed the rate of taxation that each should pay to government. He strictly prohibited his officers from farming any branch of the revenue, the collectors being enjoined to deal directly with individual cultivators, and not to depend on the headman of a village or district. For the administration of justice he appointed courts composed of two officers with different powers; the one for conducting the trial and expounding the law, and the other, who was the superior authority, for passing judgment. These were enjoined to be sparing of capital punishment, and, unless in cases of dangerous sedition, to inflict none until the proceedings were sent to court, and the emperor's confirmation returned. He also enjoined that in no case should capital punishment be accompanied by any additional severity. Akbar was fully sensible of the importance of commerce, which he greatly promoted. He improved the roads leading to all parts of the empire, and rendered travelling safe by the establishment of an efficient police. Above all, he abolished a vast number of vexatious imposts which merely fettered trade without enriching the treasury. He strictly prohibited his officers from receiving fees of any kind, and thus cut off one great source of abuse. Among the numerous efforts made by Akbar for the improvement of his country, perhaps the least successful was his attempt to promulgate a new religion. On this subject the reader will find ample information in the 'Transactions of the Literary Society of Bombay,' vol. ii., contributed by Colonel Kennedy of that presidency. It does not appear that Akbar's faith made any great progress beyond the precincts of his palace. In fact it had numberless foes to encounter among the priesthood both of Mohammed and Brahma, who throve by the existing superstitions of their respective flocks. Hence on Akbar's death it expired of itself, and the Mohammedan faith resumed all its splendour and intolerance under Jehan-ghir. Akbar had three sons, by whose misconduct the latter days of his life were embittered. Two of them were cut off in early youth through habits of dissipation, and Selim, the survivor (afterwards Jehan-ghir), repeatedly raised the hand of rebellion against his father. These afflictions, together with the loss of many of his intimate friends, began to prey upon

Akbar's mind. He died in September 1605, in the 64th year of his age, after a prosperous and beneficent reign of half a century. In person Akbar is described as strongly built, with an agreeable expression of countenance and very captivating manners. He was possessed of great bodily strength and activity; temperate in his habits, and indulging in little sleep. He frequently spent whole nights in those philosophical discussions of which he was so fond. His early life abounds with instances of romantic courage, better suited to a knight errant than the ruler of a mighty empire. The first half of his reign required almost his constant presence at the head of his army, yet he never neglected the improvement of the civil government; and by a judicious distribution of his time he was enabled not only to dispatch all essential business, but to enjoy leisure for study and amusement.

AKENSIDE, MARK, was the second son of Mark Aken-side, a butcher of Newcastle-on-Tyne, and of his wife Mary Lumaden, and was born in the street called Butchers' Bank in that town, on Nov. 9, 1721. The Rev. John Brand, who was also a native of Newcastle, states, in his 'Observations on Popular Antiquities,' that a halt which Aken-side had in his gait was occasioned by the falling of a cleaver from his father's stall upon him when he was a boy; and "this," adds Brand, who was himself bred a shoemaker, "must have been a perpetual remembrance of his humble origin." It is said that Aken-side was far from regarding the ever-present memento either with complacency, or even with the most philosophic composure. The butcher was a strict Presbyterian; and young Mark's original destination was to be a clergyman in that communion, with which view, according to the common account, he was sent to a dissenting academy in his native town, whence, at about the age of eighteen, that is to say, probably in November 1739, he proceeded to the University of Edinburgh. But it appears from a Memoir of Richard Dawes (the author of the 'Miscellanea Critica') by the Rev. Mr. Hodgson, in the 2nd volume of the 'Archæologia Eliana,' 4to., Newcastle, 1832, that Aken-side was a pupil under Dawes, who was appointed head master of the Royal Grammar School at Newcastle in July 1738. If this was the case, his attendance at the school could not have been long. The expense of his residence at Edinburgh, or part of it, was defrayed by the Dissenters' Society. But after studying divinity for one session, he determined to change his intended profession, and the remaining two years of his attendance at college were given to the medical classes. He afterwards returned the money he had received from the Dissenters' Society. In 1742 he went to finish his medical course at Leyden, and he was admitted by the university to the degree of M.D. May 16, 1744, on which occasion he published a thesis, or Latin inaugural discourse, on the human foetus ('De Ortu et Incremento Fœtus Humani'), in which he is said to have displayed eminent scientific ingenuity and judgment in attacking some opinions of Leeuwenhoek, and other authorities of the time, which have now been generally or universally abandoned. But if the date of his graduation (given by Johnson, and copied by all his subsequent biographers) be correct, Aken-side had already made a brilliantly successful literary début before the appearance of this professional essay. His English didactic blank verse poem, in three books, entitled 'The Pleasures of Imagination,' which, according to one account, he had begun, and even, it is absurdly said, finished, while he was on a visit to some relations at Morpeth, before he went to college at Edinburgh, was published at London in February 1744. He had taken to verse-making at an early age; in the 7th volume of the 'Gentleman's Magazine,' published in 1737, is a poem, entitled 'The Virtuoso, in imitation of Spenser's Style and Stanzas,' dated from Newcastle, having the signature of Marcus, and stated to be the production of a writer in his sixteenth year, which is undoubtedly his; this was followed by other poetical contributions to the same miscellany; and while at Edinburgh he had written some of the odes and other minor pieces which have since been printed among his works. But he had as yet published nothing in a separate form or with his name, and was consequently altogether unknown, when he took or sent his 'Pleasures of Imagination' to Dodsley the bookseller, with a demand of 120*l.* for the copyright. Johnson, who mentions this, says that he had heard Dodsley himself relate that, hesitating to give so large a price, "he carried the work to Pope, who, having looked into it, advised him not to make a niggardly offer, for this was no every-day writer." Pope, who died in the end of May of the year in which it appeared, lived nevertheless long enough to see his judgment ratified by the extraordinary success of the poem. It reached a second edition in May, and continued in constant demand. The poem was first published anonymously, and a story is told by Boswell, on Johnson's authority, of the authorship being claimed by a person of the name of Rolt, who is even said to have had an edition of it printed in Dublin with his name on the title-page; but in England, at least, the name of the true author appears to have been very well known all along. Aken-side was certainly in England before his poem was published: if the date of his graduation be correct, he probably returned to Leyden to go through that ceremony. His first attempt to commence practice as a physician was at Northampton; but he only continued there for about a year and a half, during which he appears to have written more poetry than prescriptions. It seems however to have been before he settled at Northampton that he wrote his 'Epistle to Curio,' a satire

on Pulteney, recently created Earl of Bath, which was published by Doddsley in a quarto pamphlet in 1744. While at Leyden, Akenside had formed an intimacy with one of his fellow-students, Jeremiah Dyson, a man of fortune, who afterwards became clerk of the House of Commons, then one of the members for Horsham, subsequently secretary to the Treasury and a lord of the Treasury, and ultimately cofferer to the household and a privy councillor. They had returned from Holland together, and on Akenside, shortly after the publication of his great poem, being attacked by Warburton in a preface to a new edition of his 'Divine Legation,' for something he had said in a note in support of Shaftesbury's notion about ridicule being a test of truth, Dyson took up his pen in defence of his friend, and published, anonymously, 'An Epistle to the Reverend Mr. Warburton, occasioned by his Treatment of the Author of the "Pleasures of Imagination."' Warburton took no notice of this appeal; but he afterwards reprinted his strictures at the end of his 'Dedication to the Freethinkers' in another edition of his work. Dyson now gave Akenside a more substantial proof of his friendship by making him an allowance of 300*l.* a year, to be continued till he should be able to live by his practice. Thus secured in an income, he came up to London, and established himself in the first instance at Hampstead, and after being two years and a half there he removed to London, and fixed himself in Bloomsbury-square, where he resided till his death. This change of residence occurred in 1748. In 1745 he had published, in quarto, ten of his odes, under the title of 'Odes on Several Subjects'; his 'Ode to the Earl of Huntingdon' appeared in 1748 in the same form; and several others of his poems appeared afterwards from time to time in 'Doddsley's Collection,' then in course of publication. An 'Ode to the Country Gentlemen of England,' 4*to.*, 1758, and an 'Ode to Thomas Edwards, Esquire, on the late Edition (by Warburton) of Mr. Pope's Works,' fol. 1766, are almost his only separate poetical productions after this date. Besides being admitted by mandamus to the degree of M.D. in the University of Cambridge, he became in course of time physician to St. Thomas's Hospital, a Fellow of the College of Physicians, and one of the physicians to the Queen; but he was probably indebted for these honours as much to his literary as to his professional reputation. His practice is said never to have been considerable. The late Dr. John Aikin, who himself attempted to combine the pursuit of literature with the practice of physic, says, in his 'Select Works of the British Poets,' "It is affirmed that Dr. Akenside assumed a haughtiness and ostentation of manner which was not calculated to ingratiate him with his brethren of the faculty, or to render him generally acceptable." Another account that has been given is, that his manner in a sick room was so grave and sombre as to be thought more depressing and injurious to his patients than his advice or medicines were serviceable. Yet his latest and most elaborate biographer, Mr. Bucke, has noted that he had practice enough to enable him, with his pension, to keep a carriage; and he also sustained his reputation at a respectable point by various professional publications. In 1755 he read the Gulstonian Lectures before the College of Physicians; and an extract from them containing some new views respecting the lymphatic vessels being afterwards read before the Royal Society (of which he was elected a fellow in 1753) was published in the 'Philosophical Transactions' for 1757. This publication drew Akenside into a controversy with Dr. Alexander Monro of Edinburgh, who in a pamphlet, entitled 'Observations Anatomical and Physiological,' both accused him of some inaccuracies, and also insinuated a charge of plagiarism from a treatise of his own published the preceding year. Akenside replied to these charges in a small pamphlet published in 1758. In 1759 he delivered the Harveian Oration before the College of Physicians; and it was published by Doddsley, in 4*to.*, in the beginning of the next year, under the title of 'Oratio Anniversaria,' &c. An 'Account of a Blow on the Heart, and its Effects,' by Akenside, appeared in the 'Philosophical Transactions' for 1763. In 1764 he published, in 4*to.*, what is accounted the most important of his medical works, his treatise on dysentery, in Latin, 'De Dysentaria Commentarius,'—"considered," says Johnson, "as a very conspicuous specimen of Latinity, which entitled him to the same height of place among the scholars as he possessed before among the wits." It has been translated into English both by Dr. Dennis Ryan and by Motteux. To these performances are to be added several papers in the first volume of the 'Medical Transactions,' published by the College of Physicians in 1767; and, having been appointed Krohnian Lecturer, he also delivered three lectures before the college on the history of the revival of learning, which have not been printed. He might probably have risen to greater professional eminence and more extended practice if his life had been protracted; but he was cut off by a putrid fever on the 23rd of June, 1770, in his forty-ninth year.

As a poet, Akenside has been very differently estimated. He must be judged of principally by his 'Pleasures of Imagination,' which is admitted on all hands to be his greatest work. Johnson, who hated both the kind of verse in which it was written and the politics of the author, which, always whig, were at the time when it was composed almost republican, admits that "he is to be commended as having fewer artifices of disgust than most of his brethren of the blank song;" but seems to regard the poem on the whole as having more splendour than substance, more sound than sense. Akenside had a warm and susceptible, but not a creative imagination; there is probably not in

his whole poetry a thought which can properly be called his own, or even a new and striking image or metaphor, or a felicity of expression not borrowed or imitated. He interests and affects his readers chiefly through the sympathetic glow which he excites by his enthusiasm in behalf of truth and beauty, and other elevating conceptions; he has no touches of nature, no pathos, no dramatic power, little or no invention; and even his pictures of natural scenery, which are perhaps what he has done best, are brought out always by an elaborate accumulation of details, never by those happy characteristic strokes which flash forth at once the lineaments and spirit of a scene like sudden sunshine. All is operose, cumbrous, and cloudy, with abundance of gay-colouring and well-sounding words, but filling the eye oftener than the imagination, and the ear oftener than either. Something of all this was natural enough in a poem written at so early an age as the 'Pleasures of Imagination;' and Akenside himself, after a time, became so dissatisfied with the work, that he proceeded not so much to rewrite it as to compose a new poem on the same subject. Of this second poem, which was to have been much more extended than the first, he had finished three books and part of a fourth before his death; and he had even printed the first and second books, although he did not publish them. Both poems were published by his friend Mr. Dyson, in a complete edition of Akenside's works, 4*to.* and also 8*vo.*, London, 1773; but his admirers have continued to prefer their original favourite, its rapid flow being felt to have more of pleasurable excitement than the greater correctness and more matured thought of the later composition. Akenside's minor pieces have the same beauties and defects with his chief work. They are mostly odes and hymns, and are full of lofty sentiments and swelling verse, which are farther made impressive by a spirit of earnestness and ardour coming from the thorough conviction and sincerity of the writer. A few are in a less ambitious style, consisting of plain sense neatly expressed; but, although he sometimes attempted the gayer flights of the muse, he had no wit or humour, and what he has done in this way is wholly unsuccessful.

(Kippis, *Biographia Britannica*; Johnson, *Lives of the Poets*; Bucke, *Life, Writings, and Genius of Akenside*, 8*vo.*, London, 1832.)

AKERBLAD, JOHN DAVID, a Swedish scholar, who distinguished himself by his researches in Runic, Phœnician, Coptic, and hieroglyphic literature. He enjoyed in early life an opportunity of travelling over several countries in the East in consequence of being appointed secretary to the Swedish embassy at Constantinople. While holding this appointment he made a journey to Jerusalem in 1792. In 1797 he visited the Troad. Some years after he was appointed Chargé d'Affaires to the king of Sweden in France. He spent his last days in Rome, where he was supported by the bounty of the Duchess of Devonshire and other admirers of his talents. He died in that city at an early age, on the 8th of February, 1819. The following are the titles of some of his publications:—"Lettre à M. Silvestre de Sacy sur l'Écriture cursive Copte," published in the 'Magasin Encyclopédique' for 1810. 'Inscriptiones Phœnicæ Oxoniensis Nova Interpretatio,' Paris, 1802; 31 pp. 8*vo.* 'Lettre sur l'Inscription Égyptienne de Rosette, adressée à M. Silvestre de Sacy,' Paris, 1802; 70 pp. 8*vo.* 'Notices sur Deux Inscriptions en Caractères Runiques, trouvées à Venise, et sur les Varanges; avec les Remarques de M. d'Ansee de Villosion,' Paris, 1804; 55 pp. 8*vo.* 'Inscrizione Greca sopra una Lamina di Piombo, trovata in uno Sepolcro nelle Vicinanze d'Atene,' 4*to.*, Rome, 1813. He was preparing a new and enlarged edition of this work at the time of his death. 'Lettre sur une Inscription Phénicienne trouvée à Athènes,' Rome, 1817; 23 pp. 4*to.* M. Akerblad is said to have been able to speak as well as read various eastern and European languages. He was a corresponding member of the French National Institute, and a member of several other learned societies.

ALARCON Y MENDOZA, DON JUAN RUIZ DE, a Spanish dramatic writer of the reign of Philip IV. Of the writers of Spain, unless pre-eminent in reputation as well as talent, biographical notices are by no means abundant. Nicolas Antonio did not know the place of his birth nor the time of his death, but supposed him to have been a native of Mexico. Ferdinand Denis however, in the 'Nouvelle Biographie Universelle,' states, that he was born towards the end of the 16th century, at Tlascoco, or Tlacheo, in the ancient province of Mexico, of a noble family, which was originally from the little town of Alarcon, in the province and diocese of Cuenca in Spain. His time is generally fixed about the middle of the 17th century; but in a preface to a second volume of his 'Comedias,' published in 1634, he says that he is the author of twenty pieces, and complains that some of them had been attributed to others, as indeed they had, by certain booksellers, to Lope de Vega and Montalvan. This fact carries back his labours to a much earlier date, and places him among the competitors of the most celebrated dramatists of his country; and it also indicates the reputation he enjoyed. It has been conjectured that he was an actor; but of this there is no sufficient evidence. He was a licentiate, a jurisconsult by profession, and instances appear in his dramas of research into the ancient laws of Spain. Though without positive data, we have a strong persuasion that he was a cadet of the noble family of Ruiz de Alarcon; but his best history is in his works. They show, not only that his attainments were of a very high order, but that he was deservedly esteemed for his noble qualities and

generosity. It is generally admitted that the best picture of Spanish manners during the reign of the Phillips is contained in the Spanish dramatists. Traitors to the divine unities, as Boileau and La Harpe denounced them, they nevertheless truly "held the mirror up to nature, and showed the very age and body of the time his form and pressure;" and they were also no mean historians of the chivalrous ages which preceded them; they gave the best parts of the vigorous chroniclers of their ancestors, in their own sonorous and majestic verse, for every Spanish drama is a piece of lyrical poetry. Alarcon has left many portraits of that dignified deportment, that generous and manly sentiment, that punctilious sense of honour, and that horror of breach of faith, which characterized the old nobility of his country (aquellos Christianos viejos); and he has sketched them with no less fidelity and spirit than Lope, Calderon, and De Castro. No writer has ever more beautifully delineated that true and delicate regard for female character in the high-born Spanish cavalier, for which he has been and is still distinguished.

There is moreover in most of his dramas a tone of morality which does him honour, and places them unquestionably among the best examples of this branch of literature. It has been truly observed by a Spanish annotator, "His pieces not only amuse, but generally convey a useful moral." The chastisement of the backbiter in 'Las Paredes oyen' ('Walls have Ears'), and of the Liar in 'La Verdad sospechosa' ('Suspicious Truth'), are examples of this. It is no small proof of the merit of the last-named piece, that Corneille, who, to use his own phrase, partly translated, partly imitated it for the Parisian stage, under the title of 'Le Menteur,' affirms that he had often said he would give two of his best pieces if he could call the invention of that drama his own. Alarcon's plots are ingenious, his characters well marked, his style nervous, pure, and elegant, and his versification easy and harmonious. His pieces are also free from the affectation and extravagance which disfigure the works of most of his contemporaries, and the object of which seems to have been to mystify and tease, rather than to instruct and delight. Among the numerous Spanish poets of this class, none could be more fitly selected as a model for a real national drama than Alarcon. Huerta gives the titles of thirty of his comedias. The 'Ganar Amigos,' 'La Verdad sospechosa,' 'Las Paredes oyen,' and 'El Examen de Maridos,' are best known. The 'Tejedor de Segovia' was very popular. Like Schiller's 'Robbers,' to which it bears a great resemblance, it has been the subject both of much censure and much praise. No complete edition of Alarcon's works has appeared, nor any volumes except the two mentioned in the article. His pieces are only found in miscellaneous collections.

(Nicolaus Antonius, *Bibliotheca Hispana; Coleccion General de Comedias*, Madrid, 1826-34.)

ALARIC, one of the most eminent of those northern chiefs who successively overran Italy during the decline of the western empire, and the first of them who gained possession of imperial Rome. He learned the art of war under the celebrated emperor of the East, Theodosius, who curbed the depredations of the Goths, settled them in different provinces of the empire, and recruited his armies from the youth of the nation; but they threw off the yoke as soon as the powerful hand which had imposed it ceased to hold the sceptre, and Alaric, born of one of the noblest families of the nation, was chosen by his countrymen as their leader. Under his guidance the Visigoths, the division of the Gothic nation to which he belonged, issued from Thrace, where they had been settled, and overran Greece, A.D. 396. Alaric took Athens; but instead of treating it with severity and destroying its edifices, as has sometimes been asserted, it is most probable that he did very little damage to its works of art, although he carried off such as were moveable. The Goths were soon compelled by Stilicho to evacuate that country, and to return into Epirus. About the year A.D. 398, Alaric, on the grounds of his high military character, was proclaimed King of the Visigoths; and about the same time Arcadius, the successor of Theodosius, alarmed at his repeated successes, attempted to identify his interests with those of the empire by declaring him Master-General of the Eastern Illyrian Prefecture. The Visigoths who obeyed his orders were thoroughly organized as an army, but as yet had few claims to the civil character and stability of a nation. They threatened both empires equally at the same time, and sold their alliance to each alternately. Alaric at last determined to make his way into the empire of the west, for the purpose of establishing a kingdom by conquest.

Early in the year A.D. 403 he appeared before Milan, which was immediately evacuated by the Emperor Honorius. Besieged in the fortress of Asta, Honorius was on the point of surrendering, when Stilicho came to his assistance, with an army hastily recalled from the frontiers of Gaul and Germany. On Easter-day, A.D. 403, was fought the battle of Pollentia. The testimony of historians varies as to the event of it; but the advantage seems to have been on the side of the Romans. In a subsequent battle, near Verona, Alaric was completely defeated by Stilicho, and was compelled by the voice of his people to accept terms which his pride would have rejected—to ratify a treaty with the empire of the west, and to retire from Italy with the remains of his army. (Claudian, 'De Bello Getico'.)

After his retreat from Italy, Alaric concluded a precarious peace with Honorius, and even entered into his service, being nominated

Master-General of the Western Illyrian Prefecture. In this capacity he was required to enforce the claims of the court of Ravenna to certain provinces held by the eastern empire; but his efforts were ineffectual, and at the end of a few years, when his army was recruited by the German youths who were attracted by his fame, he renewed his design of establishing himself in Italy. Claiming an extravagant reward for the services which he had performed, he plainly intimated that war would be the consequence of a refusal. The demand was made in the year A.D. 408. The emperor was then at Rome, and it was debated in the senate what steps were proper to be taken. The majority were for war; but by Stilicho's advice it was determined to buy off the enemy by a contribution of four thousand pounds weight of gold. One of the senators exclaimed, in the language of Cicero, "This is not a treaty of peace, but a contract of slavery." The minister maintained the demand to be nothing more than just, as Alaric had remained three years in Epirus for the service of Honorius. While the Visigoths were at the foot of the Alps, the cowardly and weak Honorius procured the assassination of Stilicho, the only man who could still have defended the empire. His son and almost all his officers were murdered along with him. Those Visigoths who were serving in the pay of the empire had left their wives and children in the Roman cities: they were all massacred at the same time. All the treaties concluded by Stilicho with Alaric were annulled, and the court of Ravenna seemed to take pleasure in provoking an enemy whom it was unable to resist. Alaric crossed Venetia without encountering any Roman soldiers; with the rapidity of a traveller who meets with no obstruction, he advanced under the very walls of Rome, and formed the siege. An application for terms was made on the part of the Romans, with an intimation that if once they took up arms they would fight desperately. Alaric returned this pithy answer: "The closer hay is pressed, the more easily it is cut." He demanded all the wealth of Rome. The ambassadors asked what he would leave to the inhabitants;—"Their lives." He at length however consented to retire, on condition of receiving a heavy ransom. But Honorius, although he had taken no measures for the defence of his capital, refused to ratify the treaties by which it might have been saved. Alaric laid siege to Rome a second time in A.D. 409. The imposing name of the Eternal City seemed to inspire the barbarian with involuntary respect. He endeavoured to save it from the consequences to which he was otherwise pledged, by appointing a new emperor in the person of Attalus, prefect of the city; but the weakness of Attalus rendered it necessary for the Visigoth conqueror to undo the work of his own hands, and Honorius was reinstated on a powerless throne. A treacherous attack on the Goths at Ravenna, while the conferences were still open, exhausted the patience of Alaric. The city was a third time besieged, and Alaric entered at midnight on the 24th of August, 410, when he gave the town up to be pillaged for six days, but with orders to his soldiers to be sparing of blood, to respect the honour of the women, and not to burn buildings dedicated to religion. After the limited period of plunder and vengeance he hastened to withdraw his troops, and led them into the southern provinces of Italy; but he died in the course of a few months, after a very short illness, while besieging Cosenza in Calabria. Alaric not only displayed great courage and military skill in his various campaigns, but was distinguished by his moderation and justice in the intervals of peace. The works of art and the usages of civilised life were respected by him, and his humanity restrained not a little the excesses of his followers. He showed by his reverence for the churches of Rome during the sack of the city, that he was in some measure under the influence of the Christian faith, which he had learned from Arian teachers, and while some regarded him as an instrument of vengeance against the remaining paganism of Rome, he seems to have made pretensions at times to an impulse from Heaven.

(Zosimus; Claudian; Jornandez, *De Rebus Geticis*; Gibbon, ch. xxix., xxxi.)

ALARIC II., ALARICUS, king of the West Goths, succeeded his father Eudca in A.D. 484. Gothia, the then name of the West Gothic kingdom, had been considerably enlarged by Eudca, and extended over Hispania Tarraconensis and Bætica, and in Gaul as far as the Loire and the Rhone, by which rivers it was separated from the kingdoms of the Franks, the Burgundians, and the East Goths, who were masters of the province. If we can trust Isidorus, Alaric had spent his youth in idleness and luxury, though the truth seems to be that, preferring a peaceful reign to war, which in the eyes of the Goths was the only occupation worthy of kings, he incurred that reproach because he was not fond of bloodshed. He was an Arian, like most of his countrymen, but very tolerant, as we see from the acts of the Council of Agde, which was held in A.D. 506, and by which many privileges were granted to the orthodox Catholics. Clovis, king of the Franks, having overthrown the last remnants of the Roman power in Gaul, coveted the fine countries west of the Loire; and there being still many Catholics in Gothia who were dissatisfied because their king did not adopt the Catholic faith, he declared war against Alaric. The old East Gothic king, Theodoric the Great, whose daughter Theudigota was the wife of Alaric, foresaw the war, and tried to prevent it by conciliatory means: the letters which he wrote to that effect to the kings of the Franks, the West Goths, and the Burgundians, are given by Cassiodorus; but his endeavours were in vain, and the war

broke out in 507. In a pitched battle near Vouglé, in the environs of Poitiers, the result proved fatal to King Alaric, whose army was entirely defeated. Alaric fled, but was overtaken and killed. The Goths made a halt at Narbonne, and quarrelled among themselves about the choice of a new king. One part of them chose Gesalic, or Gisolec, the elder but bastard son of Alaric; and another Amalaric, the lawful son of Alaric and Theudigotha. This prince being too young to rule, the regency over the West Gothic kingdom was intrusted to his grandfather, the East Gothic king Theodoric, who drove out Gesalic, and compelled the Franks to restore their conquests. A proof that Alaric was peaceful because he appreciated the blessings of peace, and that he was able to consolidate that peace by a regular system of legislation, is the code called *Breviarium Alaricianum*.

(Cassiodorus, *Variar.* 3, ep. 1, &c.; Gregorius Turonensis, ii. 36; Procopius, *De Bell. Goth.* ii. 12; Jorandez, *De Reb. Goth.* p. 129; Mascon, *Hist. of the Ancient Germans*, translated by Lediard; Aschbach, *Geschichte der Westgothen.*)

ALAVA, MIGUEL RICARDO D', was born at Vitoria, in Spain, in 1771. He first entered the naval service of his country, in which he attained the rank of captain of a frigate, which he then exchanged for a corresponding rank in the army. At the beginning of the French occupation of Spain in 1807, Alava, as a member of the assembly of Bayonne, signed the new constitution given on the nomination of Joseph Bonaparte as king of Spain; and he subsequently accompanied Joseph to Madrid. He soon however saw reason to be dissatisfied with the side he had taken, and he joined the army of the independents. In the progress of the war the Duke of Wellington appointed him one of his aides-de-camp, in which capacity, after the battle of Vitoria, he was enabled to save his native town from pillage; he ultimately attained the rank of general of brigade. When Ferdinand VII. was restored, he remembered Alava's first defection more vividly than his recent services, and he was thrown into prison, but the intervention of the Duke of Wellington procured his liberation within a few days. Alava at length succeeded in ingratiating himself with Ferdinand, who appointed him ambassador to the Netherlands, where his kindness to his banished countrymen occasioned, it is said, his recall in 1819. At the commencement of the revolution of 1820 he was elected member of the Cortes for the province of Alava, and was President in May 1822. When in June of that year the insurrection took place against the Cortes, he fought with Ballasteros and Murillo against its enemies at Madrid, and followed the Cortes to Cadiz, whither they had conveyed the king. When Cadiz was invested by the French army in 1823, Alava was commissioned by the Cortes to negotiate with the Duc d'Angoulême, and under the assurance of the Duc that he would use his influence to obtain from Ferdinand (whose liberty was first stipulated for) a constitution insuring the freedom of Spain. Ferdinand was conveyed to the quarters of the French general, having previous to his leaving Cadiz repeated the assurances in proclamations published in his name. Arrived in the French camp, Ferdinand lost no time in declaring the promises null, as well as all the acts of the government during his captivity. Alava, with many other members of the Cortes, retired to Gibraltar, and thence to England. After the death of Ferdinand VII. he returned to Spain, embraced the cause of the Queen Dowager and her daughter against Don Carlos, was appointed ambassador to London in 1834, and to Paris in 1835. After the insurrection of La Granja he refused to take the oath of allegiance to the constitution of 1812, retired to France, and died at Barèges in 1843.

(*Nouvelle Biographie Universelle*, 1852.)

ALBA, or ALVA, FERNANDO ALVAREZ DE TOLEDO, DUKE OF, General of the imperial army, and Minister of State of Charles V., was born in 1508. He was the son of Don Garcia, and grandson of Don Fadrique, or Frederic, who was first-cousin of King Ferdinand the Catholic, and the second Duke of Alba de Tormes. His father having lost his life in an engagement against the Moors of Gelvez, his grandfather superintended his education. He entered very young into the service of the emperor, and accompanied him in his expeditions to Algiers, Tunis, and Pavia. He afterwards followed him to Hungary; and it is said that the emperor promoted him to the first rank in the army, more as a mark of favour than from any consideration of his military talents. His reserved disposition, and the peculiar bent of his mind to politics, had at first given an unfavourable idea of his talents as a general. On the emperor wishing to know his opinion about attacking the Turks, he advised him rather to build them a golden bridge than offer them a decisive battle. Through his wise measures, however, the emperor obtained a complete victory over Frederic of Saxony at Mühlberg, where the elector was made prisoner. Alba subsequently commanded at the siege of Mentz.

About 1556 Pope Paul IV. had deprived the house of Colonna of their states, and added them to the territory of the church. The French favoured the Pope; and the duke was ordered by Philip II. to proceed thither against the united French and papal army. Having obtained the title of Lieutenant of all the Austrian dominions in Italy, with unlimited power, he entered the Italian territory. Immediately upon his arrival, he obliged the Count of Brisco to raise the siege of Ulpian; placed Milan in a state of security; and, proceeding to Naples, where the Pope by his intrigues had caused serious distur-

bances, he restored tranquillity, and secured respect for the Spanish authority. He then entered the Papal States, and made himself master of the Campagna of Rome, with a determination to humble both the Pope and the French; but having received fresh orders from his court, he was obliged to conclude an honourable treaty of peace with the Pope, not without telling his master that timidity and scrupulousness were incompatible with the policy of war. This proud warrior, before whom the bravest trembled, was subjected to the humiliation of asking the Pope's pardon; and, as he himself confessed, was so struck with awe at the ceremony, that he could scarcely utter a word.

About 1560 the Flemish provinces of Spain began to manifest symptoms of discontent. Philip, a bigoted Catholic, was determined to maintain the Roman religion in all its purity throughout his dominions. He disliked the Belgians as much as his father had been well-disposed towards them; and his whole conduct was calculated rather to alienate than to gain their affection. He attempted to destroy their liberty and privileges, and to establish the Inquisition at any hazard. When one of his ministers represented to him, that if he did not abolish the inquisitorial edicts, he exposed himself to the risk of losing the states, he answered, that he "would rather have no subjects at all than have heretics for his subjects." A rebellion was the result of this ungenerous policy. To quell it, Alba was furnished with troops and money, and invested with unlimited powers. He set sail from Spain in 1567, and landed at Genoa, where he strengthened his army with some Italian troops, and proceeded to Brussels. On his arrival, the country, which, through the mild and conciliatory measures adopted by the amiable regent, Margaret of Parma, was comparatively tranquil, became full of alarm. Events proved that the fears of the people were not unfounded. The Prince of Orange fled to Germany, and in vain urged the counts of Egmont and Horn to do the same. Alba summoned a council of state to his house, to consult about the best means of restoring tranquillity and repressing sedition. The two counts came as councillors, when Alba seized them, with the secretary, Cassenbrot, and put them in prison. The princess-regent, seeing herself deprived of her authority, retired to Italy, and left the government of the country in the hands of the duke.

Immediately upon the imprisonment of D'Egmont, Alba instituted a council, composed of twelve judges, whom he named 'Judges of the Tumults;' by his victims they were called the 'Court of Blood.' He was himself president. He summoned the Prince of Orange, and all the other nobles and citizens who had fled from the country, to appear before his tribunal, under the penalty of confiscation of their property. All the prisons were filled with victims, who were speedily condemned and executed. The principal cities were fortified, and filled with soldiers; and a country which had hitherto enjoyed all the benefits of rational liberty, under one of the mildest governments of Europe, was now converted into a military camp. More than 30,000 persons sought refuge in the neighbouring countries. All the laws which curb the strong and protect the weak, were virtually abolished: there was no other rule but the will of the tyrant.

The Prince of Orange had collected an army in Germany, with which he advanced into Friesland, and defeated a body of Spaniards at Groningen. The news of this reverse exasperated the duke. He hurried the trials of the counts of Egmont and Horn to a speedy conclusion. They were condemned and beheaded; and the secretary of D'Egmont was torn alive by four horses. The Prince of Orange was desirous to give battle to the Spaniards, but the duke avoided an engagement; and by his prudent movements, without losing a single man, he caused the patriot army to disband. Alba returned to Antwerp to carry on the fortifications of the citadel. The works were soon finished; and in the middle of the fortress the duke caused his own statue in brass to be erected. This statue represented him in full armour, and at his feet a two-headed monster, referring allegorically to the nobility and the people. The whole was supported by a pedestal of marble, with the following inscription:—"In honour of the Duke of Alba, for having restored the Belgians to their allegiance to the king and the church, and the country to tranquillity, peace, and justice." This insult was greater than a nation could endure. It was so revolting, that it alienated even his friends; and from that moment his dictatorship was virtually ended. His fall was hastened by the cruelty practised towards the inhabitants of Haarlem, where he caused more than 2000 persons to be executed, after having led them to expect forgiveness if they surrendered.

He now began to encounter misfortunes and disappointments on every side. His health was in a weak state; the greater part of Holland had openly revolted, and proclaimed the Prince of Orange stadtholder; his armies had ceased to be invincible; and he earnestly requested to be recalled. In December, 1573, he published a general pardon, and left a country which he had rendered desolate; in which he had delivered into the hands of the executioners 13,000 victims, and kindled a war which raged for thirty-seven years, and cost Spain the blood of her best troops, immense treasures, and the final loss of some of her richest provinces. The first act of his successor's authority was to deminish his statue; so that nothing remained in Flanders after his departure but the memory of his cruelty.

On his arrival in Spain, far from being well received at court, he

was sent as a prisoner to his castle of Uceda. Four years after his arrest, Henry II. of Portugal died, leaving no rightful heir. Philip II. of Spain put in a claim, which he enforced by the sword. Alba was now summoned from his retirement, and at the head of 12,000 men entered Portugal by Elvas. In two weeks he placed Philip in possession of the crown of Portugal. Three years after, 1583, he died at Lisbon, at the advanced age of 74.

The Duke of Alba was undoubtedly the ablest general of his age. He was principally distinguished for his skill and prudence in choosing his positions, and for his rigid enforcement of the strictest discipline in his army. He often obtained by patient stratagem those advantages which would have been thrown away or dearly acquired by a precipitate encounter with his enemy. Being at Cologne, and avoiding, as he always did, an engagement with the Dutch troops, the archbishop urged him to fight. "The object of a general," answered the duke, "is not to fight, but to conquer; he fights enough who obtains the victory." During a career of so many years' warfare, he never lost a battle. The firmness, energy, and caution of such a character as Alba, surrounded as he was by all the evil circumstances which belong to intolerance and despotism, were only instruments to render the bigot and tyrant more dangerous and odious. Under more favourable states of society, they might have produced a just and benevolent statesman.

(Mariana, *Hist. de Esp.*; Bentivoglio, *Guerr. di Flandr.*; Do Campo, *Hist. de Portugal*.)

ALBANI, a patrician Roman family, originally from the town of Urbino. One of its members, Cardinal Gian Francesco Albani, was raised to the papal see in 1700, when he assumed the name of Clemens XI. Since that time the Albani have been classed among the Roman princes, and have furnished the Church of Rome with a succession of cardinals, who have been in general men of taste and abilities. Cardinal Alessandro Albani, in the last century, was known as a patron of the arts. During the course of fifty years he enriched his villa outside of Porta Salaria with a magnificent collection of objects of art, which rendered the Villa Albani one of the most interesting spots about Rome. When the French republican army invaded Rome in 1798, this villa was stripped of all its treasures. The cardinal, however, escaped to Naples. After the death of Pius VI., Cardinal Albani repaired to the conclave at Venice, which elected Pius VII., and soon after died at an advanced age. The lay representative of the Albani family is possessed of the estate of Soriano near Viterbo, and of other domains in the papal states. [CLEMENT XI.]

ALBANI, FRANCESCO, was born at Bologna, March 17, 1578, and was placed under the tuition of Denys Calvert, to be instructed in painting. Guido Reni was studying at the same time under that master, and being more advanced in art than Albani he was enabled to afford him effectual assistance in his studies. The two youths quitted Calvert, and placed themselves under Ludovico Carracci, whose school began about this time to be conspicuous in Lombardy, and under that great master they pursued their studies with an emulation advantageous to both. Having made considerable proficiency, Guido proceeded to Rome, whither he was followed by Albani, whose talents soon excited attention in that metropolis of art. Annibale Carracci had been employed to ornament the chapel of San Diego, in the National Church of the Spaniards; but being disabled by illness, he recommended Albani to continue the work, which he finished so successfully as to obtain universal applause. He afterwards painted several large pictures at Rome, Mantua, and Bologna, but it is on his small pictures that Albani's reputation is chiefly founded. The natural bent of his mind was towards subjects of feminine and infantine softness, to high finishing rather than bold effect. All his latter works are small and elaborate; they became extremely fashionable during his day. Albani was well acquainted with ancient sculpture, but displays no indication of such knowledge in his male figures; his women and children are better drawn. He might have become a good colourist, but for that anxious and elaborate mode of finishing which impairs the brilliancy of his tints, and gives his flesh the appearance of ivory. There are at Burghley House, the seat of the Marquis of Exeter, some tapestries from his designs. Three of his pictures, namely, the Three Marys at the Sepulchre, and two Holy Families, are well engraved by Sir Robert Strange. Albani died Oct. 4, 1660. (*Malvasia, Padina Pittrice; Passeri, Vite de' Pittori*, &c.)

ALBANY, LOUISA, COUNTESS OF, daughter of Prince Stolberg Godesen, in Germany, was born in 1753, and was married in 1772 to Charles James Edward, called the Young Pretender, grandson of James II. They resided at Rome, and had a little court, by which they were addressed as king and queen. In 1780 Louisa left her husband, who was much older than herself, and with whom she did not agree, and retired to a convent. She afterwards went to France; but upon her husband's death in 1788, she returned to Italy, and lastly settled at Florence. She was then secretly married to Count Alfieri, the Italian poet, who died at her house in 1803. She however went by the name of Countess of Albany, as the widow of the last of the Stuarts, up to the time of her death, which happened at Florence, Jan. 29, 1824. She was fond of literature and of the arts, and her house was resorted to by the most distinguished persons at Florence. She caused a fine monument by Canova to be erected in 1810, in the church of Santa Croce, to the memory of Alfieri.

ALBATEGNIUS (Astronomer). D'Herbelot calls him Mohammed Ben Giaber, but Mr. Gayangos, who has given more particulars of him than any one else (in the 'Biogr. Dict.' of the Society for D. U. K.), names him *Mohammed Ibn Jdbir Ibn Sendin Abé Abdillah*. The term Albategnius is the Latinised form of El Batani, or El Bateni, from Baten in Mesopotamia, where he was born. He lived in parts of the 9th and 10th centuries, beginning his astronomical observations in A.D. 877, and continuing them till his death in 929. He generally resided at Rakkah (Aracta) or at Baghdad. His writings comprise abridgements of Ptolemæus and Archimedes, with comments; a work on astronomy, chronology, and geography; a treatise on the rising of the constellations, and various other points of astronomy; an elementary treatise on astronomy, and one on astrology, with minor works. The treatise on the rising of the constellations (*Lalande in verb. 'Delambre'*) was translated from Arabic by one Plato Tiburtinus, but badly (as was detected by Halley). This translation was twice printed: first as '*Alfragani Rudimenta Astronomiæ, et Albategnii Liber de Motu Stellarum . . . cum Joh. de Regiomonte Oratiõne Introductoria . . . Norimbergæ, 1537*,' 4to: next as '*Albategnii de Scientiâ Stellarum Liber, cum aliquot Additionibus J. Regiomontani . . . edidit Bernardinus Ugulottus, Bononiæ, 1645*,' 4to. Both editions leave out the tables which the book was written to explain, from which it is difficult to form a very accurate idea of the labours of Albategnius; but there is enough to show that he was an astronomer of great merit, and of a very independent turn of thought: it is likely that he was among the first, if not the very first, to find out that the data used by Ptolemæus required correction. He seems to have had no other guide: the Indian numerals are not found in his work, so that it is difficult to suppose that he derived any astronomy from that quarter.

He was the first who rejected the chords, and substituted sines in their place, and of this apparently trifling improvement we are reaping the fruits to this day: he also used versed sines and (though without seeing the full extent of their utility) tangents. He determined the obliquity of the ecliptic with the parallactic instrument as described by Ptolemæus, in such manner that his observation, compared with those of our time, gives 0°505" for the annual diminution of that element; our modern tables give it, at this time, 0°475". His sines gave trigonometry, even in his own hands, quite a new appearance and a new power; and he had a much greater number of methods in spherical trigonometry than the Greeks. It is most likely that he invented these himself, for he distinctly intimates himself to be the first who abandoned the chords: the rules for finding the third side from two sides and the included angle, and the angles from the sides, must be attributed to him; with great simplifications in the doctrine of right-angled triangles. He determined the length of the tropical year, making it only 2m. 26s. too short; a result much more exact than that of Ptolemæus. The same may be said of his determinations of the precession of the equinoxes, of the place of the solar apogee, and of the eccentricity of the earth's orbit. Looking at his determinations of the two latter, and seeing that he does not infer that they are changeable elements, we are left to conclude that he attributed the difference between himself and Ptolemæus to errors of observation. But as it is by the research of Albategnius that succeeding astronomers were able to infer the variability in question, and as the only reason for his not inferring it was his well-grounded want of confidence in Ptolemæus's results, he has the merit of the discovery. Several writers have affirmed that he did announce it; but incorrectly. The changes which he made in the lunar theory of Ptolemæus are slight, and in his planetary theory he has very little success. For a fuller account of his work, see Delambre, '*Hist. de l'Astron. Moyenne*,' p. 10-62. This learned and excellent historian, who rarely lets an author go without stripping a few leaves from his crown, shows Albategnius to great advantage in comparison with Ptolemæus as an observer, and with his European follower Regiomontanus as a theorist: and the subject of our article may fairly take rank as the greatest of the Arabic school, which forms the link between that of the Greeks and our own.

ALBEMARLE, DUKE OF. [MONK.]

ALBERONI, GUILIO, CARDINAL, was born in the state of Piacenza, in May, 1664. He was bred to the church, and became curate of a country parish. The Duke of Vendôme, who commanded the French army in Italy during the war of the Spanish Succession in 1702-1704, happening to be in the states of Parma, and being in want of corn for his troops, sent for Alberoni. The curate had become personally known several years before to Campistron, the poet, one of the duke's followers, when the latter, travelling through Italy, and being stripped by robbers in the same neighbourhood, was kindly taken home by him, and his wants supplied. Alberoni, who was a man of natural abilities and quickness, rendered himself useful to the French general; on which account however he became obnoxious to the opposite, or imperial party. When Vendôme was recalled from Italy he took Alberoni with him, and obtained for him a pension of 1000 French crowns from Louis XIV. Alberoni followed the duke into Spain, where the war was then raging in Catalonia. Vendôme employed Alberoni in his negotiations with the court of Philip V., where at that time the Princess des Ursins enjoyed the greatest influence. Alberoni found favour with the princess, whose intriguing mind was congenial to his own, and he became her confidant. Through her

means he was constituted agent of the Duke of Parma at the court of Madrid, in which capacity he was instrumental in bringing about the marriage of Philip V. with Elizabeth Farnese, daughter of the Prince of Parma. He set off for Parma to stipulate the marriage-contract in the king's name. In the meantime the Princess des Ursins, having understood that the character of the future bride was not so mild as it had been represented by Alberoni, and that she was likely to endanger her own influence at court, prevailed on the king to despatch a courier to Parma, with orders to Alberoni to suspend the negotiation. The courier arrived on the eve of the day appointed for affixing the signatures. Alberoni, it was said, by threats or bribe, prevailed upon the man not to make his appearance until the day after. The marriage-contract was signed in December, 1714, and the new queen set off for Spain. The first favour she asked of her husband, in writing, was to dismiss the Princess des Ursins from court. The latter, who had set off from Madrid to meet her, received an order from Philip to quit Spain immediately. The new queen, in gratitude to Alberoni, had him appointed a member of the king's council, bishop of Malaga, and, lastly, prime minister of Spain. He now devoted all his energies to rouse Spain from the state of weakness into which she had fallen during the preceding century, and make her act a principal part in the affairs of Europe. Alberoni was not scrupulous about means. In violation of the Peace of Utrecht he suddenly invaded the island of Sardinia, which had been secured to the emperor, and afterwards in like manner conquered Sicily—the Duke of Savoy being then at peace with Spain. All Europe was astounded at this new war stirred up by Alberoni; England, France, and the emperor resented his conduct; and an alliance was formed against Spain in 1719. Alberoni defied them all: he favoured the Pretender, in order to find employment for the English at home; he tried to excite disturbance in France, especially among the Protestants in the south, by claiming for Philip V. the regency of that kingdom during the minority of Louis XV.; and he even corresponded with Ragotaki of Transylvania, and with the Sultan, in order to divert the attention of the Emperor. The latter sovereign was in consequence obliged to recall Prince Eugene in the midst of his successful campaigns against the Turks, and to conclude with the latter a disadvantageous peace at Passarowitz. The clamour against Alberoni, on account of these intrigues, was universal. Pope Clement XI., who had been induced by Philip V. to make Alberoni a cardinal, was loud in his remonstrances against him. The fall of Alberoni was resolved by the allied powers as the only means of restoring peace to Europe. The Duke of Parma was prevailed upon to use his influence with the court of Spain, and especially with the queen, who being already weary of the haughty and overbearing tone of the cardinal-minister, induced Philip V. to write with his own hand an order for Alberoni's deposition, and his banishment from the Spanish territories. This happened at the end of 1719, after Alberoni had been minister about three years. Alberoni repaired to Italy, where he had transmitted large sums of money. Orders had been given by the Pope for his arrest, which Alberoni however evaded. A process was instituted at the same time against him at Rome, which he also contrived to protract. Pope Clement XI. having died in March, 1721, Alberoni suddenly repaired to Rome to attend the conclave, to the astonishment of the people, who crowded to see this famous personage. The new-elected Pope, Innocent XIII., quashed the proceedings against him.

Some time after, Alberoni was sent as legate to Romagna. But he had not yet totally forgotten his habits of intrigue; and being now unable any longer to disturb the peace of Europe, he contrived to embroil the diminutive republic of San Marino, which unfortunately was placed in the neighbourhood of his government. Under the pretence of remedying some discontents he entered the town of San Marino, and called upon the citizens to swear allegiance to the Pope. Some ran away, others refused, and the rest complied through fear. The Pope however disapproved of Alberoni's conduct, and sent another legate, who reinstated the republican government. This occurred at the beginning of 1740. Alberoni after this retired to Piacenza, his native country, where he lived in affluence, and built a large religious house. He remained in retirement, forgotten by the world, till the 26th of June, 1752, when he died at the advanced age of 88.

Alberoni left a quantity of manuscripts, from which a work, called his 'Political Testament,' published at Lausanne in 1758, was said to be derived. He is remarkable as one of the most prominent examples of that class of statesmen who rose to power by the most pitiful intrigues; and who, being uncontrolled by public opinion, thought their own ambition and their pretended zeal for their despotic masters a sufficient motive to plunge the people of Europe into continual wars, in which they had no real interest, and whose effects have so long retarded the natural progress of mankind in civilisation by the efforts of peaceful industry.

(Muratori, *Annali d'Italia*; Botta, *Storia d'Italia*; Cox, *Memoirs of the Kings of Spain of the House of Bourbon*.)

ALBERT I., Duke of Austria, and afterwards Emperor of Germany, was the son of Rudolf of Hapsburg, the founder of the imperial Austrian dynasty. Albert married the heiress of the former dukes of Austria. After his father's death in 1291 he assumed the imperial title, in opposition to the votes of the electors, who had chosen Adolphus of Nassau. After several years' war between the two competitors, Albert defeated Adolphus, who was killed in battle in 1298. Albert then ascended the

imperial throne, and received after many difficulties the confirmation of the Pope, Boniface VIII. He was next engaged in wars with the Bohemians, whose country he attempted to conquer, but without success. Soon after this the Swiss forest cantons revolted, on the 1st of January, 1308, against Albert's lieutenants, whose government was arbitrary and oppressive: this was the beginning of the Swiss Confederation. [SWITZERLAND, in GEOG. DIV.] Albert, full of indignation, came with troops to chastise them: he advanced as far as Baden in Aargau, where he summoned his vassals, and held a council for the reduction of the revolted cantons. On the 1st of May, 1308, Albert left Baden to return to Rheinfelden, where the Empress Elizabeth was. As he crossed the river Reuss at Windisch in a boat, he was separated from the greater part of his suite, his nephew, John of Hapsburg, and three other noblemen only, crossing over with the emperor. John, who had lately come of age, had been importunate with his uncle to restore to him his father's estates in Suabia, which Albert seemed determined to keep in his own possession. The nephew, despairing of justice, had formed a conspiracy with the three noblemen already mentioned; and as the party landed on the opposite bank of the Reuss, the conspirators fell upon the emperor and murdered him, in sight of his attendants on the other side of the river, who could give their master no assistance. Albert expired in the arms of a poor countrywoman who happened to pass that way. The murderers fled: two of them were afterwards taken and executed, as well as a number of other persons mostly innocent, who were suspected to have been concerned in the conspiracy. Agnes, Albert's daughter, and queen of Hungary, carried her vengeance for her father's death to a most dreadful extent. Nearly one hundred noble families, and one thousand persons not noble, of every age and sex, were involved in this inhuman proscription. The executions lasted several months. After this butchery Agnes built a monastery on the spot where Albert had been murdered, which was called Königsfelden, and here she shut herself up for the rest of her days. The remains of this monastery and church are still to be seen, as well as the apartments which Queen Agnes occupied. Königsfelden is on the high road from Baale to Baden and Zürich in Switzerland, and in sight of the castle of Hapsburg, whence the house of Austria originally sprung. (Johann Müller, *Geschichte der Schweizer*.)

ALBERT, Archduke of Austria, son of the Emperor Maximilian II., was made a Cardinal and Archbishop of Toledo. He was appointed by Philip II. in 1596 governor of the Low Countries, and succeeded the Duke of Parma in the difficult task of carrying on the war against the Dutch, who had revolted from Spain. He resigned the cardinalship, and married Elizabeth of Austria, daughter of Philip II., who brought him Flanders and Franche-Comté as her dowry: he thus became sovereign, nominally at least, of the Belgian provinces. In July, 1600, he fought the battle of Nieuport against the Dutch under Maurice of Nassau: this engagement, in which Albert was defeated, decided the independence of Holland. Albert next besieged Ostend, which he took after a long and murderous siege, in which 100,000 men are said to have lost their lives on both sides. In 1609 Albert concluded a truce with the Dutch for twelve years, before the expiration of which he died, in 1621. He left no children, and the dominion of Flanders reverted to Spain.

ALBERT, Prince of Mecklenburg, was called to the throne of Sweden in 1364 by the nobility who had deposed King Magnus. The partisans of the latter, joined with Haquin, king of Norway, carried on the war for several years; at last Magnus formally gave up the crown to Albert in 1371. Waldemar, king of Denmark, dying in 1376, his daughter Margaret, widow of Haquin, king of Norway, became queen of both Denmark and Norway; and soon after the Swedes, being dissatisfied with Albert, who favoured his German countrymen at their expense, offered to Margaret the crown of Sweden. After several more years of war, a decisive battle was fought at Talkoping in West Gothland, in which the queen's forces defeated Albert, and took him prisoner in 1388. Peace however was not re-established in Sweden till 1395, when Albert consented to give up his claims to the crown. He then retired into Mecklenburg, where he died. Margaret of Waldemar thus united the three northern kingdoms under one sceptre.

ALBERT, Margrave of Brandenburg, and first duke of Prussia, was born in 1490. He was elected in 1511 Grand Master of the Teutonic Order, who held dominion over Prussia proper, that part of the present kingdom of Prussia which borders on the Baltic Sea. He fought against Sigismund, king of Poland, for the defence of his order, who had been for ages at war with the Poles. Peace was made in 1525 at Cracow, in which Albert managed to have the duchy of Prussia secured to himself and his descendants as a fief of the crown of Poland, thus laying aside the rights of the order. Albert some time after embraced the Protestant faith, and married a princess of Denmark. One of his descendants, Frederic William, elector of Brandenburg, threw off the allegiance of Poland; and his son, Frederic I., changed the title of Duke into that of King of Prussia in 1701. [BRANDENBURG, in GEOG. DIV.]

ALBERT DÜRER. [DÜRER.]

*ALBERT, PRINCE. Albert Francis Augustus Charles Emmanuel, prince of Saxe-Coburg-Gotha, and consort of Queen Victoria, was born August 26, 1819, and was the second son of the Duke Ernest I., who died in 1844. Prince Albert was educated along with his elder brother, Prince Ernest, the present Duke-regnant of Saxe-Coburg-Gotha, under the Consistorial Councillor Florschütz, and subsequently at the

University of Bonn. His studies are described as including, besides the languages and history, the physical and natural sciences; and also music and painting, in both of which arts he attained considerable proficiency. Prince Albert was married to Queen Victoria on the 10th of February 1840 at St. James's chapel, having a few days before been naturalised by Act of Parliament. By an Act which received the royal assent August 4, 1840, it was provided that, in case of the demise of her Majesty before her next lineal descendant shall have attained the age of eighteen, the Prince is to be Regent until such age is reached. The Prince was not unmindful of the grave responsibilities which his position cast upon him, or of those which might possibly accrue. Almost immediately after his settlement in this country he read a course of English constitutional history and law with one of our highest authorities, Mr. Selwyn; and whilst he has most judiciously held himself aloof from all political parties, he has at different times shown an intimate acquaintance with the general bearing of great public movements, such as could only result from a careful study of the principles of our social economy, a clear knowledge of English institutions, and a considerate observance of the progress of events. In many of those public questions which are distinct from party politics, and in nearly all those which bear on the improvement of the physical condition of the poorer classes, on the progress of the mechanical and fine arts, and in various benevolent projects, the Prince has taken a very active part; and his speeches on public occasions have always shown an intelligent appreciation of the objects sought to be accomplished. As the head of the Fine Arts Commission the Prince did much towards setting in motion that effort to reach the higher purposes of art which has characterised the painting and sculpture of the last twelve or fourteen years; and he has, by his zealous patronage of schools of design, evinced an equal desire to aid in raising the artistic character of our manufactures. But it was as the Chairman of the Council of the Great Exhibition of 1851 that his activity and knowledge found its widest scope and fullest development; and it seemed to be admitted by all who were intimately connected with the origin and progress of that great undertaking, that it owed very much of its high position and ultimate success to the taste, judgment, and tact of Prince Albert.

The Prince is a field-marshal in the English army and a colonel of the Grenadier Guards, and he is said to take much interest in the state of the army and the condition of the soldier; but his tastes and pursuits are for the most part entirely of a pacific character. The fine and mechanical arts do not, however, engross his attention. His name appears in the lists at the Smithsonian Club, and other leading agricultural exhibitions, as a competitor, and generally as a successful competitor, for the prizes annually adjudicated for superior breeds of cattle, &c. He has indeed given a good deal of time to agricultural pursuits, and his 'model farms' at Windsor are said by practical farmers to be really entitled to their designation.

Besides those above mentioned, the Prince holds several offices under the crown. He was elected in 1842, after a sharp contest, Chancellor of the University of Cambridge; and he is president of the Society of Arts, Grand Master of the Freemasons, and patron or president of various benevolent and other institutions.

ALBERTI, LEON BATTISTA, a distinguished mathematician, but more celebrated as an architect, and hardly less so as a philosopher, poet, painter, and sculptor. He was of the ancient and noble family of the Alberti of Florence, but was born in Genoa in 1404. He was nephew of the Cardinal Alberto degli Alberti, and he himself became a canon of the metropolitan church of Florence. Having devoted much of his attention to the acquisition of the principles of architecture, by the observation and admeasurement of the remains of ancient edifices in various parts of Italy, Alberti became distinguished among the promoters of the then new style, which has been called a restoration of the ancient and classical. When at Rome he was employed by the Pope, Nicholas V., to repair the ancient aqueduct of the Aqua Vergine, and to construct the Fontana di Trevi; but the structure was so much decorated by Salvi, in the pontificate of Clement XII., that not a vestige now remains of the design of Alberti.

At Florence, Alberti succeeded to the direction of several works which had been commenced by Brunelleschi, and left unfinished at his death. He himself designed and executed in Florence the Palazzo Rucellai, the choir and tribune of the church of the Annunciation; and some attribute to Alberti the principal front of the church of Santa Maria Novella. At Mantua he executed several edifices for the Duke Ludovico Gonzaga. But the most esteemed architectural work of Alberti is the church of St. Francis at Rimini, which he was employed to decorate by Sigismondo Malatesta, lord of that city. He wrote a work on sculpture, 'Della Statua,' which was followed by another on painting, 'De Pictura,' which he calls "prædilectissimam et nunquam satis laudatâ arte" ("a most delightful art, never sufficiently praised"); but his last and most esteemed work is his treatise on architecture, 'De Re Edificatoriâ.' This was not published until after his death, when it was edited by his brother Bertrand, and at his own desire dedicated to Lorenzo de' Medici. He died in 1472. The monument of his family yet exists in the church of Santa Croce, at Florence.

(Vasari, *Vite de' Pittori*, &c., ed. Schorn; Tiraboschi, &c.)

ALBERTINELLI, MARIOTTO, one of the best of the early Florentine painters, was born at Florence about 1475. He was the

pupil of Cosimo Roselli, but he became eventually the friend and imitator of Fra Bartolomeo, whom he assisted in some of his works. In tone Albertinelli equalled, if he did not excel, Fra Bartolomeo. There are three of his works in the gallery of the academy at Florence, one of which, the Annunciation of the Virgin, is a masterpiece in tone. He excelled for his period also in design, and some of his works are drawn in a style worthy of the best of the Cinquecentisti, as the Italians term the painters of the 16th century. He drew from the antiques in the garden of Lorenzo de' Medici. His masterpiece is considered the Visitation of Elizabeth to the Virgin, in the imperial gallery of Florence; it contains however only the two saints, but beneath it is a predella in three compartments, illustrating in small figures the Annunciation, the Nativity, and the Presentation in the Temple; it has been engraved by V. della Bruna.

Albertinelli was of a very singular disposition, and of dissipated habits. At one time he forsook painting, having taken offence at some criticisms upon his works, and turned publican, an occupation however which he soon exchanged for his original profession. He painted several works in partnership with his friend Fra Bartolomeo, and when that painter joined the order of the Dominicans, Albertinelli completed his unfinished works, among which was the Last Judgment, for the cemetery of Santa Maria Nuova, which, says Vasari, many suppose to have been the entire work of Bartolomeo. Albertinelli was so much distressed at losing the society of Bartolomeo, when the latter turned monk, that his friends had much difficulty in preventing him from following his example. Vasari says that he died about 1520, aged 45, the victim of his own debaucheries. He had some distinguished scholars; the best was Visino, who, according to Vasari, died in Hungary; others were Giuliano Bugiardini, Franciabigio, and Innocenzo da Imola.

Albertinelli painted in fresco in Florence, in Viterbo, and in Rome. Vasari mentions a very excellent portrait by him of the mother of Lorenzo de' Medici, Donna Alfonsina Orsini, daughter of Roberto Orsini, the constable of Naples. A picture in the Louvre by him is inscribed "Maricotti Debertainellis Opus. Anno. Dom. M.D.VI." In the chapter-house of the Carthusians at Florence, a crucifixion in fresco, with the same date, is marked "Mariotti Florentini Opus."

(Vasari, *Vite de' Pittori*, &c.)

ALBERTRANDY, JAN CHRZCICIEL, or JOHN CHRISTIAN, bishop of Zenopolis, was born at Warsaw in the year 1731. His father was by birth an Italian. On the death of his mother, which occurred when he was very young, he was placed entirely under the care of the Jesuits, and educated in their public school. Here his progress was so rapid, and the ability he displayed so extraordinary, that at the age of 15 he was admitted into the order, and immediately on the completion of his novitiate, namely, in his 19th year, was sent as public tutor to the college of Pultusk; he subsequently filled the same important post at Plovzko, Nieswicz, and Wilna. In the year 1760, Bishop Zaluski, having determined to throw his extensive library open for the benefit of the public, appointed Albertrandy his librarian. This post he occupied four years, during which time he drew up a very elaborate catalogue of the entire collection, stated to contain 200,000 volumes. In 1764 the Prince Lubinski confided to his charge his grandson, Count Felix Lubinski, afterwards minister of justice in the duchy of Warsaw. In the year 1770 he accompanied his pupil into Italy, to the Academy of Siena, and afterwards to Rome. The growing inclination of the young Lubinski for the study of antiquities, particularly numismatics, attracted the attention of his instructor, who applied himself with redoubled diligence to this science, and in the course of two years gained for himself a place amongst the first numismatists of Europe. Two years later, Count Felix Lubinski, having presented his collection of coins to King Stanislaus, with a request that they might be continued under the care of Albertrandy, the king appointed him keeper of his medals, and subsequently his lecturer and librarian, and keeper of his prints. Albertrandy, anxious to avail himself of the royal confidence for the good of his country, proposed to the king to collect from foreign countries the various scattered notices relating to Poland. He was in consequence sent into Italy in 1782, and in the course of three years had gleaned from the Vatican and sixteen other libraries in Rome, and also from various collections in other places, their most important contents relative to Poland. He shortly afterwards went to Sweden upon a similar mission. The product of these two journeys formed a most valuable collection of historical materials in almost 200 folio volumes, which are stated to have been deposited in the library of Pulawy, by Prince Czartoryski. King Stanislaus, as an acknowledgment of the extraordinary merit of Albertrandy, presented him with the great medal of merit, and the cross of the order of St. Stanislaus, and made him Bishop of Zenopolis. When 70 years of age he was unanimously called upon to preside over the newly-formed Royal Society of the Friends of Science of Warsaw, and he continued to direct its operations with the greatest activity and zeal, enriching its transactions with numerous papers, until his death, which took place on the 10th of August, 1803. (*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ALBERTUS MAGNUS. It is a matter of controversy whether this celebrated scholar derived his laudatory name from the admiration of his contemporaries, or whether it was a Latinised form of

the surname Groot, or Grot. He was born at Lauingen, in Suabia, according to some in 1205, according to others in 1193. In 1222 he entered the order of Dominicans. During a long series of years he gave public lectures at Cologne, which were frequented by the principal scholars of the age; and he filled many places of trust and dignity. He was however unambitious of worldly honours, and he resigned even a bishopric which was forced upon him by the Pope, that he might enjoy the retirement of his cell, teach, and compose books. He died in 1280. His works form 21 volumes in folio, and are devoted to logic, physics, metaphysics, and theology.

There is great difficulty in classifying the works of Albertus, so as to obtain a correct estimate of his system, owing to his having been more a man of great erudition than a comprehensive and coherent thinker. He had read more than he had thoroughly digested; his mind in some measure broke down beneath the extent and variety of his learning. He had a taste for information of every kind; but the multiplicity of inquiries into which this universality prompted him to enter, rendered it impossible for him to retain them except by the mere formal memory. When any branch of science was mentioned, his tenacious memory recalled what the authors he had read delivered concerning it, their arrangement, and manner of dividing the subject. He had a vigilant and sharp eye to the phenomena of external nature, and a singular talent for clear exposition. His style and manner are too formal; the logical framework is pedantically ostentatious; but what he knows himself he makes clear to others.

All that we know of Albertus as an author or as a man is calculated to inspire us with respect for him. If his writings do not evince the subtle intellect of his scholar Thomas Aquinas, or the comprehensive genius of his master Aristotle, they evince an enthusiastic love of knowledge, an extraordinary power of persevering labour, and a pure and elevated disposition. Though frequently called to take part in public business, both civil and ecclesiastical, he was free from ambition; his cloister-cell was his favourite abode; adding to his store of knowledge, and communicating it to others, his favourite occupations. Yet such was his reputation for integrity, that laymen selected him as umpire in disputes with dignitaries of the church who were his personal friends, and popes consulted him even when the interests of his order might have been supposed to bias his opinion. When, in addition to these qualities, his influence in promoting the progress of knowledge in Europe is taken into account, his being the first to present the students of the middle ages with an encyclopædia of knowledge, it is easy to enter into the feelings of those who bestowed upon him the name of 'Great.' There are not many among those to whom that abused epithet has been applied who have so well deserved it.

(Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.)

ALBINUS, BERNARD SIEGFRIED, one of the most celebrated anatomists of the 18th century, was born at Frankfurt, in the year 1697. His father was professor of the practice of medicine in the University of Frankfurt, but subsequently filled the chair of anatomy at Leyden, then the most celebrated school of medicine in Europe. The position of his father afforded him the advantage of studying from his early youth under the greatest masters of the age—Boerhaave, Weyden, and Rau. In 1718 he went to Paris to study at the hospitals, but in the following year was recalled to Leyden to take the office of reader in anatomy and surgery. In 1721, on the death of his father, he was unanimously elected to the professorship of those sciences, and for more than twenty years from that time he entirely devoted himself to the study and teaching of them. In 1745 he was chosen professor of therapeutics, and he remained in this office till his death in 1770.

Bernard Siegfried Albinus, though the best anatomist of his time, was not a great discoverer. The knowledge of many single facts is due to his investigations; but he was not the author of any important principle in anatomy or physiology. His merit consists in the accuracy with which he investigated all the subjects of his study, the clearness and completeness of his descriptions, and the care which he bestowed on the delineation of the various structures of the body. In all those he was unequalled; and he thus contributed more than any of his predecessors to render descriptive anatomy an exact science. The commencement of that close study of anatomy by which it is now nearly perfected in its adaptation to surgery may be traced in the publication of his works. The engravings of the bones and muscles, by Vandelaar, have never been surpassed in fidelity, and have rarely been equalled in beauty of execution. They are said to have cost Albinus 30,000 florins, for the artist lived several years under his roof, and many of the first engravings were destroyed for trivial inaccuracies or defects. (For a list of the works of Albinus, see Watt's 'Bibliotheca Britannica,' vol. i. p. 14, z.)

ALBITTE, ANTOINE LOUIS, one of the most violent Jacobins of the French revolution, and afterwards a humble satellite of the Emperor Napoleon I. At an early age the violence of his principles procured his election as a member of the Legislative Assembly for the department of the Lower Seine, in September, 1791. His profession was that of an advocate, which he carried on at Dieppe. On the morning after the memorable 10th of August, 1792, he and his colleague Sers proposed and carried the resolution that every statue of a king should

be destroyed, and a statue of Liberty erected in its stead. He was sent in September with Lecointre-Puyraveau to the department of the Lower Seine, to disarm suspected persons, and deport the priests who refused to take the oath. He executed his commission with great severity, and in return was elected by the department to the National Convention. Here he was of the number of those who voted, on the 21st of December, against allowing Louis XVI. counsel on his trial, and shortly afterwards for putting him to death. On the 23rd of March, 1793, he carried the decree that emigrants taken prisoners in foreign countries should be massacred, whether found with or without arms. In Paris he was always the ardent opponent of the Girondins, and the proposer or supporter of the most violent measures; but it was in the country, and as commissioner to the armies of the republic, in which he attained the military rank of adjutant-general, that his atrocities were carried farthest. He was present in this character at the siege of Lyon, and at the partial demolition of that city after its capture, at the operations of Carteaux against the insurgents of the south, and at the opening of the siege of Toulon, where he made the acquaintance of Bonaparte, which was useful to him in after-life. His cruelty was accompanied with luxury and avarice: at Bourg he is said to have bathed every morning in the milk that was brought for the consumption of the town. His success and his excesses seem at this time almost to have turned his brain: he amused himself by having the pope, the king of England, &c., guillotined in effigy; and when one day at the Théâtre Français, the pit applauded the hemistich in Chenier's 'Caius Gracchus,' which may be translated "Let us have laws, not blood," he rose in anger, and vociferating imprecations on the audience, shouted out, "Let us have blood, not laws." On the fall of Robespierre numerous denunciations of his conduct were sent in to the Convention from the departments, and one from the administrators of the district of Bourg was referred to a committee. Albitte, thus pressed by danger, joined in a conspiracy to re-establish the reign of terror, which burst out in the insurrection of the first of Prairial in the year 3 (the 20th of May, 1795), one of the most terrible days of the whole revolution. It was on this occasion that the insurgents broke into the Convention, compelled that assembly to pass several decrees at the point of the sword; and after murdering Ferand, one of the members, presented his head on a pike to the president Boissy d'Anglas. After a desperate contest in the hall of the Convention, the insurgents were defeated and driven out; and the legislative body revoked the decrees it had passed under the influence of force, and voted, at the proposal of Tallien, the instant arrest of the members who had dared to bring them forward, or to countenance the conduct of the insurgents. Albitte was ably defended by his younger brother Jean Louis, also a representative of the Lower Seine, who, on this occasion, broke through a course of habitual inaction; the decree for his arrest was nevertheless passed, but it was found that during the confusion he had escaped. He was condemned in default of appearance; his colleagues were sentenced to death, and committed suicide in a body to avoid the guillotine. Albitte remained concealed till the general amnesty for revolutionary offences issued on the 26th October, 1795 (the 4th Brumaire, year 4), soon after which he was appointed by the Directory municipal commissary at Dieppe. On the overthrow of the Directory by Bonaparte, he became a warm partisan of his old acquaintance, who rewarded his zeal by naming him sub-inspector of reviews, a post which he maintained during the imperial government. He accompanied Napoleon I. in this capacity in the invasion of Russia, and died of cold, fatigue, and hunger, on the retreat from Moscow, on the 25th December, 1812. It is said that he maintained existence during three days with the remains of a flask of brandy, which in his last moments he shared with one of his unfortunate companions, the only act of benevolence that is recorded in his history. (Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ALBOIN, one of those northern princes who established kingdoms in Italy upon the ruins of the Roman empire. He was the son of Audoin, king of the Lombards [LONGOBARDS], who, about the middle of the 5th century, were settled in Pannonia. Here they became engaged in hostilities with the rival monarchy of the Gepids; and in the early stage of this contest, Alboin, then a youth, signalled his courage, strength, and skill in arms; and the prince of the Gepids fell by his hand. After his accession to the Lombard throne he became enamoured of Rosamond, daughter of Cunimond, king of the Gepids, and sister of him whom he had slain, and sought her in marriage. His suit being rejected, he carried her off by force. The Gepids, supported by a Roman army, were strong enough to compel the restoration of the princess. But the love or resentment of Alboin led to the renewal of hostilities: he obtained the assistance of the Avars; the Gepids, abandoned by the Romans, were defeated with great slaughter (A.D. 566), and their name and nation passed away. Cunimond fell by the hand of Alboin; and Rosamond became the bride of the victor, whose savage temper led him to fashion the skull of the deceased monarch into a drinking-cup, long preserved as a trophy by the Lombard princes.

In the year 568 Alboin led the Lombards into Italy, and overran the whole inland district, to the gates of Rome and Ravenna, without meeting an army in the field. Milan opened its gates on the 4th of September, 569. Before Pavia he was detained more than three years; and, in anger, he vowed to put all the inhabitants to the sword.

The city at length yielded to famine. As he entered the gate his horse fell, and could not be raised from the ground; and the humanity of one of his attendants, who interpreted this accident as a token of Heaven's wrath against his bloody design, induced him to countermand the intended massacre. Delighted with the situation, he fixed his abode at Pavia, and it remained for some ages the chief city of the Lombard dominions.

By the justice and mildness of his government Alboin secured the affections of his subjects. The conquest of the Lombards was in some sort the epoch of the regeneration of the people. Independent principalities, communities, and republics, began to be formed on all sides; a principle of life was infused into the country, which had been so long buried in lethargic slumber. The series of monarchs who succeeded Alboin were long distinguished by their prudence, and by making the laws their rule of conduct.

Alboin's life was terminated by domestic treachery. Having drunk deep at a feast with the chief of his countrymen, he called for the cup of victory, the skull of Cunimond; and when it had passed round the circle, ordered it to be carried to Rosamond, with his request that she would taste the wine, and rejoice with her departed father. The queen obeyed, but she determined on revenge. One evening, when Alboin, oppressed by wine and sleep, had retired to his chamber, she unbolled the door to her paramour, the king's armour-bearer, after she had herself fastened his sword to the scabbard. Alboin was the best and bravest of the Lombard warriors; but, unarmed and surprised, he fell an easy victim. His valour, generosity, and successes were celebrated in the songs of the German nations even to the age of Charlemagne.

(Paul Warnesfrid, *De Gestis Langobardorum*; Muratori; Gibbon, chap. xlv.; Menzel, *History of Germany*, Lond. 1849.)

ALBORNOZ, GIL CARRILLO DE, a celebrated cardinal, was born at Cuenca, about the beginning of the 14th century, and became Archbishop of Toledo. In those days churchmen were sometimes warriors, as well as politicians. Albornoz saved the life of his king, Alfonso XI, in an engagement with the Moors at Tarifa; was at the siege of Algeiras; and was dubbed a knight by the king himself. Driven from Spain by his conscientious opposition to the criminal life of Peter the Cruel, he sought refuge in Avignon with Pope Clement VI., and was created a cardinal. In 1355 he was appointed legate, and entrusted with the important mission of the reconquest of the Papal States. When Urban V. came to Italy, Albornoz went to meet him at Viterbo, and the Pope called his legate to give him an account of his administration. The cardinal ordered a cart loaded with old keys and locks to be brought into the court of the house, and showing it to the pontiff, said, "I have spent all my funds in placing your holiness in possession of all the towns and castles, the keys of which I present to you." The pope, sensible of his ungrateful mistrust towards a man who had done so much for him, embraced him cordially, and always after entertained for him the greatest esteem. Having been appointed legate of Bologna, he gave to that city a new constitution, and at his own expense founded there a college for the Spaniards. Cardinal Albornoz died at Viterbo in 1364.

ALBRECHT, WILHELM, was born in Germany, in 1786. He was one of the most distinguished pupils of Thaer, in the agricultural school at Mughin, in Prussia; and he afterwards taught rural economy in Fellenberg's school at Hofwyl. In 1819 he was employed by the government of Nassau to edit a weekly publication devoted to agricultural subjects; and in the following year he was made director of an experimental agricultural school, established at Idstein. The experimental farm was transferred to Geisberg, near Wiesbaden, and it became at once distinguished as the source of agricultural improvements for the west of Germany. As it was found impossible constantly to employ all the pupils on the farm, Albrecht determined to open the school, during the six winter-months, for instruction in the theory of agriculture; while in April of each year the students went to the homes of their parents, or to some farming establishment, in order to familiarise themselves with the practical labours of an agriculturist. During the life of Albrecht the school was highly successful. "The best students for our institute," said he, "are young men from about eighteen to twenty-two, who, after distinguishing themselves at the primary schools, have followed agriculture for some years at home, or on some well-managed farm; they bring a well-disposed mind, not fatigued with study, nor distracted by too many pursuits." While managing these establishments, Albrecht, besides his weekly paper, edited the 'Annals of the Agricultural Society of Nassau'; to which society he was perpetual secretary. Albrecht died in 1848, at his house in Franconia, whither he had retired on resigning the direction of the establishment at Geisberg, a short time previously. (*Nouvelle Biographie Universelle*, 1852.)

ALBUQUERQUE, ALFONSO DE (or, as the Portuguese write his name, AFFONSO D'ALBUQUERQUE), surnamed 'the Great,' and 'O Marte Portuguez' (the Portuguese Mars), owing to his great exploits, was born in 1453, at a country villa near the town of Albandra, about 20 miles from Lisbon, and not at Melinda, in Africa, as generally stated. He was the second son of Gonzalvo d'Albuquerque, lord of Villaverde, descended of a bastard branch of the royal family of Portugal. In his youth he was first esquire to King John II.; but he first becomes well known to us in the year 1503,

when, in conjunction with Francisco Albuquerque, his cousin, or uncle, he conducted a fleet to India, and secured the King of Cochin on his throne, which had been endangered by his powerful neighbour, the Zamorin of Calicut. In gratitude for their services they obtained leave to build a fort at Cochin, which, according to the Portuguese authors, is to be considered as the foundation of their national empire in the East. Francisco Albuquerque was wrecked on his voyage home. Alfonso reached Lisbon safely, July 18, 1504, and was favourably received by the king, who sent him out to India again, in 1506, in command of a squadron of five ships, composing part of a fleet of sixteen, under the orders of Tristan da Cunha. For a time the generals carried on a prosperous warfare against the Moorish cities on the eastern coast of Africa. Da Cunha, sailing for India, left Albuquerque to command in the Arabian seas; who appeared before Ormuz, 25th September, having already in his course reduced most of the chief trading towns between the Red Sea and the Persian Gulf. The terms of his message to the prince whose territory he invaded are worthy of attention. He came, he said, not to bring war, but peace,—peace however to be obtained only by paying tribute to the King of Portugal, instead of the King of Persia; but then the Portuguese monarch was so great a lord, that it was better to be his vassal than to command empires. Zeifadin, king of Ormuz, was obliged to submit, after the shipping and part of the town had been burnt. Cogi-Atar, his prime-minister, however, concerted a revolt, which proved successful. Albuquerque was compelled to evacuate the place; and after an unsuccessful attempt to reduce it by famine, returned to the island of Socotra, off Cape Guardafui, leaving his chief purpose unaccomplished.

Being joined by three ships bound to India, he set sail for the Malabar coast, in 1508. He had received a secret commission, authorising him to supersede Don Francisco d'Almeida, governor of the Indies, when the period of his commission should have expired. On arriving at Cananor he informed Almeida of this; but the governor received him very coldly, declined either to surrender the government, or to accept his services in any subordinate capacity, and finally threw him into prison, where he remained three months. The arrival of the Grand Marshal of Portugal, with a powerful fleet, restored him to liberty. Almeida returned home, and Albuquerque was acknowledged General and Commander-in-Chief in India.

This fleet was intended to act against the Zamorin of Calicut, whose long-continued hostility had made him very obnoxious to the Portuguese. The fleet accordingly was divided into two squadrons, of which the marshal commanded one. Albuquerque's division gained the start in landing, and emulation induced the marshal to venture too far with a small number of followers, in hopes of gaining possession of the Zamorin's palace. He succeeded in this; but the Indians rallied, and he was surrounded and slain, with most of his principal officers. Albuquerque, in attempting to rescue him, was desperately wounded; and the Portuguese were forced to return to their vessels with considerable loss, having done much injury to the town and shipping.

The court of Portugal had now divided their Indian government into three portions—one comprehending the eastern coast of Africa and the coast of Asia, from the tropic of Capricorn to Cambay; the second, Hindustan, which was allotted to Albuquerque; the third, the rest of India east of the Ganges. Its chief object was to prosecute its conquests in the Red Sea, and to monopolise the Indian trade by destroying that carried on between India and Egypt. With this view the greater part of the reinforcements sent to the East were ordered to act in the Red Sea, under the command of George d'Aguiar; and Albuquerque thus seemed placed in a secondary command: but by good fortune and good policy he succeeded in frustrating, in some degree, the designs of the court, and contrived to gain nearly as extensive authority as his predecessors had held. After some intrigues to avoid assisting his unsuccessful coadjutors, he resolved to sail to Goa; and that rich and prosperous city fell into his hands almost without resistance. His energy may be judged from the rapidity with which his enterprises were conducted. He appeared before Calicut January 2, 1510, and though severely wounded there, he entered Goa February 17th following. But he was unable to hold it. That town, in name belonging to the Deccan, was governed by a Moor named Idalcan, who, like other powerful Indian subjects, paid little obedience to his nominal sovereign. He was absent when Albuquerque took his town, but he lost no time in collecting a powerful force, and by dint of numbers regained possession of it, and shut the Portuguese up in the citadel. Albuquerque's difficulties were increased, and in great measure produced, by the discontent, mutinous conduct, and almost treachery, of his officers. At last he was reduced to the alternative of abandoning the citadel and taking to his ships, or suffering the river to be blocked up, and all chance of escape lost. He chose the former. But the bar being impassable during the south-west monsoon, which had already set in, he was obliged to remain in the harbour, compelled by the enemy's fire constantly to shift his place, and exposed to all the evils of famine. His energy and the bravery of his troops triumphed over their embarrassments; and they maintained their ground, though not without much loss and suffering, till the navigation was again open. Finally he left the harbour, August 15, 1510.

In the course of the year strong reinforcements were sent out from Portugal, and, at the same time, Lemos was recalled, and his command made over to Albuquerque. The same autumn Albuquerque attacked Goa a second time, and carried it by storm, Nov. 25. Early in the next year he meditated new conquests. A detachment of the fleet, which had been sent out in the preceding year, was especially ordered to proceed to Malacca under the command of Diego de Vasconcellos. This Albuquerque forcibly prevented, seizing Vasconcellos, and sending him back to Portugal, and three of his officers were put to death. As soon as Vasconcellos was removed, Albuquerque sailed himself on the expedition against Malacca, which hitherto he had put off on different pretexts, and, with some difficulty, captured the town, which was given up to plunder. Immense wealth was obtained. The fifth of the booty, which was set apart for the king, was valued at 200,000 gold crusadoes, exclusive of naval and military stores, among which 3000 cannon were said to have been found. In this expedition his troops amounted only to 800 Portuguese, and 200 Malabar auxiliaries: the Malayan prince is said to have had 30,000 men under arms.

Albuquerque had it much at heart to establish the Portuguese power as firmly at Malacca as at Goa. He built a citadel, coined money, established a new system of law and police, and lost no opportunity of conciliating the natives. He received and sent embassies to the kings of Siam, Pegu, and other neighbouring princes, who were deeply impressed by the rapid growth of the power of these European strangers. After remaining at Malacca near a year, he set sail for Goa. On his voyage he encountered a violent storm; his ship was wrecked, and he himself, washed into the sea, narrowly escaped with his life. He reached Cochim with the scattered remains of his squadron at the end of February, 1512. His first object was to proceed to the relief of Goa, which in his absence was hard pressed by Idalcan, and where he arrived Sept. 13, 1512. He was received with lively joy; his presence soon removed all cause for disquietude, and established the power of the Portuguese more firmly than ever. He relaxed the king's dues, and gave every encouragement to commerce, and Goa soon became the most flourishing city of the Portuguese dominions. It was observed, even then, that the king's revenue was increased, instead of suffering, by the reduction of duties. Idalcan and the Zamorin of Calicut, thinking further resistance hopeless, sued for peace, and the Portuguese influence was effectually and surely established along the Malabar coast from Cape Comorin to Goa.

The orders of the court were still urgent to prosecute the war in the Red Sea; and seeing India quiet, he now, in 1513, directed his efforts to the reduction of Aden, a considerable commercial town of Arabia. His force, much larger than usual, consisted of 20 ships, and 1000 Portuguese and 400 Malabar troops (Barros, 'Decad.' II. lib. vii. cap. 9); but he reaped neither honour nor profit by this voyage. Repulsed at Aden, he entered the Red Sea, leading the first European fleet that ever sailed in its waters; but he experienced much hardship and danger from heat, want, and difficulty of navigation, and returned to India without striking a blow.

His last enterprise was a second attempt upon Ormuz, in which he succeeded (1507) without recourse to arms, by the effects of terror and negotiation; and the place remained in the hands of the Portuguese till it was taken from them in 1622, by the English and Shah Abbas. [ABBAS.]

Albuquerque, after his first failure, vowed never to cut his beard till he had regained Ormuz, and it is said that he wore it till he could knot it to his girdle. Soon after the accomplishment of this favourite wish he fell sick, and was obliged to return to Goa. At the mouth of the Gulf he met a vessel bearing despatches from Europe. They signified his recall; that Lopez Soarez d'Albergaria was nominated his successor; and that Diego Pereira and Diego Mendez de Vasconcellos were appointed to high offices. His proud spirit was deeply hurt. "What!" he said, "Soarez governor! Vasconcellos and Pereira, whom I sent home as criminals, sent out again in posts of honour! I have gained the hate of men for the love of the king, and am disgraced by the king for the love of men. To the grave, miserable old man! to the grave, it is time!" He might have seen something more in this—a just return for his unworthy treatment of Vasconcellos. His illness, aggravated by vexation, proved fatal. He died December 16, 1515, in his sixty-third year. His body was conveyed to Goa, and buried in the church of Our Lady, which he had built; and in future years—a touching testimony to the uprightness of his government—Moors and Indians repaired to his tomb, as to that of a father, to implore redress from the injustice and tyranny of his successors. His bones, more than fifty years after his death, were transported to Portugal.

Albuquerque has no doubts claims to the name of a great man. As a public servant he was scrupulously honest; as governor of an obedient people, scrupulously just; though his temper was austere and arbitrary, and his punishments were awfully severe. His views as a statesman were enlarged and judicious, his skill great as a general, his courage as a soldier daring to rashness. On the other hand, where territory was to be gained to his country, or renown to himself, he was stopped by no considerations of right or wrong. The attack on Malacca admits of justification; but the capture of Ormuz and Goa were provoked by no acts of hostility, and can be

sanctioned by no law but that of the longest sword. His character is well exemplified in a scheme which he is said to have proposed to the Emperor of Ethiopia for destroying the commerce of Egypt by turning the course of the Nile into the Red Sea, and thus converting that fruitful land into a barren desert. The project is called grand by historians: it is certainly great; but the very idea of such an impossible undertaking throws some discredit upon the General's knowledge. And it seems never to have occurred either to them or to him, that there would have been any moral guilt in blotting out from the earth a fertile, populous, and extensive country, to gratify the grasping thirst for monopoly of a second-rate European kingdom.

(The second decade of Barros's *History of the Portuguese Conquests in the East* is entirely occupied by the transactions of which we have here given a short sketch, from the sailing of Da Cunha and Albuquerque to the death of Albuquerque. Those who do not read Portuguese may consult Maffei, *Historia Indica*; Lafitau, *Hist. des Conquêtes des Portugais dans le Nouveau Monde*; and the *Modern Universal History*.)

ALCÆUS, one of the most celebrated lyric poets of Greece. Of his compositions, once so much admired, nothing but fragments remain, consisting for the most part only of a few lines, or even words. These have been preserved in quotations by later authors. Horace makes frequent mention of him, and always in terms of the highest admiration. Alcæus was a native of Mitylene, in Lesbos; and wrote about the forty-fourth Olympiad, or B.C. 600; being the contemporary and countryman, and, it is said, the admirer also, of the celebrated poetess Sappho. He is spoken of by ancient writers as a brave and skilful warrior, although in a battle with the Athenians he sought safety in flight, and he threw away his armour, which the victors dedicated in the temple of Athene, at Sigeum. From Alcæus, the Alcaic, one of the most beautiful of lyric metres, derives its name. His poems, we learn from Quintilian and Horace, were more severe and elevated in style and subject than those of most of the followers of the lyric muse; of the fragments preserved however, many are in praise of wine. The most striking is one which has been finely expanded by Sir W. Jones. Alcæus aspired to be the poet of liberty; and directed the full vigour of his genius against Pittacus, who had raised his power above that of his fellow-citizens, or in Greek language made himself tyrant of Mitylene. (The best collection of the fragments of Alcæus is in the Cambridge *Museum Criticum*, vol. i. p. 421, and in Gaisford's *Minor Poets*, Leipzig, 1823. For additional fragments see the *Rhenish Museum* for 1829, 1833, and 1835; Jahn's *Jahrbuch für Philolog.* for 1830; and Camer's *Anecdota Græca*, vol. i. Oxf. 1835.)

Other persons of the name of Alcæus are named by ancient writers. We shall only mention two—a comic poet, also of Mitylene, who contended with Aristophanes for the prize, when he produced the 'Plutus,' Ol. 98-1, B.C. 388; and a Messenian, the author of a number of epigrams in the Greek anthology. He was contemporary with Philip III. of Macedonia, against whom several of his epigrams are directed.

ALCAMENES, a celebrated ancient sculptor, and a native of Athens. He was the pupil of Phidias, and lived therefore in the middle of the 5th century, B.C., and later. Phidias, Alcamenes, and Polyclethus, were the three greatest sculptors of ancient Greece; Alcamenes survived Phidias some time, as he was still living in the 95th Olympiad, according to Pausanias, about 400 B.C., for he made two colossal statues of Minerva and Hercules, to commemorate the victory of Thrasylbulus over the thirty tyrants, which he dedicated in the temple of Hercules at Thebes; this victory took place in the second year of the 94th Olympiad, or B.C. 403.

Alcamenes was sculptor in marble and statuary in bronze; his most celebrated work was a Venus, known as the 'Venus in the Gardens;' it was in the temple of Venus Urania at Athens. In the dialogue of the Portraits, Lucian makes Polystratus term this statue the noblest of all the works of Alcamenes. Many other ancient writers speak of this statue. Pliny says that Phidias finished it; by which must be understood that he made a few alterations on the finished statue of Alcamenes, which, according to his riper judgment, it required; mere technical finishing is not the work of a great master.

Alcamenes contended, according to Tzetzes, with Phidias; the subject was a statue of Minerva; and the work of Alcamenes was at first, on account of its higher finish and proportions, preferred to the work of his master, but when fixed in their destined places, the superiority of the statue of Phidias was evident; the latter gained effect, the former lost it. In this instance, Phidias gave Alcamenes a lesson, from which modern artists might derive a benefit. The great majority of the statues and works of sculpture in the modern churches or other buildings of Europe, appear to have been made without any allowances for either the elevation or the distance from the eye, of the destined locality of the work; that a work in which this principle is carried fully out is unfitted for any but a similar situation, is not a sufficient apology for its neglect, though it may satisfy the artist's vanity.

Another celebrated statue by Alcamenes was one of Dionysus, of ivory and gold, placed in a temple to that god in Athens. The sculptures also of the posterior pediment of the temple of Jupiter at

Olympia, representing the fight of the Lapithæ and the Centaurs, were by Alcmena. Pausanias mentions besides at Athens a statue of Mars in the temple of Mars; a triple-bodied statue of Hecate on the Acropolis, the first in that form; and statues of Proce and Itys, in the same place. There was also a Vulcan or Hephaestus at Athens, in which the lameness was expressed without destroying the beauty of the statue; it is noticed by Cicero and by Valerius Maximus. Pausanias mentions also an Æsculapius at Mantinea, and Pliny speaks of a bronze figure of a pentathlete, or victor in the pentathlon, or five athletic exercises, which was called Encrinomenos; these five games were—leaping, running, the discus or quoit, throwing the javelin, and wrestling.

(Pliny, *Hist. Nat.* xxiv. 8, xxxvi. 5; Lucian, *Imagines*, 4, 6; Pausanias, l. 8, 19, 20, 24, 38; v. 10; viii. 9; ix. 11; Cicero, *Nat. Deor.* l. 30; Valerius Maximus, viii. 11; Tzetzes, *Chil.* viii. 193; Winkelmann, *Werke*, vol. vi.; Tischsch, *Epöche der bildenden Kunst*, &c.)

ALCEDO, ANTONIO DE. Less is known than could be desired of the life of this deserving geographer. He was a native of Spanish America. He published his 'Dictionary of American Geography' at Madrid, 1786, after having been twenty years engaged in compiling it. He was at the time of its publication a colonel in the royal guard, and states, in his preface, that his studies had been often interrupted by his military avocations. This brief account comprehends almost everything that is known of him. Alcedo mentions that some of his accounts of places were drawn from personal observation, but more obtained from the library of printed and manuscript works relative to America, and communications of a distinguished person who had filled for forty years high offices in the Indies. He also states that he had access to official documents, and had received valuable original information. The work is compiled with a good deal of critical accuracy, and fills a gap in the history, as well as the geography, of Spanish America. The jealousy of the Spanish government occasioned the suppression of the work. There are two copies of the Spanish Alcedo (1786) in the library of the British Museum. It has been translated into English by Mr. G. A. Thompson, whose translation (with considerable additions from more recent authors) was published in London, in five volumes, in 1812-15. An atlas to Alcedo was published in 1816 by A. Arrowsmith.

ALCIBIADES, son of Cleinias, an Athenian remarkable for his ability as a soldier and statesman, for the great and varied influence which he exercised over the fortunes of Greece, and for the versatility and splendour of his talents, was born about B.C. 452-50, when Athens was rapidly rising to its highest power. In early youth he seemed marked out for distinction by the most brilliant endowments of person, of station, and of intellect. Though high ancestry conferred no direct political privileges, it was not indifferent in his own eyes, or those of his fellow-citizens, that he descended from the noblest families of Athens. By his father's side he traced his ancestry into the heroic ægea, through Ajax up to Jupiter; and his mother, Deino-mache, was one of the Alcmaeonids. He inherited one of the largest fortunes in Athens, swelled by the savings of a long minority; and with his wife, Hipparete, daughter of Hipponicus, he received ten talents, the largest dowry that had been given in Greece. His person was remarkable for beauty, an advantage which he abused to licentiousness. His powers of mind were extraordinary, and he enjoyed peculiar advantages in their cultivation, being the ward of Pericles, who was connected with him on the mother's side, and the favourite pupil and companion of Socrates. But his great qualities were alloyed by a frivolity of mind, shown in the importance which he attached to pre-eminence and display, and in a childish love of notoriety, which constantly led him into wanton and offensive excesses; and he is liable to the graver charge of an intense selfishness, which postponed truth, justice, and patriotism to self-aggrandisement, or to the gratification of a headstrong will. The advice which he is said to have given to Pericles, when at a loss in what palatable shape to render his accounts to the state, may be taken as an index of his character: "It would be better to study how to avoid rendering them at all."

The life of Alcibiades by Plutarch begins with a long series of very amusing stories, to which we can only refer. At the age of 18, according to the Athenian law, he attained his majority. In B.C. 432 he served at the siege of Potidea, in company with Socrates, who there saved his life in battle. On that occasion, the crown and suit of armour, the prize of the most distinguished combatant, was awarded to Alcibiades, at the instance of Socrates, to whom it appears to have been more justly due. Eight years later, at the battle of Delium, Alcibiades in his turn saved the life of the philosopher. Their intimacy has caused Alcibiades to fill a prominent place in the dialogues of Plato. They sought each other's society from widely different motives: "Socrates saw in him many elements of a noble character, which might be easily perverted; abilities which might greatly serve or fatally injure his country; a strength of will capable of the most arduous enterprises, and the more dangerous if it took a wrong direction; an ardent love of glory, which needed to be purified and enlightened; and he endeavoured to win all these advantages for truth, virtue, and the public good. It was one of the best tokens of a generous nature in Alcibiades, that he could strongly relish the conversation of Socrates, and deeply admire his exalted character, notwithstanding his repulsive exterior, and the wide difference of station

and habits by which they were parted. . . . But their intimacy produced no lasting fruits."

To keep himself before the eyes of the people suited both the temper and the policy of Alcibiades. Many of his eccentricities seem to have been directed to this end. He served, like all Greek citizens, in the army, and, as has been stated, with credit. He had a powerful and persuasive eloquence, which he used unscrupulously, "flattering the people in the mass," says Andocides, "and despitefully using any individual." He lavished his wealth, sometimes in idle frolic or prodigal magnificence, sometimes in a more serious and well-considered splendour. "He was not only liberal to profusion in the legal and customary contributions with which at Athens the affluent charged themselves, as well to provide for certain parts of the naval service as to defray the expense of the public spectacles, but aspired to dazzle all Greece at the national games. . . . He contended at Olympia with seven chariots in the same race, and won the first, second, and third or fourth crown—success unexampled as the competition. He afterwards feasted all the spectators; and the entertainment was not more remarkable for its profusion, and for the multitude of the guests, than for the new kind of homage paid to him by the subjects of Athens. The Ephesians pitched a splendid Persian tent for him; the Chians furnished provender for his horses; the Cyzicenes, victims for the sacrifice; the Lesbians, wine and other requisites for the banquet. . . . Reflecting men could not but ask, whether any private fortune could support such an expenditure, and whether such honours were in harmony with a spirit of civic equality." (Thirlwall, 'History of Greece.') And such a doubt might well be increased by his light and fearless violations, not only of individual rights and persons, but of the majesty of the public tribunals and of religion. "At these things," says Plutarch, "the best citizens of Athens were much offended, and were afraid withal of his rashness and insolency;" and he goes on to quote a passage from Æschylus applied to Alcibiades by Aristophanes, to the effect that a lion's whelp should not be brought up in a city, but that whosoever rears one must let him have his own way.

The family of Alcibiades had been connected with Sparta by the respected tie of hereditary hospitality. That tie, which had been broken by his grandfather, Alcibiades wished to renew, and to constitute himself the head of the Spartan party. But the Spartan government, jealous probably of his temper and ignorant of his power, preferred to retain their connection with Nicias, the recognised leader of the aristocratic party; and thereon Alcibiades went over to the opposite extreme. His first public measure seems to have been a proposition for increasing the tribute paid by the Athenian allies, which was doubled in amount, he being one of the commissioners appointed to effect the change. This appears to have been before the peace between Athens and Sparta, B.C. 421. Soon after that peace he came forward as the advocate of the democratic party against the Spartan alliance; and by a clever and unscrupulous trick, in which he outwitted the Spartan ministers, obtained the enactment of a treaty of alliance with Argos, Elis, and Mantinea (B.C. 420). This meant little less than a declaration of hostilities against Sparta, and soon led to open war. In B.C. 419 Alcibiades was elected one of the board of generals (strategos), and he bore an active part in the complicated wars and negotiations carried on in Peloponnesus during the next three years, a period unmarked by any leading events in his personal history. He is however charged with having been a leading agent in procuring the atrocious decree by which the male citizens of Melos were put to death by the Athenians, their lands occupied by Athenian settlers, and their families enslaved—a transaction infamous in history under the name of the Melian massacre.

At this time Alcibiades and Nicias were the unquestioned leaders of the democratic and aristocratic, the war and peace parties; the latter desirous above all things to secure, by a good understanding with Sparta, that power and wealth which had grown up so wonderfully in some sixty years; the former eager to extend them, and open new prospects of conquests, gain, and glory to the young, the needy, and that large class of citizens who were in one way or another to be fed at the public expense. The only man who could be formidable to either was Hyperbolus, Cleon's successor as leader of the lowest class of citizens. He had the boldness to threaten Alcibiades with ostracism, but was himself banished under that strange law, through the co-operation of the two leaders, of whom Nicias hated him on political as heartily as Alcibiades on personal grounds. Soon after (B.C. 415), the cardinal event of the war came under discussion, the interference of Athens with the affairs of Sicily. That she did interfere was principally due to Alcibiades, whose arguments are presumed to be faithfully represented by Thucydides, in the speech ascribed to him (vi. 16-18). A powerful armament was voted, in the command of which he was joined with Nicias and Lamachus; but before it sailed, the general exultation was damped by a strange occurrence, never clearly explained. One morning most of the Hermæ (stone figures of Mercury placed in the streets as guardian images) were found defaced. This was a great sacrilege, and raised an extraordinary commotion. Inquiry was made; rewards were offered to witnesses and informers; and finally a charge of profaning the Eleusinian mysteries, connected with the mutilation of the Hermæ and the existence of a plot against the democracy, was brought against Alcibiades. To the charge of profanation the excesses of his youth gave colour; the rest of it had

not even plausibility. Alcibiades begged for a trial before he was sent out in so high a command; but his enemies had the ear of the people, and it was not their object to give him a fair hearing; it was therefore voted that he should proceed with the fleet, and return when summoned to answer the things laid to his charge. On reaching Sicily, those hopes of powerful support by which the expedition had been recommended were found to be futile. The commanders differed in their views: finally, those of Alcibiades were adopted; but before his talents could tell he was recalled to stand his trial, and trial, in the then temper of the people, he held equivalent to condemnation. He escaped on the voyage; and, not appearing, was pronounced accursed, and sentenced to death with confiscation of property.

Whether or not Alcibiades was capable of carrying to a prosperous issue the great hopes with which the Sicilian expedition was undertaken is doubtful, but his colleagues and successors proved unequal to the task. [NICIAS; DEMOSTHENES.] He threw his talents into the opposite scale, and appeared at Sparta as the enemy of his country. (Thucyd., vi. 89-92.) By his advice, a Spartan was given to command the Syracusans, a very sparing yet effectual aid; and a permanent station was fortified and garrisoned by the Spartans at Deceleia, a town of Attica, about 15 miles from Athens, to the great inconvenience and injury of that city. The total loss of the Sicilian armament (B.C. 413) gave new spirits both to the open enemies and the discontented allies of Athens. By the ready agency of Alcibiades, the islands and Ionia were urged into revolt; and a treaty was concluded between Sparta and Tissaphernes, satrap of Ionia, on terms more favourable to the Persian interests than to the honour of Greece (B.C. 412). But about this time the cordiality and unity of purpose of Alcibiades and the Spartans declined. By the annual change of magistrates, a party unfriendly to him came into office; and the king, Agis, hated him, believing him to have seduced his wife, Timocæ. This indeed Alcibiades is said to have avowed, intimating that he was governed not so much by any preference for the lady as by ambition that his posterity should fill the throne of Sparta; and it is a remarkable but not solitary instance of the levity with which he would let the indulgence of a whim cross deep schemes of policy. In this, and in other respects, he strikingly resembles a man much inferior to himself, the second duke of Buckingham. According to the secret and crafty policy of Sparta, the commander of the army in Asia was instructed to get rid of Alcibiades as a dangerous person; but he was warned of the danger, and took refuge with Tissaphernes, the Persian satrap above named.

Whatever party Alcibiades attached himself to, that party always seems to have taken a start from that moment. Such had been the case when he was driven from Athens; such was now the case when he was driven from Sparta. He soon estranged Tissaphernes from his new allies; made him reduce their pay, upon which the Spartan power of maintaining a fleet greatly depended; and led him to see that the policy of Persia was, not to substitute the ascendancy of Sparta on the coasts of Asia Minor for that of Athens, but to preserve the one to counterpoise the other. He fascinated Tissaphernes by his unrivalled talents of social intercourse; and the notoriety of his favour, and belief in his power, soon reached and made a deep impression in the Athenian armament then quartered at Samos. Of the rich Athenians a large proportion was disgusted by the length of the war, and by the pressure upon property which it occasioned. One heavy burden was the obligation of acting as trierarch, or captain of a ship, which involved a great expense for the equipment of the vessel, and was compulsory upon men of a certain fortune. An influential party in the Samian armament was therefore well disposed to embrace the advantages consequent on the restoration of Alcibiades, backed by the wealth of Persia; and that he coupled his restoration with the establishment of an oligarchy, professing that he could not feel secure so long as the government rested in the party which had banished him, was probably an additional inducement to further his plans. A deputation was sent to Athens, headed by Pisander, who speedily obtained a decree by which he with ten others was authorised to negotiate with Tissaphernes and Alcibiades. But nothing was effected, in consequence of the excessive demands of Alcibiades, who appears to have resorted to that method of concealing the truth, that his influence was not sufficient to induce the satrap to break absolutely with the Peloponnesians. Meanwhile that revolution at Athens still proceeded which lodged (B.C. 411) the sovereign power in the council of Four Hundred. But the temper of the Samian armament was changed. Thrasybulus and Thrasyllus, officers of subordinate rank, but men of talent, had gained a commanding influence in the absence of the leading oligarchists. An oath to support the democracy was imposed upon persons suspected of favouring the new government; and Alcibiades was recalled by a vote of the soldier-citizens, who, in the abeyance of the constitution, claimed the sovereignty as vested in their assembly. His first action was an important benefit to his country, inasmuch as he prevented the army from returning to Athens to restore the constitution by civil war. And in the course of the same year which had witnessed the revolution, the Four Hundred were overthrown without the agency of the army; the sovereign power was vested in a selected body of 5000 citizens; and Alcibiades and other exiles were recalled.

His promises to bring the gold of Persia to relieve the Athenian

exchequer proved vain: as Tissaphernes had deserted the Peloponnesian, so now he deserted the Athenian interest. But under the command of Alcibiades a succession of brilliant victories—at Cynossema and Abydos (B.C. 411); at Cyzicus (B.C. 410); in the two following years the acquisition of Chalcedon and Byzantium; the renewal of Athenian supremacy throughout the Hellespont and Propontis, whereby the control of the Euxine, and a lucrative revenue derived from tolls levied on ships passing through the straits, were secured;—all these successes testified the ability with which the affairs of Athens were now conducted. Four years after his recall (B.C. 407), Alcibiades for the first time since his banishment returned to Athens: he was enthusiastically received; his property was restored; the records of the proceedings against him were sunk in the sea; the curse publicly laid on him was as solemnly revoked, and he was appointed commander-in-chief of the forces by land and sea. He signalised his abode in Athens, where he stayed four months, by conducting the annual procession to celebrate the mysteries at Eleusis; a ceremony which had been discontinued since the occupation of Deceleia. Returning to the scene of war, his first action was an unsuccessful attempt on the island of Andros. Soon after, while the fleet was quartered at Notium, near Ephesus, a general engagement was brought on, in his absence and against his express orders, by the rashness of his lieutenant, Antiochus; when the Peloponnesian fleet, commanded by Lysander, gained the advantage. This, though attended with no material loss, was enough to disgust the Athenians, who seem to have considered Alcibiades' past successes only as giving them a claim on him for more brilliant exploits. It was urged that the wealth of the state was squandered upon himself and his favourites; and the luxurious indulgence of his habits gave plausibility to the charge. He was superseded, and thereon retired to his estates in the Thracian Chersonese, on which, in anticipation of such an event, he had built a castle, thinking it unsafe to return to Athens. Formerly, when he made his escape on being recalled from Sicily, he is reported to have replied to the question, whether he did not dare trust his country? "In everything else; but as to my life, not even my mother, lest by mistake she should put in a black ball for a white."

Here ends the public life of Alcibiades. He held no further office; and the only thing recorded of him is that he endeavoured by his advice, being then resident on the spot, to prevent the final defeat of the Athenians at Ægos-potami, B.C. 405. After the capture of Athens and the establishment of the tyranny of the Thirty he was condemned to banishment. Not thinking himself safe in Thrace, he passed into Asia, and was honourably received by Pharnabazus. He was about to visit the court of Persia, or probably had begun his journey, apparently with the hope of gaining over Artaxerxes to help in the enfranchisement of Athens, when the house in which he slept was surrounded at night by a band of men, who set it on fire, and when he rushed out sword in hand (for no one, says Plutarch, awaited his onset) despatched him with missiles, B.C. 404. The authors of this deed are unknown: it is charged severally upon the jealousy of Pharnabazus, the fear and hatred of the Spartan government, and the revenge of a noble family, one of whose sisters he had seduced. Alcibiades left a son of the same name, of no repute or eminence, and a fortune which, contrary to public expectation, proved smaller than his patrimony. From the terms of the statement we may infer that his patrimony had not been greatly diminished, which is quite as surprising. A speech in defence of the younger Alcibiades was written for him by Isocrates. Two of the speeches of Lysias (xiv. and xv.) are against him.

(Thucydides; Xenophon, *Hellen.*; Plutarch, *Alcibiades*; Thirlwall, *Hist. of Greece*, vols. iii. and iv.; *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ALCMAN, the lyric poet of Sparta, was originally a Lydian of Sardis, and for some time a slave in the house of Agesidas, a Spartan. He was however subsequently emancipated, though it is not probable that he gained the full rights of Spartan citizenship. In one of the fragments (No. 11) of his poetry, still extant, he makes a chorus of virgins say of himself "that he was no man of rough and unpolished manners, no Thessalian or Ætolian, but sprung from the lofty Sardis." The statement of Suidas that he was of Messoa, one of the districts of Sparta, is incorrect, or only means that the residence of his old master was situated there. According to the ancient chronologists, by some of whom he is called Alcmæon, he lived about B.C. 671—631, and was a contemporary of the Lydian king Ardys. This period agrees with the statement in Suidas, that he was older than Stesichorus and the preceptor of Arion; and there are some allusions in his extant poems which refer to the same age: consequently he lived at a time when music had already been improved by the Spartan poets Thaletas and Terpander, and when the Spartans themselves, after the successful termination of the first Messenian war, had both leisure and inclination for the arts and refinements of life. From some of the fragments of his poetry it would appear that he devoted himself to the cultivation of poetic art, and invented some new metrical forms. According to the Latin metrical writers, several different forms of verses were known by the name of 'Alcmanica metra.' The poetry which he composed was generally choral, and consisted of Parthenia, or songs sung by choruses of virgins, besides hymns to the gods, peans, prosodia, or processional songs, and bridal

hymns. These were generally sung or represented by choruses of young men or maidens, who however were not, as in the choral odes of Pindar, invariably identified with the character of the poet, nor the mere organ by which he expressed his thoughts and feelings. On the contrary, many of Alcman's Parthenia contain a dialogue between a chorus of virgins and the poet, and in most cases the virgins speak in their own persons. Still he was both the leader and teacher of his choruses; and sometimes we meet with addresses of the maidens to the poet, sometimes of the poet to the maidens joined with him. In one beautiful fragment written in iambs he thus addresses them: "No more, ye honey-tongued holy-singing virgins, are my limbs able to bear me; would that I were a Cerylus, which with the halcyons skims the foam of the waves with fearless breast, the sea-blue bird of spring." Alcman was also noted for erotic poems, of which he was by some considered the first Greek writer, and to the licentious spirit of which his character was said to correspond. (Athenæus, xiii. 600, ed. Dind.) These were probably sung by a single performer to the cithara. Another species of his compositions was the clepsambic, consisting partly of singing and partly of common discourse, the accompaniment of which was an instrument similarly named. (Hesychius, s. v.) In this, as well as in other forms of his poetry, he is thought to have imitated an older poet, Archilochus. The metre of the peculiar anapestic verses sung by the Spartans as they advanced to battle, was also attributed to Alcman; but we cannot from this infer that he composed war-songs, for there is no trace of it in any of his fragments, nor anything corresponding in the general character of his poetry; and though he made use of the anapestic metre, it was only in connection with other rhythms, and not in the same way as the war-poet Tyrtaeus. It appears, then, that the compositions of Alcman were somewhat varied in metre and poetic character, as they were in dialect.

The extant fragments of Alcman, though some of them are very beautiful, scarcely warrant the admiration which the ancients have expressed of him; but this may be from their extreme shortness, or because they are very unfavourable specimens. They are however distinguished by lively conceptions of nature, and abound in those personifications of the inanimate which characterised the earliest Greek poetry: thus the dew (in Greek 'hera') is called by him the daughter of Zeus and Selene, of the god of heaven and the moon. Müller ('Literature of Greece', p. 197) thus speaks of him:—"He is remarkable for simple and cheerful views of human life, connected with an intense enthusiasm for the beautiful in whatever age or sex, especially for the grace of virgins. A corrupt, refined sensuality neither belongs to the age in which he lived nor to the character of his poetry; and although perhaps he is chiefly conversant with sensual existence, yet indications are not wanting of a quick and profound conception of the spiritual." We may however observe, that the terms in which the ancients spoke of the licentiousness of Alcman's erotic poetry are so strong that we cannot well acquiesce in such a favourable representation of it. According to Plutarch and other writers, Alcman died of the same kind of disease as Sulla, the morbus pedicularis. The Fragments of Alcman were first printed in H. Stephens's 'Collection of the Poems of the Nine Chief Lyric Poets,' Paris, 1650, 8vo. The last edition is by P. T. Welcker, Giessen, 1815, 4to.

(Pausanias, iii. 15, 2; Suidas, *Alcman*; Eusebius, *Chron. Armen. Olymp.*, 30, 4; Pliny, *Hist. Nat.*, xl. 33; Plutarch, *Sulla*, c. 36; Clinton, *Fest. Hell.*, i. 189, 195.)

(From the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ALCUIN, or, as he called himself in Latin, *Flaccus Albinus Alcuinus*, was one of the most learned persons of the 8th century. He appears to have been born about the year 735, and probably in the city of York or the neighbourhood, though some authorities make him a native of Scotland. He tells us himself that he received his education at York, where he had successively for his masters Egbert and Elbert, who were afterwards successively archbishops of that see. He there acquired a knowledge of the Latin language, and some acquaintance also, it would appear, with the Greek and the Hebrew. He afterwards became himself master of the school, and taught with much reputation. He was also appointed keeper of the library which Egbert had founded in the cathedral, of the contents of which he has given us a minute and curious account in one of his poems. Being equally eminent for piety as for learning, he was likewise ordained a deacon of the cathedral; and we may mention here that through modesty, as is stated, he never afterwards would accept of any higher rank in the priesthood. Having been sent by Alibert's successor, Eanbalde, to Rome to procure for him the pallium, Alcuin on his return passed through Parma, where the Emperor Charlemagne then was. At the invitation of the emperor he consulted, as soon as he should have executed his mission, to come to France; and accordingly in the same year (780) he proceeded to that country. Soon after his arrival his patron bestowed upon him the abbey of Ferrières in the Gâtinois and of St. Loup at Troyes, and the little monastery of St. Jean in Ponthieu; but the principal occupation of Alcuin was as a public teacher of what was then called the *totum orbis*, or entire circle of human learning. In this capacity he was frequently attended at his lessons by the emperor, his children, and the lords of the court. The place where he principally taught was probably Aix-la-Chapelle, which was the chief residence of the

emperor. The school thus established by Alcuin is considered by French antiquaries as the germ from which the University of Paris originated; and the example and exertions of this foreigner were undoubtedly mainly instrumental in rekindling in the country of his adoption the extinguished light of science and literature. Much of Alcuin's time was also occupied in theological controversy and other labours connected with his clerical calling. In 796, on the death of Ithier, abbot of St. Martin of Tours, the emperor gave him that abbey also; and some time after, having obtained leave to retire from court, he established a school here, which soon became greatly celebrated. In his old age Alcuin gave himself up almost exclusively to theological studies; and besides composing many treatises in that department, copied with his own hand the whole of the Old and New Testaments, introducing numerous corrections as he proceeded. This edition came to be looked upon as a standard, and many transcripts were made from it. There is still to be seen in the library of the Fathers of the Oratory of St. Philip of Neri, at Rome, a Bible, which is believed to be, as some verses written on it state, a copy given by Alcuin to Charlemagne. Alcuin died on the 19th of May, 804, and was buried in the church of St. Martin.

Of the writings of Alcuin several have been printed separately, both in France and England; but the first edition of his collected works was that published at Paris in 1617 by André Duchèsne (Andreas Quercetanus), in one volume, folio. A much more complete edition however appeared at Ratisbon, in two volumes, folio, in 1777, under the superintendance of M. Froben, the prince-abbot of Ratisbon. It contains many pieces which had never before been published, but which were found in manuscript in the libraries of France, England, and Italy. The epistles of Alcuin in Froben's edition amount to 232, among which are included a few epistles of Charlemagne in answer to Alcuin. There is prefixed to them a 'Synopsis Epistolarum,' which gives a general view of the contents of each letter: the period which they comprise extends from the year 787 to the beginning of the next century. It is however certain that this is not a complete collection of Alcuin's epistles, and indeed Pertz has since discovered others. The correspondence of Alcuin generally relates to topics of business or to ecclesiastical matters; it never assumes the character of learned disquisition or philosophical discussion. The letters are addressed, among others, to popes Adrian I. and Leo III.; Offa, king of the Mercians; and to various bishops and other ecclesiastical persons. In one of them, addressed to Bishop Aginus, he respectfully reminds him of his promise to give him some relics of saints ("aliquas sanctorum reliquias"). The letters to Charlemagne, thirty in number, are the most interesting in the collection. The mild temper, the sincere piety, and the unaffected humility of the man, are apparent in all his correspondence. Towards Charles his letters show the most profound devotion and respect, and yet the correspondence between the great king and his teacher is in the style of friendship. Alcuin addresses Charles by his assumed name of David, to which he sometimes adds "most beloved" (dilectissimus). Though his Latin style is far from being free from unclassical expressions, it is flowing and perspicuous: he wrote Latin with ease and perfect freedom from all affectation. His letters are often concluded by some Latin verses. They are among the best specimens of the Latinity of the middle ages.

Alcuin, the most learned man of his age, was the friend and adviser of one of the most energetic and able princes that ever sat on a throne. In his enlarged schemes for the restoration and encouragement of learning, Charles was aided by the industry and knowledge of Alcuin. Theology was the principal pursuit of Alcuin, but with him it was practical rather than speculative: its object was to secure a virtuous life. From some ill-understood expressions of his own, and from a passage or two in the anonymous 'Life,' it has been inferred that Alcuin was unfavourable to secular studies. That the founder of schools, the restorer of ancient learning, the diligent student of Roman antiquity, should, even in his old age, have condemned or discouraged such pursuits, would require strong evidence. The fact is exactly the reverse. He distinctly states that secular learning is the true foundation on which the education of youth should rest; grammar and discipline in other philosophical subtleties are recommended; and he states, consistently enough, as any Christian may do at the present day, that by certain steps of (human) wisdom the scholar may ascend to the highest point of Christian (evangelical) perfection. With him, everything is subordinate to religion; and, when secular studies come in comparison with theological, the superiority of the theological is emphatically asserted. But this does not lead to the inference, and his writings distinctly contradict it, that he was unfavourable to the studies in which he excelled, and which he recommended by his precepts and his teaching. The activity of Alcuin was the striking part of his intellectual character. In originality, in large and comprehensive views, he was eminently deficient; he did not possess more than a reasonable amount of dialectic skill; abstract speculation and philosophical inquiry were beyond his sphere. He was too good a son of the Church to transgress the limits which were prescribed to her children. His learning and his prodigious industry made him the first man of his age, and his honesty of purpose and his services to education entitle him to our grateful remembrance.

A list of the editions of Alcuin is given by Mr. Wright in his very useful work entitled '*Biographia Britannica Literaria*,' London, 1842.

The latest life of Alcuin is by F. Lorenz, Halle, 1829, which was translated into English by Jane Mary Slee, London, 1837, 8vo. A particular account of Alcuin's works is given in the 'Biographical Dictionary of the Society for the Diffusion of Useful Knowledge,' from which passages of this article have been taken.

ALDAY, JOHN. We know nothing of this writer except as the translator of a French work that was highly popular in the middle of the 16th century—'Theatrum Mundi; the Theatre or Rule of the World, wherein may be seen the running Race and Course of every Man's Life, as touching Miserie and Felicitie, &c., written in the French and Latin Tongues by Peter Boastuanu,' &c. There were three editions of this translation, the last and the most correct of which appeared at London in 1581. Boastuanu's work contains many passages of quaint satire upon the manners of his age, which Alday has translated with considerable spirit. (See extracts in Dibdin's edition of More's 'Utopia.') There are also in Boastuanu's work several pieces in verse, which are also translated by Alday with some elegance. (See Ritson's 'Bibliographia Poetica,' also 'Bibliographical Memoranda,' Bristol, 1816.) Dr. Dibdin is of opinion that there are resemblances between particular passages in Burton's 'Anatomy of Melancholy' and Alday's translation of Boastuanu; and he gives a page or two in support of this opinion, referring generally to Burton's 'Love Melancholy,' which occupies more than two hundred pages of that remarkable work. Burton, the most voracious of readers, was no doubt familiar with Alday's book. But such supposed general resemblances are often more fanciful than real. (*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ALDEGREVER, HEINRICH, a celebrated German painter and engraver of the 16th century, was born at Soest in Westphalia in 1502. He became the pupil of Albert Dürer, being attracted to Nürnberg by the great fame of that artist; and he imitated his style so closely that he acquired the name of Albert, or Albrecht, of Westphalia—a circumstance which has misled some writers to call him Albert Aldegrever. There can be no doubt of his name having been Heinrich, or Henry, as it is so engraved in two different portraits both executed by himself. As a painter, Aldegrever executed little; he was chiefly occupied in engraving his own designs. His plates are generally small, and are executed in a very minute and laboured manner, whence he is reckoned among the so-called little masters, of whom he is one of the most distinguished. His prints are very numerous, exceeding three hundred, and they bear dates between 1522 and 1562, which is supposed to have been the year of his death; it is however a mere conjecture. His designs are conspicuous for the sharp and angular lines of the gothic style; but though hard and wiry, many of his figures display good anatomical drawing. His subjects are sacred and profane. Thirteen plates of the Labours of Hercules are among his very best works: they are very scarce. A print of the Count D'Arohaubaud, just before his death, killing his son lest he should leave the paths of virtue for those of vice, is also a remarkably good plate. Among the portraits engraved by Aldegrever are those of Luther, dated 1540; Melancthon; John of Leyden, king of the Anabaptists; and the fanatic Bernard Knipperdoyling. He engraved also many designs for silversmiths and for booksellers.

His paintings are in the same style of design as his engravings, but they impress, still more than his prints, with the feeling of the pains they cost him: his colouring is very high. In the gallery at Berlin there is a small picture of the Last Judgment by him; in the gallery of Munich there is an excellent portrait of a man with a red beard; there are a few of his works at Schleissheim, at Vienna, and at Nürnberg, and at Soest, in some churches.

In a print of Titus Manlius ordering the execution of his son, Aldegrever has introduced an instrument very similar to the guillotine used by the terrorists of the French revolution: it is dated 1533.

(Heineken, *Dictionnaire des Artistes dont nous avons des Estampes*; Bartsch, *Peintre-Graveur.*)

ALDINI, GIOVANNI, nephew of Galvani, the discoverer of galvanism, and brother of the Count Antonio Aldini, a distinguished Italian statesman, was born at Bologna on the 10th of April, 1762. From his earliest years he showed a predilection for the study of natural philosophy. In 1798 he was appointed to succeed Canterzani, who had been his own instructor in physics, in the university of Bologna. He was one of the earliest and most active members of the National Institute of Italy, to the foundation of which he contributed; and in 1807 he was made a knight of the Iron Crown, and a member of the Council of State at Milan. Though thus in favour with Napoleon's government, he preserved, like his brother, his credit with the Austrians; and continued in the enjoyment of their patronage and protection till his death on the 17th of January, 1834. He left his philosophical instruments and a large sum in money to found a public institution in Bologna for the instruction of artisans in physics and chemistry.

The most conspicuous merit of Aldini was his activity in endeavouring to render public such discoveries either of himself or others as he conceived likely to be of public use. He was well acquainted with the modern languages, fond of travelling, and indefatigable in conveying scientific intelligence from one end of Europe to the other. The three principal objects which engaged his attention at different periods were—the medical uses of galvanism, the discovery of his

illustrious uncle; the utility of gas, particularly in the illumination of lighthouses; and the advantages of a fire-proof dress for persons engaged in extinguishing conflagrations. Several of his treatises were published in English, and were derived from observations and experiments made in England.

ALDRICH, HENRY, eminent as a scholar, a divine, and a musician, the son of a gentleman of the same name in Westminster, was born there in 1647, and educated in the collegiate school of that city under Dr. Busby. He was admitted a student of Christ Church, Oxford, in 1662, and having been elected on the foundation, took his master of arts degree in 1669. He soon afterwards took holy orders, and obtained the living of Wem in Shropshire; but he continued to reside in his college, of which he became one of the most eminent tutors and distinguished ornaments. On the 15th of February, 1681, he was installed a canon of Christ Church, and in the following May took the degrees of bachelor and doctor in divinity. During the reign of James II. he was a consistent and able champion of Protestantism, both by preaching and writing; and when, on the accession of King William, Massey, the Roman Catholic dean of Christ Church, fled his country, Dr. Aldrich was appointed his successor, and was installed on June 17, 1689. For the remainder of his life he continued to discharge the duties of his station in the university with dignity, urbanity, and assiduity; he was zealous to improve and adorn his college, to increase its usefulness, to extend its resources, and to perpetuate its reputation. In 1702 he was chosen prolocutor of the convocation, and closed his laborious and exemplary career at Christ Church on the 14th of December, 1710.

Himself a sound and accomplished scholar, he endeavoured by every means in his power to foster the love of classical learning among the students of his college, and presented them annually with an edition of some Greek classic which he printed for this special purpose. He also published a system of logic for their use, and at his death bequeathed to his college his valuable classical library. Dr. Aldrich was a proficient in more than one of the arts: three sides of what is called Peckwater Quadrangle, in Christ Church College, and the church and campanile of All Saints in the High-street, Oxford, were designed by him; and he is also said to have furnished the plan, or at least to have had a share in the design, of the chapel of Trinity College, Oxford.

Dr. Aldrich, among other sciences, cultivated music with ardour and success. As dean of a college and a cathedral he regarded it as a duty, as it undoubtedly was in his case a pleasure, to advance the study and progress of church music. His choir was well appointed, and every vicar, clerical as well as lay, gave his daily and efficient aid in it. He contributed also largely to its stock of sacred music; and some of his services and anthems, being preserved in the collections of Boyce and Arnold, are known and sung in every cathedral in the kingdom. His musical taste was founded on the best and purest models of church writing—those especially which Palestrina and Carissimi have bequeathed to the world; and, in addition to his own compositions, he adapted words from the English version of the Scriptures to many movements from their masses and motets, a task which he executed with consummate skill. Of these it is to be regretted that a few only are in print or in use. Nor did Dr. Aldrich disdain to employ his musical talents in the production of festive and social harmony. Catch singing was much in fashion in his time; and the well-known catch, 'Hark, the bonny Christ Church Bells,' is his production.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ALDROVANDUS, ULYSSES (*Aldrovandi*), a great naturalist, was born of a noble family at Bologna, on the 11th of September, 1522. He lost his father at the age of six years, and his mother placed him out as page in the family of a bishop. He occupied this situation only a short time, and when twelve years old was placed with a merchant at Bresse. He was however soon tired of a mercantile life; and during his early years applied himself first to legal and subsequently to medical studies. He travelled much; and especially made botanical collections. In 1553 he graduated in medicine, and in 1560 he was appointed lecturer on natural history in the chair that had been occupied by Luca Ghino. In 1568 he succeeded in inducing the senate of Bologna to establish a botanic garden.

Whilst Aldrovandus was thus publicly engaged, in private he was pursuing natural history with an ardour that has been seldom equalled, perhaps never surpassed. The great object of his life was to obtain a knowledge of the external world, and to this object he devoted his time, his talents, and his fortune. He travelled much himself in search of objects of natural history, and employed others to collect for him. In this way he formed an extensive museum, which to this day remains at Bologna, a monument to his industry and perseverance. His dried plants alone occupied sixty large volumes. He spared no expense in obtaining the first artists of the day to make original drawings in natural history. Christopher Coriolanus and his nephew of Nürnberg were employed as his engravers. By these means he was prepared for the gigantic task of becoming the historian and illustrator of all external nature. The first work that he published, in 1599, on natural history, was devoted to birds. His next work was on insects, in 1603. A third work came out in 1606,

on the lower animals. This was the last work that was published during his lifetime. He, however, left abundance of materials for further works, and the senate of Bologna, who had liberally assisted Aldrovandus when alive, appointed persons to edit his works. The subsequent volumes all appear in his name, with the addition of that of the editor: the only difference consists in styling Aldrovandus patrician in the posthumous volumes, whereas he is called professor in those published in his lifetime.

The great merit of the writings of Aldrovandus is their completeness; their great fault is the credulity of the author. Cuvier says the works of Aldrovandus might be reduced to one-tenth without injury, and Buffon ridicules his comprehensive mode of treating his subjects in the following language:—"In writing the history of the cock and the bull," says Buffon, "Aldrovand tells you all that has ever been said of cocks and bulls; all that the ancients have thought or imagined with regard to their virtues, character, and courage; all the things for which they have been employed; all the tales that old women tell of them; all the miracles that have been wrought upon or by them in different religions; all the superstitions regarding them; all the comparisons that poets have made with them; all the attributes that certain nations have accorded them; all the representations that have been made of them by hieroglyphics or in heraldry; in a word, all the histories and all the fables with which we are acquainted on the subject of cocks and bulls." This is hardly an overdrawn picture of the manner in which Aldrovandus treats each animal, plant, and mineral in his ponderous volumes. But these works must not be criticised as if they were something which they are not. They are not manuals, outlines, or introductions to natural history: they profess to be histories of the subjects on which they treat, and as such they are the most precious storehouse of facts, references, and observations in natural history extant. Nor are these works mere compilations. They are illustrated with many hundreds of original drawings; references are made to objects in the museum of Aldrovandus, and he has given the result of numerous dissections made with his own hand.

Aldrovandus regarded objects in nature more as individuals than in their relations to each other, and hence he made no progress in systematic arrangement; and in this respect his works are not superior to those of Aristotle or Gesner. He has however supplied facts, and whatever may be the confusion in which they are arranged, on account of the period at which they are recorded, they still claim the attention of every naturalist.

Aldrovandus died on the 10th of November, 1607, in his eighty-fifth year. Nearly all his biographers state that this event occurred in the hospital at Bologna, where he was compelled to spend his last days on account of the great expense he had been at in collecting his museum and publishing his works. The secret archives of the senate of Bologna, as quoted by Fantuzzi, proved that they assisted Aldrovandus in the most liberal manner. They doubled his salary soon after his appointment to the chair of natural history, and when he was no longer able to lecture, they appointed a successor but continued his salary. At various times they granted him no less than 40,000 crowns to carry on his researches and publish his works. He was buried with great pomp, at the public expense, in the church of St. Stephen in Bologna; and all the works that appeared after his death were published under the direction and at the expense of the senate. From these circumstances we are inclined to think, that if Aldrovandus did die in a hospital, it may have arisen from something peculiar in his case, and not from any want of public sympathy or gratitude.

ALDUS. [MANUTIA.]

ALEMAN, MATEO. This celebrated Spanish writer was born at Seville, about the middle of the 16th century. He held an important office in the financial department, under Philip II., which he filled with honour for a long period. Disgusted at last with the broils of the court, he requested his dismissal; and having obtained it, he retired to devote himself entirely to study. In 1604 he published the 'Life of St. Antonio de Padua.' We are ignorant of the motive or object of his voyage to Mexico, and only know, that in 1609 he published there an 'Ortografía Castellana.' But the work which entitles him to the notice of posterity is his 'Gusman de Alfarache,' which he published at Madrid in 1599. This amusing and interesting work is a bitter satire on the corrupted manners of Spain at that period. The enterprising genius of Charles V. had inspired the Spanish youth with an ambition for military glory, and drawn them off from the cultivation of the useful arts and sciences. His successors were incapable of preserving the immense empire raised by him, and the huge edifice began to fall already under his son. The nation was then swarming with a multitude of men, who, thinking it degrading to earn an honest livelihood, did not scruple to live by cheating and swindling. This was the origin of the multitude of those novels called 'Picarescas' which, from the beginning of the 16th to the latter end of the 17th centuries, appeared in Spain, intended to describe the life and man-

ners of rogues, vagabonds, and beggars, bringing also the other classes of society upon the stage, either as their victims, abettors, or protectors. Aleman seems in his retirement to have recurred to past scenes, and to have set down the vices, the follies, and the hypocrisies of the more elevated classes which he had witnessed, while at the same time he details with extraordinary minuteness the tricks and adventures of rogues of inferior degree. Guzman is a worthy follower of Lazarillo de Tormes, and a precursor of Gil Blas. The hero is of doubtful descent, with the prænomen of one of the proudest families of Spain; tenderly reared, he throws himself, a boy, upon the world; becomes successively stable-boy, beggar, porter, thief, man of fashion, soldier in Italy, valet to a cardinal, and pander to a French ambassador; is subsequently a merchant and becomes bankrupt, then a student at the university of Alcalá, marries, is deserted by his wife, commits a robbery, is sent to the galleys, is liberated, and then writes an account of his life. The narrative is interwoven with shrewd maxims and acute observations. The author is classed by Mayans among the prose writers best adapted for the formation of a good Castilian style, and is named by him, which is no small merit, with Fray Luis de Leon, Hurtado de Mendoza, Cervantes, Mariana, and Herrera, the great masters of this rich, harmonious, and noble language. The book was first printed in 1599, went through five-and-twenty editions in Spain, and was translated into all the languages of Europe; it appeared in London, in 1623, as from an anonymous translator, for the Spanish name affixed, Don Diego Pucde-ser (Maybe-so), is evidently assumed; probably by the indefatigable Howell, who was at Madrid immediately prior to the date of its publication. (Nicolao Antonio, *Bibliotheca Hispana Nova*.)

ALEMBERT, JEAN-LE-ROND D'. On Nov. the 17th, 1717, a newborn infant was found exposed in a public market by the church of St. Jean-le-Rond, near the cathedral of Notre-Dame, at Paris. This infant was the celebrated D'Alembert, and from the place of his exposure he derived his christian name. How he obtained his surname is not mentioned. He was found by a commissary of police, and instead of being conveyed to the hospital of Enfants-Trouvés, was intrusted to the wife of a poor glazier, on account of the care which his apparently dying state required. It has been supposed that the discovery, as well as the exposure, was arranged beforehand, as in a few days the father made himself known, and settled an allowance of 1200 francs a-year for his support. Other accounts state that the abandonment was the act of the mother, and that the father, upon hearing it, came forward for the protection of his son. This father was M. Destouches, commissary of artillery; the mother was Madame or more properly Mademoiselle de Tencin, a lady celebrated for her talents and adventures, and authoress of several works, in one of which, 'Les Malheurs de l'Amour,' she is supposed to have given a sketch of her own life. She was sister of Peter Guerin de Tencin, Cardinal Archbishop of Lyons, and took the veil in the convent of Montfleuri, near Grenoble, which place she afterwards quitted, and settled at Paris, where she became more celebrated for wit than virtue. It is said that when D'Alembert began to exhibit proofs of extraordinary talent, she sent for him, and acquainted him with the relationship which existed between them; and that his reply was, "You are only my step-mother; the glazier's wife is my mother."

D'Alembert commenced his studies at the Collège des Quatre Nations, at the age of twelve years. The professors were of the Jansenist party, and were not long in discovering the talents of their pupil. In the first year of his course of philosophy, he wrote a commentary on the Epistle to the Romans, from which, as Condorcet remarks, they imagined they had found a new Pascal; and to make the resemblance more complete, turned his attention to mathematics. The attempted parallel probably never existed except in the ingenious head of the author of the 'Eloge;' for D'Alembert himself informs us, that his professors did their best to dissuade him both from mathematics and poetry, alleging that the former, in particular, dried up the heart, and recommending as to the latter, that he should confine himself to the poem of St. Prosper upon Grace. They permitted him, nevertheless, to study the rudiments of mathematics, and from that time he persisted in the pursuit. When he left college, he returned to his foster-mother, with whom he lived altogether forty years, and continued his studies. Not that she gave him much encouragement, for when he told her of any work he had written, or discovery which he had made, she generally replied, "Vous ne serez jamais qu'un philosophe; et qu'est ce qu'un philosophe? c'est un fou qui se tourmente pendant sa vie, pour qu'on parle de lui lorsqu'il n'y sera plus;" which we may English thus, "You will never be anything but a philosopher—and what is that but a fool who plagues himself all his life, that he may be talked about after he is dead?"

With nothing but his income of 1200 francs, and the resource of the public libraries for obtaining those books which he could not buy, he gave up all hopes of wealth or civil honours, that he might devote himself entirely to his favourite studies. Here he was dispirited by finding that he had been anticipated in most of what he imagined to have been his own discoveries. In the meanwhile his friends urged him to enter a profession, to which he at last agreed, and chose the law. After being admitted an advocate, he abandoned this profession and took to physic, as more congenial to his own pursuits. Determined to persevere, he sent all his mathematical books to a

friend, resolved that the latter should keep them till he was made doctor; but he soon found that he could not send his mathematical genius with them. One book after another was begged back, to refresh his memory upon something which he found he could not keep out of his head. At last, finding his taste too strong for any prudent consideration, he gave up the contest, and resolved to devote himself entirely to that which he liked best. The happiness of his life, when he had made this resolution, is thus described by himself. He says that he awoke every morning thinking with pleasure on the studies of the preceding evening, and on the prospect of continuing them during the day. When his thoughts were called off for a moment, they turned to the satisfaction he should have at the play in the evening; and between the acts of the piece he meditated on the pleasures of the next morning's study.

Some memoirs which he wrote in the years 1739 and 1740, as well as some corrections which he made in the 'Analyse Démontrée' of Reynau, a work then much esteemed in France, procured him admission to the Academy of Sciences, in 1741, at the age of twenty-four. From this time may be dated the career of honour which ranks him among the greatest benefactors to science of the last century. We will now interrupt the order of his life to specify his principal works. In 1743 appeared his 'Treatise of Dynamics,' founded upon a general principle which afterwards received the name of 'D'Alembert's Principle.' The deductions from this new and fertile source of analytical discovery appeared in rapid succession. In 1744 he published his 'Treatise on the Equilibrium and Motion of Fluids.' In 1746 his 'Reflections on the General Causes of Winds' obtained the prize of the Academy of Berlin. This treatise will always be remarkable, as the first which contained the general equations of the motion of fluids, as well as the first announcement and use of the calculus of partial differences. In 1747 he gave the first analytical solution of the problem of vibrating chords, and the motion of a column of air; in 1749 he did the same for the precession of the equinoxes and the nutation of the earth's axis, the latter of which had been just discovered by Bradley. In 1762 he published his 'Essay on the Resistance of Fluids,' a treatise originally written in competition for a prize proposed by the Academy of Berlin, but the decision of which was postponed, and finally awarded to a production which has not since gained any reputation for its author. A misunderstanding between Euler and D'Alembert is asserted by some French writers as the ground of this rejection, which, resting on the well-known character of Euler, we must be permitted to doubt. In the same year he also edited Rameau's 'Elements of Music,' though his opinions did not entirely coincide with that celebrated system. In 1747 he presented to the Academy of Sciences his 'Essay on the Problem of Three Bodies,' and in 1754 and 1756 he published 'Researches on Various Points connected with the System of the Universe.' We must complete the list of his mathematical works by mentioning his 'Opuscles,' collected and published towards the end of his life, in eight volumes. Though D'Alembert wrote no large system of pure analysis, the various methods and hints which are so richly scattered in his physico-mathematical works have always been considered as rendering them a mine of instruction for mathematicians.

We now turn to his philosophical productions. The French 'Encyclopédie,' as is well known, was commenced by Diderot and himself, as editors; and it is needless to speak of his celebrated Introductory Discourse, a work which, as Condorcet expresses it, there are only two or three men in a century capable of writing. D'Alembert contributed several literary articles; but on the stoppage of the work by the government, after the completion of the second volume, he retired from the editorship, nor would he resume his functions when permission to proceed was at length obtained. From that time he confined himself entirely to the mathematical part of the work, and his expositions of the metaphysical difficulties of abstract science are among the clearest and best on record. While engaged on this undertaking, he wrote his 'Mélanges de Philosophie,' &c., 'Memoirs of Christina of Sweden,' 'Essay on the Servility of Men of Letters to the Great,' 'Elements of Philosophy,' and a treatise on 'The Destruction of the Jesuits.' He also published translations of several parts of Tacitus, which are admitted by scholars to possess no small degree of merit. In 1772, when elected perpetual secretary of the Academy, he wrote the 'Eloges' of the members who had died from 1700 up to that date. His correspondence, and some additional pieces, were published after his death. The whole of his works have been collected in one edition by M. Bastien, in eighteen volumes, octavo, Paris, 1805.

In 1752 Frederic of Prussia, who had conceived the highest esteem for his writings, endeavoured to attract him to Berlin. D'Alembert refused the offer, but in 1754 he accepted a pension of 1200 francs. In 1756, through the friendship of M. D'Argenson, then minister, he obtained the same from Louis XV. In 1755, by the recommendation of Benedict XIV., he was admitted into the Institute of Bologna. In 1762 Catharine of Russia requested him to undertake the education of her son, with an income of 100,000 francs. On his declining the offer, she wrote again to press him, and says in her letter, "I know that your refusal arises from your desire to cultivate your studies and your friendships in quiet. But this is of no consequence: bring all your friends with you, and I promise you that both you and they

shall have every accommodation in my power." D'Alembert was too much attached to his situation and his income of 150*l.* a-year to accept even this princely offer. The letter of Catharine it was unanimously agreed to enter on the records of the Academy of Sciences. In 1759 Frederic again pressed his coming to Berlin, in a letter in which he says, "I wait in silence the moment when the ingratitude of your own country will oblige you to fly to a land where you are already naturalised in the minds of all who think." In 1763, when D'Alembert visited Frederic, the latter again repeated his offer, which was again declined; the king assuring him that it was the only false calculation he had ever made in his life.

We now come to relate the history of a connection which ended by embittering the last years of the life of D'Alembert, and finally, it is supposed, had no small share in sending him to his grave. At the house of a common friend he was in the habit of meeting Mlle. de l'Espinasse, a young lady whose talents caused her society to be sought by the élite of the literary world of Paris. Between her and D'Alembert a mutual attachment grew up, which though, as appeared afterwards, not very strong on her part, became the moving passion of his future life. When, in 1765, he was attacked by a violent disorder, she insisted on being his attendant, and after his recovery they lived in the same house. It is said that friendship was their only bond of union; and this may be believed, since in the then state of opinion, the assertion, if untrue, would have been unnecessary. The friendship, or love, of the lady however found other objects; and though D'Alembert still retained all his former affection for her, she treated him with contempt and unkindness. Her death left him inconsolable; and his reflections upon her tomb, published in his posthumous work, present the singular spectacle of a lover mourning for a mistress whose regard for him, as he was obliged to admit to himself, had entirely ceased before her death. After that event, he fell into a profound melancholy, nor did he ever recover his former vivacity. His death took place October 29, 1783. Not having received extreme unction it was with great difficulty that a priest could be found to inter him, and then only on condition that the funeral should be private.

The character of D'Alembert was one of great simplicity, carried even to bluntness of speech, and of unusual benevolence, mixed with a keen sense of the ridiculous, which exerted itself openly and without scruple upon those who attempted the common species of flattery. He was the friend of Frederic of Prussia, because that monarch exacted no servility; and to him only, and two disgraced ministers, of all the great ones of the earth, did D'Alembert ever dedicate a work. He was totally free from envy. Lagrange and Laplace owed some of their first steps in life to him; though the former had settled a mathematical controversy in favour of Euler and against him. In his dispute with Clairaut on the method of finding the orbit of a comet, and with Rousseau on the article 'Calvin' in the 'Encyclopédie,' he gave his friends no reason to blush for his want of temper. It was his maxim, that a man should be very careful in his writings, careful enough in his actions, and moderately careful in his words; his observance of the last part of the maxim sometimes made him enemies. The Duc de Choiseul, when minister, refused the united solicitations in his favour of the Academy of Sciences for a pension vacant by the death of Clairaut, for more than six months, because he had said, in a letter to Voltaire which was opened at the post-office, "Your protector, or rather your protégé, M. de Choiseul." He cared nothing for those in power, at a time when the latter exacted and obtained deference in very small matters. Madame de Pompadour, who hated all the friends of Frederic, refused the request of Marmontel that she would employ her influence with the king in favour of D'Alembert: on one occasion, alleging that the latter had put himself at the head of the Italian party in music. It was his maxim that no man ought to spend money in superfluities while others were in want; and a friend, who knew him well, declared to the editor of his works, that when his income amounted to 8200 francs, he gave away the half. His attentions to his foster-mother, to the end of her life, were those of a son. In his account of his own character, a singular mixture of vanity and candour, written in the third person, he speaks as follows: "Devoted to study and privacy till the age of twenty-five, he entered late into the world, and was never much pleased with it. He could never bend himself to learn its usages and language, and perhaps even indulged a sort of petty vanity in despising them. He is never rude, because he is neither brutal nor severe; but he is sometimes blunt, through inattention or ignorance. Compliments embarrass him, because he never can find a suitable answer immediately; when he says flattering things, it is always because he thinks them. The basis of his character is frankness and truth, often rather blunt, but never disgusting. He is impatient and angry, even to violence, when anything goes wrong, but it all evaporates in words. He is soon satisfied and easily governed, provided he does not see what you are at; for his love of independence amounts to fanaticism, so that he often denies himself things which would be agreeable to him, because he is afraid they would put him under some restraint; which makes some of his friends call him, justly enough, the slave of his liberty." This account agrees very well with that of his friends.

D'Alembert has been held up to reprobation in this country on account of his religious opinions. But on this point we must observe, that there is a wide line of distinction between him and some of his

colleagues in the 'Encyclopédie,' such as Diderot and Voltaire. When we blame the two latter, it is not for the opinions they held (for which they are not answerable to any man), but for their offensive manner of expressing them, and the odious intolerance of all opinions except their own which runs through their writings. Men of the best and of the worst lives appeared to be equally offensive to them, if they professed Christianity. The published writings of D'Alembert contain no expressions offensive to religion; they have never been forbidden on that account, as La Harpe observes, in any country of Europe. Had it not been for his private correspondence with Voltaire and others, which was published after his death, the world would not have known, except by implication, what the opinions of D'Alembert were. On this point we will cite two respectable Catholic authorities. The Bishop of Limoges said, during the life of D'Alembert, "I do not know him personally; but I have always heard that his manners are simple, and his conduct without a stain. As to his works, I read them over and over again, and I find nothing there except plenty of talent, great information, and a good system of morals. If his opinions are not as sound as his writings, he is to be pitied, but no one has a right to interrogate his conscience." La Harpe says of him, "I do not think that he ever printed a sentence which marks either hatred or contempt of religion; but we may cite a great many passages where, apparently drawn into enthusiasm by the heroes of Christianity, he speaks of them with dignity, and, what in him is even more strange, with sentiment."—"I knew D'Alembert well enough to be able to say, that he was sceptical in everything except mathematics. He would no more have said positively that there was no religion than that there was a God: he only thought the probabilities were in favour of theism, and against revelation. On this subject he tolerated all opinions, and this disposition made him think the intolerant arrogance of the atheists odious and unbearable."—"He has praised Maestlin, Fénelon, Bossuet, Fléchier, and Fleury, not only as writers, but as priests. He was just enough to be struck with the constant and admirable connection which existed between their faith and their practice, between their priestly character and their virtues." To these testimonies we need add nothing, except to desire the reader to turn to the part of the letter of the Empress Catharine which we have quoted, and then to recollect that it was the same Empress Catharine who refused a visit from Voltaire, saying, "that she had no Parnassus in her dominions for those who spoke disrespectfully of religion."

The style of D'Alembert as a writer is agreeable, but he is not placed by the French in the first rank. His mathematical works show that he wrote as he thought, without taking much trouble to finish. His expression was, "Let us find out the thing, there will be plenty of people to put it into shape;" an assertion abundantly verified since his time. He said of himself that he had "some talent and great facility." He liked the mathematical part of natural philosophy better than any other, and took but little interest in purely experimental researches. Hence he remained in ignorance of some of the most striking facts discovered in his day; and when laughed at on the subject, he always said, "I shall have plenty of time to learn all these pretty things." The time however, as Bossuet remarks, never arrived.

Those readers who would know more of D'Alembert should consult the first volume of Bastien's edition of his works.

ALEXANDER. [PARIA.]

ALEXANDER I, son of Amyntas I, said to be the tenth king of Macedonia, was alive at the time of the great Persian invasion of Greece, B.C. 480. His history, as far as it is known, and his share in the troubles of the Persian wars, are contained in the last five books of Herodotus.

ALEXANDER II, the sixteenth king of Macedonia, was the son of Amyntas II, and ascended the throne about B.C. 370.

ALEXANDER III, surnamed the Great, king of Macedonia, was the son of Philip and Olympias, and born at Pella in the autumn of the year B.C. 356. On his father's side he was descended from Caranus the Heraclid, who was the first king of Macedonia; his mother belonged to the royal house of Epirus, which traced its pedigree up to Achilles, the most celebrated hero of the Trojan War. She was the daughter of Neoptolemus, prince of the Molossians, and the sister of Alexander of Epirus, who lost his life in Italy. The historians of Alexander regard it as a significant coincidence that Philip on the same day received the intelligence of the birth of his son, of the victory of his General Parmenio over the Illyrians, and of his own victory at the Olympic games; on the same day also the magnificent temple of Diana at Ephesus was burnt down. Occurrences like these were afterwards thought to be indications of the future greatness of Alexander, and various marvellous stories were fabricated, which were believed and eagerly spread by the flattery or the superstition of the Greeks, and readily listened to by Alexander himself in the midst of his wonderful career of conquest. Many persons were engaged in the early education of Alexander, but the general conduct of it was intrusted to Leonidas, a relation of Olympias, and a man of austere character. Lysimachus, an Acarnanian, appears to have insinuated himself into the favour of the royal family of Macedonia and of his pupil by vulgar flattery; he is reported to have called Alexander always by the name of Achilles, and Philip by that of Peleus. About the time when Alexander had reached his thirteenth

year, Philip thought it advisable to procure for his son the best instructor of the age, and his choice fell upon Aristotle. A letter which Philip is said to have written to this philosopher on the occasion is preserved in Gellius. Under the instruction of such a master the powerful mind of Alexander was rapidly developed, and enriched with stores of practical and useful knowledge. With the view of preparing his pupil for his high station, Aristotle wrote a work on the art of government, which is no longer extant. No royal pupil ever had the advantage of such a master. His short life was spent in gigantic undertakings, and in the midst of war; but the results of Aristotle's teaching are apparent in all Alexander's plans for consolidating his empire: his love of knowledge manifested itself to the last months of his life and in the midst of all his labours. His physical education also was not neglected. In horsemanship he is said to have excelled all his contemporaries; and it is a well-known story, that when the celebrated horse Bucephalus was brought to the Macedonian capital, no one but young Alexander was able to manage him. His alleged descent from Achilles, and the flattery of those by whom he was surrounded, made a deep and lasting impression upon his youthful mind; the 'Iliad' became his favourite book, and its hero, Achilles, his great model. Ambition was his ruling passion; everything which appeared to limit the sphere within which he hoped to gain distinction, seemed to him an encroachment upon his own rights. When intelligence was brought of his father's victories, he would lament that nothing would be left for him to do: he refused to contend for the prize at the Olympic games because he could not have kings for his competitors. In the same spirit he regretted that Aristotle published one of his profound works, because the wisdom which he wished to possess alone was thus communicated to many. He would always pardon and honour an enemy whose resistance had added to his own glory, but a cowardly opponent was the object of his contempt.

Head of Alexander the Great, enlarged, from a coin in the Bodleian Library, Oxford. The head is repeated beneath, with the reverse, showing the size of the coin.

When Alexander had reached his sixteenth year, Philip was obliged to leave his kingdom to carry on a campaign against Byzantium; and as his son had already shown extraordinary judgment in public affairs, Philip intrusted him with the administration of Macedonia. During the absence of his father, he is said to have led an army against some revolted tribe, and to have made himself master of their town. The first occasion on which he specially signalled himself was two years later, in the battle of Charonea (B.C. 338), and the victory on that day is mainly ascribed to his courage; he broke the lines of the enemy, and crushed the sacred band of the Thebans. Philip was proud of such a son, and was even pleased to hear the Macedonians call him their king, while they called Philip their general. But the good understanding between him and his father was disturbed during the last years of Philip's life, owing to his father repudiating Olympias, and giving his hand to Cleopatra, the niece of Attalus. A reconciliation took place, but on the very day that it was to be sealed by the marriage of Philip's daughter with a brother of Olympias, Philip was assassinated (B.C. 336), and it was even reported that Alexander was compromised in the conspiracy. There is however no evidence to prove the truth of this report, though it is possible that Alexander at least knew of the plot, notwithstanding the severe punishment which he inflicted on most of the guilty persons.

At the age of twenty Alexander was thus suddenly called to the throne of Macedonia. But while the attachment of the people of Macedonia, who had always been accustomed to look up to him with admiration, was secured by a reduction of taxes and other politic measures, dangers were threatening on all sides, and he had to secure by wars the throne which was his lawful inheritance. His father had during the last years of his life made extensive preparations for invading Persia, and Attalus and Parmenio had already been sent into Asia with a force. The realisation of these plans, in the midst of which Alexander had grown up to manhood, and in which he had taken a most lively interest, now devolved upon him; but before he could carry them into effect it was necessary to secure his own dominions. Attalus, the uncle of Cleopatra, aimed at usurping the crown of Macedonia, under the pretext of securing it to Philip's son by Cleopatra; Greece was stirred up by Demosthenes against Macedonia, and the barbarians in the north and west were ready to take up arms for their independence. Everything depended upon quick and decisive action. Alexander was well aware of this, and at the same time he was determined not to surrender any part of his dominions, as some of his timid or cautious friends advised him. His first measure was to send his general, Hecateus, with a force to Asia, with instructions to bring Attalus back to Macedonia either dead or alive. All the professions of attachment and fidelity that Attalus made were of no avail; he was put to death, and his army joined that of Parmenio, who had remained faithful. While this took place in Asia, Alexander marched with an army into Greece. Thessaly submitted without resistance, and transferred to him the supreme command in the projected expedition against Persia. After having marched through the pass of Thermopylae, he assembled the Delphic Amphictyons, and was received a member of their confederacy, and the decree of the Thessalians was confirmed by a similar one of the Amphictyons. Advancing into Boeotia, he pitched his camp in the neighbourhood of the Cadmea, the citadel of Thebes. His sudden appearance struck terror into the Thebans, who had been indulging in dreams of recovering their liberty. The Athenians also, who, pretending to despise young Alexander, had talked much about war, but as usual had made no preparations for it, were greatly alarmed when they heard of his sudden arrival before the gates of Thebes. They immediately despatched an embassy to beg his pardon for not having sent ambassadors to the assembly of the Delphic Amphictyons, and for not having conferred upon him the supreme command against Persia in their name also. Alexander received their ambassadors kindly, and only required the Athenians to send deputies to a general council of the Greeks which was to be held at Corinth. At this meeting all the states of Greece, with the exception of Sparta, transferred to the Macedonian king the command of all their forces against Persia, an office which they had before conferred upon his father. The Greeks overwhelmed the young king with assurances of attachment, marks of honour, and the meanest flattery. The refusal of the Spartans to join the other Greeks did not make Alexander in the least uneasy; he knew that he had nothing to fear from them, and that they were without the power to give effect to their wishes.

After having thus settled the affairs of Greece, he returned in the spring of B.C. 335 to Macedonia, to put down an insurrection of the northern barbarians. He marched from Amphipolis towards Mount Hæmus (Balkan), which he reached in ten days. He forced his way across the mountains, penetrated into the country of the Triballians, and pursued their king Syrmus as far as the Danube, where the barbarians took refuge in a strongly fortified island in the river. Before Alexander attacked them there, he wished to subdue the Getæ who occupied the north bank of the river. A fleet which had been sent up the Danube from Byzantium enabled him to cross the river. The Getæ, terrified at seeing the enemy thus unexpectedly invading their territory, left their homes and fled northward. Laden with booty, Alexander and his army returned to the south bank of the Danube, where he received embassies from the tribes which inhabited the plains of the Danube, and from king Syrmus, suing for peace and alliance. After having secured this frontier of his kingdom he hastened against Clitus and Glaucias, the chiefs of the Illyrians and Taulantians, who were threatening an attack upon Macedonia, while another tribe was to engage the army of Alexander on his return from the north. This plan however was thwarted, and Alexander compelled the barbarians to recognise the Macedonian supremacy.

While he was thus successfully engaged with the barbarians to the north and west of Macedonia, new dangers threatened in the south. The spirit of insurrection, stirred up by Demosthenes and other friends of the independence of Greece, had revived, especially at Thebes, which perhaps suffered more than any other Greek city from its Macedonian garrison; and on the arrival of a report that Alexander had lost his life in his Illyrian campaign, some of the Greek states resorted to hostile measures. The Thebans expelled their Macedonian garrison and sent envoys to other Greek states to invite them to aid in recovering their independence. Their summons was favourably received by most of the Greeks, but they were slow in carrying their resolutions into effect; and before a force was assembled, and even before the intelligence of Alexander being still alive reached Thebes, he was with his army at Onchestus in Boeotia. He immedi-

ately marched against Thebes, and attempted a peaceful reconciliation; but the Thebans answered him with insult. Perdiccas, one of Alexander's generals, availed himself, without his master's command, of a favourable opportunity for an attack with his own detachment, out of which a general engagement arose. Notwithstanding the brave resistance of the Thebans the city was taken, and this event was followed by one of the most bloody massacres in ancient history. The city, with the exception of the citadel, the temples, and the seven ancient gates, was razed to the ground; 6000 Thebans, men, women, and children, were put to the sword; and 80,000 others were sold as slaves. The priests, the friends of the Macedonians; and the descendants of Pindar alone retained their liberty. Of the private dwellings none was spared except the house of Pindar.

The other Greek states which had been willing to join Thebes, and more especially Athens, sought and obtained pardon from the conqueror, who afterwards showed on several occasions in his behaviour towards some of the surviving Thebans that he had not destroyed their city out of wanton cruelty. Convinced that the fearful fate of Thebes was a sufficient warning to the rest of Greece, Alexander returned to Macedonia to devote all his energy to preparations for the war against Persia. His friends advised him, before setting out for Asia, to marry, and give an heir to the throne of Macedonia; but he had already been too long prevented from carrying his Asiatic expedition into effect, and he thirsted for the possession of Asia. Before setting out he lavished nearly all his private possessions among his friends, and when Perdiccas asked him what he meant to retain for himself, he answered, "Hopes." Antipater was appointed regent of Macedonia during his absence, with a force of 12,000 foot and 1500 horse. Alexander set out for Asia in the beginning of the spring, B.C. 334, with an army of about 30,000 foot and 5000 horse, which mainly consisted of Macedonians and Thessalians, while the infantry consisted of 7000 allied Greeks, Thracians, Agrianians, and a number of mercenaries. His financial means were very small. The army advanced along the coast of Thrace, and after a march of twenty days reached Sestos on the Hellespont, where the Macedonian fleet lay at anchor ready to convey the army to the coast of Asia. This fleet consisted of 160 or, according to others, of 180 triremes, and a number of transports. While the greater part of the army landed at Abydos and encamped near Arisbe, Alexander, accompanied by his friend Hephæstion, paid a visit to the mound which was believed to contain the remains of Achilles, whose successor it was his ambition to be considered by his soldiers. As soon as he had joined his army again, he began his march against the Persians, who, although they had long been acquainted with the plans of the Macedonians, were not fully prepared, and had a force of about 20,000 horse and as many Greek mercenaries stationed near Zeleia. There was in the Persian army a Rhodian Greek, of the name of Memnon, whose military talent might have made him a formidable opponent to Alexander; but his advice to retreat before the Macedonians, who were scantily supplied with provisions, and to lay waste the country, was rejected by the Persians, and they advanced as far as the river Granicus, in order to check the progress of the invader. Alexander found the Persians drawn up in order of battle on the east bank of the river, and without listening to the advice of his cautious friend Parmenio, he boldly forced a passage in the face of the enemy with his cavalry, which kept the enemy engaged until the infantry came up. The discipline of the Macedonians, and the impetuosity of their attack, broke the line of the Persians, who were completely beaten, although the number of their dead was not very great: they are said to have lost about 1000 horsemen; but the mercenaries, who, as long as the Persians were engaged had, by the command of the Persians, been obliged to remain inactive, were for the most part cut down, and 2000 of them were made prisoners and sent to Macedonia to be employed as public slaves for having engaged in the service of the Persians against their own countrymen. Alexander had himself been active in the contest, and killed two Persians of the highest rank; after the victory he visited his soldiers who had been wounded. The parents and children of those who had fallen in the battle were honoured with privileges and immunities. In the first assault twenty of the king's horse-guard (*ἐταῖροι*) had fallen, and he honoured their valour by ordering Lysippus to execute their figures in bronze, which were erected in the Macedonian town of Dium, whence they were afterwards carried to Rome.

Before advancing into the interior of Asia Minor, Alexander wished to make himself master of the western and southern coasts of the peninsula. As he proceeded southward, nearly all the towns on the coast opened their gates to him; and to show that he had really come as their liberator, he established in all the cities a democratical form of government. Miletus was taken by storm. In the mean time a Persian fleet, consisting principally of Phœnician ships, lay off Mycale. The king, contrary to the advice of his generals, would not engage in a sea-fight, but kept his fleet quiet near the coast of Miletus; he thus prevented the Persians from landing and taking in water and provisions, the want of which compelled them to retreat to Samos. It was now late in the autumn of the year B.C. 334, and Alexander wanted to take possession of Caria and the capital Halicarnassus. The occupation of the country was easy enough: a princess of the name of Ada surrendered it to him without resistance, for which she

was rewarded with the title of Queen of Caria; but Halicarnassus, the siege of which is the most memorable event of this campaign, held out to the last under the command of Memnon, but was taken. As the winter was approaching, and Alexander had no apprehension of having to encounter another Persian army during this season, he allowed the Macedonians who wished it to spend the winter with their families in Macedonia, on condition of their returning at the beginning of spring with the reinforcements which were to be levied in Macedonia. A small detachment of the remainder of the army, which had been greatly increased by the Asiatic Greeks, was allowed under Parmenio to take up their winter quarters in the plains of Lydia. Alexander himself marched along the coast of Lycia. From Phaselis he chose the road along this dangerous coast to Pamphylia, took the towns of Perga, Side, and Aspendus, and, forcing his way through the mountains of Pisidia, which were inhabited by barbarous tribes, into Phrygia, he pitched his camp near Gordium, on the river Sangarius. Here he dexterously availed himself of a prophecy which in the eyes of the credulous made him appear as the man called by the Deity to rule over Asia. The acropolis of Gordium contained the Gordian knot by which the yoke and collars of the horses were fastened to the pole of the chariot. The sovereignty of Asia was promised to him who should be able to untie this complicated knot. After vainly attempting to untie the knot, Alexander relieved himself from his difficulty by cutting it, according to one account; but the particulars of the story vary. It was considered however that he had fulfilled the oracle, and the general opinion was confirmed by a storm of thunder and lightning.

In the spring of the year B.C. 333, the various detachments assembled at Gordium. Together with those who returned from their visit to their homes, there came from Macedonia and Greece 3000 foot, 300 horse, and 200 Thessalians, and 150 allies from Elis. Alexander led his army along the southern foot of the Paphlagonian Mountains to Ancyra, received the assurance of the submission of the Paphlagonians, and crossing the river Halys entered Cappadocia. Satisfied with making himself master of the south-western part of this province, he directed his march southward to the Cilician Gates, or one of the mountain passes which led over Taurus from Cappadocia into Cilicia, and proceeded as far as Tarsus on the Cydnus. Here his life was endangered by a fever which attacked him either in consequence of his great exertions, or, according to other accounts, in consequence of having bathed in the cold water of the river Cydnus; but the skill of his physician Philip, an Acarnanian, soon restored him to health. The possession of Cilicia was of the greatest importance to him on account of the communication with Asia Minor. While therefore Parmenio occupied the Syrian Gates or pass in the south-eastern corner of Cilicia, Alexander compelled the western parts of the country to submission. About the time that his conquests in this part were completed, he received intelligence of king Darius having assembled an immense force near the Syrian town of Sochi. The Persian king had now lost the ablest man in his service. Memnon, who after the taking of Halicarnassus had fled to Cos, and with his powerful fleet had gained possession of nearly the whole of the Ægean, died at the moment when he was on the point of sailing to Eubœa; a movement by which Alexander would perhaps have been compelled to give up for the present all thoughts of Eastern conquests. Darius had levied all the forces that his extensive empire could furnish, hoping to crush the invaders by his numerical superiority. Though he possessed no military talent, he commanded his own army, which is said to have consisted of 500,000 or 600,000 men, among

of whom 100,000 were Persians, 100,000 Greeks, and 300,000 mercenaries. Darius left his favourable position in the wide plain of Sochi, contrary to the advice of Amyntas, a Greek deserter, and entered the narrow plain of Issus, east of the little river Pinarus. By this movement he was in the rear of Alexander's army, who had left behind him at Issus those who were unfit for further service. Darius had probably been led to this unfortunate step by the belief that the long stay of Alexander in Cilicia was the result of fear. The Macedonians at Issus fell into the hands of the Persians, and were treated cruelly. Darius now hastened to attack Alexander, apprehending that he might make his escape; but Alexander, without waiting for the approach of Darius, returned by the same road by which he had come. The armies met in the narrow and uneven plain of the river Pinarus—a position most unfavourable to the unwieldy masses of the Persians. The contest began at day-break, in the autumn of the year B.C. 333. Notwithstanding the great resistance of the enemy, especially of the 30,000 Greek mercenaries, Alexander, towards the end of the day, gained a complete victory. The number of the slain on the part of the Persians was prodigious; the loss of the Macedonians is stated to have been very small. As soon as Darius saw his left wing routed he took to flight, and was followed by the whole army. The Persian king escaped across the Euphrates by the ford at Thapsacus. His chariot, cloak, shield, and bow were afterwards found in a narrow defile through which he had fled; his mother, Sisygambis, his wife Statira, and her children, fell into the hands of Alexander, who treated them with the utmost respect and delicacy. The booty which Alexander made after this victory was very great, but yet was insignificant compared with the treasures which Parmenio found at Damascus, whither they had been carried by the Persians before they left the plain of Sochi.

The Persian army was now dispersed, the Greek mercenaries had fled, and Asia was thrown open to the invader. For the present Alexander did not think it necessary to penetrate into the interior: he wished first to make himself complete master of the coasts of the Mediterranean. He therefore advanced into Phœnicia, where all the towns opened their gates. Tyre alone, which was situated on an island about half a mile from the main land, and was strongly fortified by lofty walls, for some time checked his progress, and it was not till after the lapse of seven months (about August of the year B.C. 332) that he succeeded in taking the city by constructing a causeway to connect the island with the continent, and by the use of a fleet which had been furnished him by other Phœnician towns and by Cyprus. The causeway of Alexander still remains, and Tyre is now part of the main land. The obstinacy of the Tyrians, the immense exertion and expense which their resistance rendered necessary, and the cruelty with which they had treated the Macedonians who fell into their hands, were followed by the most fearful revenge: 8000 Tyrians were put to death, and all the rest of the population sold into slavery; the highest magistrates alone and some Carthaginian ambassadors were spared, who had taken refuge in the temple of Hercules. The city itself was not destroyed, but received a new population consisting of Phœnicians and Cyprians; and Alexander, who knew the importance of the place, encouraged the revival of its commerce and prosperity.

During the siege of Tyre, Darius had sent to Alexander with proposals of peace, but the humiliation of the Persian king only convinced Alexander of his weakness. All the proposals of Darius were rejected with the declaration that the Persian king must petition and appear in person if he wished to ask for favour. During the siege of Tyre, Alexander had also made excursions with separate detachments of his army against other towns of Syria and some Arab tribes about the

From a Mosaic found at Pompeii, supposed to represent the Battle of Issus.

whom there were about 30,000 Greek mercenaries. Alexander marched from Tarsus along the Bay of Issus to the town of Myrian-

southern foot of Lebanon. In the autumn he proceeded with his army southward along the coast of Palestine, and, according to Josephus, he

paid a visit to Jerusalem, where he worshipped and sacrificed in the Temple, and was made acquainted with an ancient prophecy, that a king of Greece should conquer the king of Persia. But this long episode in Josephus is not supported by any other testimony. In the same autumn Alexander besieged the strong town of Gaza, near the southern frontier of Syria. It was vigorously defended for two months by the Persian commander Batis, and did not surrender until nearly all the garrison had fallen. Alexander, who had himself been severely wounded during the siege, sold the inhabitants as slaves, and re-peopled the town with Syrians from the neighbouring country.

The last province of Persia on the coasts of the Mediterranean that now remained was Egypt. In seven days Alexander marched with his army from Gaza through the desert to the gates of Pelusium, on the north-eastern frontier of Egypt, where he found the fleet at anchor, with which Phœnicia and Cyprus had supplied him. The Persian satrap of Egypt, having no means of defence, surrendered to Alexander without striking a blow. The Egyptians themselves, who had always hated the oppressive rule of the intolerant Persians, were little inclined to take up arms, and gladly surrendered to the invader, who justified their confidence in him by the restoration of several of their civil and religious institutions which the Persians had suppressed. The Greeks, of whom great numbers resided in Egypt, may also have helped the matter. After having paid visits to Heliopolis and Memphis, he sailed down the Canopic, or most western branch of the Nile, to the Lake of Marea, and here he founded, on a strip of barren land, the city of Alexandria, which still exists as a flourishing place of trade. The place was judiciously selected for the purpose of the Mediterranean trade on the one side, and the communication with the Red Sea through the Nile on the other. After the foundations of the new city were laid, Alexander marched along the coast to Parætonium, and thence in a southern direction, and through the desert to the renowned oracle of Jupiter Ammon in the oasis now called Siwah. What may have induced him to visit this sacred island of the desert is only matter of conjecture; but it is not improbable that it was the desire to see his wishes respecting the sovereignty of the world sanctioned by the oracle of Jupiter Ammon, and thus to inspire his soldiers with confidence; or it may be that the visit was connected with the foundation of Alexandria, and had a commercial object, as Ammonium was the centre of a considerable inland trade. Whatever his wishes may have been, Alexander was perfectly satisfied with the results of his visit: there was a report that the oracle had declared him the son of Jupiter Ammon, and promised him the sovereignty of the world; a report which must have been of incalculable advantage to Alexander with his soldiers and the inhabitants of Asia. After having richly rewarded the temple and its priests, he returned to Memphis, according to Aristobulus, by the same road by which he had gone; but according to Ptolemæus he took the shortest way across the desert.

In the spring of the year B.C. 331, after having received fresh reinforcements from Macedonia and Greece, Alexander set out on his march towards the interior of Asia. He visited Tyre, from whence he marched to the Euphrates, which he crossed at the ford of Thapsacus. From Thapsacus his march was in an eastern direction, across the plain of Mesopotamia towards the river Tigris, in the direction of Gaugamela, a distance of no less than 800 miles from Memphis. Darius had again assembled an immense army, the amount of which is stated at 1,000,000 infantry, 40,000 horse, 200 chariots with scythes, and about 15 elephants. He had chosen a favourable position in the plains of Gaugamela, east of the Tigris, on the banks of the small river Bumadus. After having allowed his soldiers four days' rest, Alexander moved in the night against the enemy, whom he found drawn up in battle array. On a morning of the month of October, in the year B.C. 331, the battle which put an end to the Persian monarchy began. Some parts of the Persian army fought courageously, and the Macedonians sustained some loss: but when Alexander, by an impetuous attack, succeeded in breaking the centre of the Persian army, which was commanded by Darius himself, the king took to flight, and was followed by his army in utter confusion. Alexander pursued the fugitives as far as Arbela (Erbil), about fifty miles east of Gaugamela, where he found the treasures of the king, and got an immense booty. Darius fled through the mountainous country to Ecbatana (Hamadan). The loss of the Persians on this day is said to have been enormous: that of the Macedonians is stated to have been very inconsiderable. It now only remained for Alexander to subdue the Persian satraps whose provinces had not yet been conquered, and who continued faithful to their king. In accomplishing this he was greatly assisted by the policy that he adopted; he promised to leave the satraps who would submit in possession of their former power, with the exception of the military command, which was given to Macedonians. The attachment of the people was gained in another way. Alexander, elated by his success, began to surround himself with all the pomp and splendour of an eastern king; he respected the religion and customs of his new subjects, and protected them from the oppression to which they had long been subjected. From this time a great change is manifest in the character and conduct of Alexander. He exercised no control over his passions; he committed acts of cruelty and excess such as are common with eastern despots. But he did not sink into indolence: active occupation, both mental and physical, remained now as before the only element in which he could exist.

From Arbela, Alexander marched southward to the ancient city of Babylon, which opened its gates without resistance; and he gained the good-will of the people by ordering the temple of Belus, which had been damaged by the Persians, to be restored, and by sacrificing to the god according to the rites of the Chaldeans. After a short stay there he set out for Susa (Sus) on the Choaspes (Kerak, or more properly Kerkhab), which he reached after a march of twenty days, and where he found immense treasures, which had been accumulated in this ancient capital. The Macedonians, following the example of their master, plunged into the enjoyment of the pleasures of this wealthy city; and the more readily, as they had hitherto been exposed to all kinds of hardship, with scarcely any interval of repose. Towards the end of the year Alexander left Susa for Persepolis, the original seat of the Persian kings, and where many of them were buried. The road which he took is described thus:—He first marched towards the river Pasitigris (Karoon), and thence along the valley of Ram-Hormuz to the mountain pass now called Kala-i-Sifid, which forms the entrance into Persia Proper. After having met with some resistance at this spot, he took Persepolis by surprise, so that none of the treasures were carried away before his arrival. To avenge the destruction of the Greek temples by the Persians, Alexander, contrary to the advice of his friend Parmenio, set fire to the palace of Persepolis, and part of it was burnt down. According to another account he was instigated to this act of madness by Thais, an Athenian courtesan, during the revelry of a banquet. Immense ruins (Tchil-Minar) still point out the site of this ancient city; but its complete destruction, which is usually ascribed to Alexander, belongs most probably to a much later period. After a stay of four months, during which he subdued Persia and several of the neighbouring mountain tribes, he left, as he had done at Babylon and Susa, the country under the administration of a Persian satrap. Early in the year B.C. 330 he began his march on Ecbatana, where Darius, on seeing that Alexander after the battle of Gaugamela turned to the south, had collected a new force with which he hoped to maintain himself in Media. But while he was expecting reinforcements from the Scythians and Cadusians, he was surprised by the tidings of Alexander's arrival on the frontiers of Media. Unable to maintain his ground, Darius fled through Rhaga (Rey, near Tehran), and the mountain pass, called the Caspian gates (the Elburz mountains), to his Bactrian provinces. After a short stay at Ecbatana, where he dismissed his Thessalian horse and other allies who had served their time, with rich presents, Alexander hastened after the fugitive king; but on reaching the Caspian gates he was informed that Darius had been made a prisoner by his own satrap, Bessus. The Macedonians continued their pursuit with great rapidity through the arid deserts of Parthia, and when they were near upon Bessus and his associates, who were unable either to make a stand against Alexander or to carry their victim any further, the traitors wounded the king mortally, left him near a place called Hecatompylos, and dispersed in various directions. Darius died before Alexander came up to the spot. Moved by the misfortunes of the Persian king, Alexander covered the body with his own cloak, and sent it to Persepolis to be buried in the tomb of his ancestors.

From this moment Alexander was in the undisputed possession of the Persian empire: all the satraps, who had hitherto been faithful to their king, now seeing that resistance had become hopeless, submitted to Alexander, who knew how to value their fidelity, and he rewarded them for it. Bessus, who had escaped to Bactria, assumed under the name of Artaxerxes the title of king, and endeavoured to get together an army. Alexander marched into Hyrcania, where the Greeks who had served in the army of Darius were assembled. After some negotiation Alexander induced them to surrender; he pardoned them for what was past, and engaged a great number of them in his service; but some Lacedæmonians who had been sent as ambassadors to Darius by their government were put into chains. At Zadracarta, the capital of the Parthians, the site of which is unknown, Alexander spent fifteen days; after which he proceeded along the northern extremity of the great salt desert towards the frontier of Aria, which submitted to him. He left this province in the hands of its former satrap, Satibarzanes, and marched farther east towards Bactria; but he was soon called back by the news that Satibarzanes had revolted, had formed an alliance with Bessus, and had destroyed the Macedonians who had been left in his province. In order to secure his rear, Alexander hastened back with almost incredible speed, and in two days surprised the faithless rebel in his capital of Artacoana. The satrap took to flight, and Alexander, after having appointed a new governor, instead of returning on his former road to Bactria, thought it more expedient to secure the south-eastern part of Aria. After a march through an almost impassable country—to ascertain the precise road is impossible—he took possession of the countries of the Zarangæ, Drangæ, Dragogæ, and other tribes on the banks of the river Etymandrus (Helmund), which flows into the Lake of Aria (Zerrah). During his stay at Prophthasia, the capital of the Drangæ, things occurred which showed the altered character of Alexander in the light in which we are only accustomed to see an oriental despot. Philotas, the son of Alexander's friend Parmenio, was charged with having formed a conspiracy against the life of the king. He was accused by Alexander before a court of Macedonians: distinct proof was not produced, though circumstantial evidence seemed to warrant the truth of the charge. Philotas was

tortured, confessed the crime, and was put to death. So far all might be just: but Parmenio, who was then with a part of the army at Kobstanta to guard the treasures conveyed thither from Persia, was likewise put to death by the command of Alexander, apparently only because Alexander feared lest the father might avenge the death of his son. Some other Macedonians charged with having taken part in the conspiracy of Philotas, and Alexander, son of Aeropus, were also put to death. These occurrences also show the state of feeling that began to spread among the Macedonians in the army. They must have felt grieved at their king abandoning the customs of their native land, and their grief was increased by envy and jealousy as they saw the Persians of rank placed by Alexander on the same footing with themselves.

From Prophthasia the army advanced probably up the river Etymandrus through the country of the Ariaspans into that of the Arachoti, whose conquest completed that of Aria. The detail of this campaign is unknown, but it is evident that Alexander must have had to contend with extraordinary difficulties. On his march towards the mountains in the north he founded a town, Alexandria, which is supposed to be the modern Candahar. He was now separated from Bactria by the immense mountains of the Paropamisus, the western ranges of the Hindoo Coosh. Alexander crossed these lofty mountains, which were covered with deep snow, and did not even supply his army with firewood. After fourteen days of great exertions and sufferings the army reached Drapaca, or Adrapa, the first Bactrian town on the northern side of the Paropamisus. Bactria submitted to the conqueror without resistance, for as soon as Bessus had heard of the approach of Alexander he had fled across the Oxus to Nautaca in Sogdiana. Here he was overtaken and made prisoner by Ptolemaeus, the son of Lagus, and was brought by Alexander before a Persian court, which condemned him to death as a regicide.

In the month of May or June, B.C. 329, Alexander with his whole army crossed the river Oxus, which seems to have been swelled by the melted snow of the mountains, as Arrian states that its breadth was about six stadia. Boats or rafts could not be constructed for want of materials, and the passage was effected in the space of five days by means of floats made of the tent-skins of the soldiers, filled with light materials. Previous to crossing this river, Alexander sent home those Macedonians and Thessalian horsemen who were no longer fit for service. When he reached the northern bank of the Oxus he directed his course to Maracanda, the modern Samarcand, then the capital of Sogdiana. After several engagements with the warlike inhabitants of that province, he advanced as far as the river Jaxartes (Sir), which he meant to make the frontier of his empire against the Scythians. Cyropolis on the Jaxartes was taken by storm; and, to strike terror into the Scythians, he crossed the river, defeated the Scythian cavalry, and pursued the enemy until his own army became exhausted in those dry steppes, and began to suffer from thirst and the unwholesome water of the country. After founding a town, Alexandria, on the Jaxartes, which was to be a frontier fortress against Scythia, he returned to Zariaspa, where he spent the winter of 329 and 328. During the winter months he received various embassies from distant tribes, and reinforcements for his army, which had been somewhat diminished by the garrisons which he had been obliged to leave in several places. During this same winter Alexander gave another proof of his ungovernable passion by the murder of Clitus. Arrian remarks that, among other Asiatic customs, the king had adopted the Persian fashion of hard drinking, while the miserable flatterers, by whom he was surrounded, encouraged his vanity by exalting him above the demigods and heroes of Greece. Clitus, who was drunk himself, had the boldness and imprudence to deny Alexander's claim to such extravagant honours, and the furious king, whom his attendants were unable to restrain, pierced his friend through with a javelin on the spot. Unavailing honours to the dead, and bitter remorse on the part of the murderer, were the natural termination of this tragical story.

In the spring of B.C. 328 Alexander again marched into Sogdiana across the river Oxus, near a spot which was marked by a fountain of water and a fountain of oil. Sogdiana abounded in mountain fortresses, and Alexander had to take them before he could be said to have possession of the country. As the winter in those regions is too cold for military operations, he took up his winter quarters at Nautaca. In the following spring he renewed his attacks upon the mountain fortresses, and in one of them, which was situated upon a steep and almost inaccessible rock, and was compelled, or rather frightened, into a surrender, Alexander made Oxyartes, a Bactrian prince, and his beautiful daughter Roxana, his prisoners. Alexander was captivated by the beauty of Roxana, and made her his wife, to the great delight of his eastern subjects. After having reduced all the strongholds in Sogdiana, he returned through Bactria and across the Hindoo Coosh to Alexandria in Aria, which he reached after a march, it is said, of ten days. During the ensuing winter new symptoms of the dissatisfaction of the Macedonians with their king showed themselves. While he was making preparations for an expedition to India, the plan of which he had been maturing for the last two years, a conspiracy was formed against him, in which even those individuals took part who had before been his most contemptible flatterers, as Callisthenes of Olynthus. Hermolaus was at the head of it, and in conjunction with

a number of the royal pages a plan was formed for murdering the king. But the conspiracy was discovered, and Callisthenes and Hermolaus with his young associates were put to death.

The time for his Indian expedition had now come, as all the conquered countries continued obedient to their new master. Late in the spring of B.C. 327, he set out from Alexandria in Aria with an army of about 120,000 men, of whom about 40,000 Macedonians formed the nucleus. Ptolemaeus and Hephestion were sent ahead with a strong detachment to make a bridge of boats across the river Indus. Alexander and his army marched to a place called Cabura, which was henceforth called Nicaea, crossed the rivers Choaspes and Gyrus, and on his road took Aornos, another mountain fortress, notwithstanding the obstinate resistance of the besieged. He then crossed the Indus, probably a little north of the modern place called Attock, where the river is very deep, and about a thousand feet wide. It must have been early in the year 326 when Alexander entered India, or rather that part of it which is now called the Panjab, that is, the Five Rivers.

His march towards the Indus had not been accomplished without various struggles with the mountain tribes; while on the other hand several Indian chiefs, such as Taxiles of Taxila, welcomed him with rich presents and surrendered their cities. In this manner Alexander got possession of Taxila, the largest place between the Indus and the Hydaspes. Alexander proceeded from Taxila to the river Hydaspes (now Behut, or Bedusta), whither the boats which had been used on the Indus had been conveyed by taking them in pieces. On the Hydaspes he met a most resolute enemy in the Indian king Porus, who possessed the whole country between the Hydaspes and Acesines, and was hostile to Taxiles, which circumstance seems to have induced Taxiles to surrender to Alexander and make him his friend. On reaching the Hydaspes, Alexander perceived the immense army of Porus drawn up in battle array on the opposite bank. The river was much swollen, and there seemed to be no possibility of crossing it. But Alexander contrived to cross it unobserved with a detachment of his troops and with his invincible cavalry in a place somewhat above the part where Porus was posted. Porus began the attack with his best troops, 200 elephants and 300 war chariots. But Alexander, who was superior in cavalry, drove back upon their infantry the Indian cavalry, which, as well as the elephants, had been placed in front of their lines; and these were thrown into utter confusion. After a hard struggle Alexander gained a complete victory, in which the Indians are said to have lost 23,000 men, and among them their best generals and two sons of Porus. The war chariots were destroyed, and the elephants partly killed and partly taken. The loss of the Macedonians is estimated by Arrian so low that it is scarcely credible, and we are probably justified in preferring the statement of Diodorus, according to whom the Macedonians lost upwards of 1200 foot and 300 horsemen. Porus was among the last who fled from the field: he was taken by the soldiers of Alexander, who, full of admiration at his courage, not only restored to him his kingdom, but increased it considerably afterwards, in order to make him a faithful vassal. But by this means he excited a jealousy between Taxiles and Porus.

After this victory Alexander stayed thirty days on the Hydaspes, where he celebrated sacrifices and games, and founded two towns, one on each bank of the Hydaspes; that on the western bank was called Bucephala, in honour of his famous war-horse, and the other Nicaea, to commemorate the victory over Porus. Hereupon the army advanced towards the third river of the Panjab, the Acesines (Chenab), which was crossed in boats and on skins. Alexander then traversed the barren plain between the Acesines and Hydraotes (Ravee), the latter of which rivers he likewise crossed to attack a new enemy. But the second Porus, who ruled over the country between these two rivers, had fled across the Hydraotes on the approach of Alexander, and his dominions were given to the first Porus. Alexander thus met with no obstacle until he reached the eastern bank of the Hydraotes. Here the Cathæi, the most warlike of the Indian tribes, made a most resolute resistance. Their army was stationed on an eminence in their capital Sangala, which was surrounded by walls and a triple line of waggons; but this fortress was taken, and the power of this brave tribe, whose descendants some modern travellers have supposed that they have discovered in the modern Kattia, was broken, and their territory was divided among those Indian tribes which had submitted without resistance. Alexander had now pressed forward as far as the river Hyphasis (Garra), and the reports of a rich country beyond it offered a temptation to cross this river also. But his exhausted army did not feel the strength of the temptation. The troops had suffered so much from the incessant toil and marches through barren and hostile countries, and their hopes and expectations had so frequently been disappointed, that they were determined to proceed no farther, and neither persuasion nor threats could induce them to move. Alexander at last, advised, as he said, by the signs of the sacrifices, determined not to lead his army farther. Twelve gigantic towers were erected on the banks of the Hyphasis to mark the limits of his adventures. He returned across the rivers which he had passed before in a western direction as far as the Hydaspes, and the whole country between this river and the Hyphasis was given to the brave Porus, who thus became the most powerful prince of India.

On reaching the Hydaspes the army did not march farther west, as

Alexander wished to conquer the country around the Indus and to explore the course of the river down to its mouth. This had been his plan when he crossed the Hydaspes for the first time, and he had accordingly given orders to build a fleet on the Hydaspes, for which there were then, as there are now, abundant materials. On his arrival a great number of ships were ready for sailing, and after a short time their number was increased to 1800, or, according to others, to 2000. In the beginning of November, B.C. 326, the army began to move. Alexander himself embarked in the fleet with about 8000 men, under the admiral Nearchus, who commanded the ship in which the king sailed. The remainder of the army was divided between Craterus and Hephaestion, the former of whom led his forces along the right, and the latter on the left bank of the river. The tribes through whose territory the army passed submitted without resistance, except the Malli, whom Alexander hastened to attack before they were fully prepared. Their greatest and best fortified place—perhaps the modern Moultan, or Malli-than—was taken by an assault, in which Alexander himself was severely wounded. This accident threw the army into the greatest consternation; but he was soon restored, and the rest of the Malli sent envoys with offers to recognise his sovereignty. The submission of the Indian tribes south of the Malli took place without any difficulty. When the army reached the point where the four united rivers join the Indus, he ordered a town, Alexandria, and dockyards to be built, which were garrisoned by some Thracians under the satrap Philip, to keep the country in subjection. After having reinforced his fleet, he sailed down the Indus, and visited Sogdi, where he likewise ordered dockyards to be built. All the Indian chiefs on both sides of the river submitted. Musicanus, one of them, was seduced by the Brahmins to revolt, but he was taken and put to death. All the important towns that fell into the conqueror's hands received garrisons.

Before Alexander reached the territory of the Prince of Pattala, who submitted without a blow, about the third part of the army was sent, under the command of Craterus, westward through the country of the Arrachoti and Drangae into Carmania. At Pattala, the apex of the Indian delta, Alexander built a naval station, and then sailed down the western branch of the river into the Indian Ocean, a voyage which was not without danger on account of the rapid changes of the tides. He then also explored the eastern branch of the river as well as the delta inclosed by the two arms. The end he had in view was the establishment of a commercial communication by sea between India and the Persian Gulf. For this purpose he ordered dockyards to be built, wells to be dug, and the land round Pattala to be cultivated. Pattala itself was garrisoned. Nearchus now received orders to sail with the fleet from the mouth of the Indus through the unknown ocean to the Persian Gulf [NEARCHUS], while Alexander moved from Pattala, in the autumn of 325, and took the nearest road to Persia through the country of the Arabites and Oritae, whose principal town, Rambacia, he extended and fortified. After having appointed a governor he proceeded towards Gedrosia (Mekran). As the army advanced, the country became more barren and desolate, and the roads were almost impassable. The march through the arid and sandy desert of Gedrosia in the burning heat of the sun, while water and provisions were wanting, surpassed all the difficulties and sufferings which the army had hitherto experienced. Alexander did everything in his power to alleviate the sufferings of his men, but during sixty days of exhaustion and disease a considerable part of the army perished. After unspeakable sufferings they at last reached Pura. Here the soldiers were allowed a short rest, and then proceeded without any difficulty to Carmana (Kirman), the capital of Carmania, where Alexander was joined by Craterus with his detachment and the elephants. Soon after Nearchus also landed on the coast of Carmania near Harmozia (Ormuz). The king, delighted with the success of his bold enterprises, offered thanks and sacrifices to the gods, and rewarded his men by festivities and amusements.

After a short stay Nearchus continued his voyage along the coast to the mouth of the Tigris and Euphrates; Hephaestion led the greater part of the army, the beasts of burden, and the elephants along the sea-coast to Persia; and Alexander, with his light infantry and his horseguards, took the nearest road across the mountains to Pasargadae, the burial-place of the great Cyrus. His tomb had been plundered by robbers, and the body thrown out of the golden coffin. Alexander ordered the body to be restored to its place of rest, and the damage of the tomb to be repaired by skilful artists. After having paid this honour to the dead, he went to Persepolis, where he is said to have felt bitter remorse at seeing the destruction which he had caused. As few had expected that Alexander would return from his Indian expedition, some of the Persian satraps had during his absence oppressed their provinces. The Persian governor at Persepolis was put to death, and the Macedonian, Peucestas, was appointed in his stead, who, by adopting the manners of the Persians, gave great satisfaction to the people. From Persepolis Alexander marched to Susa on the Choaspes, in B.C. 324. Here the army was at length allowed to rest and recover from their fatigues, which the king made them forget by brilliant festivities. All the governors who had misconducted themselves during his absence were severely punished, and after this was over, he began the great work of consolidating the union between the Western and Eastern world by intermarriages.

The king himself set the example, and took a second wife, Barsine, the eldest daughter of Darius, and according to some authorities, a third, Parysatis, the daughter of Ochus. About eighty of his generals also received each an Asiatic wife, who was assigned by the king, and Hephaestion, the dearest friend of Alexander, received another daughter of Darius, that their children might be of the same blood. About 10,000 other Macedonians chose Persian women for their wives, with whom they received rich dowries from the king. These marriages were celebrated with the most brilliant festivities and amusements that Greek taste and ingenuity could devise. Another step was also taken towards establishing a union between Europeans and Asiatics. The Asiatics, who had hitherto been regarded as an inferior race, and only served as auxiliary troops in the army of Alexander, were now trained and armed in the European fashion: they were organised in separate regiments, and partly incorporated with those of the Macedonians, and placed on an equality with them. This policy was wise and necessary; for, not to mention more obvious reasons, Macedonia must at that time have been nearly exhausted by the frequent reinforcements sent into Asia. While he was thus engaged in Persia, Alexander did not neglect his plans for the extension of commerce; he made the rivers Eulæus and Tigris more suitable for navigation by removing the bunds, or masses of masonry, by which the current of the water was impeded, for the purpose of irrigation. To carry his plans into effect, and to gain a clear view of the matter himself, he sailed down the Eulæus and returned up the Tigris as far as Opis.

The Macedonians were dissatisfied with the new arrangements which Alexander had made in the army, and also with his conduct: he seemed to despise the customs of his forefathers. They only waited for an opportunity to break out in open rebellion. This opportunity was offered in 324, during a review of the troops at Opis, when Alexander expressed his intention to dismiss the Macedonians who had become unfit for further service, which they took as an insult. He succeeded however in quelling the mutiny, partly by severity and partly by prudence, and at last a solemn reconciliation took place, and 10,000 Macedonian veterans were honourably sent home under the command of Craterus, who at the same time was to take the place of Antipater as governor of Macedonia, while Antipater was to come to Asia with fresh reinforcements. Soon after the departure of these veterans Alexander paid a visit to Ecbatana, and while in the autumn the festival of Dionysus (Bacchus) was celebrated there, his friend Hephaestion died: an event which caused Alexander the deepest grief, and is said to have thrown him into a state of melancholy from which he never recovered. Hephaestion's body was conveyed to Babylon, and buried there in a manner worthy of the friend of Alexander. Soon after the king with his army likewise marched to Babylon, and on his way thither he endeavoured to dissipate his grief by warring with the Cossei, a race of mountaineers, whom he nearly extirpated. Before he reached Babylon, there appeared before him ambassadors from the remotest parts of the world to do homage to the conqueror of Asia. Among other nations of Western Europe the Romans also are said to have honoured him with an embassy: and there is indeed nothing surprising in this, for at that time the name of Alexander must have been familiar to all nations from the shores of the Atlantic to the borders of China.

On the arrival of Alexander at Babylon vast plans of conquest, and the establishment of useful institutions in his new dominions, occupied him, and he seems now more than ever to have required active occupation. His next object was the conquest of Arabia; and to open the navigation from the Persian Gulf round the Peninsula of Arabia into the Red Sea. This conquest, according to some accounts, was to be followed by expeditions against Africa, Sicily, Italy, and Iberia. Babylon, as the centre between the Western and Eastern world, was chosen for the capital of this gigantic empire, and preparations were made to restore the ancient splendour of the city. But Alexander's body sank under the exertions which were required for the superintendance of his great preparations, combined with excesses in which he is said to have endeavoured to forget his grief. At the end of May B.C. 323, he was attacked by a fever which terminated his life in the course of eleven days. Alexander died at the early age of thirty-two years, after a reign of twelve years and eight months, during which he had extended his empire from the coasts of the Mediterranean to the eastern tributaries of the Indus. He died without having declared his successor, which was probably owing to his having lost the power of speech during the last days of his illness. He gave his seal-ring to Perdicas; but this may have meant no more than that Perdicas should be regent during the minority of the lawful heir; Roxana was pregnant at the time of Alexander's death. His body was embalmed, and in B.C. 321 it was conveyed to Memphis, and thence to Alexandria. A sarcophagus now in the British Museum, which was brought over from Alexandria, has been called the sarcophagus of Alexander, but without sufficient evidence.

Alexander belongs not to the history of Macedonia only. From the borders of China to the British islands in the West, his name appears in the history of the early poetry of every country. In Asia he is still the hero of ancient times; and the tales of the great exploits of Iskander are even now listened to with delight by the people of Asia. As a military commander he had great merit. His movements were rapid and well directed. He knew what might be neglected, and

what must be accomplished, before he could safely advance. When the unwieldy masses of the army of Darius were once broken, confusion must follow; and accordingly in his campaigns he made great use of his irresistible cavalry, that arm to which he mainly owed all his victories. He could adapt himself to all circumstances, he was never deficient in resources, and always ready to avail himself of every opportunity. His conquests made a lasting impression upon Asia and Africa; and although his empire was dismembered after his death, the Greek colonies he had founded long survived him. From the ruins of his empire Greek kingdoms were formed as far as India, and maintained themselves for centuries. New fields were opened to science and discovery; and to him it is owing that Eastern Asia became accessible to European enterprise.

There is scarcely an ancient writer after the time of Alexander from whom some information respecting him may not be collected. Many of his contemporaries and companions wrote of his life and exploits, but all these original works are lost. The biographies of Alexander, as that by Plutarch, Arrian, Curtius, and what is told of him in Diodorus and Justin, are compilations derived from earlier sources. The most important and most trustworthy work for the life of Alexander is the 'Expedition of Alexander,' by Arrian, who professes to follow the accounts of Ptolemæus, the son of Lagus, and of Aristobulus of Cassandria, and who is himself a careful and judicious writer.

(From the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ALEXANDER I., surnamed BALAS, or Βαλλης, reigned as king of Syria from B.C. 150 to 145. According to some authorities, Alexander took his surname from his mother Bala or Balle. Others regard

Alexander Balas.

it as a title signifying lord or king. The governor of Babylon, Heraclides, being exiled to Rhodes by Demetrius I., persuaded Alexander, who was of low birth, to feign himself a son of Antiochus Epiphanes, and to claim as such the right of succeeding him. The Roman senate, to revenge themselves on Demetrius, acknowledged the pretender on his appearing at Rome. The edict in his favour induced Ariarathes, king of Cappadocia, Ptolemæus, and Attalus II., king of Pergamus, to send troops to assist him. Many discontented Syrians joined his army. Demetrius I., as well as Alexander Balas, endeavoured to obtain the support of Jonathan, the Maccabee, who headed at that time the Jewish patriots. Jonathan embraced the party of Alexander, who conferred upon him the high priesthood, styled him friend of the king, and presented him with a purple robe and a diadem. Alexander Balas having been defeated in the first battle, 152, received reinforcements and gained a decisive victory in the year 150. Demetrius I., who was wounded by an arrow, perished in a swamp. Alexander Balas then mounted the throne of Syria, and married, at Ptolemais, Cleopatra, a daughter of Ptolemæus Philometor. When Balas considered his government sufficiently established, he left the cares of administration to his favourite Ammonius, in order to enjoy without restraint a luxurious life. Ammonius put to death those members of the royal family of the Seleucids whom he could get into his power, but there still lived in the island of Cnidus two sons of the last king, the elder of whom, Demetrius II., landed in Cilicia, whilst the governor of Coele-syria, Apollonius, rebelled against Balas in the year B.C. 148. Apollonius was beaten by Jonathan, but Balas himself was obliged to march against Demetrius II. Ptolemæus, who had apparently come to assist

Alexander Balas.

his son-in-law, suddenly embraced the cause of Demetrius, after accusing Balas of an intention to murder him. Balas, being defeated

by Ptolemæus, escaped into Arabia, where he was murdered by an Arabian chieftain, in the town of Abas, which was afterwards called Motho ('his death'). Demetrius II., surnamed Niketor, then ascended the throne of Syria.

Justin (xxxv. 12) states that Balas was the original name by which Alexander was known during the period of his private life. He is called by Strabo Balas Alexandros; where the word Balas appears to be used by him as synonymous with king. In the British Museum there are many silver and copper coins of Alexander Balas. On some coins the head of Alexander Balas is associated with that of Cleopatra, who occupies the foreground with a modius on her head,—an indication of his subordination to this proud woman.

ALEXANDER II., ZEBINAS, or ZEBINÆUS, reigned over a part of the kingdom of Syria from B.C. 123 to 122. The inhabitants of Apamea, Antiocheia, and some other cities, disgusted with the tyranny of Demetrius II., requested Ptolemæus Phegeon to appoint another king. Ptolemæus sent them the son of a broker, Protarchos of Alexandria, whom he represented as having been adopted by Antiochus Sidetes. The pretender took the name Alexander; but the people called him Zebinas, the 'bought one,' from a report that he had been purchased by Ptolemæus as a slave. Demetrius being defeated near Damascus, fled to Tyre, where he was murdered. Zebinas thinking his kingdom firmly established, refused the annual tribute to Ptolemæus, who now encouraged Antiochus VIII., the son of Demetrius II. Zebinas was in his turn defeated by the Egyptian army, and retreated to Antioch; where, being unable to pay his troops, he permitted them to pillage the temple of Victory, and took for himself the golden statue of Jupiter. Expelled by the people of Antioch from their city, and deserted by his troops, he endeavoured to escape on board a small vessel into Greece, but was taken by a pirate, and delivered into the hands of Ptolemæus, who put him to death. The British Museum contains silver and copper coins of Alexander Zebinas.

Alexander Zebinas.

ALEXANDER JANNÆUS, third son of Johannes Hyrcanus, succeeded his brother Aristobulus I., as king of the Jews, and as high-priest, in B.C. 104, having put to death a brother who claimed the crown. Taking advantage of the disturbances in Syria, he attacked Ptolemais (Acre), which, with some other cities, had made itself independent. The inhabitants called Ptolemæus Lathyrus, of Cyprus, to their assistance, by whom Alexander Jannæus was beaten on the banks of the Jordan, and Palestine horribly ravaged, until, by the aid of Cleopatra, the mother of Lathyrus, Alexander was enabled to repel his enemy. Alexander then conquered Gaza, burned the city, and massacred the inhabitants who had joined the party of Lathyrus. Jannæus embraced the party of the Sadducees; and, of course, was hated by the Pharisees and by the people. On the Feast of Tabernacles, after being pelted by the people with lemons, and insulted by their opprobrious language, he caused 6000 men to be cut down, and in future protected himself by a body-guard of Libyans and Psidians. Having lost his army in an unfortunate expedition against the Arabians, the Pharisees made an insurrection, and carried on for six years a civil war against the king, in which 50,000 Jews are said to have perished. The rebels, supported by the Arabians, the Moabites, and by Demetrius Eukæros, compelled Alexander to escape into the mountains. But a part of the auxiliaries coming over to the king's party, he was now enabled to crush the rebels; and to gratify his vengeance, he crucified on one day 800 of the most distinguished captives. Their wives and children were massacred before their eyes; whilst the king dined with his wives in sight of the victims. On account of this cruelty he was surnamed 'the Thracian.'

Alexander Jannæus.

Alexander after this engaged in several wars, by which he enlarged his dominions. Desirous to reconcile his subjects, he asked them what

he should do to make them quite content? "Die," they replied. He did die at the siege of Ragaba, in Gerasena, in consequence of his gluttony, in the 27th year of his reign. He had two sons; but left the government to his widow. (Joseph., 'Archæolog.,' xiii. c. 12-15.) There is a small copper coin of Jannæus in the British Museum, but the Samaritan inscription between the rays of the stars, mentioned by others, is not discernible. (Compare Bayeri 'Vindiciæ Num. Hebr.,' plate, fig. 5.) There is another coin extant, which shows that Jonathan was his Hebrew name, and that Alexander was the name assumed by him according to the prevalent custom.

ALEXANDER, a son of king Aristobulus II., and grandson of Jannæus, was taken captive in Judæa by Pompæus, who intended to exhibit him with his father and brother in his triumph at Rome. Alexander escaped on the journey, and returned to Judæa, where he raised an army of 10,000 foot and 1500 horse to attack Hyrcanus, who had been appointed by Pompæus to govern Judæa. Alexander took several castles in the mountains; but Hyrcanus imploring the assistance of the Romans, Marcus Antonius, who was sent by Gabinus, governor of Syria, defeated Alexander near Jerusalem, B.C. 57, and besieged him in Alexandrion, a small town with a fine castle, about six miles south of Tyre, where he capitulated. After his father Aristobulus had escaped from Rome to Judæa, and been again defeated and put into prison, Alexander once more took up arms, conquered Judæa, put many Romans to death, and besieged the rest in Garizin. But his army of 30,000 men was finally defeated by Gabinus, in a battle near Mount Tabor, in which 10,000 Jews perished. Alexander at last fell into the hands of Metellus Scipio, and was beheaded at Antioch, in the year B.C. 49.

ALEXANDER POLYHISTOR. [POLYHISTOR.]

ALEXANDER SEVERUS. [SEVERUS.]

ALEXANDER I., one of the earliest bishops of Rome, succeeded Evaristus about the beginning of the 2nd century of our era, but the precise epoch is not well ascertained.

ALEXANDER II., a Milanese, succeeded Nicholas II. in 1061. This was at the beginning of the dispute between the see of Rome and the emperors of Germany, concerning the investitures. The imperial party assembled a conclave at Basle, where they elected Cadalous, bishop of Parma, who took the name of Honorius II. Cadalous was taken prisoner, and confined in the castle of St. Angelo at Rome, and Alexander was generally acknowledged as pope. He died in 1073, and was succeeded by Gregory VII.

ALEXANDER III., Cardinal Rinaldo of Siena, succeeded Adrian IV. in 1159. His long pontificate of twenty-one years was agitated by wars against the emperor Frederick I., and by a schism in the church, during which three successive antipopes were raised in opposition to Alexander. The latter took part with the Lombard cities in their struggle against Frederick. [FREDERICK I., BARBAROSSA.] At last peace was made, and Alexander was universally acknowledged as pope. He held a great council in the Lateran palace in 1180, when a decretal was passed, that two-thirds of the cardinals should be requisite to make an election valid. He died at Rome in 1181, and was succeeded by Lucius II. Alexander took part with Thomas à Becket in his contest with King Henry II., and canonised him after he had been murdered.

ALEXANDER IV., of Anagni, succeeded Innocent IV. in 1254. He inherited the ambition, but not the talents of his predecessor. He manifested the same inveterate hostility against the house of Suabia, and its representative Manfred, king of the Two Sicilies, but did not succeed in his attempt at overthrowing the latter, which became the work of his two immediate successors. Alexander died in 1261, and was succeeded by Urban IV.

ALEXANDER V., a native of Candia, and monk of the Franciscan order, was elected in 1409, and died the following year. He was succeeded by John XXIII.

ALEXANDER VI., Roderic Borgia, of Valencia in Spain, a man of great personal wealth, and of some ability, but of loose conduct. He had been made a cardinal by his uncle Calixtus III., and was elected pope in 1492, after the death of Innocent VIII. At the time of his election, he had four children by his mistress Vanozia; and, during his reign, he made no scruple at employing every means in his power to confer on them honour and riches. The politics of the pope were capricious and faithless in the extreme. At first he was hostile to the house of Aragon then reigning at Naples, and showed himself favourable to the French, who were at that time attempting to invade Italy, but afterwards his younger son, Gioffredo, having married a daughter of Alfonso II. of Naples, Alexander allied himself with the latter, for the purpose of arresting the progress of the invaders. As, however, Charles VIII., at the head of his army, advanced upon Rome, the pope received him with honour, and promised him his support for the conquest of Naples, and even gave him his son, Cardinal Cæsar, as a hostage. But the cardinal found means to escape; and Alexander joined the league formed in the north by the Venetians and Sforza against the French, which led to the expulsion of the latter. He afterwards allied himself to Lewis XII. of France, successor of Charles VIII., who wanted the pope's sanction for divorcing his first wife: he was also a party to the double treachery by which Ferdinand of Spain first betrayed the cause of his relative, Frederic of Naples, partitioning that kingdom between Lewis XII. and himself; and then,

breaking his engagement with the French, he seized upon the whole of the conquest by means of his general, Gonsalvo. Alexander's internal policy was, if possible, still more perfidious. He was bent upon the destruction of the great Roman families of Colonna, Orsini, and Savelli; and either by treachery or open violence he succeeded in putting most of them to death, and seizing on their extensive possessions. He sent his son, the Duke Valentine, into the Romagna, where, by means of similar practices, the latter made himself master of that country. Alexander gave his only daughter, Lucretia Borgia, in marriage, first, to Giovanni Sforza, Lord of Pesaro, whom she afterwards divorced; then to a prince of the house of Aragon, who was murdered by her brother Cæsar. She was married a third time, in 1501, to Alfonso d'Este, son of Hercules, duke of Ferrara, to whom she brought as a dowry 100,000 golden pistoles, besides jewels. Alexander's eldest son, John, duke of Gandia, was murdered one night while returning from a debauch, by unknown assassins, and thrown into the Tiber. (Roscoe's 'Leo X.,' vol. i.) At last Alexander himself died on the 18th of August, 1503, being 74 years of age. It was said, and several historians have repeated the assertion, that he died of poison which was intended for his guest, the Cardinal of Corneto. This crime however is not clearly proved. He was succeeded nominally by Pius III., who died twenty-six days after his election, and then by the famous Julius II. The pontificate of Alexander VI. is certainly the blackest page in the history of modern Rome. The general demoralisation of that period, of which abundant details are found in John Burchard's 'Diarium,' as well as in Panvinius, Muratori, Fabre's continuation of Fleury's 'Ecclesiastical History,' and other writers, Catholic as well as Protestant, appears in our times almost incredible.

Alexander VI.

ALEXANDER VII., Fabio Chigi of Siena, succeeded Innocent X. in 1655. He embellished Rome, and protected learning, but was accused of favouring too much his relatives and connexions. He was embroiled in a dispute with the imperious Louis XIV. of France, in consequence of some insult which had been offered by the populace to the Duke of Crequi, French ambassador at Rome. He died in May, 1667, and was succeeded by Clement IX.

ALEXANDER VIII., Cardinal Ottoboni of Venice, succeeded Innocent XI. in 1689. He assisted his native country in its wars against the Turks. He died in February, 1691, at the age of eighty-two, and was succeeded by Innocent XII.

ALEXANDER I., king of Scotland, was a younger son of Malcolm III. (Canmore), and succeeded his eldest brother Edgar, who died without issue, on the 8th of January, 1107. In those times, in Scotland, as well as in other countries, the succession to the throne was frequently regulated, at least to a certain extent, by the will of the reigning king; and Edgar, at his death, left part of his dominions to his younger brother David. Lord Hailes thinks that David's share was only the Scottish portion of Cumberland; but it probably included the whole territory that was considered subject to the Scottish crown to the south of the Forth, except the Lothians. Alexander eventually acquiesced in this apportionment. The instructions of his mother, Margaret, the sister of Edgar Atheling, and the advantages which he enjoyed from the society of the English exiles, who crowded, after the Conquest, to his father's court, had given to Alexander a degree of literary cultivation which none of his predecessors had possessed. His natural talents seem also to have been of a superior order; while he possessed in an eminent degree the energy of character suited to the times in which he governed. His reign was agitated by successive insurrections; every one of which, however, he promptly put down. One of the most serious was that excited in the district of Moray, in 1120, by Angus, the grandson of Lulach, son of the wife of Macbeth, and the occupant of the throne for a few months after the death of that usurper. Angus claimed the crown in virtue of this descent; but Alexander speedily quelled the attempt. From his energy on

this occasion, he derived the epithet or surname by which he is known in Scottish history. The old chronicler, Wynton, says—

"Fra that day forth his lieges all
Used him Alexander the Fierce to call."

Alexander showed equal spirit in resisting foreign encroachments upon the independence of his kingdom. During his reign the archbishops of Canterbury and York claimed episcopal jurisdiction in Scotland; but the determination of the Scottish king at length compelled the English prelates to give up the contest. St. Andrew's, and several of the other ecclesiastical foundations of Scotland, were largely indebted to the bounty of Alexander. He founded a church, in 1123, on the isle of Inchcolm, in the Frith of Forth, in the neighbourhood of which he had nearly perished in a tempest. He died at Stirling, without leaving any legitimate issue, on the 27th of April, 1124, and was succeeded by his brother David I. Alexander had married Sibilla, the natural daughter of Henry I. of England. She died suddenly, at Lochtar, on the 12th of June, 1122.

ALEXANDER II., king of Scotland, was born at Haddington on the 24th of August (St. Bartholomew's Day), 1198. He succeeded his father, William the Lion, on the 4th of December, 1214, and was crowned at Scone on the following day. He began his reign by entering into a league with the English barons who were confederated against King John—engaging to aid them in their insurrection, on condition of being put in possession of the northern counties of England. This led to several devastating incursions into each other's dominions by the two kings. The death of John, in October, 1216, put an end to their hostilities; and the following year Alexander concluded a treaty of peace with Henry III., one of the conditions being that Alexander should espouse Henry's eldest sister, the Princess Joan. This marriage accordingly took place on the 25th of June, 1221. In the course of the following thirteen years Scotland was disturbed by insurrections which broke out successively in Argyle, in Caithness, in Murray, and in Galloway; all of which, however, Alexander put down. His connexion with the royal family of England preserved peace between the two countries, and led to considerable intercourse between the Scottish king and his brother-in-law, whom he repeatedly visited at London. The death of Queen Joan without issue, on the 4th of March, 1238, and the marriage of Alexander, on the 15th of May in the following year, with Mary, daughter of a French nobleman, Ingelram de Couci, broke this bond of amity; and after some years of mutual dissatisfaction and complaint, the two kings prepared to decide their differences by arms in 1244. By the intervention however of some of the English nobility, bloodshed was prevented, after Alexander had approached the border with an army, it is said, of 100,000 men; and a peace was concluded at Newcastle in August of that year. In 1247 another insurrection broke out in Galloway, which Alexander soon suppressed. In the summer of 1249 he had set out at the head of an army to repress a rebellion raised by Angus, Lord of Argyle, when he was taken ill at Kerrary, a small island off the coast of Argyle, and died there on the 8th of July. By his second marriage he left an only son, his successor, Alexander III. Alexander II. bears a high character in the pages of the ancient historians and chroniclers of Scotland; and he appears to have been a prince endowed with many great qualities. Besides the ability with which he preserved both the independence and the internal order of his kingdom, he is particularly celebrated for his regard to justice, and the wisdom and impartiality which he secured in the administration of the laws among all classes of his subjects. This virtue in a king or governor never fails to attract popular attachment and respect; accordingly, we are told by a contemporary English writer, Matthew Paris, that Alexander was deservedly beloved, not only by his own subjects, but by the people of England likewise. He is usually characterised as altogether one of the ablest and best of the Scottish kings.

ALEXANDER III., king of Scotland, the son and successor of Alexander II., was born at Roxburgh on the 4th of September, 1241. Although only eight years old at his father's death, he was crowned at Scone by David de Bernham, bishop of St. Andrew's, on the 13th of July, 1249, having previous to that ceremony been knighted by the same ecclesiastic. He had already, when only a year old, been betrothed to Margaret, the eldest daughter of the English king, Henry III.; and notwithstanding the youth of both parties, the celebration of the marriage took place at York on the 25th of December, 1251. The connexion thus formed, together with the minority of his son-in-law, gave Henry a plausible pretext for interfering, as he was anxious to do, in the affairs of Scotland; and the distracted state of that kingdom, occasioned by the factions among the nobility, facilitated his views. In August, 1255, he approached the borders at the head of an army; and by a course of intrigue with the political parties contending for the regency, endeavoured to subjugate Scotland to the English crown. It was the commencement of the design so perseveringly pursued by Henry and his successor, to reduce the Scottish kings to the condition of vassals. The eminent talents however which Alexander began to display as soon as the administration of affairs came into his own hands, together with his determination to maintain his own rights and the independence of his dominions, effectually thwarted the further prosecution of such views. Meanwhile he kept on good terms with his father-in-law. In 1260 he visited London with his queen. In

February, 1261, the queen was delivered at Windsor of a daughter, who was named Margaret.

On the 1st of October, 1264, Haco, king of Norway, after having ravaged the Western Islands, approached the coast of Ayrshire at the head of a numerous fleet. Every preparation had been made by the Scottish king to meet this formidable armament; but when only a small portion of the Norwegian troops had landed, a tempest of unusual fury suddenly arose, and drove nearly all the ships on shore or otherwise destroyed them. The attack of the Scottish soldiers and peasantry completed the destruction of the invading force; and Haco with difficulty made his escape, only to die of a broken heart a few months afterwards. Next year, Magnus, Haco's successor, agreed to relinquish to the king of Scotland the Hebrides and the Isle of Man for the sum of 4000 marks, and a small yearly quit-rent. In 1283 the peace between the two kingdoms was further consolidated by the marriage of Alexander's daughter, Margaret, to the Norwegian king Eric, then a youth of fourteen. Margaret died in 1283, but left a daughter of the same name, commonly designated the 'Maiden of Norway,' who eventually became the successor of her grandfather on the Scottish throne.

The successful resistance which, seconded by his clergy, he offered to an attempt of the Pope to levy certain new imposts in his dominions, is almost the only other act in Alexander's reign which history has commemorated. Under his sway, Scotland appears to have enjoyed a tranquillity to which she had long been a stranger, and which she did not regain for many years after his decease. The death of his daughter Margaret however was the first of a succession of calamities. Soon after her nuptials, Alexander, the prince of Scotland, the king's only son, who was born in 1263, had espoused Margaret, daughter of Guy, earl of Flanders; but he also died without issue on the 28th of January, 1284. On the 15th of April, 1285, the king, having some time before lost his first wife, married Joleta, daughter of the Count de Dreux, in the hope of leaving a male heir. But on the 16th of March, 1286, as he was riding in a dark night between Burntisland and Kinghorn, on the banks of the Frith of Forth in Fifeshire, he was thrown with his horse over a precipice, at a turn of the road about a mile west from Kinghorn, and killed on the spot. The place, which is called the King's Wud End, is still pointed out. A cross was erected upon the spot, but it has long since disappeared. The death of Alexander, followed as it was in a few years by that of the Maiden of Norway, left Scotland to contend at once with the internal distractions arising from a disputed succession, and with all the art and force employed by a powerful neighbour to effect its subjugation. Alexander was also lamented by his subjects on account of his own wisdom and virtues. The country had never before enjoyed such prosperity, and Scotland may be said, during this reign, to have passed from barbarism to civilisation. It was then that its intercourse with England first became considerable, and that it began to acquire an acquaintance with the arts and manners of what we may call European life. Alexander also improved and completed the system for the dispensation of justice which had been introduced by his father; he divided the country into four districts for that purpose, and made an annual progress through it in person for hearing appeals from the decisions of the ordinary judges. He was long affectionately remembered in Scotland; and the old chronicler Wynton has preserved the following verses respecting him, which are extremely interesting, as being the most ancient specimen of the Scottish dialect now extant:—

"Quhen Alexandyr our King was dede,
Dat Scotland led in luve (love) and le (law),
Away wes sons of ale and brede,
Of wyne and wax, of gamyn (gambling) and gle,
Oure gold was changed into lede.
Christ, born into virgynytè,
Succour Scotland, and remede,
Dat stad (placed) is in perplexytè."

ALEXANDER JAROSLAWITZ NEVSKOJ enjoyed a high renown among his countrymen for bravery, prudence, and religious zeal; he has been celebrated in many a Russian ballad, and is still venerated by the present generation. He was the second son of the Grand Duke Jaroslaw II. Wasladowitz, and was born at Vladimir in 1219. At the period when his father ruled over Novogorod (in 1237), the Tartars, with a very large army, under the command of the Khan of Kaptshak, a grandson of Gengis Khan, invaded Russia, desolated the country in the most cruel manner, overran it even to the Upper Volga, and exacted the most degrading submission from the Russian princes. Jaroslaw, though not immediately attacked by the Tartars in his own Principality of Novogorod, found it advisable to repair to the great Tartar horde stationed at that time in the region of the modern city of Kasan, to pay homage to Batu-Khan. From this khan he received the grand duchy of Vladimir, to be held as a fief, made Perjaslaw his residence, and as his elder son Feodor had died in 1232, he entrusted Alexander the younger with the government of Novogorod. Returning a second time to the great horde, and there remonstrating against certain unreasonable Tartarian commands, he met with ill treatment, and died on his homeward journey, in the month of September, 1245.

Alexander succeeded his father in the fief of Vladimir, the possession of which was confirmed to him by Batu-Khan. Alexander, while his father was still alive, had distinguished himself by two great

victories—one over the Swedes, and another over the united order of the Livonian and Teutonic Knights of the Sword. A crusade against the Russians had been instigated by Pope Gregory IX., who, by a bull of 1229, enjoined the bishops of Lübeck, Linköping, and Livland, to prohibit all intercourse and commerce with the schismatic Russians, as long as they should resist the conversion of the apostate Finlanders. This however was only a negative measure; but the bull of the 14th of May, 1237, by which the Livonian and Esthonian Knights of the Sword were united to the Teutonic order, evidently by way of strengthening them for a Russian crusade, tended in a more direct and positive manner towards the destruction of the Greek Church in the north-east of Europe. The Roman Court also opened negotiations with Eric XI., king of Sweden, who, at the Pope's instigation, gladly sent an army against the Finlanders, which landed near the mouth of the Neva, on the spot where St. Petersburg has since been built. Alexander marched against this army, and, on the 15th of July, 1240, totally defeated it at the confluence of the Ishora and the Neva. By this victory he obtained the honourable surname of Nevskoj, or Alexander of the Neva. While he was thus engaged, the Knights of the Sword, commanded by their chief, Hermann von Balk, had taken Pleskow. Early in the year 1241, Alexander marched against them from Novogorod, and drove them out of Pleskow; but having allowed his army to disperse in the autumn, he next winter saw the enemy again in the field. The Knights of the Sword had advanced within thirty versts of the city of Novogorod. With great speed Alexander again collected his army, pursued the retreating enemy, and on the 5th of April, 1242, fought them on the ice of the lake of Peipus, where he gained a decisive victory: four hundred Teutonic Knights were slain, and fifty were taken prisoners; those of the prisoners who were Germans were pardoned, but the Esthonians Alexander ordered to be hanged, considering them as Russian rebels. Alexander returned in triumph to Pleskow, having liberated that city and its commerce, which at that time was considerable, from the yoke of foreigners.

Arms proving unavailing, the Roman Court had recourse to diplomacy as a surer means for converting Alexander. Several attempts of this kind had been made in vain with his predecessors, by the popes Innocent III., Honorius III., and Gregory IX. Innocent IV. made a new trial, and in the year 1251 sent two cardinals, who in Russian chronicles are called Gald and Gemont, as ambassadors to Alexander Nevskoj; they brought a letter from this pope, dated January 23, 1248, probably so long antedated in order to show how long his Holiness had been big with the scheme of the embassy, but Alexander remained inflexible, and the cardinals returned without effecting anything for the Church of Rome.

Though Alexander was successful against the Pope, he continued a vassal of the Tartars as long as he lived. It does not however appear that Russia was, during his reign, actually invaded or plundered by them.

He repaired to the great horde three times, and died on his return from the last of these journeys at Kassimcow in 1263; from that place his body was removed to Vladimir, and there interred. It is a tradition that shortly before his death he took holy orders; but it probably has no good foundation. Alexander's wife was a daughter of Wratelaw, Prince of Polotsk, by whom he had four sons—Vassilij, Dmitrij, Andrej, and Danilo. It is uncertain whether the valiant Jueje (George) who ruled over Novogorod till 1270, was also his son. The foundation of St. Petersburg in 1703, on the very spot where the national hero had gained such an important victory, naturally recalled the memory of Alexander Nevskoj in a lively manner. The Czar Peter on this occasion instituted St. Alexander Nevskoj's Order of Knighthood, but did not himself give that decoration to any man; this was first done after his death by his consort Catharine. There is also in St. Petersburg a St. Alexander-Nevskoj Monastery, which is well endowed, to which is attached a seminary for the education of young divines, called St. Alexander-Nevskoj's Academy.

ALEXANDER, Emperor of Russia, called by his countrymen Alexander Paulowitch (that is, the son of Paul), was born on the 23rd of December, 1777. He was the son of the emperor Paul and of Maria, daughter of Prince Eugene of Würtemberg. From his infancy he was distinguished for a gentle and affectionate disposition, and a superior capacity. His education was directed not by his parents, but by his grandmother the reigning empress, Catharine II., who lived until he had attained his nineteenth year. Under her superintendance he was carefully instructed by La Harpe and other able tutors in the different branches of a liberal education, and in the accomplishments of a gentleman.

Catharine was succeeded, in 1796, by her son Paul, whose mad reign was put an end to by his assassination on the 24th of March, 1801. No doubt can be entertained that Alexander, as well as his younger brother Constantine, was privy to the preparations which were made for the dethronement of his father, which had indeed become almost a measure of necessity; but all the facts tend to make it highly improbable that he contemplated the fatal issue of the attempt. The immediate sequel of this tragedy was a slight domestic dispute, occasioned by a claim being advanced by the widow of the murdered emperor to the vacant throne, who had not been admitted into the conspiracy. After a short altercation she was prevailed upon to relinquish her pretensions; and the Grand Duke Alexander was forthwith proclaimed

Emperor and Autocrat of all the Russias. This collision does not seem to have left any unpleasant traces on the mind either of Alexander or his mother, to whom during his life he always continued to show respect and attachment. The Empress Maria survived her son about three years.

The history of the reign of Alexander is the history of Europe for the first quarter of the present century. We can here only attempt a slight outline of the course of events during that busy time, with a reference to the movements of the Russian emperor. When Alexander came to the throne he found himself engaged in a war with England, which had broken out in the course of the preceding year. He immediately indicated the pacific character of his policy by taking steps to bring about a termination of this state of things, which was already seriously distressing the commerce of Russia; and a convention was accordingly concluded between the two powers, and signed at St. Petersburg on the 17th of June, 1801. The general peace followed on the 1st of October, and lasted till the declaration of war by England against France on the 18th of May, 1803. Meanwhile Georgia, hitherto under the protection of Persia and Turkey, had been occupied, on the invitation of the people themselves, by the troops of Russia, and incorporated with that empire. Alexander also, during this interval, showed his disposition to extend the influence of Russia in another direction, by entering into a negotiation with France respecting the compensation to be granted to certain of the minor powers of Germany, with which country he was connected both through his mother and through his father, who was born head of the house of Holstein-Gottorp. It was in the course of these negotiations that he had his first interview with the king of Prussia, which is understood to have laid the foundation of an intimate friendship between the two sovereigns, and to have established a concurrence of views which powerfully influenced the future policy of each. In a dispute with Sweden, with regard to the frontier of Finland, although hostilities were averted by the concession of the Swedish king, the extensive military preparations which were immediately made by Russia, showed how little that power was disposed to allow the invasion of any of her rights.

Alexander did not immediately join England in the war against France; but even in the early part of 1804 symptoms began to appear of an approaching breach between Russia and the latter country. On the 11th of April, 1805, a treaty of alliance with England was concluded at St. Petersburg, to which Austria became a party on the 9th of August, and Sweden on the 3rd of October following. This league, commonly called the third coalition, speedily led to actual hostilities. The campaign was eminently disastrous to the allied powers. A succession of battles, fought between the 6th and the 18th of October, almost annihilated the Austrian army before any of the Russian troops arrived. Alexander made his appearance at Berlin on the 25th, and there, in a few days after, concluded a secret convention with the king of Prussia, by which that prince, who had hitherto professed neutrality, bound himself to join the coalition. Before leaving the Prussian capital, Alexander, in company with the king and queen, visited at midnight the tomb of the great Frederick, and, after having kissed the coffin, is said to have solemnly joined hands with his brother sovereign, and pledged himself that nothing should ever break their friendship. He then hastened by way of Leipzig and Weimar to Dresden, from whence he proceeded to Olmutz, and there, on the 18th of November, joined the emperor of Austria. On the 2nd of the following month, the Austrian and Russian troops, commanded by the two emperors in person, were beaten in the memorable and decisive battle of Austerlitz. The immediate consequences of this great defeat were the conclusion of a convention between France and Austria, and Alexander's departure to Russia with the remains of his army.

Although Alexander did not accede either to the convention between France and Austria, or to the treaty of Presburg, by which it was followed, he thought proper, after a short time, to profess a disposition to make peace with France, and negotiations were commenced at Paris for that object. But after a treaty had been signed on the 20th of July, 1806, he refused to ratify it, on the pretence that his minister had departed from his instructions. The true motive of his refusal no doubt was, that by this time arrangements were completed with Prussia and England for a fourth coalition; and it is even far from improbable that the negotiations which led to the signature of the treaty had from the first no other object beyond gaining time for

preparations. On the 8th of February hostilities recommenced, and the victory of Jena, gained by Bonaparte a few days after, laid the Prussian monarchy at his feet. When this great battle was fought, Alexander and his Russians had scarcely reached the frontiers of Germany; on receiving the news they immediately retreated across the Vistula. Hither they were pursued by Bonaparte, and having been joined by the remnant of the Prussian army, were beaten on the 8th of February, 1807, in the destructive battle of Eylau. Finally, on the 14th of June, the united armies were again defeated in the great battle of Friedland, and compelled to retreat behind the Niemen. This crowning disaster terminated the campaign. An armistice was arranged on the 21st; and five days after, Alexander and Napoleon met in a tent erected on a raft in the middle of the Niemen; and at that interview not only arranged their differences, but, if we may trust the subsequent professions of both, were converted from enemies into warmly-attached friends. A treaty of peace was signed between the two at Tilsit on the 7th of July, by a secret article of which Alexander engaged to join France against England. He accordingly declared war against his late ally on the 26th of October following. The treaty of Tilsit indeed converted the Russian emperor into the enemy of almost all his former friends, and the friend of all his former enemies. Turkey, though supported by France, had for some time been hard pressed by the united military and naval operations of England and Russia; but upon Alexander's coalition with the French emperor, a truce was concluded between Turkey and Russia at Slobosia, August 24th, and the Turkish empire was saved from the ruin which threatened it. A war with Persia, commenced in 1802, continued to be carried on with varying success. The meeting of the emperors of France and Russia at Tilsit is an important event not only in the life of Alexander, but in the history of Europe. It produced a total change in the policy of Russia, as well as in the personal sentiments of the two emperors, who from deadly enemies became to all appearance cordial friends. At their first interview, on the 25th of June, 1807, each left the banks of the Niemen in a boat attended by his suite. The boat of Napoleon cleared the distance first; and Napoleon, stepping on the raft appointed for the conference, passed over, and receiving Alexander on the opposite side, embraced him in the sight of both armies. The first words of Alexander were directed to flatter the ruling passion of Napoleon. "I hate the English," he exclaimed, "as much as you do: whatever you take in hand against them, I will be your second." "In that case," replied Napoleon, "everything can be easily settled, and peace is already made." In the first conference they remained together two hours; the next day they met again, and Alexander presented to Napoleon the King of Prussia, who was soon after joined by his queen. During the remainder of the conference, which lasted twenty days, the two emperors were daily in the habit of meeting and conversing on terms of intimacy; while the King of Prussia was treated by Napoleon with haughtiness, and the queen with rudeness, and Alexander appeared almost ashamed to make any exertion in their favour with his new friend. He even concluded a separate treaty with Napoleon to the bitter mortification of Frederick William, the treaty made with whom soon after was of a very different character from that between the two emperors.

On the 24th of February, 1808, Alexander, in obedience to the plan arranged with Napoleon, declared war against Sweden; and followed up this declaration by dispatching an army to Swedish Finland, which, after a great deal of fighting, succeeded in obtaining complete possession of that country. On the 27th of September the Russian and French emperors met again at Erfurt. Many of the German princes, with representatives of the King of Prussia and the Emperor of Austria, also attended the Congress, which continued to sit till the 15th of October. On this occasion a proposal for peace was made to England in the united names of Napoleon and Alexander, but the negotiations were broken off after a few weeks.

The friendly relations of Alexander with France continued for nearly five years; but, notwithstanding fair appearances, various causes were in the meanwhile at work which could not fail at last to bring about a rupture. The Russian autocrat having failed in the plan of policy with which he had begun his reign, and which seems to have contemplated the avoidance of war, but at the same time the exercise of a powerful foreign influence, appears to have resolved to try another game, and to see what he could gain by entering into confederacy with the great conqueror of nations. But the peace of Tilsit, and the new relations into which Russia was thrown, however much they may have been to the mind of the sovereign, entailed such privation and commercial suffering on the people of that country, by severing the connection with England, as made it at length impossible to persist in this course of policy. In the meanwhile however the treaty of Vienna, signed on the 14th of October, 1809, which, following the battles of Austerlitz and Wagram, dissolved the fifth coalition against France, increased the Russian dominion by the annexation of Eastern Galicia, ceded by Austria. The war with Turkey also, which had been recommenced, continued to be prosecuted with success. But by the end of the year 1811 the disputes with the courts of Paris, which ostensibly arose out of the seizure by Bonaparte of the dominions of the Duke of Oldenburg, had assumed such a height as left it no longer doubtful that war would follow. A treaty of alliance having been previously signed with Sweden, on the 10th of March 1812 Alexander

declared war against France; and on the 24th of April he left St. Petersburg to join his army on the western frontier of Lithuania. On the 28th of May peace was concluded at Bucharest on advantageous terms with Turkey, which relinquished everything to the left of the Pruth. The immense army of France, led by Napoleon, entered the Russian territory on the 25th of June. As they advanced the inhabitants fled as one man, and left the invaders to march through a silent desert. In this manner the French reached Wilna. On the 14th of July Alexander had repaired to Moscow, whence he proceeded to Finland, where he had an interview with Bernadotte, then crown prince of Sweden. Here he learned the entry of the French into Smolensk. He immediately declared that he never would sign a treaty of peace with Napoleon while he was on Russian ground. "Should St. Petersburg be taken," he added, "I will retire into Siberia. I will then resume our ancient customs, and, like our long-bearded ancestors, will return anew to conquer the empire." "This resolution," exclaimed Bernadotte, "will liberate Europe."

On the 7th of September took place the first serious encounter between the two armies, the battle of Borodino, in which 25,000 men perished on each side. On the 14th the French entered Moscow. In a few hours the city was a smoking ruin. Napoleon's homeward march then commenced, and terminated in the destruction of his magnificent army. Not fewer than 300,000 Frenchmen perished in this campaign. The remnant, which was above 150,000, repassed the Niemen on the 16th of December.

In the early part of the following year Prussia and Austria successively became parties to the alliance against France. Alexander, who had joined his army while in pursuit of Bonaparte at Wilna, continued to accompany the allied troops throughout the campaign of this summer. On the 26th and 27th of August he was present at the battle of Dresden, and on the 18th of October at the still more sanguinary conflict of Leipzig. On the 24th of February, 1814, he met the King of Prussia at Chaumont, where the two sovereigns signed a treaty binding themselves to prosecute the war against France to a successful conclusion, even at the cost of all the resources of their dominions. On the 30th of March 150,000 of the troops of the allies were before the walls of Paris, and on the following day at noon Alexander and William Frederick entered that capital.

We shall not enter into the detail of the transactions which followed this event. Alexander, owing in a great measure to his engaging affability, as well as to the liberal sentiments which he made a practice of professing, was a great favourite with the Parisians. The conquerors having determined upon the deposition of Bonaparte, and the restoration of the Bourbons, Alexander spent the remainder of the time he stayed in inspecting the different objects of interest in the city and its vicinity, as if he had visited it in the course of a tour. He left the French capital about the 1st of June, and proceeding to Boulogne, was there, along with the King of Prussia, taken on board an English ship-of-war, commanded by the Duke of Clarence, and conveyed to Calais, from which port the royal yachts brought over the two sovereigns to this country. They landed at Dover on the evening of the 7th, and next day came to London. They remained in this country for about three weeks, during which time they visited Oxford and Portsmouth, and wherever they went, as well as in the metropolis, were received with honours and festivities of unexampled magnificence, amidst the tumultuous rejoicings of the people. From England Alexander proceeded to Holland, and thence, after a short stay, to Carlsruhe, where he was joined by the Empress. On the 25th of July he arrived at his own capital St. Petersburg, where his appearance was greeted by illuminations and other testimonies of popular joy.

The Congress of European sovereigns at Vienna opened on the 3rd of November, 1814. In the political arrangements made by this assembly Alexander obtained at least his fair share of advantages, having been recognised as King of Poland, which country was at the same time annexed to the Russian empire. Before the members of the Congress separated however news arrived of Bonaparte's escape from Elba. They remained together till after the battle of Waterloo; when Alexander, with the Emperor of Austria and the King of Prussia, proceeded to Paris, where they arrived in the beginning of July, 1815. On the 26th of the following September, the three sovereigns signed an agreement, professedly for the preservation of universal peace on the principles of Christianity, to which, with some presumption, if not impiety, they gave the name of the Holy Alliance. On leaving Paris Alexander proceeded to Brussels, to arrange the marriage of his sister, the Grand Duchess Anne, with the Prince of Orange; and thence, by the way of Dijon and Zürich, to Berlin, where he concluded another family alliance, by the marriage of his brother Nicholas, afterwards emperor, with the Princess Charlotte, daughter of the King of Prussia. On the 12th of November he arrived at Warsaw, and after publishing the heads of a constitution for Poland, he left this city on the 3rd of December, and on the 13th reached St. Petersburg.

No great events mark the next years of the reign of Alexander. On the 27th of March, 1818, he opened in person the first Polish diet at Warsaw, on the close of which he set out on a journey through the southern provinces of his empire, visiting Odessa, the Crimea, and Moscow. The congress of Aix-la-Chapelle, at which he was present with the Emperor of Austria and the King of Prussia, met in September, and on the 15th of the following month promulgated a declaration,

threatening, in reference to the then state of Spain, the suppression of all insurrectionary movements wherever they might take place. The congresses held in 1820 and 1821 at Troppau and Laybach, on the affairs of Naples and Piedmont, and that of Verona in 1822, were also mainly directed by the Russian autocrat. Meanwhile the insurrection of the Greeks in 1820, although publicly condemned by Alexander, was attributed by Turkey to the secret encouragement of Russia, and seemed to threaten a renewal of hostilities between the two countries; but for the present Alexander determined to persevere in his pacific policy. In 1823 several tribes of the Kalmucks, who had formerly acknowledged the sovereignty of China, exchanged it for that of Russia.

In the beginning of the winter of 1825 Alexander left St. Petersburg on a journey to the southern provinces, and on the 25th of September arrived at Taganrog on the Sea of Azof. From this town he some time after set out on a tour to the Crimea, and returned to Taganrog about the middle of November. Up to nearly the close of this latter excursion, he had enjoyed the highest health and spirits. But he was then suddenly attacked by the common intermittent fever of the country, and when he arrived at Taganrog he was very ill. Trusting however to the strength of his constitution, he long refused to submit to the remedies which his physicians prescribed. When he at length consented to allow leeches to be applied, it was too late. During the last few days that he continued to breathe, he was insensible; and on the morning of the 1st of December he expired.

It was for some time rumoured in foreign countries that Alexander had been carried off by poison; but it is now well ascertained that there is no ground whatever for this suspicion. It appears however that his last days were embittered by the information of an extensive conspiracy of many of the nobility and officers of the army to subvert the government, and even to take away his life; and it is not improbable that this news, which is said to have been brought to him by a courier during the middle of the night of the 8th, which he spent at Aлуpta, may have contributed to hasten the fever by which he was two or three days after attacked. For full details upon this subject, and a translation of the Report of the Commission appointed to inquire into the affair by the Emperor Nicholas, we refer the reader to vol. ii. pp. 333-435 of Webster's 'Travels in the Crimea, Turkey, and Egypt,' London, 1830.

The death of Alexander took place exactly a century after that of Peter the Great, under whom the civilisation of Russia may be said to have commenced. The state of the empire did not change so completely during Alexander's reign as it did during that of Peter; but still the advancement of almost every branch of the national prosperity in the course of the quarter of a century during which Alexander filled the throne was probably, with that one exception, greater than had ever been exhibited in any other country. He founded or reorganised seven universities, and established 204 gymnasias, and above 2000 schools of an inferior order. The literature of Russia was also greatly indebted to his liberal encouragement, although he continued the censorship of the press in a modified form. He greatly promoted among his subjects a knowledge of and taste for science and the fine arts by his munificent purchases of paintings, and anatomical and other collections. The agriculture, the manufactures, and the commerce of Russia were all immensely extended during his reign. Finally, to Alexander the people of Russia were indebted for many political reforms of great value. Certain checks were applied to the arbitrary authority of the monarch, by rights granted to or recognised in the senate; the provincial governors were subjected to more effective control; the laws were improved by a mitigation of the severity of the old punishments, and in various other respects; personal slavery was entirely abolished; and even of the serfs attached to the soil, great numbers were emancipated, and arrangements made for the eventual elevation of all of them to a state of freedom. Under Alexander also both the extent and the population of the Russian dominions were greatly augmented; the military strength of the nation was developed and organised; and the country, from holding but a subordinate rank, took its place as one of the leading powers of Europe.

Alexander was married on the 9th of October, 1793, to the Princess Louisa Maria Augusta of Baden, who, on becoming a member of the Imperial family, assumed the name of Elizabeth Alexiowna. By her however he had no issue. On his death, his next brother, the Grand Duke Constantine, was proclaimed king at Warsaw; but he immediately surrendered the throne to his younger brother, the late Emperor Nicholas, according to an agreement made with Alexander during his lifetime.

* ALEXANDER II., surnamed NICOLAIEWITCH, the present Emperor of all the Russias, was the eldest son of the late Emperor Nicholas and the Empress Alexandra Feodorowna. This name his mother assumed on her marriage, as it is the custom with females on marrying into the Imperial family to change their names with their religion on being admitted into the Greek Church; before marriage she was the Princess Frederica Louisa Charlotte Wilhelmina, sister to the present Frederick William IV., king of Prussia. Alexander was born on the 29th of April, 1818, was educated with great care, and entered very early into the military service, in which of course during his father's lifetime he was invested with a numerous variety of honorary commands, but is said not to have evinced any remarkable military aptitude, though by

no means destitute of talent or intelligence. On the 28th of April, 1841, he married Maximilienne Wilhelmina Augusta Sophia Maria (now Marie Alexandrowna), daughter of Louis II., Grand-Duke of Hesse, by whom he has had four sons and a daughter; the eldest son, Nicolas Alexandrowitch, now the Czarowitch, or Crown Prince, was born on September 20, 1843. On the death of the Emperor Nicolas, on March 2, 1855, Alexander succeeded to the throne, and to the conduct of the war against the united forces of Turkey, France, England, and Sardinia. As Crown Prince he had been represented as opposed to the warlike policy of the late Emperor; but almost his first step after his accession was to issue a proclamation expressing his determination to carry out completely the plans and intentions of his predecessor, and to this determination he has hitherto held with great firmness. On September 8, 1855, the allies obtained possession of Sebastopol, as they had somewhat earlier of Kertch and Yenikale, and somewhat later of Kinburn. In October and November following he in person visited the scene of the most active hostilities, Nicolaieff, Odessa, and the Crimea, encouraging the soldiery to renewed efforts, and at other times has made progresses through various parts of his dominions, endeavouring to lessen as much as possible the unpopularity of the contest with a great portion of his subjects, occasioned by the enormous conscriptions levied upon them in order to supply the terrible losses experienced by his armies.

ALEXANDER, WILLIAM, EARL OF STIRLING, was the son of Alexander Alexander of Menstrie. The date of his birth is not very satisfactorily fixed. His father died in 1594. An engraved portrait of the Earl of Stirling found in a few copies of the collected edition of his poems published in 1637, bears the inscription "ætatis suæ 57." According to this very imperfect evidence, he would have been born in 1580. But the print is of extreme rarity and very high value, being considered the finest production of William Marshall, the celebrated engraver of that day. The probability therefore is, that it was not originally attached to the edition of 1637, and bearing no date itself, does not fix the age of the person represented. William Alexander, having succeeded to his father's landed property in the counties of Clackmannan and Perth, travelled for some time with Archibald the seventh Earl of Argyle. After his return to Scotland, he published in 1603 'The Tragedy of Darius;' which was followed in 1604 by two other tragedies, 'Julius Cæsar' and 'Cæsus.' In 1604 he published 'A Parænesis to the Prince,' the object of which was "to speak of princely things," and especially to enforce the choice of patriotic and disinterested councillors. In the same year he also printed 'Aurora,' containing the first Fancies of the Author's Youth, William Alexander of Menstrie. A collected edition of his plays, including a fourth, called 'The Alexandrian Tragedy,' was published in London in 1607, under the title of 'The Monarchicke Tragedies.' These were reprinted in 1616, and again in 1637, when they appeared with 'Doomsday,' a poem (originally published in 1614), containing something more than ten thousand lines; the 'Parænesis;' and 'Jonathan,' an unfinished poem. This collection was entitled 'Recreations with the Muses.' In these successive editions of his works, Alexander took very commendable pains to free them from those Scotticisms with which they originally abounded. Langbaine, speaking of the 'Darius,' says: "It was first composed in a mixed dialect of English and Scotch, and even then was commended by two copies of verses. The author has since polished and corrected much of his native language." In the last collected edition of these plays it is almost impossible to detect any of this dialect, which Langbaine seems to have considered as another tongue.

The poems of Alexander can scarcely now be regarded in a higher light than as literary curiosities. The quantity of verse which this author poured out in the course of ten years is remarkable enough; and this apparent facility is more remarkable, when it is considered that he was composing in a language which in many respects was to him a foreign one. But to this circumstance may be attributed not only what the critics of a later generation would have called the correctness of his versification, but the circumstance that the author is always labouring to express the commonest thoughts in the most high-sounding words, and by the most wearisome circumlocutions. It is in vain that we turn over his pages to find a single natural image expressed with force and simplicity. His genius, if genius it can be called, was exclusively of the didactic character. All his productions, whatever form they assume, are a succession of the most cumbersome preachments, unenlivened by any variety of illustration; without adaptation, when they take the dramatic form, to the character of his speakers, and altogether wanting in applicability to the habits and feelings of mankind, and the practical business of human life. It is almost incomprehensible how such productions as the 'Four Monarchicke Tragedies' could have appeared in the age of Shakespeare and his great dramatic contemporaries. Their author must undoubtedly have fancied that he was doing a higher and a better thing than presenting a poetical view of real life, when he produced such a tragedy as his 'Julius Cæsar,' where the great interest of the action is utterly lost in the tumid dialogues and interminable soliloquies, and the personages talk, not only unlike Romans, but unlike men. Oldys, who has written his life in the 'Biographia Britannica,' says of his plays: "He calculated them not for the amusement of spectators, or to be theatrically acted, so much as for readers of the highest rank; who,

by the wisest counsels and cautions that could be drawn from the greatest examples, of the ill effects of misgovernment, and confident reliance upon human grandeur, might be taught to amend their own practices, to moderate their own passions and their power over all in subjection to them; and if they have but this end with such readers, to term them historical dialogues, or anything else, can be no discredit to them." Alexander was evidently composing these tragedies upon a totally false theory of art; but it was one suited to his natural powers and his acquisitions. The character of a poet, with which he chose to invest himself, had in his view no regard to the highest objects of poetry. Verse was for him a conventional thing, suited as he thought for the delivery of a series of lectures upon state policy and the moral virtues, in which the introduction of historical names as the speakers of the said lectures might give the sentences a greater authority than if they appeared to come wholly from the mouth of William Alexander. In our great age of dramatic poetry, these tragedies, therefore, offer a remarkable contrast to the living spirit which informs the acting plays of even the humblest of Alexander's contemporaries. A singular notion has prevailed, nevertheless, that Shakespeare borrowed from Alexander, particularly in his own 'Julius Cæsar.' Malone suspects this, although he has the good sense to observe that what he calls the parallel passages "might perhaps have proceeded only from the two authors drawing from the same source." Another critic, of whom it would be difficult to say whether his presumption or his ignorance is the most conspicuous, affirms the resemblance more dogmatically: "There is a great similarity between the 'Julius Cæsar' of Shakespeare and that of Lord Stirling. Which was written the first? In other words, which of these writers borrowed from the other? This, we fear, cannot be ascertained. . . . The probability is, that Shakespeare borrowed from the northern poet." (Lardner's 'Cyclopædia': "Literary and Scientific Men," vol. ii.)

The poems of Alexander were sufficiently depraived in his own day. One calls him "the monarch-tragic of this isle;" another compares him with Sophocles, Euripides, and Æschylus. Even Drummond addresses him with—

"Thy Phoenix muse, still wing'd with wonders, flies."

John Davis of Hereford, in his Epigrams published about 1611, thinks that Alexander the Great had not won more glory by his sword than this Alexander with his pen. Yet in less than forty years after his death his poems were forgotten. Edward Phillips, the nephew of Milton, does not even mention him in his 'Theatrum Poetarum,' although Drummond is spoken of as writing in a style "sufficiently smooth and delightful."

Alexander began to pay to King James the homage of verse adulation at the exact moment when the king was in a condition to confer substantial benefits in return. In 1604 he addressed two poems to James, which have not been reprinted in his collected works: the 'Monarchicke Tragedies' are dedicated to his Majesty in a poem of fourteen stanzas, in which the king is told—

"The world long'd for thy birth three hundred years."

Honours and substantial offices were bestowed by James on the man whom he called "his philosophical poet." Alexander became gentleman-usher, in 1613, to Prince Charles; and in the same year was knighted, and made Master of the Requests. The subsequent public career of Sir William Alexander is altogether very singular. In 1621, King James, by charter, granted to him the whole territory of Nova Scotia, coupled with the famous scheme of extending the order of baronets by granting purchased honours in connection with the new colony. The scheme was however laid aside during the last years of James's reign; but it was revived by Charles: and Sir William Alexander held out the greatest inducement to adventurers in his pamphlet, published in 1625, entitled 'An Encouragement to Colonies.' In the first year of his reign Charles created Sir William Alexander lieutenant-general of New Scotland. In a few years afterwards he had the remarkable privilege granted him of coining small copper money. In 1626 he was appointed secretary of state for Scotland. In 1630 he was created Viscount Stirling, and in 1633 Earl of Stirling. In addition to his grant of Nova Scotia, he received a charter of the lordship of Canada in 1628 and obtained from the council of New England another grant of a large tract of country, including Long Island, then called the island of Stirling. He applied himself with great energy, in concert with his eldest son, to colonise this island, and to found a settlement on the St. Lawrence. But he does not appear to have derived any permanent advantage from these projects, and the labours of his son brought on a disease which terminated in his death. Nova Scotia was sold by Sir William to the French, and its beguiled baronets lost the territorial grants which were to have been attached to the dignity. As might be suspected, a good deal of odium was attached to the schemes of Alexander. In a very extraordinary book written by Sir Thomas Urquhart, the translator of Rabelais, and published in 1652, under the title of 'The Discovery of a most excellent Jewel, &c., found in the Kennel of Worcester Streets,' he is spoken of with great freedom, although the chief object of the book is the commendation of Scotsmen.

The countrymen of Lord Stirling seem to have had a notion that his poetry and his financial projects were equally conducive to the

art of money-making. His base copper coins were called 'turners, and Douglas in his 'Poerage' tells us that the favourite of James and Charles having built a large house in Stirling on which he inscribed "Per mare, per terras," his motto, it was whimsically read "Per metro, et turners." He certainly obtained very substantial tokens of the royal favour, for, besides the American grants, the baronies of Menstries, of Largis and Tullibody, of Tulliculture and of Gartmore were successively conferred upon him; and in addition to his office of secretary of state, he was keeper of the signet, commissioner of exchequer, and an extraordinary lord of session. Yet after his death, which took place in 1640, his family estates were given up to his creditors by his third son, Anthony. By his wife Janet, the daughter of Sir William Erskine, the Earl of Stirling had seven sons and two daughters. The eldest son, William, died in the lifetime of his father, and the grandson succeeded to the earldom, but died about a month after the subject of this article. The second son, Henry, became then Earl of Stirling. The title is now extinct; the last of the male descendants died in 1739.

ALEXEI MICHAILOWITZ, born at Moscow in the year 1630, was a son of the Czar Michailo Feodorowits Romanow, the first of the house of Romanow that held the sceptre of Russia, and of his second consort, Eudokia Lukianowna Streshnew. At the death of his father, July 12th, 1645, he succeeded to the crown, and as he was still very young, he was mainly guided by the advice of his councillors, Morosow, his tutor and brother-in-law; Miloslavskoj; and Plessow, a judge in one of the high courts at Moscow. The excessive avarice and despotism of these men caused an insurrection in Moscow, in 1648, in which Plessow and several of their creatures were murdered. The Czar's intercession with difficulty saved Morosow from the people's fury.

The reign of Alexei was disturbed by two pretenders to the throne, of whom one was the celebrated Demetrius; the other was Ankudinow; and the support of their pretended claims by Poland led to a war with that country, in which the Polish commander-in-chief, John Radzivil, was completely defeated at Sklovo; the Russians took Smolensko in 1654, and almost the whole of Lithuania was conquered and devastated by them. The Poles, being at this time severely pressed by the Swedes, found it advisable, after two years' war, to agree to an armistice, which was concluded at Niemietz, in November, 1656, Austria being on this occasion the mediator. The Poles agreed to cede the provinces of Smolensko, Tahernigow, and Seweria to the Russians, for a sum of money.

Alexei's second war was against Charles Gustav of Sweden, which commenced before the armistice with Poland was concluded. The cause of complaint on the part of the Russians was, that Gustav had hindered the operations of their army in Lithuania. The war was long and destructive, but inconclusive, and Alexei at length agreed to an armistice with Sweden, which was signed on the 23rd of April, 1658, and three years after, on the 21st of June, 1661, was converted into a treaty of peace at Kardis, by which their former possessions were mutually secured to each party. A peace had also been concluded between Poland and Sweden, in 1660, at Oliva; but before its conclusion, the war between Russia and Poland had been renewed; this war was occasioned by the Cossaks on the Dnieper, who had revolted from Russia, and sought protection from the Poles. It lasted till 1667, and by an armistice concluded at Andruszow, Russia gained, in addition to former conquests, that part of the Ukraine on the other side of the Dnieper of which she had already got possession.

Immediately after the conclusion of the Polish war a formidable insurrection broke out among the Don Cossaks. Stenko Razin, a Cossak, resented the death of his brother, who had been executed by order of a Russian general, and seduced his countrymen to revolt; they burnt and devastated the country from the lower Wolga to Jalk, took Astrakhan in 1670 (where Stenko ordered the Woiewod Prossorowsky to be thrown over the walls), and several other cities.

Hopes were held out to Stenko which prevailed on him to present himself at Moscow, where he was executed as a traitor and rebel; after this, tranquillity was easily restored among the Cossaks. Alexei's last war was against the Turks. Led by their hetman Dorosenky, the Saporogian Cossaks had revolted against the Poles, and made a treaty of alliance with Mohammed IV., receiving from him the province of Ukraine in fief. From this cause naturally arose a war between the Poles and the Turks; and Russia was not slow in interfering, and demanded that Azow, which originally belonged to Russia, and in 1642 had been taken from the Cossaks by the Turks, should again be ceded to Russia. But Mohammed's success did not dispose him to listen to the demands of Russia: he took the Polish frontier fortress Kamienieck, conquered the whole of Podolia in less than two months, and alarmed the Russians by the rapidity and success of his operations. The King of Poland, Michael, drew no advantage from the victory over the Tartars gained by Sobiesky at Kaluzo on the 18th of October, 1672, but made a hasty peace which was disgraceful to his country. But the King of Poland's peace was rejected by the Polish diet, and Alexei was glad to assist even a constitutional power

in renewing hostilities against the formidable Turks; but finding his expected advantages not so great as he anticipated, his zeal abated, and he died before a peace with the Turks was concluded, on the 10th of February, 1676, in his forty-sixth year.

Alexei Micháilowitx did much for the improvement of Russia; agriculture and manufactures were constant objects of his solicitude: he invited many foreigners to Russia, especially mechanics, artists, and military men, whom he treated liberally. He ordered many works, particularly on applied mathematics, military science, tactics, fortification, geography, &c., to be translated into Russian; he enlarged the city of Moscow, and built two of its suburbs. He likewise completely reformed the Russian laws. He moreover commenced and partly effected an extensive ecclesiastical reform, chiefly in matters concerning the liturgy. Alexei was twice married: his first wife was Maria Ilijinshna Miloslawskoy, by whom he had five sons (two of whom, Feodor Alexeiewitx and Iwan Alexeiewitx, were his successors on the throne of Russia), and seven daughters. His second wife was Natalia Kirillowna Nariashkin, by whom he had one son, Peter Alexeiewitx (Peter the Great), and one daughter, Natalia Alexeiewna.

ALEXEI PETROWITZ, the eldest son of Peter the Great of Russia, and of Eudoxia the first wife of that monarch. He was born at Moscow, in 1695. From his boyhood Alexis showed a headstrong disposition, and an inclination for low pleasures, which, as he grew up, assumed the character of a decided aversion and opposition to that reformation of the ancient manners of the country which it was the object of Peter's life to effect. It was in 1716 however, while the Czar was absent on his second tour through Europe, that the Prince may be said to have first thrown off his allegiance, by secretly quitting Russia, and taking flight to Vienna, whence he some time after retired to Naples. Peter, having returned from abroad, foresaw the confusion and mischief which this conduct in the heir apparent might eventually occasion, and went to work with his usual energy to counteract and defeat a plan which threatened the destruction of whatever he had done for the improvement of Russia. It was some time before he succeeded in discovering his son's retreat; but having at length learned where he was, he gave instructions to some noblemen, who proceeded to Naples, and induced the prince to return to Russia, and to solicit his father's forgiveness. The determined character of Peter's extraordinary mind now displayed itself with fearful sternness. As soon as he had secured the person of his son, he proceeded to treat him as a criminal. Being deprived of his sword, he was brought before an assembly of the clergy and nobility, and there compelled to execute a formal resignation of his pretensions to the crown. At the same time, effectually to crush the sedition of which he was the head, his principal partisans were all arrested, and some of them put to death. His mother was shut up in a monastery. But all this was not deemed enough. The prince himself was finally brought to trial, and condemned to suffer death. This was in the year 1718. The day after he was informed of his sentence, Alexis was found dead in prison, and it was given out that he had been carried off by some natural illness; but suspicions have been naturally enough entertained that a private execution accomplished the end, without incurring the risks or inconveniences of a public one. The Prince, whose unhappy career was thus terminated, left a son, a child of three years old, who in 1727, on the death of Catharine I., became emperor under the title of Peter II. He only reigned for three years. After the death of Alexis, Peter declared his second son his heir, but he also died soon after, to the great grief of his father. These events opened the succession to the Empress, who, on the death of her illustrious husband in 1725, assumed the title of Catharine I.

ALEXIS COMNENUS I., Emperor of Constantinople, ascended the throne in 1081. The Comneni were a family of Italian origin transplanted into Asia Minor. Isaac Comnenus I., whose father Manuel had served the empire with distinction, was elected Emperor in 1057 by the troops, in opposition to Michael VI. Isaac having abdicated two years after, and his brother John having declined to succeed him, the imperial purple was assumed by Constantine Ducas, a friend of the Comneni. After several reigns interrupted by revolts, Alexis, the third son of John Comnenus, was raised by the soldiers to the throne, from which his predecessor, Nicephorus Botaniates, himself a usurper, was hurled down, and forced to retire into a monastery.

Alexis assumed the reins of the empire at a critical moment. The Turks had spread from Persia to the Hellespont; the frontiers of the Danube were threatened by swarms of barbarians; the Normans, who were masters of Apulia and Sicily, attacked the provinces on the Adriatic; and, to crown the whole, the first crusade came with its countless multitudes, threatening to sweep away the eastern empire, and Constantinople itself, in their passage. "Yet, in the midst of these tempests, Alexis steered the imperial vessel with dexterity and courage. At the head of his armies he was bold in action, skilful in stratagem, patient of fatigue, ready to improve his advantages, and rising from his defeat with inexhaustible vigour. The discipline of the camp was revived, and a new generation of men and soldiers was created by the example and the precepts of their leader. In a long reign of thirty-seven years he subdued and pardoned the envy of his equals; the laws of public and private order were restored; the arts of wealth and science were cultivated; the limits of the empire were

enlarged in Europe and Asia, and the Comnenian sceptre was transmitted to his children of the third and fourth generation." (Gibbon's 'Decline and Fall of the Roman Empire,' ch. xlviii.)

The most important event of Alexis's reign is the passage of the Crusaders through his dominions. His conduct on that occasion has given rise to the most conflicting statements by various historians. Alexis had solicited some assistance from the western princes against the invading Turks; but he was alarmed at the approach of hundreds of thousands of undisciplined and riotous fanatics led by Peter the Hermit, who ravaged the Christian countries on their way with as little scruple as if they had been Mohammedan. This promiscuous multitude however was safely passed by Alexis's care across the Bosphorus into Asia, where they were drawn by the Turks into the plains of Nicea, and there destroyed in 1096. The regular part of the expedition came after in several divisions, under the command of Godfrey of Bouillon, of several French princes, and of Bohemond and Tancred, son and nephew to Robert Guiscard, the Norman conqueror of Sicily. After a long and painful march the Crusaders encamped under the walls of Constantinople. Alexis supplied them with provisions, but carefully guarded the city against any surprise on their part. Frequent affrays however took place between the Franks and the Greeks, who looked upon their unwelcome guests with as much fear and aversion as they did on the Turks. The leaders of the crusaders were admitted to the imperial presence, where they paid homage to Alexis, who found means to tame and to conciliate the rude chiefs by gifts, and by promises of assistance in their expedition to the Holy Land, while he induced them one after the other to pass quietly over to Asia. This being accomplished, Alexis assisted them in the capture of Nicea from the Turks, which conquest however he kept for himself. In the same manner he profited by the progress of the Crusaders, following as it were in their wake, and reconquering from the Turks all the coasts of Asia Minor and the neighbouring islands, and driving the Turkish sultans into the interior to the foot of Mount Taurus. While intent upon this, Alexis neglected or forgot to lend any further succour to the Crusaders, who were fighting on their own account in Syria and Palestine. The Latin historians therefore accuse him of bad faith, whilst his daughter, Anna Comnena, who wrote her father's life, extols his wise policy, dwelling with haughty indignation on the insolence and rapacity of the western barbarians. The Byzantine Greeks were a refined, but effeminate and corrupt race; cunning, suspicion, and dissimulation were their principal weapons of defence against the headlong violence of the feudal semi-barbarous Franks. Alexis died in 1118, and was succeeded by his son John Comnenus, a good and wise prince. His other son, Isaac, was the father of another John, who apostatised to the Turks, and married their sultan's daughter, and through whom, apparently, Mahomet II., centuries after, boasted of his Comnenian descent; and of the famous Andronicus, who, after a most adventurous career, usurped the throne in 1183, causing his relative, the youthful heir Alexis Comnenus II., to be strangled, together with his mother Maria, the Emperor Manuel's widow. Andronicus was himself overthrown and put to a cruel death three years after, and in him ended the Imperial line of the Comneni on the throne of Constantinople. Andronicus's posterity reigned afterwards over the provinces of Trebizond, with the pompous title of Emperor.

(See the various *Histories of the Crusades*, and the collection of the *Byzantine Historians*; and particularly the *History of Anna Comnena*.)

[ANNA COMNENA.]

ALFENUS VARUS, one of the Roman jurists whose Excerpts are contained in the 'Digest.' He was one of the most distinguished pupils of the great jurist Servius Sulpicius, the friend of Cicero. Pomponius ('Dig.' i. tit. 2) states that he became consul, and it is generally assumed that he is the P. Alphinus who was consul A.D. 2, and the same person as the P. Alfinus, or Alfenus Varus, of Dion Cassius (lib. lv. Index). But as Sulpicius, the master of Varus, was born B.C. 106 and died B.C. 43, it is not probable that Alfenus the jurist could be consul so late as A.D. 2.

Acron, the scholiast (Horatius, 'Sat.' i. 3, v. 130), has a story that Alfenus was a shoemaker at Cremona, who came to Rome, where he became the pupil of Servius Sulpicius, and attained such distinction for his legal knowledge that he was made consul and had a public funeral. The passage of Horace and the remark of the scholiast have occasioned much discussion. (Wieland, 'Horazens Satiren übersetzt,' note on 'Sat.' i. 3, v. 130; Heindorf, 'Des. Q. Horatius Satiren erklärt.') It is very difficult to form any conclusion from the passage of Horace, though it may perhaps be assumed that he does refer to the jurist Alfenus; but this will not determine whether the story of his early life as given by Acron and alluded to by Horace is true.

Alfenus wrote a work entitled 'Digesta,' in forty books. He is often cited by other jurists. The Excerpts in the 'Digest' show that his style was clear.

ALFIERI, VITTORIO, was born at Asti, in Piedmont, Jan. 17, 1749, of a noble and wealthy family. He lost his father when a child, and his mother having married again, young Vittorio and his sister Julia were placed under the guardianship of their uncle, Pellegrino Alfieri. Vittorio at 9 years of age was sent as a boarder to the Academia, or College of the Nobles, at Turin. At the age of 13 he was admitted to study philosophy in the university of Turin. At the age of 14, by the laws of Piedmont, he was master of his own

income, and only subject to his guardian in so far as he could not alienate his property. He then entered the army, as all young noblemen were bound to do, with the rank of ensign in a provincial regiment, which in time of peace only assembled for a few days twice in the year.

At the age of 17 he obtained the king's leave to travel under the escort of an English Roman Catholic tutor. He went first through Italy, and, having got rid of the tutor, next proceeded to France, where he was introduced at the levee of Louis XV. at Versailles. He was struck with "the Jupiter-like superciliousness of that monarch, who stared at the persons introduced to him without condescending to say a word to them." Alfieri's pride was evidently hurt. From France he came to England, with which country he was pleased from the first. After spending in England the winter of 1768, he crossed over to Holland, which country he liked best next to England. He attributed the advantages of both to their institutions, and the long habit of rational freedom. His life was for several years after restless and dissipated.

In 1773 he returned to Turin, and began to write some scenes of a drama on the subject of Cleopatra. This was his first essay in Italian versification. In 1777 he went first to Siena and then to Florence, where he applied himself seriously to dramatic composition. He there also made the acquaintance of a lady who fixed his heart for ever. This was the wife of Charles Edward Stuart, called the Young Pretender [ALBANY, COUNTESS OF], at whose house most foreigners visited. The lady afterwards separated from her husband, and retired into a convent at Rome. Alfieri continued attached to her, and followed her to several places; at last, after her husband's death in 1788, it appears that they were privately married, although the marriage was never made public, and by some is doubted.

In 1782 Alfieri had completed fourteen tragedies, ten of which were printed at Siena. In 1785, the Countess of Albany having gone to live in France, Alfieri also repaired thither, and resided first at a villa near Colmar, and afterwards in Paris, where he superintended the edition of his tragedies by Didot. Soon after he published his other miscellaneous works at Kehl. Alfieri and the countess were living quietly at Paris, when the French revolution drove them away.

Alfieri and his companion hastened through Belgium and Germany back to Florence, from which city he never stirred after. Here he wrote his 'Misogallo,' a collection of satirical sonnets, letters, and epigrams, in which he has embodied all his early prejudices and his more recent feelings of dislike to the French people. At 46 years of age he began studying Greek, and by his own unassisted application he was enabled in two years to understand and translate the Greek writers. He lived quietly at Florence, seeing nobody except the countess and his old friend the Abbate Caluso, till 1803, when an attack of the gout, to which he was subject, added to his constant application and an extremely sparing diet, terminated his life on the 8th of October, at the age of 55. He expired without much pain, his constitution being evidently worn out. The Countess of Albany was by his side in his last moments. He was buried in the church of Santa Croce, the Florence Pantheon, where many years before the sight of Michel Angelo's mausoleum had inspired him with a desire for literary fame. The Countess of Albany caused a fine monument by Canova to be erected to his memory.

Alfieri gave to Italy the first tragedies deserving the name. The unities are strictly preserved, the characters are few, the action one, no by-play or subordinate incidents; and yet, notwithstanding all this meagreness, there is so much power in the sentiments, so much nervousness in the language, such a condensation of single passion, that the performance of one of Alfieri's tragedies keeps the audience spell-bound. Such at least is the effect they produce upon an Italian audience.

The 'Saul' is the finest of Alfieri's plays; the author has imparted an oriental and biblical colouring to the language and the situations of his personages, which, together with the fine lyric passages expressive of the changes in Saul's mental alienation, give a peculiar and epic interest to this play. The 'Filippo' is considered as the next in merit. Most of the others are on Greek and Roman subjects. Two are taken from the history of Florence. Alfieri's classic drama is very different from that of the French stage; it is chiefly distinguished by

its extreme simplicity, the absence of all superfluous declamation and tedious narrative, and the exciting abruptness of his blank verse. This arrangement of words, which has been called harsh, was by him purposely studied, to supply the deficiencies of the measure.

Alfieri's abhorrence of the excesses of the French during the first revolution, and of their subsequent servility under military despotism, has caused some to imagine that he had renounced all his liberal ideas before his death. Alfieri's idea of liberty was inseparably connected with that of order and security for persons and property, and he saw the latter violated every day both in France and in Italy. His violent temper led him sometimes into paradox and seeming contradictions; but he was, upon the whole, an independent, candid, honest-hearted writer, and his example and his precepts gave a temper to the Italian mind which has not been lost.

(*Vita di Vittorio Alfieri da Asti, scritta da Esso.*)

ALFONSO is the name of several kings of Spain and Portugal, and of some kings of Naples and Sicily. This name is written by the Spaniards, Ildefonso, Alphonso, Alfonso, and Alonso; and by the Portuguese, Affonso. We have chosen the form Alfonso, as being that in most common use.

ALFONSO I., surnamed the Catholic, was chosen King of Asturias and Leon in 739. He was the son-in-law of Pelayo, and a descendant of King Leovigild. He wrested from the Moors Lara and Saldaña in Castile, extended his empire over nearly one-fourth of Spain, and inflicted a severe retribution on the descendants of the sanguinary hordes of Tarik and Muza. Alfonso founded new churches in the towns which he conquered, and rebuilt or repaired the old; it is owing to his zeal for religion, that the epithet of Catholic was given him. He died in 757, and was succeeded by his son, Fruela I. (Mariana, vii. 6.)

ALFONSO II., called the Chaste, elected King of Asturias and Leon in 791, was the nephew of Bermudo the Deacon. His reign was a continual scene of warfare both against the Moors and against his rebellious subjects. To this king is attributed the abolition of the disgraceful tribute of a hundred maidens, which the Spaniards were bound from the time of Mauregato to pay to the Moors. The amours of his sister Donna Ximena with the Count of Saldaña—the wonderful exploits of Bernardo del Carpio, who was the offspring of this love, against the no less famous French hero Roland—also belong to this period. All this history however is considered by the best critics as belonging to the region of fable and romance. Alfonso died about the year 843; he was succeeded by Ramiro I., son of Bermudo the Deacon. (Mariana, vii. 9, 12.)

ALFONSO III., surnamed El Magno (the Great), king of Asturias and Leon, succeeded his father Ordoño I. in 866, at the age of fourteen. Successful against his rebellious subjects and his Christian enemies in the beginning of his reign, Alfonso next turned his attention to the Mohammedans, and in thirty years of continual warfare his arms were always crowned with victory. He extended the boundaries of his empire to the banks of the Guadiana. But his son Garcia, aided by the ever-rebellious barons, by his father-in-law the Count of Castile, by his brother Ordoño, governor of Galicia, and even by his own mother, attempted to dethrone the aged monarch. Alfonso succeeding in crushing the rebellion and taking his son prisoner; but fearing the evils of a civil war, he called a junta in 910, and abdicated the crown in favour of Garcia. After his abdication, he led the troops of his son against the Moslems, and gained a brilliant victory, shortly after which he died at Zamora, in 910. (Mariana, vii. 17-20.)

ALFONSO IV., called El Monge, the Monk, king of Leon, succeeded Fruela II. in 924. Six years after his accession to the throne, he abdicated in favour of his brother Ramiro, and retired to the monastery of Sahagun. Within two years he attempted to regain his kingdom, but was defeated by his brother, who consigned him to a monastery, and sentenced him to the loss of his eyes. He died ten years afterwards. (Mariana, viii. 5.)

ALFONSO V. succeeded his father Bermudo on the throne of Leon in 999, being only five years of age. The government, during his minority, was intrusted to a regency, which was a very eventful one. During it, the great Al-Mansur was defeated, and this success led to the conquest of Cordova. Alfonso V. rebuilt and re-peopled the city of Leon, and made some salutary laws in the Cortes at Oviedo in 1020. He was killed at the siege of Viseu in 1028; his son Bermudo III. succeeded him. (Mariana, viii. 10, 11.)

ALFONSO VI. was the son of Fernando I. He was crowned king of Leon in 1066. Fernando had committed the same fault as his father in dividing his states among his children. He left Leon to Alfonso, Castile to Sancho, Galicia to Garcia, and the cities of Toro and Zamora to Urraca and Elvira, his two daughters. Alfonso and Sancho lived in peace with each other only two years. In 1068 Sancho invaded the states of his brother, took him prisoner after some vicissitudes, and confined him in the monastery of Sahagun, from which he escaped, and sought a refuge at the Moorish court of Toledo. In 1072 Sancho was assassinated while besieging Zamora, and Alfonso hastened from his exile to take possession of the vacant throne. Asturias, Leon, and Castile acknowledged his authority. He invited his brother Garcia to his court, and shut him up in the castle of Luna, where he remained until his death, and Galicia was thus added to the states of Alfonso.

Having remained undisputed lord of so large a portion of the peninsula, Alfonso turned his arms against the Saracens. He invaded Portugal, and made most of the Moorish petty chiefs his tributaries. He afterwards took Coria, and then attacked Toledo; and had not the Almoravides with a powerful army invaded Spain, he would have expelled the Moors from the peninsula. He gave his illegitimate daughter, Theresa, in marriage to Henry, count of Besançon, with his conquests in Portugal, and the title of count. During his reign the famous hero Rodrigo Diaz de Vivar, surnamed the Cid or Sidi, the Moorish word for Lord, performed those exploits which have furnished abundance of materials to romance-writers.

King Alfonso died in 1109, at Toledo, in the seventy-ninth year of his age. His son Sancho having fallen in a battle against the Moors, the crowns of Leon and Castile fell to his eldest daughter Urraca. (Mariana, ix., x., ch. 8-20; 1-8.)

ALFONSO VII. [ALFONSO I., of Aragon.]

ALFONSO VIII., king of Castile and Leon, styled the Emperor. At the death of his mother, Queen Urraca, he became king in 1126. The misrule of that princess's government, and the wars which had devastated Castile during the latter part of the preceding reign, rendered the beginning of his own very stormy. Several places were held by his step-father, Alfonso VII., until they were subdued, but at last the two princes were reconciled, and Alfonso VIII. remained sovereign lord of Castile and Leon. About the year 1137 he was obliged to march an army into Galicia against the Count of Portugal, Alfonso Henriquez. Though the Portuguese had the advantage, Henriquez sued for peace, which Alfonso readily granted.

In 1140 he attempted to conquer Navarre, but failed. In his wars with the infidels, Alfonso was more successful. He obtained many signal victories over them, and advanced the Castilian frontiers to Andalusia. His last battle against the Almohades was undecided; after which he returned towards Toledo, and died in his tent in August, 1157. At the close of his reign, the military order of Alcántara, to which Christian Spain owed so much, was instituted. He was succeeded in Castile by Sancho III., and in Leon by Fernando II. (Mariana, x., xi., 8-20; 1-7.)

ALFONSO IX., king of Leon, succeeded his father Fernando in 1188. He was dubbed a knight by his cousin, Alfonso III. of Castile. For a short time the two relatives lived on good terms; but in 1189, a dispute about the possession of some territory in Estremadura led to repeated wars. Alfonso first married the Princess Theresa of Portugal, from whom he was forced to separate by Pope Celestine III.; he then married the daughter of his cousin of Castile, and the marriage was again annulled by the Pope on the same plea of relationship. Alfonso then conquered Merida, Caceres, and other important places in Estremadura, and while on his road to Santiago, he died at Villanueva de Sarria, in 1230. His son Fernando III. succeeded to the crowns of both Leon and Castile. (Mariana, xi., xii., 16-22; 1, 2; *Chronicle of Alfonso el Sabio*.)

ALFONSO X. of Castile and Leon, surnamed 'El Sabio' (the Learned), owing to his legislative, scientific, and literary labours, was the son of Ferdinand III., whom he succeeded in 1252. One of the first acts of his reign was so dishonourable that it throws an indelible spot on his character. Being discontented with his queen, Doña Violante of Aragon, because she had no children, he sent his ambassadors to the King of Denmark, stating that he was about to divorce his wife, and requesting him to send him one of his daughters as a bride. The Princess Christina accordingly set out from her father's court, and having traversed France and Germany arrived at Valladolid. By this time the queen had a daughter, and Alfonso was reconciled to her, and the Princess of Denmark, mortified and disappointed in her hopes of an honourable marriage, died a few months after. In 1253 Edward, the son of Henry III. of England, paid him a visit. He was magnificently entertained by that prince, who conferred on him the honour of knighthood, and married him to his daughter, Leonor, commonly called Eleonor. In 1256 he became a competitor for the imperial crown, but Richard, earl of Cornwall, was elected by a small majority of the Diet. On the death of Richard in 1271, Alfonso renewed his application, but Rudolph of Habsburg was elected. In vain did Alfonso, who had assumed the title of emperor, protest against the validity of this new election; in vain did he lavish his wealth to form a party in his own favour; his pretensions only served to involve him in perpetual dispute with the secular princes of the empire, as well as with the Pope, who, weary of his importunities, went so far as to excommunicate his adherents. The enormous expense which the ambitious projects of Alfonso entailed upon him, and the adulteration of the coin, to which he is known to have resorted in order to raise money, made him unpopular with his subjects, who began loudly to complain of his expensive follies. This state of things was taken advantage of by a few discontented barons who formed a league against Alfonso, at the head of which was his own brother the Infante Don Felipe. Having obtained the assistance of Mohammed I., sultan of Granada, who promised to make a diversion in their favour on the frontiers of Castile, they rose in arms in 1270; but upon Alfonso promising them that their grievances should be redressed, they dispersed, and the most turbulent retired to Granada, where they were kindly received by the Moorish king. In 1275, during the absence of Alfonso on a fruitless visit to Pope

Gregory, then at Beaucaire in France, respecting his pretensions to the empire, his eldest son, the Infante Fernando de la Cerda, died. This was the cause of fresh disturbances, for a question now arose whether the offspring of the Infante, who had left two sons by a French princess, was to be preferred to the second son, Don Sancho. This led to a series of distressing civil wars. Sancho was disinherited by a junta at Seville and was solemnly cursed by his father, but he succeeded in reducing Alfonso to such extremity that he applied to Abú Yúsuf, sultan of Marocco, and requested his aid in money and troops, offering to pawn him his crown. The African crossed the straits at the head of considerable forces; Sancho, on the other hand, concluded an alliance with Mohammed II. of Granada, and the civil war which now raged was rendered more than usually destructive and atrocious by the interference on both sides of foreign powers professing a hostile religion. Both parties ravaged the country without gaining any decisive advantage, until at length Alfonso was prevailed upon to pardon his rebellious son, and to restore him to his favour. He died shortly after, in 1284, in the eighty-first year of his age. The character of Alfonso was a curious compound of weakness and vindictiveness, and of the best as well as of the worst qualities of human nature. Upon the whole, fickleness rather than incapacity seems to have been his leading fault. That in the midst of such troubles Alfonso should have been able not only to devote himself to the cultivation of science and literature, but to acquire learning so extensive for the age in which he lived, is really wonderful. Notwithstanding the few moments of rest which his immoderate ambition and the revolt of his subjects allowed him, he conferred such services both upon his own country and upon the world at large, as few royal persons have done. Spain owes to him not only her earliest national history, and a translation of the Scriptures, but the restoration of her principal university, that of Salamanca, the introduction of the vernacular tongue in public proceedings, and the promulgation of an admirable code of laws. Science is greatly indebted to him for the celebrated astronomical tables known by his name, which were still universally used in Europe at the beginning of the 16th century. It is probable that Alfonso employed in their construction several Moorish astronomers of Granada, who visited his court for the express purpose of superintending, if not of making them. Their epoch is the 30th of May, 1252, the day of his accession to the throne. They were printed for the first time at Venice, 1492, 4to, and went subsequently through several editions. It has been asserted by Salazar ('Origen de las Dignidades Seculares de Castilla y Leon,' p. 105) that in the promulgation of the body of laws known as 'Las Siete Partidas,' because it is divided into seven sections or parts, Alfonso had only a small share, that code having been begun in the reign of his father Ferdinand III. But this has since been discovered to be an error. Ferdinand perceived, no doubt, the defects of the Visigothic code, but he never attempted to remedy them, and the task was reserved for his son. The revival of the study of Roman law, which was then taught in the Italian universities, and his wish to appear as a legislator in the hope of obtaining the imperial crown, the favourite object of his ambition, urged him on to the arduous task of legislating for a warlike and chivalrous nation. How cautiously he proceeded in his great design will appear from the fact that his first compilation for actual use was the 'Fuero Real,' which consisted of ordinances or laws taken from the local 'fueros' or charters, with a few monarchical axioms from the Justinian code, and that neither Alfonso nor his immediate successors, Don Sancho el Bravo and Fernando IV., attempted to enforce them as the law of the land.

ALFONSO XI., king of Castile and Leon, succeeded his father Fernando IV. in 1312, being only a few months old. A long series of convulsions attended his minority. When he came of age he quieted the intestine disturbances, and seriously pursued the wars against the Infidels. He took Tarifa and Algeciras from them, but died of the plague while besieging Gibraltar, in 1350. He was succeeded by his son Pedro the Cruel. (Villasan, *Cronica del Rey Don Alfonso el Onceno*; Mariana, xv.)

ALFONSO I., king of Aragon, surnamed El Batallador, 'the Battler,' succeeded his brother Pedro in 1104, and marrying Queen Urraca of Castile and Leon, was styled king of those provinces also. This marriage was annulled in 1114. In a succession of victories he rescued from the Mohammedans almost all the territory south of the Ebro. He laid siege to Saragossa, and after four years of struggle he entered it by capitulation in 1118, and made it the capital of Aragon. In 1120 he defeated a numerous army of the Almoravides near Daroca. Tarragona, Meguizenza, and Calatayud were also among his conquests; and he carried his victorious arms even to Andalusia.

In 1134 he invested Fraga, when the wali of Valencia, Aben Gama, advanced with a considerable force to relieve the town. A battle took place, in which the Christians were defeated and Alfonso killed. He was succeeded by his brother Ramiro II.

(Florez, *España Sagrada*; *Chronica Adefonsi Imperatoris*, vol. xi.; Rodericus Toletanus, *De Rebus Hispanicis*; Mariana, x. 8.)

ALFONSO II. succeeded his mother Petronila on the throne of Aragon when he was only eleven years of age. He extended the frontiers of his kingdom on the side of the Mohammedans, penetrated into the territory of Valencia, and aided Alfonso IX. of Castile in investing Cuença. For this important service Aragon was made

exempt from paying homage to Castile. Alfonso died in 1196; and was succeeded in his Aragon and his Spanish dominions by his eldest son, Pedro II. (Rodericus Toletanus; Mariana, xi. 9-13.)

ALFONSO III. was the son of Pedro III., king of Aragon. At the death of his father in 1285, he was at Majorca, where he had been sent by his father to dethrone his uncle Jaime, who had usurped the sovereignty of that island. Having succeeded in his expedition, he returned to Aragon, and found the Cortes assembled at Saragossa. This body sent a deputation to meet him at Valencia, to express their surprise at his having assumed the title of king previous to his taking the customary oath before the Cortes of the realm. Not without great difficulty, and after many tumultuous debates, Alfonso was acknowledged king, upon submitting to all the conditions required by that body. His reign was occupied with wars against France, the Pope, and the dethroned King of Majorca, productive of no other result than the distress of the people. He died at Barcelona in 1291, and was succeeded by his brother, Jaime II. (Zurita, *Anales de Aragon*, vii.; Mariana, xiv.)

ALFONSO IV., son of Jaime II., ascended the throne of Aragon in 1327. The Genoese not only fomented dissension in his new conquests of Sardinia, but even dared to attack him in his own kingdom. They made various descents on Catalonia and Valencia, but were repulsed. At home, his son and successor Pedro raised the standard of revolt against him, because his father had given some possessions to his half-brother Alfonso. These dissensions were in a great measure the cause of his death, which took place in Barcelona in 1336. He was succeeded by his son, Pedro IV. (Zurita, *Anales*, vii.; Mariana, xvi.)

ALFONSO V. of Aragon, and I. of Sicily, succeeded, in 1416, his father, Ferdinand I., who had annexed the crown of Sicily to that of Aragon. To these two Alfonso added that of Naples. Queen Joanna II. having adopted him for her heir and successor, Alfonso repaired to Naples, but was driven away by the party of the Angevins, headed by the famous Sforza Attendolo, and the Queen was compelled, in 1423, to name as her successor Louis III. of Anjou. At the death of Joanna, in 1435, Alfonso renewed his claims, but was opposed by René of Anjou, who after Louis's death had been called to the throne by the last will of the Queen. The court of Rome declared for René. Alfonso's fleet was attacked near the island of Ponza by the Genoese, who had taken René's part, and was totally defeated, Alfonso himself being taken prisoner. The Genoese sent him to Philip Maria Visconti, duke of Milan, who was then also lord of Genoa. Alfonso found favour with his keeper, who was pleased with his acuteness of mind and his superior address, and who, being also jealous of the French dominion at Naples, not only restored him to liberty, but made an alliance with him. Alfonso repaired to Gaeta, which his fleet had taken by surprise, and thence he went into the Abruzzi and Puglia, where he found partisans among the nobility. The war between him and René was carried on in those remote provinces for several years, till at last the treachery of the younger Caldora, a condottieri chief, ruined the affairs of René, and Alfonso advanced against Naples in 1442. His soldiers entered the city through an old aqueduct, and René escaped by sea to Provence, where he reigned till his death, the last king of the house of Anjou. Alfonso now fixed his residence at Naples, and for the first time since the Sicilian Vespers, Sicily and Naples were united under the same monarch. Alfonso applied himself to re-establish order and justice throughout the kingdom, which had long been a prey to misgovernment and confusion under the weak and corrupt reign of Joanna II. In order to strengthen himself with the nobles, whose power was very great, he extended their feudal privileges, and he also increased largely the number of the feudatories of the crown. In return he obtained of them parliamentary grants of money, or gifts, as they were called, and fresh taxes to supply his expenditure.

Alfonso was engaged in frequent disputes with the Popes, which were terminated by the treaty of Terracina in 1443, when he joined the Papal troops against Francesco Sforza, the son of his old antagonist, and dispossessed him of the Marches. Sforza having afterwards become, first, general, and then Duke of Milan, Alfonso joined the Venetians against him and his allies, the Florentines. The most favourable feature of Alfonso's reign is his patronage of letters. He also was fond of the arts, and to him Naples owed several embellishments.

Alfonso had no legitimate children, having early separated from his wife. For his natural son, Ferdinand, he procured the Pope's bull of legitimacy, and left him as his successor to the throne of Naples; his brother John retaining heir to the crowns of Aragon, Valencia, Sardinia, and Sicily. This John was afterwards succeeded by Ferdinand, called the Catholic, who reconquered the kingdom of Naples, which continued to be a dependency of Spain for several centuries.

In 1457 Alfonso sent a fleet against Genoa, to favour the party of the Asorni faction, which had been exiled; the city was hard pressed by the besiegers, when Alfonso died at Naples, on the 17th June, 1458.

ALFONSO III., of Castile (previous to the union of Castile and Leon) was only three years of age at the death of his father, Sancho III., in 1158. His minority was a very stormy one. The two families of

Castros and Laras quarrelled for the guardianship of the young king, and caused much blood to be shed. Alfonso married Eleanor, daughter of Henry II. of England, in 1170, and from that time he exercised the regal authority without control. In 1195 he was defeated by the Almohades at Alarcos, but he avenged this affront in the famous battle of Las Navas de Tolosa, where he destroyed the most numerous army that ever crossed the Strait of Gibraltar, after the first invasion. [ALMOHADES.] Shortly after this memorable victory, he died at Garci Muñoz, in 1214; he was succeeded by his son Enrique I. (Mariana, xi., xii.)

ALFONSO I., king of Portugal, was the son of Henry, count of Bezaçon, who held Portugal in fief with the title of count. At his father's death, in 1096, Alfonso being only two years old, his mother governed the state in his minority, and he was forced to apply to arms before he could wrest the sovereignty from her.

After a short war with Castile, he assembled his army at Coimbra, with a view to attack the Infidels. The King of Badajoz and four other Moorish chieftains also mustered an army, far superior in numbers to that of the Portuguese. The struggle was severe on both sides, and at last victory declared for the Christians. An incredible multitude of Africans remained dead on the field, the number of which is estimated by the Portuguese historians at 200,000. In the exultation of victory, the Count was proclaimed King by his followers, which title he assumed from that day. This battle was fought in the plains of Ourique, in the province of Alentejo, in the year 1139.

In 1146 Alfonso took by assault the fortress of Santarem from the Saracens, and put to the sword all its inhabitants without distinction of age or sex. In the next year he took Lisbon, when the fleet of English crusaders, who were going to the Holy Land, rendered him very effectual assistance. He afterwards reduced Cintra, crossed the Tagus, and possessed himself of several towns in Extremadura and Alentejo. In 1158 he reduced Alcazar-do-Sal after a siege of two months. In short, Alfonso almost freed all Portugal from the yoke of the Saracens.

This king, the founder of the Portuguese monarchy, was not a warrior only—he was also a legislator. Under his reign a code of laws was promulgated at the Cortes of Lamego. These laws chiefly treated on the succession to the crown, the duties of the nobles and the people, and the independence of the kingdom.

Alfonso died in 1185, at Coimbra. He was succeeded by his son Sancho I.

(Brandao, *Monarchia Lusitana; Chronicon Lusitanum; Mariana*, x., xi.; Lemos, ix.)

ALFONSO II. ascended the throne of Portugal in 1211, on the death of his father Sancho I. The principal event of his reign was his dispute with the church by attempting to subject the clergy to personal military service, and their possessions to contribute the same as the laity towards the support of the state. The consequence of these measures was that Pope Honorius III. placed the kingdom under an interdict. Alfonso was forced to yield, and was pardoned on his promise of making ample satisfaction for his past offences. Before he could fulfil his promise he died, in 1223, and was succeeded by his son, Sancho II. (Rodericus Toletanus, viii.; Lemos, xii.)

ALFONSO III. succeeded his brother Sancho II., in 1248. Before his accession, he was a poor exile in France. His brother having been deprived by a decree of the Pope, Alfonso sailed for Lisbon, and on his arrival was received with enthusiasm by all classes of the nation. Sancho finding himself deserted by his subjects, retired to Toledo, where he died in 1248. Alfonso made some few conquests from the Mohammedans, and died in 1279; he was succeeded by his son Dennis. (*Chronicon Comimbriense; Mariana*, xiii.; Lemos, xiii.)

ALFONSO IV., surnamed the Brave, ascended the throne of Portugal on the death of his father Dennis in 1325, against whom he had been in rebellion several times. Through the intrigues of the Infante Juan Manuel, he became embroiled with his son-in-law Alfonso XI. of Castile; and scarcely was his dispute with the Castilian settled, when he had to encounter disturbances of a more serious nature, in the unlawful intercourse of his son Pedro with Inez de Castro his mistress. His own weakness, and a mistaken zeal for the welfare of his kingdom, induced him to give his consent to the barbarous murder of that unfortunate lady, which plunged the state into a civil war. Pedro raised the standard of rebellion against his father, and possessed himself of almost all the north of Portugal. After much bloodshed a reconciliation was effected between father and son, and not long after Alfonso died, tormented by the remembrance of his murderous deed. His death took place in 1357, and he was succeeded by his son, Pedro I. (*Chronicon Comimbriense; Lemos*, xvii.)

ALFONSO V. was the son of Duarte. At the death of his father in 1438 he was only six years of age. His minority was very disturbed and eventful. In 1446, Alfonso having reached his fourteenth year, seized the reins of government, and suppressed a rebellion raised by his uncle Pedro the late regent. In 1457 Alfonso fitted out an expedition against the Moors. He landed in Africa with 20,000 men, and took Alcazar, Seguer, and Tangier. He also engaged in an unfortunate war with Castile; and not long after, having concluded a peace with that nation, died of the plague in 1479. He was succeeded by his son João II. (Ruiz de Pina, *Chronica do Senhor Rey Dom Alfonso V.; Mariana*, xxi.; Lemos, xxvi.)

ALFONSO I., of Naples. [ALFONSO V., of Aragon.]
 ALFONSO II., of Naples, son of Ferdinand I., and grandson of Alfonso I., was the chief cause of the famous revolt of the barons under his father's reign, and of the cruelties that followed. On the death of Ferdinand in 1494, he succeeded to the throne; but the approach of the French under Charles VIII. frightened him, and he ran away before he had completed one year of his reign. He retired to a convent at Messina, and died soon after. Ferdinand II., his son, succeeded him, and, with the assistance of the Spaniards, drove away the French; but dying in 1496, was succeeded by his uncle Frederic, Alfonso II.'s brother. (Guicciardini, *Storia d'Italia*; Porzio, *La Congiura dei Baroni*.)

ALFRAGANIUS, properly AL-FARGANI, or with his complete name, *Ahmed-ben-Kothair-Al-Fargani*, was a celebrated astronomer, who flourished under the reign of the Abbasside Kalif Mamun, in the earlier part of the 9th century of the Christian era. He was called Al-Fargani from his native place, Fargana, a town and province in Transoxiana. We possess an elementary treatise on Astronomy by him, chiefly founded on the system of Ptolemæus, which was printed with a Latin translation and notes by Golius in 1669.

ALFRED, AELFRED, ELFRED, or ALURED, surnamed the Great, king of the West Saxons in England, was born in 848 or 849, at Wandering, or Wannating, in Berkshire, generally supposed to be the village now called Wantage, which was then a royal town, and had been originally a Roman station. His father was King Ethelwulf, the son and successor of Egbert the Great; his mother was Osburga, or Osberga, daughter of Osac the Goth, who held the high office of royal cupbearer (*famosus pincerna*), and was of the race of the sub-kings of the Isle of Wight, who were sprung from a nephew of Cerdic, the founder of the West Saxon kingdom. Ethelwulf, who had been brought up as a monk, had come to the throne above twelve years before the birth of Alfred, who was the youngest of his four sons. The favourite of both his parents, Alfred is supposed to have been from the first designed by Ethelwulf to succeed him on the throne; and it was probably with this view that the boy was sent to Rome with a splendid retinue in 853, when, we are told by his biographer Asser, the Pope Leo IV. bestowed upon him the royal unction, and adopted him as his son; and that two years after Ethelwulf himself took him a second time to Rome, and remained with him there a whole year. It was in returning through France from this visit that Ethelwulf fell in love with Judith, the young and beautiful daughter of Charles the Bald, king of that country, and was married to her in October 856, after a courtship of three months. It is natural to suppose that his former wife, Osberga, must have been dead when he contracted this new alliance. Yet Asser tells a story of Alfred having been first induced to learn his letters in his twelfth year by his mother (*mater sua*) tempting him and his brothers with the promise of a Saxon book of poetry, which she said she would give to the one who should first learn to understand and recite its contents. At this date Judith had ceased to be even Alfred's step-mother; Ethelwulf had died not long after his return home, and she had become the wife of Ethelbald, his eldest son. In 863, in his twentieth year, Alfred married Alswitha, Elswitha, or Ealswitha, the daughter of Ethelred, surnamed Mucil (that is, the 'large'), a nobleman of Mercia. Alswitha's mother, Eadburh, was of the blood of the Mercian kings. During the festivities at the celebration of his marriage, Alfred, as Asser tells us, was suddenly seized before the assembled multitude with a distressing malady for which the physicians had neither name nor cure, and the attacks of which continued to torment him daily down to the time at which the biography professes to be written, when Alfred was in his forty-fifth year.

King Ethelbald had been succeeded in 860 by his next brother Ethelbert; and Ethelbert having also died in 866, the throne at the time of Alfred's marriage was filled by Ethelwulf's third surviving son, Ethelred, or Etherned (notwithstanding that Ethelbert appears to have left at least one son). At the time of his marriage, Alfred, Asser tells us, held the rank of *Secundarius*, whatever that may mean. This title or rank, which he retained till he became king, he appears to have enjoyed even before Ethelred came to the throne; for a little lower down he is spoken of as having been *Secundarius* while his brothers lived. During the reign of Ethelred he probably took a more active part than the king himself in the direction of public affairs; Asser's narration at least represents him as associated with his brother on all occasions, both in war and negotiation. Ever since the last years of the reign of Egbert, who died in 835, the Scandinavian sea-rovers, or Danes, as they were called, had harassed England with one descent after another; on some occasions wintering in the country, and holding the district where they settled in complete

subjection. Indeed it is probable that the effect of these invasions had already been to intermix a considerable number of foreigners with the native population of the eastern and northern counties. But the first year of the reign of Ethelred saw a hostile armament approach the coasts so formidable as to be evidently designed for nothing less than the entire conquest of the island. It was under the command of three of the sons of the celebrated Ragnar Lodbrog, twenty-eight others of whose relations and associates, styling themselves kings and earls, were captains in the fleet. Disembarking in East Anglia, the foreigners passed the winter in that kingdom; in the spring of the next year marched into and overran Northumbria; and in 863 crossed the Humber, and occupied part of Mercia. Both Mercia and East Anglia, the only other kingdoms of the old Heptarchy, with the exception of Northumbria, that still subsisted, had ever since the reign of Egbert been accustomed to look up to Wessex as, if not actually their superior in the feudal sense, at least the leading member of the Anglo-Saxon confederacy of states; and in this emergency Burrhed the Mercian king and his nobles immediately sent messengers to King Ethelred and his brother Alfred to supplicate their assistance in repelling the invaders. The two brothers thereupon collected an army, with which they advanced as far as the town of Nottingham (Scotengabam), where the Danes lay; but the pagans, to use Asser's terms, refused to come out to battle, and the Christians were not strong enough to force their entry into the town; so that the latter found themselves obliged to return home without effecting anything, and the Mercians made the best peace they could with their enemy. The Danes now retired to York, in the dominion of the Northumbrians, and remained there a whole year. In the spring of 870, embarking on the Humber, they landed at Humberstan in Lincolnshire, devastated all the eastern part of Mercia, and then passed into East Anglia, where they in like manner carried everything before them, and having seized and put to death King Edmund (the St. Edmund of the calendar), set Godrun, or Guthrun, one of their own leaders, on the vacant throne. After wintering in Thetford, their army, in the spring of 871, advanced into the dominions of the West Saxons, and taking possession of the royal town of Reading (Rædigam), on the third day after their arrival, sent out part of their force mounted to plunder in the neighbourhood, while another band employed themselves in erecting a defensive rampart on the right (that is, the west) side of the town from the Thames to the Kennet (Cynetan). The latter were attacked by Ethelwulf, earl of Berkshire, near the village of Inglesfield, and after a sharp conflict defeated, with the loss of one of their captains. Four days after, Ethelred and Alfred appeared with their forces before Reading, when another engagement took place, which ended in the defeat of the Christians, Earl Ethelwulf being among the slain. After four days more the two armies met again at a place called Aescesdun (probably Aston, near Wallingford), when the impetuosity of Alfred, who commanded one of the two divisions of the Saxon force, and who, Asser says, on the relation of an eyewitness, led his men to the attack with the courage of a wild boar, nearly lost the day; but, Ethelred coming up (after saying his prayers with unusual deliberation), the Saxons recovered themselves, and in the end the foreigners were defeated with great slaughter, and pursued back into Reading. A fortnight afterwards however, in another battle fought at Basing in Hampshire, the victory fell to the Danes; and soon after this they were joined by another body of their countrymen from beyond seas. Another battle, not noticed by Asser, but mentioned both in the Saxon Chronicle and the Chronicle of Mailros, took place about two months after at Mertune (probably Morton, to the north-west of Reading), in which the Danes were again successful; and in this conflict King Ethelred received a wound, of which he died soon after Easter 871. Upon this Alfred was immediately declared king, with the universal consent of all ranks of the people. Asser intimates that he accepted the crown with some reluctance, as dreading that he should never be able alone to sustain the hostility of the pagans.

The first seven years of Alfred's reign abundantly justified this apprehension. The events of this space, as far as they are to be collected from Asser, the Saxon chronicler, and other early authorities, whose narratives however are in many particulars very confused and indistinct, are as follows:—In the course of the year in which Alfred ascended the throne (including apparently the portion of it that had elapsed before the death of Ethelred) eight or nine great battles, besides innumerable skirmishes, were fought between the Saxons and the Danes, in most or all of which the Saxons seem to have been worsted. All that we are told is, that, after this course of ill success, Alfred made a peace with the invaders, on condition that they should leave Wessex: it is probable that he bought them off by a payment in money, or at least engaged to stand aloof while they fought out their quarrels with the other states. We know, at any rate, that they now overran the rest of the country without any further attempt on his part to interfere with them. Having collected their forces at London, and wintered there, they waited for another year, till their strength had grown by accessions from their native north, and then sallying forth, they soon reduced both Mercia and Northumbria, pushing their conquests in the latter direction as far as to the British kingdom of Strathclyde, in the heart of what is now called Scotland. Alfred appears to have remained quiet till the year 875, when we are

told by Asser he engaged six of the ships of the pagans at sea, and took one of them, the others making their escape. This seems to have brought them down again upon Wessex. The next year, issuing from their winter quarters at Cambridge (Grantebrycge) by night, a powerful body of them, taking to sea and sailing along the south coast, surprised the castle of Wareham in Dorsetshire, and Alfred was obliged to bribe them by a sum of money to leave his dominions. They did not however keep their oaths, though he had sworn them both in the pagan and the Christian fashion, but soon after, attacking him in the night, they slew all his cavalry, and seizing the horses, rode away on them to Exeter, where they settled for the winter. Encouraged by his late naval success, Alfred ordered boats and galleys to be built in different ports, and manning them, Asser tells us, with pirates, stationed them to guard the sea, while, in the spring of 877, he marched at the head of a land force to Exeter, to expel the intruders. According to Asser, the fleet attacked 120 ships of the Danes which were coming to the assistance of their countrymen, and drove them on shore, when all on board perished; but it does not appear that the English king ventured to besiege those who had taken possession of Exeter; all that is stated is, that another treaty was concluded, and another promise given by them on oath that they would soon take their departure; and in fact in the month of August they removed into Mercia. But they returned in the beginning of the next year, 878, in augmented numbers; and now they appear to have met with no resistance. Marching to Chippenham, they took possession of that royal town, and making it their head-quarters, sent out thence their marauding bands over all the surrounding country. Of the natives some fled beyond seas; those who remained behind universally submitted to the invaders, and Alfred himself, at first attended only by a few of his nobility and soldiers, afterwards without any followers, wandered about in the woods and marshes, till at last he found what proved a secure hiding-place in the hut of a poor peasant, who with his wife tended a few cows on a small elevated piece of ground rising among the marshes on the north bank of the Tone in Somersetshire, and still known by the name of Athelney; that is, Atheling-Eye, meaning the island of the nobles, or the royal island. He is said to have re-resented himself to the cowherd as one of the king's thanes, escaped from a rout of his countrymen.

Statements are found in various old writers which distinctly impute to Alfred up to this time of his life a character and conduct in some respects very different from what he afterwards displayed. Mr. Sharon Turner, who was the first among the modern biographers of Alfred to notice this circumstance, has, in his 'History of the Anglo-Saxons,' collected and exhibited the concurring testimonies in question with diligence and clearness, and with a good sense and right feeling, very unlike the spirit in which his discoveries have been seized upon, and absurdly produced as a proof that all the so-called greatness of the Anglo-Saxon king is the mere creation of modern ignorance and bombast. It is conjectured by Mr. Turner that the facility with which the Danes appear to have at last obtained complete possession of Wessex may be accounted for on the supposition that Alfred had lost the attachment of his subjects through his misgovernment and his immoralities; and he rests this upon the belief that Asser says that he believed this adversity which befel the king happened to him not undeservedly, "because," he goes on, "in the first part of his reign, when he was a young man, and governed by a youthful mind, when the men of his kingdom and his subjects came to him and besought his aid in their necessities, when they who were depressed by the powerful implored his aid and patronage, he would not hear them, nor afford them any assistance, but treated them as of no estimation." This part of the proof may be set aside; it having been ascertained that the passage is an interpolation of a later period. (See Preface to 'Monumenta Historica Britannica.') The well-known story of his being scolded one day by the cowherd's wife for allowing some leaves, or cakes, to burn which she had left him to watch, is told in the ancient Saxon and Latin Lives of St. Neot, which are in the Cotton Library. According to William of Malmesbury and other later chroniclers, the cowherd, whose name was Denuif, having afterwards, on Alfred's recommendation, applied himself to letters, was made by him Bishop of Winchester, and was the same Denuif who died occupant of that see in 909. After some time Alfred appears to have discovered himself to some of his friends, or to have been discovered by them; and he was also joined in his retreat by his wife, if another story be true which is told by Ethelward, Ingulfus, and Simeon of Durham, about his one day ordering their scanty store of bread to be divided with a beggar who came hungry to the door, although they had no immediate prospect of a further supply; an act of kind-heartedness which, as might be expected, the monkish narrators make to have been forthwith bountifully recompensed by Heaven, besides embellishing the incident with sundry other miraculous circumstances. It is calculated that Alfred remained at Athelney about five months; but during the latter part of his time he had an armed body of his subjects with him, and the place had been converted into a well-defended stronghold, from which incursions were frequently made into the neighbouring country, the bees and granaries of Dane or recreant Saxon serving indifferently, we are told, to replenish the royal larder. At last Alfred resolved to attack their main army, which was encamped on and around Bratton Hill, between Eddington and Westbury in Wilt-

shire. His principal adherents having gathered on his summons at a place known by the name of Egbert's Stone in Selwood Forest, he led his united forces to a hill at a short distance from that occupied by the Danes, encamped on it for the night, and next morning conducted them to the attack. The Northmen were defeated with great slaughter, and those who escaped were beleaguered in a neighbouring fortified place in which they had shut themselves up, and after a short time were compelled to surrender at discretion. The romantic adventure, mentioned by several of the old historians, of Alfred making his way into the Danish camp, and into the tent of the king, Gorm, Guthrun, or Godrun, in the disguise of a harper, is said to have happened the day before this victory of Eddington, or Ethandune, gained early in May 878, which restored him to his throne, and compelled the foreigners to quit Wessex without another blow. Godrun even consented to Alfred's proposition that he and his followers should become Christians; he himself was baptised by the name of Athelstan, Alfred standing as his godfather; and it was thereupon agreed that the converted Danes should occupy in peace the whole of the country called East Anglia, including the modern counties of Norfolk, Suffolk, Cambridge, and perhaps Essex, with the small portions of Huntingdon, Bedford, and Hertford, that might lie to the eastward of the old Roman road called Watling-street. A formal treaty to that effect, the terms of which have been preserved, was concluded between the two parties.

The effect of this arrangement was, that the Danes, no longer regarded as foreigners, were established in the dominion of a considerable portion of England, and in the occupation of the country to a much greater extent; for the population both of the northern counties constituting the kingdom, or the two kingdoms, of Northumbria, and of the midland districts forming the kingdom of Mercia, was also by this time in great part Danish as well as that of East Anglia. The only part of the country that remained purely Saxon was the kingdom of Wessex (with which Kent and Sussex had long been incorporated), comprehending the region to the south of the Thames, or the modern counties of Kent, Surrey, Sussex, Hants, Berks, Wilts, Dorset, Somerset, Devon, and so much of Cornwall, as had been wrested from the Britons. It has however been held by some that even in East Anglia Alfred was understood to have reserved to himself the supreme dominion; and it appears that, at least within a few years from this time, the whole or nearly the whole of Mercia fell under his power, and was given by him to be ruled by Ethelred, to whom he afterwards gave his daughter Ethelfleda in marriage. In Northumbria also he exercised a predominant influence; and in 893, after the death of Guthred, whom he had appointed king ten years before, he took the government of the country into his own hands. Meanwhile Guthrun had continued to reign in East Anglia till his death in 890, when, according to the Danish historians, he was succeeded by another prince of the same name; but, a few years after this kingdom also appears to have returned under the sway of Alfred, who may therefore be regarded as having been from about the year 894 king of all England. In the interval between his restoration to his ancestral throne of Wessex and this date he had been unremitting in his exertions both to re-establish order within his kingdom, and to strengthen it against external enemies. Ingulfus states that he divided it into hundreds and tithings, with a view both to police and to military defence; and that he not only restored the cities and castles which had been destroyed or had fallen into ruin during the recent wars and confusions, but constructed additional fortifications wherever they were required. He also engaged with ardour in the building of ships, so that he was in a few years master of a respectable navy; and, if we may rely on the accounts of Asser, the Saxon chronicler, and other ancient authorities, Alfred may be regarded as the true founder of this great English arm of war.

In 894 a new invasion of Northmen, under a leader, Hastings, who had already made his name terrible by various descents on the coast and incursions into the heart of France, once more involved England in a war, which was protracted over more than three years, and in the course of which nearly every part of the country, of the interior as well as of the coasts, was at one time or other the scene of bloodshed and devastation. The Northmen made their appearance in two fleets; one consisting of 250 vessels, which landed its armed multitude on the south-west coast of Kent, near Romney Marsh; the other of 80 ships, under the conduct of Hastings himself, who, leading them up the Thames, and thence into the East Swale, disembarked his forces at Milton, near Sittingbourne. Alfred immediately threw himself between the two armies; and when, after confining itself for some time to its encampment, the one which had landed on the south coast suddenly plunged into the interior, and attempted to cut across the country and effect a junction with the other by a route to the west of where he was stationed, he pursued and overtook it at Farnham, in Surrey, where an engagement took place, which soon ended in the defeat and flight of the Danes. The pursuit was continued across the Thames, and then across the whole of Essex, till the foreigners took refuge in the small Isle of Mersey, at the mouth of the Colne. While Alfred lay blockading them here, an armament of a hundred ships, fitted out by the revolted Danish colonists of East Anglia, passed the North Foreland, and, sailing along the southern coast as far as Exeter, attacked that city; and another fleet of forty vessels, which had set sail from Northumbria, had made its way round by

the northern extremity of the island, and reached the Bristol Channel. On receiving this intelligence, Alfred immediately marched across the country to Exeter; and he soon rid that city of its assailants, who, sailing away to the east, attacked Chichester, but were there driven off by the inhabitants. Meanwhile, Hastings had got out of the Swale, and, having been joined by his countrymen from the Isle of Mersey, had sailed up the Thames, and was devastating Mercia; but Alfred was soon after them, and pursued them till they threw themselves into a fortress at Buttington on the Severn, whence, after being penned up for some weeks and reduced to extremities, they endeavoured to cut their way out by a desperate sally, in which some thousands were slain and driven into the river. Hastings however and a small number escaped to the coast of Essex, where they were joined by a large force of East Anglians and Northumbrians, and whence they soon after marched across the island in a new direction, and took possession of the town of Chester; but to this point too they were followed by Alfred, and, after ravaging part of North Wales, they returned by a circuitous route through Northumbria and East Anglia to the Isle of Mersey, where they wintered. Here also they appear to have lain quiet during the whole of the year 895, watched by Alfred, who, by digging new canals for the river, is said to have drawn off the water from their ships, which were moored in the Lea, so that they were left immovable, and had to be abandoned. But in the summer of 896 they again suddenly left the east coast, and, taking their way through Mercia, fixed themselves at Bridgenorth in Shropshire, and, though blockaded by Alfred, maintained their ground there throughout the following winter. The strength and hopes of the invaders however were now nearly worn out. Their leader Hastings indeed appears to have withdrawn to France before this time, and the long contest which Alfred had to sustain was terminated in 897 by the dispersion of some and the capture of others of a number of Danish vessels which attempted to plunder the coast of Wessex. He sent out against them, the Saxon Chronicle tells us, ships of war of a new construction, neither like those of the Danes nor the Frisians, but twice as long, and also higher, some of them holding sixty rowers or more. Those of the Danish sailors, it is said, that fell into his hands he treated as pirates, sending them to instant execution.

After the Danes were thus got rid of, a depopulating pestilence ravaged the country for three years; and the lapse of this space, unmarked by any other memorable events, also brought the life of Alfred to a close. He died on the 28th of October, most probably in the year 901, although one account gives 900 and another 899 as the year; nor is there any documentary or other evidence by which the matter can be absolutely determined. By his queen Alswitha he is said to have had four sons:—Edmund, who died in the lifetime of his father; Edward, who succeeded him on the throne; Athelstan, of whom little or nothing is known; and Ethelward, who became a scholar: and three daughters:—Ethelfleda, married to Ethelred, earl of Mercia; Ethelgora, who became abbess of the monastery of Athelney, founded by her father; and Elfreda or Ethelawitha, who married Baldwin the Bald, earl of Flanders.

Putting out of view the imputations already noticed, which refer exclusively to the first few years of his reign, and, rightly considered, rather set off and enhance the conquest over himself which he afterwards achieved, the lustre of Alfred's character, both as a man and as a king, is without spot or shade. He is charged with no vice; and, besides the cheerful and unpretending exhibition of all the ordinary virtues in his every-day life, the untoward circumstances in which he was placed, and the afflictions with which he was tried, were continually striking out from his happy nature sparks and flashes of the heroic and sublime. He triumphed over pain as he had triumphed over passion; his active exertions in arms, and his unintermitted labours of every other kind, were carried on while he was suffering under the torment and debility of a disease which never left him, and which probably at last brought him to his grave. The field in which he acted was limited and obscure; but that too makes part of his glory; for of all the rulers who have been styled 'the Great,' there is no one to whom the epithet has been given with more general acclamation than to this king of the West Saxons. His fame transcends that of most conquerors, although he won it all by what he did for his own subjects and within his own petty principality; but probably no king ever did more for his country than Alfred, at least if we measure what he accomplished by his means and his difficulties. His preservation of it from conquest by the Northmen in the latter part of his reign was perhaps as great an achievement as his previous recovery of its independence when all seemed to be lost, and the foreigner had actually acquired the possession of the soil; the latter contest at least was much the more protracted one, and appears to have called for and brought out more of Alfred's high qualities—his activity, his vigilance, his various military talent, his indomitable patience and endurance, his spirit of hope that nothing could quench, as well as his mere valour. That contest with Hastings too was marked by several generous actions on the part of Alfred, not admitting of notice in a brief outline, which displayed the magnanimity of his character in the strongest light. Nor let it be said that Alfred's heroic efforts after all proved ineffectual, inasmuch as England notwithstanding was at last subjugated by those Danish invaders whom he twice drove off: this did not happen till after more than a century of independence

and freedom obtained by his exertions; and at any rate his success, even if the Anglo-Saxons had preserved their liberties for a much shorter time, would still have given to the history of the world one of its most precious possessions, another example of persevering courage and strength of heart winning the battle over the darkest and most disastrous circumstances. This was a lesson of hope and encouragement which those who came after him could never lose by any change of fortune. The actual improvements in the department of the national defence for which his country was indebted to Alfred were the already mentioned commencement of the royal navy, various improvements in the building of ships, the protection of the coast by (it is said) no fewer than fifty forts or castles erected in the course of his reign on the most exposed or otherwise important points, and the establishment of a regular order of military service, according to which one half of the male population of the proper age was called to the field and the other allowed to remain at home in turns, instead of the whole, as formerly, being obliged to serve for a limited time. In this way the demands both of war and of agriculture were properly provided for. Alfred has been commonly represented as a great innovator in the civil institutions of the Anglo-Saxons; but it is probable that he attempted little, if anything, more in this department than the restoration of the old laws and establishments of police, which had fallen into inefficiency in the confusions and troubles that preceded his reign. The body of laws which professes to be of his enactment consists almost entirely of a selection from those of Ethelbert of Kent, Ina of Wessex, Offa of Mercia, and other preceding kings, with the addition of some portions of the Mosaic code. Ingulfus and other later writers attribute to him the division of the country into shires, hundreds, and tithings, and the establishment of a system which made every man in some degree responsible for the peace of his district and for the conduct of every other inhabitant; but it is in the highest degree probable that all this, in so far as it does or ever did actually exist, is of much earlier origin. We may however believe that Alfred maintained a strict and efficient police in his dominions, without taking literally what is asserted by William of Malmesbury, that a purse of money or a pair of golden bracelets would in the time of this king remain for weeks exposed in the highway without risk of depredation. It may also be true, as Ingulfus relates, that he first appointed a justiciary, or special officer for the hearing of causes in every shire; dividing the authority which had formerly resided in a single governor between that functionary and the viscount or sheriff. But that Alfred, as has often been said, was the founder or inventor of trial by jury, is certainly an erroneous notion; the jury trial of the Anglo-Saxons was altogether a different thing from what is now known by that name, and was also undoubtedly much more ancient than the time of Alfred. The most important of Alfred's patriotic services, and those at the same time of which we have the best evidence, consist in what he did for the literature of his country, and the intellectual improvement of his subjects. In addition to the establishment of schools in all the principal towns, having himself at the late age of 39 began the study of Latin under the direction of some of the learned men whom he invited to his court from all parts—Grimbold or Grimbald of St. Omer and John of Corvei from the continent, as well as Asser from St. David's in Wales, and Plegmund, Werferth, and others from Mercia—he did not rest satisfied till he had turned his new acquirements to account by translating into the popular tongue such treatises as he conceived to be best suited for his countrymen. The following translations by Alfred have come down to us:—1. The Pastoralis, or Liber Pastoralis Curæ, of Pope Gregory the Great, a directory or manual of instruction for bishops and other clergymen. Of this all that has been printed is Alfred's highly curious and interesting preface. It is given in Latin in various editions of Asser, and in other works; and, with an English translation, in Mr. Wright's 'Biographia Britannica,' 8vo, London, 1842. "When I thought," says Alfred, in the conclusion of this preface (to adopt Mr. Wright's rendering), "how the learning of the Latin language before this was decayed through the English people, though many could read English writing, then I began, among other divers and manifold affairs of this kingdom, to translate into English the book which is named in Latin Pastoralis, and in English Herdsman's Book, sometimes word for word, sometimes meaning for meaning, as I learnt it of Plegmund my archbishop, and of Asser my bishop, and of Grimbald my presbyter, and of John my presbyter. After I had thus learnt it so that I understood it as well as my understanding could allow me, I translated it into English; and I will send one copy to each bishop's see in my kingdom," &c. 2. The treatise of Boethius, entitled 'De Consolatione Philosophiæ.' Alfred's translation of this work is throughout very free, and contains many additions to the original—a fact which, we believe, was first noticed by Mr. Turner, who has given an ample analysis of the performance in his 'History of the Anglo-Saxons.' The following is the proemium or preface to the Boethius, as translated by Mr. Cardale:—"Alfred, king, was translator of this book, and turned it from book Latin into English, as it now is done. Sometimes he set word by word, sometimes meaning of meaning, as he the most plainly and most clearly could render it, for the various and manifold worldly occupations which often busied him both in mind and in body. The occupations are to us very difficult to be numbered which in his days came upon the

kingdoms which he had undertaken; and nevertheless, when he had learned this book, and turned it from Latin into the English language, he afterwards composed it in verse, as it is now done. And (he) now prays, and for God's sake implores every one of those whom it lists to read this book, that he would pray for him, and not blame him if he more rightly understand it than he could. For every man must, according to the measure of his understanding, and according to his leisure, speak that which he speaks, and do that which he does." Notwithstanding what is here said, the version published by Mr. Cardale exhibits no verse; and Mr. Wright has stated some considerations, from which he concludes that the verse translations of the metrical passages in the original, which are given in Rawlinson's edition, cannot have been composed by Alfric. 3. The General History of Orosius, published by the Hon. Daines Barrington, under the title of 'The Anglo-Saxon Version from the Historian Orosius, by Aelfred the Great; together with an English Translation from the Anglo-Saxon,' 8vo, London, 1773. This translation is remarkable as containing, in addition to the original text, a sketch of the geography of Germany in Alfric's own day, and a curious relation of two voyages made in the northern seas, as given to Alfric by the navigators themselves, Ohthere and Wulfstan. These voyages had been previously printed more than once. 4. The Ecclesiastical History of the English by Bede. This is also a very free translation, but its deviations from the original consist more frequently of abridgements than of additions. 5. A translation of a selection from the Soliloquies of St. Augustine, mentioned by Mr. Turner as extant in the Cottonian manuscript Vitellius, A. 15. Of other works which have been attributed to Alfric, some, if they ever existed, are lost, and others, such as the metrical version of the Psalms, translations of other parts of Scripture, and the collection of verses entitled 'Alfric's Proverbs,' are not believed to be genuine. Alfric's will was published in 4to, at Oxford, in 1788, with a translation and notes by the Rev. Owen Manning. Alfric's Laws are in the collection published by Wilkins, fol., London, 1721; and also in the new Record Commission edition by Mr. Benjamin Thorpe, fol.

(Auserus, *De Aelfredi Rebus Gestis*; *Chronicon Saxonicon*; Ingulphus, *Historia Monasterii Croylandensis*; Will. Malmaburiensis *De Gestis Regum Anglorum*; *Life of Aelfred*, by Sir John Spelman, 8vo, Oxford, 1709; Turner, *History of the Anglo-Saxons*; Wright, *Biographia Britannica Literaria*; Pauli, *Life of Aelfred*.)

ALFRIC, AELFRIC, or ELFRIC, styled *Abbas*, or the Abbot, and also *Grammaticus*, or the Grammarian, is the author, or supposed author, of more of the Anglo-Saxon literature that has come down to us than any other writer. Eighteen distinct works have been attributed to him. It is not quite certain however that all even of the works that bear the name of Alfric are by the same writer. In the greater number of them the author calls himself Alfric the Abbot (in Saxon, Abboth; in Latin, Abbas); in others, Alfric the Monk (Monachus or Monue); in a few, Alfric the Bishop (Episcopus or Biscop). The biography of the Alfric whom these several designations have commonly been all supposed to indicate is extremely obscure, and has been the subject of much controversy. He was probably born before the middle of the 10th century; and, if we may believe Matthew Paris, he was of very noble descent, his father being ealdorman or earl of Kent. In his Preface to Genesis he speaks of having once had a secular or mass priest for his teacher, who scarcely understood Latin; but he afterwards became one of the scholars of the learned Ethelwold, as he has himself mentioned, both in a Latin preface to his Homilies and in another to his Grammar. He probably studied under Ethelwold both at Abingdon, and afterwards in the more famous school which that person superintended at Winchester, of which he became bishop in 963. The next fact regarding him that is certainly known is that about the year 988 he was sent by the then bishop of Winchester, Alpheg, to take charge of the abbey of Cerne in Dorsetshire, at the request of its founder, Ethelmer, earl of Cornwall. This he tells us himself, in a Saxon preface to his Homilies. He is also supposed to have been the Alfric who was bishop of Wilton (now Salisbury), and then archbishop of Canterbury, and who died in 1006; while others suppose he was the Alfric, archbishop of York, who died in 1051. The latest investigation of the history of Alfric the Grammarian, and the most complete account that has been given of his works, is contained in Mr. Wright's '*Biographia Britannica Literaria*,' vol. i. pp. 480-494, under the head of 'Alfric of Canterbury.'

The writings of Alfric attracted the attention of the reformers in the 16th century, by some passages (in his Paschal Sermon and elsewhere) which are opposed to the Roman Catholic doctrine of transubstantiation; and the discovery of these passages appears to have had a main influence in reviving the study of the Anglo-Saxon language and literature. The author of the Preface to Archbishop Parker's edition of the 'Paschal Sermon,' states some curious facts, making it probable that the passages in question owed their preservation to the circumstance of the monks since the Norman Conquest having been unable to read them. Alfric's writings also contain many notices of the manners and customs of the time in which he lived; and some of them are of considerable interest and importance in a philological point of view. His 'Homilies,' Mr. Wright observes, "are written in very easy Anglo-Saxon, and form on that account the best book for the student who is beginning to study the language."

ALGARDI, ALESSANDRO, an Italian sculptor and architect,

chiefly distinguished however as a sculptor. He was the son of a silk-mercer of Bologna, where he was born about 1600, or even earlier, but the dates given by the various writers who have written notices of him are so contradictory, that it is impossible to give a preference with any degree of certainty. He entered the celebrated school of the Carracci, but finding that sculpture was more suitable to his taste than painting, he became the pupil of Giulio Cesare Conventi, a sculptor of celebrity in his day. "At the age of twenty," says Bellori, "he accompanied Gabrielle Bertazzuoli, the architect, to Mantua, and was introduced to the Duke Ferdinand, with whom he apparently became a favourite, as he received many small commissions from him for models, and was afterwards sent by him to Rome with an introduction to the pope's nephew, Cardinal Ludovisi: he arrived in Rome in 1625. The cardinal employed him chiefly in the restoration of ancient statues; and he received some employment from the Roman jewellers. His first original productions in Rome were two statues in stucco, for the Capella Bondini in the church of San Silvestro on Monte Cavallo. He obtained these commissions through the intercession of his friend Domenichino: they were a John the Baptist, and a Magdalen, and obtained for Algardi a considerable reputation; he had however still to depend upon the jewellers for support. His patron Ferdinand, duke of Mantua, died shortly after his arrival in Rome; he quarrelled with Domenichino, and for many years he had no other occupation as a sculptor than that of restoring ancient fragments. But about 1640 his prospects changed; he was chosen by Pietro Buoncompagni to execute the statue of San Filippo Neri for the sacristy of the Padri dell' Oratorio of Rome; he made a group in marble of two colossal figures, the saint, and an angel kneeling by his side presenting him a book; and he displayed so much judgment and taste in working the marble, that he raised himself to an equality with the most favoured of his contemporaries; and the Cardinal Bernardino Spada, in consequence of the success of this group, gave him a commission to execute a colossal group in marble of two figures representing the decapitation of St. Paul, for the church of the Padri Bernabiti at Bologna. St. Paul was represented kneeling, with his hands bound together before him; the executioner, entirely naked, was behind the saint, with his sword raised ready to strike. The success of this group was complete; it is technically a work of very great excellence, but in the attitudes it is forced or affected; it however established for Algardi the reputation of the greatest sculptor of his age. He now produced many works in rapid succession, chiefly in metal, both for Bologna and Rome. The principal of these were the monument of Leo XI. in St. Peter's, and Attila checked by St. Leo, an alto-rilievo of enormous size, for one of the altars of the same church.

Algardi's prosperity increased after the accession of Innocent X. in 1644, whose niece, Costanza Panfilii, was married to Algardi's friend and patron, Prince Nicolo Ludovisi, the nephew of Gregory XV., and himself a Bolognese. Don Camillo Panfilii, another of the pope's nephews, entrusted to Algardi the erection of a villa without the gate of San Pancrazio, now well known as the Villa Panfilii. As an architectural design it is a work of little merit, though it is Algardi's most successful effort in architecture: it is richly ornamented with sculpture.

Algardi executed also the bronze statue of Innocent X., which was decreed by the Roman people or senate in consideration of his having completed the Capitol. Innocent built the north-east wing, or Nuovo Palazzo de' Conservatori. The senate had voted the execution of the work to Francesco Mochi: why it was not executed by Mochi does not appear; Innocent probably interfered in Algardi's favour. The first casting failed; the second however was completely successful. Innocent is represented sitting, giving the papal benediction, and is placed in that part of the Capitol which was built by him. When the statue was completed, the pope was so well satisfied with it that he placed with his own hands a cross and chain of gold upon Algardi's neck, and created him a Cavalier dell' Abito di Cristo.

The Attila, or La Fucga d'Attila, as it is called, is the largest alto-rilievo in the world; the two principal figures of St. Leo and Attila are about ten feet high. The design contains many other figures, and is treated pictorially, which treatment however involves many disagreeable effects, as the parts in high relief cast their shadows upon those in low relief, which are intended to be at a greater distance from the spectator, and destroy their effect entirely; the high light also of the principal figures coming in immediate contrast with their deep shadows, gives an insignificant and mottled effect to the accessory parts. In addition to these objections, there is another still more detrimental to pictorial effect, that is, the fact of the shadows being vertical as well as horizontal, for they fall upon the ground to which the figures are attached, as well as upon that on which they stand. This alto-rilievo, however, which is in marble, is of itself a work of great merit, though it may not deserve all the praises it has obtained; nor perhaps, on the other hand, does it merit all the censure it has received. Count Cicognara has severely criticised it.

Algardi received for it 10,000 scudi, a sum probably equivalent at that time to 5000*l.* sterling now, and more than two hundred times as much as his old friend Domenichino received a few years before for his 'Communion of St. Jerome,' one of the finest pictures in Rome. The rilievo was executed in great part by Domenico Guidi of Naples, and was finished in 1650.

Algarði died of a fever in 1654. His biographers speak of his character as generally good, though when he became rich he became also avaricious; he was never married, and in his youth he was very dissipated. The bulk of his property was inherited by a sister, whose marriage against Algarði's consent was partly or perhaps chiefly the cause of his death. Algarði's reputation is nearly exclusively that of a sculptor, and as such he ranks amongst the greatest of the moderns. His design is vigorous and natural, and his draperies are well studied; but his style, when compared with the antique, is somewhat vulgar and affected. He excelled in representing infants. His architectural designs, of which there are not many, are purely ornamental; the design itself is subservient to its ornaments; they want mass and feature.

(Passeri, *Vite de' Pittori*, &c.; Bellori, *Vite de' Pittori*, &c.; Cicognara, *Storia della Scultura*; Milizia, *Opere*.)

ALGAROTTI, FRANCESCO, was born at Venice in 1712. His father was a wealthy merchant. He studied at Rome and Bologna, in which latter place he had for instructors Eustachio Manfredi and Francesco Zanotti, who afterwards continued his friends and correspondents. Algarotti made great progress in the study of languages, the mathematics, astronomy, and anatomy. Being at Paris at the age of twenty-one, he there wrote his 'Newtonianismo per le Dame,' or explanation of the system of Newton, adapted to the taste and understanding of female students. This is still considered as his best work. He next proceeded to London, whence he accompanied Lord Baltimore to St. Petersburg. He gave an account of this journey in his 'Letters on Russia,' a country then comparatively little known. From Russia he went to Germany, where he became acquainted with Frederic, then Crown Prince of Prussia, who was living in philosophical retirement at Rheinsberg. The prince was so much pleased with his society, that four days after his accession to the throne, he wrote to Algarotti, who was then in England, inviting him in the most pressing manner to come to Berlin. Algarotti accepted the invitation, and remained afterwards in the Prussian capital or at Potsdam the greater part of his life, not as a servile courtier, but as the friend and confidant of Frederic. The king gave him the title of count, made him his chamberlain, and employed him occasionally in diplomatic affairs. He was also commissioned by the Elector of Saxony to collect objects of art throughout Italy for the gallery of Dresden. For five-and-twenty years from Algarotti's first acquaintance with Frederic to the moment of his death, their mutual friendship and confidence were never interrupted. Towards the latter part of his life, Algarotti, finding the climate of Prussia too cold for his declining health, returned to Italy, where he lived first in his own house in Venice, afterwards at Bologna, among his literary friends, and lastly at Pisa, where the mildness of the air induced him to remain, as he was evidently sinking under consumption of the lungs. There he corrected the edition of his works then publishing at Leghorn; the study of the fine arts and music filled up the remainder of his time. In this calm retirement he waited for death, which came on the 3rd of May, 1764, in his fifty-second year. Frederic, to whom Algarotti had bequeathed a fine painting, ordered a monument to be raised to him in the Campo Santo, or great cemetery of Pisa, where it is to be seen. It is asserted by Ugoni, in his biography of Algarotti, that Frederic forgot to pay Count Bonomo the expense of this mausoleum. Algarotti was an honorary member of many universities and academies of Italy, Germany, and England. He was the friend and correspondent of most of the literary men and women of his time, among others, of Voltaire, Maupertuis, Metastasio, Bettinelli, Lord Chesterfield, Lady Wortley Montague, Madame du Bocage, &c. Besides the two works above mentioned, he wrote 'Letters on Painting,' in which he has described several frescoes which are now lost; he also wrote a number of essays on various subjects. His works have been swelled, by the insertion of his extensive correspondence, into seventeen volumes, octavo, Venice, 1791. Algarotti's style seldom rises above mediocrity; his chief merit is that of having rendered science and literature fashionable among the upper classes of his time and country. He was a man of much information and considerable taste, but of a cold imagination, and not profound in any particular branch of learning.

ALHAZEN, or ALLACAN, properly *Al-Hasan*, or, with his complete name, *Abu Ali al-Hasan ben al-Hasan ben Haitam*, a distinguished mathematician, who lived during the earlier part of the 11th century. He was a native of Basra. Having boasted that he could construct a machine by means of which the inundations of the Nile could be predicted and regulated, the Fatimide kalif, Hakim bi-amr-Allah, sent for him, in order to carry his plan into effect. But Al-Hasan soon found that he had undertaken an impossibility, and in order to avoid the consequences of Hakim's anger at his disappointment, he feigned insanity till Hakim died (A.D. 1020). He lived at Cairo, where he supported himself by copying books, and devoted his leisure hours to study and original composition. He died in 1038. A long list of his works may be found in Casiri's 'Bibliotheca Arabico-Hispana Escorialensis,' vol. i. p. 415. A treatise on optica, by Al-Hasan, was translated into Latin by Risner, and printed at Basil, under the title of 'Opticæ Thesaurus,' in 1572.

ALI BEN ABI TALEB, surnamed by the Arabs *Asad Allah*, and by the Persians *Shir-i-Khoda*, that is, the Lion of God, was the fourth kalif or successor of Mohammed in the government founded by him,

and occupied the throne during the years 35-40 after the Hegira, A.D. 655-660. He was the cousin-german of Mohammed, lived from childhood under his care, and when ten or eleven years old, was, according to tradition, the first to acknowledge him as a prophet. From these circumstances, and also on account of his marriage with Fatima, the daughter of Mohammed, Ali appeared to have strong claims to the commandship over the Faithful, when the Prophet died, in 632, without leaving male issue. Three other associates of the Prophet, Abu Bekr, Omar, and Othman, were however successively appointed kalifs, before Ali came to the throne in 655. The controversy concerning the respective rights of Abu Bekr, Omar, and Othman, on the one side, and of Ali ben Abi Taleb and his lineal descendants on the other, gave rise to the schism of the Sunnites and Shiites in the Mohammedan community. [ABU BEKR.] Othman had been killed during a revolt at Medina, where a number of malcontents from different parts of the empire were assembled; those from Egypt succeeded in elevating Ali to the kalifate. Two of his competitors, Zobair and Talha, at first acknowledged him as sovereign; but when Ali refused to appoint them governors of the important towns of Basra and Kufa, by the inhabitants of which their claims to the kalifate had been chiefly supported, both deserted him, and in common with Ayesah, the widow of Mohammed, formed a strong party against Ali. They had already made themselves masters of Basra, when Ali, at the head of an army of 30,000 men, defeated them in a battle near Khorraiba in 656. Talha and Zobair were killed: Ayesah, who had been present at the conflict, was taken prisoner, and sent to Mecca.

New disturbances soon arose at Damascus, where Moawia, a near relative of Othman, had by a strong party been appointed Amir, or chief. Ali encountered him near Saffein in 657, in the neighbourhood of which place nearly a whole year was consumed in skirmishes between the two armies, but no decisive battle ensued. At last the two opponents agreed to withdraw, appointing each a delegate to arrange the controversy in a peaceable convention. This measure excited much dissatisfaction among the adherents of Ali, many of whom seceded, and assembled at Naharvan under the command of Abdallah ben Waheb. They were however dispersed after a decisive battle in 658, in which Ali was victorious.

The caution with which the governor of Egypt, Saad ben Kais, had conducted himself during these disputes rendered him suspected by the kalif. Ali removed him in 658, and appointed Mohammed, the son of Abu Bekr, who behaved with such rigour towards the adherents of Moawia, that much discontent was excited in Egypt. Moawia availed himself of this opportunity to send an army into Egypt under the command of Amru ben al-As, who vanquished and killed Mohammed. Soon afterwards Moawia took possession also of Basra, which Ali's governor, Zayyad, made but a feeble effort to defend. Abdallah ben Abbas however reconquered that town for the kalif.

In 660 Moawia sent an army under the command of Bosr ben Artha into Hejaz, who took possession of the two sacred cities, Mecca and Medina, and on his return defeated and killed Abdallah ben Abbas, the governor of Basra.

About this time three of the zealots of Naharvan, with the design of restoring unity, entered into a conspiracy to murder Amru ben al-As, the kalif Ali, and Moawia. Amru ben al-As and Moawia escaped, but Ali was struck with a poisoned sword in his residence at Kufa, and died after three days, in 660, at the age of fifty-nine, or according to others, sixty-five years.

Ali had by Fatima three sons, Hassan, Hossain, and Mohsen. Hassan succeeded his father for a short time in the government, and with him terminated, according to Arabic historians, the legitimate kalifate, that is, the succession of those kalifs who had been appointed by the free choice of the Faithful.

ALI, HYDER. [HYDER ALI.]

ALI PASHA, a celebrated Albanian chief, was born about 1750, in the little town of Tepelen, in the pashalic of Berat, on the left bank of the river Voiousa, the ancient Aous, at the foot of the Klissoura Mountains. Ali's family was distinguished by the name of Hissas, and had been for ages settled in the country; it belonged to the Albanian tribe or clan of the Toske or Toxide, who boast of being old Mussulmans. One of Ali's ancestors, after being for some time a klephtis, or highway-robber, made himself master of Tepelen, and assumed the title of Bey, holding it as a fief of the pacha of Berat. Ali's grandfather distinguished himself in the Ottoman service by his bravery, and was killed at the siege of Corfu against the Venetians, in the beginning of the 18th century. His son, Vehli Bey, the father of Ali Pasha, was a good, quiet, liberal-minded man, very partial towards the Greeks. The neighbouring beys or feudal Albanian chiefs combined against him, and deprived him of the greater part of his estates; but the mother of Ali was a woman of masculine courage, though of cruel disposition, and, on her husband's death, secured the succession to her own son Ali, then fourteen years of age, by the adoption of the most unscrupulous means.

The early life of Ali was passed in the usual vicissitudes of predatory warfare, and sufficiently varied by a succession of adventures possessing the interest of romance, though marked by ferocity, treachery, and most other atrocities. His power however continued to become gradually consolidated, and several of the surrounding districts submitted to him, until at length his riches gave him the means of intriguing at

the Porte. He then obtained the secret commission of executing the 'firman of death' against Selim Pasha of Delvino. In reward for this service he was appointed lieutenant to the new Derwend Pasha of Roumili, in which office he enriched himself by sharing with the klephtis the produce of their spoils. In consequence of this traffic the roads soon swarmed with robbers; repeated complaints reached the Porte, and the Derwend Pasha was recalled and beheaded. The lieutenant also, being summoned, instead of appearing, sent presents to several members of the divan, and thus evaded punishment.

Ali's reputation for bravery and decision was however established at Constantinople, and when the war broke out in 1787, between the Porte and the two courts of Austria and Russia, he was appointed to a command in the army under the vizier Jusuf. Having distinguished himself in the field, he was next appointed to the pashalic of Tricala in Thessaly, and was moreover named Derwend Pasha of Roumili. He now raised a body of 4000 men, all Albanians and old klephtis, with whom he soon cleared the roads of robbers, and thus won merit with the Porte. He now turned his views towards Jannina, the capital of southern Albania, or Epirus, where utter anarchy prevailed. Assisted by his friends in the town, he entered it and took possession of the citadel. He then, by bribery and other means, got himself confirmed in the pashalic which he had usurped; and by a vigorous despotism extinguished all factions, restored tranquillity, and the people were satisfied with the change. The Porte, seeing this so long turbulent province reduced to subjection, forgave Ali for a deception of which the divan had been apprised only when it was too late.

Ali extended his dominion over all Epirus, and also into Acarnania and Etolia, or western Greece, by successfully attacking the revolted Armatoloes or Greek militias who, under the corrupt and supine Turkish government, infested instead of protecting the country. He attacked the Suliotes, a people inhabiting a mountainous district about 30 miles S.S.W. from Jannina. After a brave and protracted resistance of more than ten years, the Suliotes agreed to evacuate their country in December, 1803, but on attempting to retreat, in order to embark at Parga, Ali's soldiers fell upon them, and the scenes that followed were dreadful. None of the Suliotes surrendered; almost all perished. In one instance, a small party, being completely surrounded, retreated towards a precipice, the women leading the way; being arrived on the brink, they first threw their children into the abyss below, after which they all, husbands and wives, fathers and sons, brothers and sisters, loked hand in hand, ran down the declivity, and mutually impelled each other into the precipice, in sight of their disappointed enemies. Only a few, who escaped before the attack, managed to reach Parga, and thence embarked for Corfu, at that time occupied by the Russians. A remnant of these unfortunate exiles were subsequently, under the auspices of England, restored to their native country. But Ali was shackled on the sea-side of his dominions: he therefore attacked and reduced in succession the fortress towns on the coast of the Adriatic and the Gulf of Arta, which, formerly dependencies of Venice, were then in the hands of the French, of which Prevesa and Parga were the most eminent. Their capture was attended with almost every circumstance of ferocity and cruelty that can make war revolting.

Ali extended his dominions to the north into Albania Proper, by the conquest of the pashalic of Berat, which he effected more by intrigue than by force. He likewise occupied the government of Ochrida in Upper Albania, by joining in the attack ordered by the Porte against the rebellious pasha of Skodra, or Scutari, and then kept it for himself. The Porte was obliged to wink at these usurpations. Ali was even appointed for a twelvemonth Roumili-Valicy, or supreme inspector of the principal division of the empire, and he went to reside at Monastir, at the head of 24,000 men. His extortions in Roumelia were very great. His own dominions in the latter part of his life extended over all Epirus, one half of Albania Proper, part of Thessaly, and the whole of western Greece, from the Lake of Ochrida on the north, to the Gulf of Lepanto on the south, and from Mount Pindus to the Adriatic. Ali was now vizier or pasha of three tails: his second son, Vehli, was made pasha of the Morea; and his elder son, Mouktar, a thorough soldier, distinguished himself in the service of the Sultan during the campaign of 1809 against the Russians. The youngest of all, Salih Bey, who was his father's favourite, and destined to succeed him, was brought up with particular care under good tutors and teachers. Ali Pasha, although hated by the Porte, might have ended his days in peace; his power made him feared, and his advanced age was an inducement to the Sultan to wait patiently for his natural death. But an attempt to procure the assassination of one of his confidants who had abandoned him, and obtained an appointment in the seraglio at Constantinople, aroused the ire of the Sultan. Ali was excommunicated, and all the pashas of Europe were ordered to march against him. This was at the beginning of 1820, and at length Ali was compelled to abandon Jannina, and to surrender himself on being promised the Sultan's pardon. His own perfidy was now retorted on himself. He was murdered; his head was cut off, and sent to Constantinople, where it was exhibited before the gate of the seraglio. His sons shared their father's fate. Thus Ali Pasha, at seventy-two years of age, closed his guilty but extraordinary career, in February, 1822.

The character of such a man is easily ascertained from the account of his life. The cruelty of his revenge was even fiendish. His administration rested upon the principles of terror; he certainly extir-

pated the robbers and other criminals, and rendered his territories perfectly secure from all depredations but his own. This security, in a country like Turkey, was felt as a boon, and commerce improved in some measure by it. Jannina became one of the most flourishing towns of Turkey, and its population had increased to 40,000 inhabitants. Ali was a Mussulman only by name: he fully protected the Greeks, and other Christians, in the exercise of their religion, and allowed them to have schools, and even a lyceum and a library. Ali treated all his subjects, Albanians, Turks, or Greeks, alike, and without partiality; the Turks were perhaps those who liked him the least, because he did not allow them to ill-use the rest of the people, as in other parts of Turkey.

ALIMENTUS, CINCIUS. [CINCIUS ALIMENTUS.]

ALISON, REV. ARCHIBALD, was born in 1757 in Edinburgh, of which city his father, Andrew Alison, was a magistrate. In 1772 Archibald was sent to the University of Glasgow, whence he proceeded with an exhibition to Balliol College, Oxford, where he matriculated, November 9th, 1775. He took the degree of A.M. and that of LL.B. March 23rd, 1784, in which year he entered into holy orders, and married the daughter of Dr. John Gregory of Edinburgh. He was soon afterwards appointed to the curacy of Bransopeth, Durham. He obtained the perpetual curacy of Kenley in Shropshire in 1790, a prebendal stall in Salisbury Cathedral in 1791, the vicarage of Ercall in Shropshire in 1794, and the living of Roddington in Shropshire in 1797. In 1800 he was invited to become senior minister of the episcopal chapel, Cowgate, Edinburgh. He accepted the invitation, and continued to officiate for the congregation, which afterwards removed to St. Paul's chapel, a handsome new gothic building in York-place, till 1831, when severe illness compelled him to withdraw from the performance of his public duties. He died in 1839, at the age of 82.

The Rev. Mr. Alison was the author of 'Essays on the Nature and Principles of Taste'; 'Sermons, chiefly on Particular Occasions,' 2 vols. 8vo., 1814, 1815, and several editions since; and 'A Memoir on the Life and Writings of the Hon. Alexander Fraser Tytler, Lord Woodhouselee,' in the 'Transactions of the Royal Society of Edinburgh,' 1818.

His literary reputation chiefly depends on his 'Essays on Taste,' which were first published in 1790, but which made little impression on the public till the second edition, with additions, came out in 1811, when the work became the subject of an encomiastic article by Jeffrey in the 'Edinburgh Review,' and it then became popular; its popularity however was but evanescent. The work consists of two essays; the first 'Of the Nature of the Emotions of Sublimity and Beauty,' the second 'Of the Sublimity and Beauty of the Material World;' the whole work is divided into chapters, sections, and parts, with much appearance of philosophical accuracy, but with little either of comprehensiveness or precision in the treatment of the subjects. His notion of sublimity is vague; sometimes he seems to understand the word in the common acceptation, as super-eminent grandeur of any kind; sometimes in the sense in which it is used by Longinus, as anything calculated to produce a powerful emotion. The vagueness of his notion of beauty may be more easily excused, since, as the term is generally applied to any object of nature or art calculated to produce a pleasing feeling in the mind, the causes of the emotion of beauty are necessarily multifarious, and subject to no general rule. Alison does not treat of taste as an appreciating and discriminating faculty of the mind depending on the judgment, or as the judgment applied to the fine arts and to the objects and scenes of nature about which those arts are conversant; but as an emotion caused by objects or scenes calculated to excite certain associations of ideas and trains of thought, which, according to him, are the real causes of the emotion. His views are indeed little better than a series of opinions formed with little power of thought, and falsified in many parts by the application of the doctrine of association, which, however true as applied to particular cases, is not true when applied as the primary cause of the emotions of sublimity and beauty, or as the leading principle of taste itself. His style is not unpleasing, but it is diffuse, and deficient in distinctness and precision.

*ALISON, SIR ARCHIBALD, Bart., son of the preceding, was born December 29, 1792, at Kenley, Shropshire, of which place his father was then vicar. His father removed to Edinburgh in 1800, and carried his son with him. In the schools and university of that city the future historian received his education; and there, in 1814, he was called as an advocate to the Scottish bar. His earliest literary appearance was as a writer on the criminal law of Scotland, and as a contributor to the periodical publications. But the work on which his literary reputation depends is the 'History of Europe, from the Commencement of the French Revolution in 1789 to the Restoration of the Bourbons in 1815,' the first volume of which appeared in 1839. This work supplied a want in contemporary historical literature, and achieved a great success. It has already passed through numerous editions, the latest being a library edition (the eighth), in fourteen volumes, an edition of smaller size, in twenty volumes, besides a cheap edition; and it has been translated into most of the European and more than one of the Eastern languages. The history is written with a strong party bias, is singularly verbose and perplexed in style, and is deficient in many of the qualities of a historical work of a high class; but it is full of matter, the result of great and comprehensive

industry—displays constant animation, and an evident desire to deal fairly with all parties and persons concerned in the events described. No other English history of the period can be turned to with equal confidence for information, and the tendency to enforce a pre-conceived theory is counterbalanced by free quotations or fair statements of the views of opposing parties, and full references to original authorities. In 1852 Sir Archibald published the first volume of a continuation of his history, to the accession of Louis Napoleon, and four more volumes have since appeared. But the continuation has little chance of obtaining the popularity of the earlier work, of which it possesses all the faults with scarce any of the merits. In describing the conflict of opinions, Sir Archibald loses the animation which sustains him in narrating the more exciting events of the revolutionary war; and the history becomes a series of heavy disquisitions, which tax the patience of the most persevering reader, yet add little to the knowledge of the least instructed. The other more important of Sir Archibald's works are—a 'Life of Marlborough,' in two volumes, which has reached a third edition; 'Essays: Historical, Political, and Miscellaneous,' originally published in 'Blackwood's Magazine,' in three volumes; and the 'Principles of Population,' in two volumes.

Mr. Alison was created a Baronet soon after the formation of the Derby administration in 1852. In 1828 he was appointed Sheriff of Lanarkshire. In 1851 he was elected Rector of Glasgow University; and he has received the honorary degree of D.C.L. from the University of Oxford.

ALKMAR, HENRY VAN, or, as he himself wrote his name, *Hinrek van Alkmar*, is the person to whom Germany owes the first edition and translation of the celebrated poem, 'Reynard the Fox.' He lived during the latter half of the 15th century, but of his circumstances we know no more than what he himself states in the preface to his 'Reineke Voss'—that he was a schoolmaster and teacher of virtue in the service of the Duke of Lorraine, and that he translated the poem from the Walsch (probably the Wallon) and French into German at the request of his master. He further divided the whole poem into four parts and into chapters, each of which is preceded by a sort of commentary explaining the poet's meaning and the moral of the tale. This first German edition of 'Reynard the Fox' is in Low German, and embellished with woodcuts. It was printed at Lübeck in 1493 in small quarto. The only copy which is known to exist of this edition is in the library of Wolfenbüttel. A reprint of it was edited by F. A. Von Hakemann, Wolfenbüttel, 1711. The second edition, which was perhaps made in the life of Alkmar himself, is that published at Rostock, 1517, 4to., of which also there exists only one copy in the library of Dresden. The woodcuts of this edition are somewhat better than those in the Lübeck edition.

As to the faithfulness of the translation we are unable to judge, as the original which Alkmar used is unknown; but it is certain that Alkmar produced one of the most spirited and beautiful poems that exist in the German language.

The version printed in 1498 at Lübeck bears the title of 'Reineke Voss.' It is written in the Frisian dialect, which is only a modification of that spoken in Lower Saxony, and it consists of four books, each of which is subdivided into chapters. The verses consist of iambs mixed with numerous spondees and anapaests. The poem consists of the picture of a court of animals, of which Nobel, the Lion, is king, and at which many animals complain of the injuries suffered from the intrigues and rapacity of Reineke the Fox. He is summoned to Court, and after exercising his ingenuity in punishing the messengers he appears, is sentenced to be hung, but gets released by promising to discover a concealed treasure to the king. On the deception being discovered he is again summoned, appears, defends himself by an ingenious series of falsehoods, and ultimately undertakes a single combat against his principal opponent, the Wolf, whom he conquers by a vile trick, and is restored to the king's favour, with which the poem ends. The moral conveyed is of a low character, that cunning and fraud constitute the true wisdom; but an interest is raised for Reineke as he acts a sort of retributive part, the sufferings of his victims being as much the consequence of their own evil dispositions as of his tricks, except in the cases of Lampe the hare and Bellin the ram, towards whom his excuse is that they were "stupid." His apology for his own conduct usually rests upon the bad example set by others, particularly by priests. The great number of editions which appeared in Germany after the first publication of it, and still more the numerous bad paraphrases in prose, which were sold by thousands at every fair, show the immense popularity which the story had in Germany.

The best edition was edited by Hoffmann von Fallersleben (Breslau, 1834), with an introduction, glossary, and commentary. The text is a correct reprint of the first edition. Göthe has made a most beautiful translation of 'Reineke Fuchs' into modern High German, in hexameters (Berlin, 1794); D. W. Soltau has made another in doggerel verse (Berlin, 1803), a much improved edition of which appeared at Braunschweig, 1823. It has also been translated into Latin by Hartmann Schopper, under the title, 'Opus Poeticum de Admirabili Fallacia et Astutia Vulpeculæ Reineke,' &c., Frankfurt, 1574; this translation has often been reprinted. In 1706 there appeared in London a metrical English translation from the Latin of Schopper.

The German version of 'Reineke' was, notwithstanding the state-

ment of its author, formerly thought to be an original composition; but the subject was known for many centuries and in several countries before the German poem was printed. A Dutch edition of the story of 'Reineke' in prose, interspersed with occasional verses, was printed in 1485 at Delft; it was republished in 1783 at Lübeck and Leipzig, under the title 'Die Historie va Reinaert de Vos.' The author of this Dutch version, which is in many respects superior to the German, and has probably served as the source from which the German poet drew his materials, calls himself William Matok, and also refers to a French work which had served him as his model. But even this Dutch version cannot have been the first; for Caxton (1481), in his English translation, states that he kept closely to a Dutch original. It may be inferred from the various subsequent corrected and enlarged editions of this poem, as well as from the allusions of our early dramatists, that it gained considerable popularity in England also. The Flemish likewise possess an excellent metrical version, which was published in 1836 at Ghent by Willems, with a very valuable introduction. The early French literature, however, is the richest in poems founded on the story of Reynard. Méon, in his 'Roman du Renard' (Paris, 1826), has shown that most of these poems belong to the 13th century, and more modern researches have proved that the story was known as early as the 9th century. The subject is one which so readily presents itself to the imagination, that it would be impossible with any probability to assign its invention to any particular time or nation. Whenever a work of fiction of commanding interest appears, unpoetical minds are always ready to seek some real history disguised under it; and this has been the case with this poem ever since its publication, until Jacob Grimm, in his 'Reinhart Fuchs' (Berlin, 1834), showed that there is no ground whatever for such a supposition.

(Högel, *Geschichte der Komischen Literatur*; Jördens, *Lexikon Deutscher Dichter und Prosaisten*; Carlyle, *Miscellanies*, vol. iii., p. 197, &c.)

ALLAN, DAVID, called the Scottish Hogarth, was born at Alloa in Clackmannanshire in 1744, where his father was shore-master. The choice of his profession was partly owing to an accident: he burnt his foot, and while he was being nursed at home, having nothing else to do, he amused himself with drawing with a piece of chalk upon the floor; an amusement he got so much attached to, that when he recovered he had a very great objection to going to school. But he soon obtained a happy release from this obligation, for his old schoolmaster turned him away from the school for making a caricature of him punishing a refractory boy. Mr. Stuart, collector of the customs at Alloa, was so much struck with the caricature that he recommended Allan's father to send him to the academy of Robert and Andrew Foulis at Glasgow to learn to become a painter. He was accordingly apprenticed in 1755 to Robert Foulis. Allan remained at this academy nine years, and when he returned home he had the good fortune to be introduced by Lord Cathcart as a native prodigy to Erskine of Mar, on whose estate he was born, and by whom he was generously sent as a pensioner to prosecute his studies at Rome. Here he obtained first a silver medal for a drawing in the academy of St. Luke, and afterwards the gold medal for a painting. The subject was the legend of the Corinthian maid who drew the profile of her lover around his shadow cast by a lamp upon the wall. The picture was well painted, and a good engraving of it by Cunego spread Allan's reputation throughout Italy; and his praises reached even his own countrymen: it was however the first and last good picture he ever painted. His subsequent works were distinguished for humour and feeling, but in execution, whether as paintings or engravings, they are very inferior.

He painted two other pictures at Rome, the 'Prodigal Son' for Lord Cathcart, and 'Hercules and Omphale' for Erskine of Mar; and he made also four humorous designs illustrating the Roman Carnival, which through Paul Sandby's prints of them became popular, and gained Allan a considerable reputation for broad humour. But he no more deserved the title of the 'Scottish Hogarth,' which for these and a few other similar designs he obtained in Scotland, than his historical pictures would warrant his being called the Scottish Raphael. "He is among painters," says Allan Cunningham, "what Allan Ramsay is among poets—a fellow of infinite humour, and excelling in all manner of rustic drollery, but deficient in fine sensibility of conception, and little acquainted with lofty emotion or high imagination."

In 1777 Allan visited London, which however he left for Edinburgh, after practising there for a short time as a portrait-painter. After the death of Runciman in 1786, Allan succeeded him as master of the Trustees' Academy, which office he held for ten years until his death in 1796. He left a son and daughter; the former went in 1806 as a cadet to India.

Allan's most popular designs are his twelve illustrations of Ramsay's 'Gentle Shepherd,' which he engraved himself in aquatinta, and published with an edition of the poem, with some prefatory remarks as a sort of apology for the humbleness of the style of his designs. He made also some designs for the lyric poems of Burns, who complimented the painter in his letters to his friend Thomson on more than one occasion. Burns however found fault with Allan's 'stock and horn,' a rude musical instrument which he put into the hands of some of his characters. Burns offered to send him a real one, such as the shepherds used in the braes of Athol. "If Mr. Allan chooses," says Burns, "I will send him a sight of mine, as I look on myself to be a

kind of brother brush with him. 'Pride in poets is *nae sin*;' and I will say it, that I look on Mr. Allan and Mr. Burns to be the only genuine and real painters of Scottish costume in the world." But Allan did not think that Burns's 'stock and horn' were any improvement on his own; he said it was only fit for "routing and roaring."

(Cunningham, *Lives of British Painters*, &c.)

ALLAN, SIR WILLIAM, was born in Edinburgh in 1782. After receiving his early education at the High School, he was placed with a coach-painter; but displaying a strong attachment to art, he was entered as a pupil in the Trustees' Academy, where Wilkie was his fellow-student. When his term expired he proceeded to London, and became a student of the Royal Academy. In 1805 his first picture of a 'Gipsy Boy and Ass' appeared at the exhibition of that institution. Not succeeding in at once attracting public attention, Allan resolved to try his fortune abroad, and selected St. Petersburg for the scene of his experiment; incited partly, it is said, by the expectation of finding novel and picturesque objects for the exercise of his pencil. He remained in Russia nearly ten years, making occasional journeys to distant parts of the country, to Turkey, Tartary, the shores of the Black Sea, &c., and everywhere industriously employing himself in gathering materials for his art.

On his return to Scotland in 1814, he made a public exhibition of his sketches and finished pictures of Russian, Tartarian, and Circassian scenes and costume. Among the pictures was a large one of 'Circassian Captives,' which at the suggestion of Sir Walter Scott was purchased by one hundred gentlemen, who subscribed ten guineas each; it fell to the lot of the Earl of Wemyss, in whose possession it now is. From this time Allan settled in his native city, sending regularly some of his works to the exhibition of the Royal Academy. For a while his pencil was chiefly employed on pictures suggested by the countries in which he had travelled; he then turned to the annals of his native land, and for several years was mostly engaged in illustrating the history or the romance of Scotland. To this period belong the 'Murder of Archbishop Sharpe,' 'Parting of Prince Charles Stuart and Flora Macdonald,' 'Knox admonishing Mary Queen of Scots,' 'Murder of the Regent Murray,' and others of his best works. In consequence of a disease in the eyes he was compelled for a year or two to cease from painting, and being advised to try a change of climate, he visited Italy, Asia Minor, and Greece. On resuming his pencil, his 'Slave Market at Constantinople,' and pictures of a like kind, showed that he had profited by his travels.

Meanwhile he had been gaining the distinctions awarded to success in his profession. In 1825 he was elected associate of the Royal Academy. In 1835 he became R.A. In 1838 he was chosen, on the death of Mr. Watson, to be president of the Scottish Academy. On the death of Wilkie in 1840 Allan was appointed to succeed him as her Majesty's Limner for Scotland; and in 1842 he received the honour of knighthood. Sir William Allan was best known by his Russian and Circassian *genre* pieces, and by his Scottish historical works. In all of them there is much skill and refinement, but in none any very evident marks of a high order of genius. But he was also a very successful painter of a special class of portraits, such, for instance, as his 'Scott in his Study Writing,' and its companion, 'Scott in his Study Reading;' and in his later years he essayed with success the more laborious task of depicting scenes of actual warfare. Of these the most important were two pictures of the 'Battle of Waterloo,' which met with the marked approval of the Duke of Wellington, and one of which his grace purchased; the 'Battle of Preston Pans;' 'Nelson Boarding the San Nicolas;' and the 'Battle of Bannockburn,' a large painting, on which he was engaged at the time of his death. One of his last considerable works, 'Peter the Great teaching his Subjects the Art of Ship-building,' was a commission from the Emperor of Russia.

Sir William Allan died on the 23rd of February, 1850. As a painter he was generally acknowledged by his countrymen to be at the head of Scottish art, by right of his talent as well as of his office.

ALLATIUS, LEO, an eminent literary man of the 17th century. He was a Greek, born in the island of Chios in 1586. Being carried over to Italy at an early age, he was taken under the protection of a powerful family in Calabria, and educated in the Greek college at Rome. He revisited his native country, but soon returned to Rome, where, after a succession of literary employments, he was appointed librarian to the Vatican. For this post he was well fitted by great industry and a retentive memory; and, in a long life, he edited manuscripts, translated Greek authors, and published many original works, which display more learning and power of collecting materials than taste or judgment. A Greek by birth, he was one of the most strenuous and bigoted upholders of the Roman Church and of papal infallibility, and hesitated not to invoke fire and sword as the legitimate means of converting obstinate heretics. (See his treatise 'De Ecclesie Occidentalis et Orientalis perpetua Consensione.') He founded a college in the island of Chios, and died at Rome in the year 1669, aged 83.

ALLECTUS, one of the officers of Carausius, king of Britain, in the time of Diocletian. Constantius Chlorus (whom Diocletian and his colleague Maximian had raised to the dignity of Cæsar, and appointed to the command of Gaul and the conduct of the war against Carausius), having attempted to cross over to Britain (A.D. 292), had been obliged, by stress of weather, to return. During the

interval which succeeded this attempt, Carausius was murdered by Allectus (A.D. 293), who was afraid of being punished with death for some crimes of which he was conscious. Allectus now assumed the sovereignty, and stationed his fleet near the Isle of Wight to prevent the enemy from crossing; but Constantius sent forward Asclepiodotus, prætorian præfect, with a portion of his fleet and army, who, under cover of a dense fog, effected a landing. Allectus, fearing the arrival of that part of the expedition which was under Constantius himself, leaving his fleet and the harbour near which he was encamped, marched against Asclepiodotus, who had burned his fleet immediately after landing, that his men might have no resource but in victory. Allectus did not attempt to draw up his forces in regular order, but rushed at once to the encounter, and was defeated and slain with a great number of his men. He had laid aside his imperial robes, so that his body was recognised with some difficulty. Scarcely any of Asclepiodotus's soldiers fell. If the statement of Eutropius and Orosius be correct, that Allectus held the sovereignty of the island for three years, we may place his death in the year 296. Constantius landed shortly after the fall of Allectus, and was received with great demonstrations of joy; and the imperial authority was fully re-established in the island. (Eutropius, *Historia Romana Breviarium*; Orosius, *Historia*.)

ALLEGRI, C. ANTONIO. [CORREGGIO.]

ALLEN, JOHN, M.D., a writer on subjects connected with metaphysics, history, and physiology, was born in January, 1770, at Redford, in the parish of Colinton, near Edinburgh. The domain of Redford, situated on the slope of the Pentland Hills, was his paternal property, and the mansion-house still attests the moderate but substantial wealth of his ancestors. He studied at Edinburgh, where he took a degree in medicine in 1791. He soon afterwards connected himself with the movements in Scotland for the furtherance of parliamentary reform. In 1795 he published 'Illustrations of Mr. Hume's Essay concerning Liberty and Necessity, in answer to Dr. Gregory of Edinburgh, by a Necessitarian.' This small tract is in many respects characteristic of his subsequent more distinguished works, in the felicity with which it adopts a broad and comprehensive view, as well as in the clearness with which it adheres to one unbroken line of reasoning, and keeps clear of divergencies and incidental questions. In 1801 he translated from Cuvier, whose friendship he enjoyed, 'An Introduction to the Study of the Animal Economy.' It appears to have been about the commencement of this century that he formed an intimacy with Lord Holland, with whom he continued to reside until that nobleman's death. After the peace of Amiens, Dr. Allen accompanied Lord and Lady Holland through France and Spain, and resided with them in the latter country until the year 1805. He made large collections relating to the past history of Spain, and to its social and political position. He became an extensive contributor to the 'Edinburgh Review,' on subjects chiefly connected with the British constitution, and with French and Spanish history. Forty-one articles in that periodical are attributed to him, and his researches in a great measure served to establish and characterise its opinions on constitutional questions. His earliest papers were on Spanish and South American subjects. The earliest article on constitutional subjects attributed to him is that on the Regency question, May, 1811. In the number for June, 1816, an elaborate essay on the constitution of parliament, full of original investigation, is believed to have been from his pen. He wrote in the same periodical some papers on the 'History of England' by Lingard, which occasioned a pamphlet controversy with that author, chiefly relating to the massacre of St. Bartholomew, the authorities for which he charged Lingard with having referred to at second hand. The latest article which he is supposed to have contributed to the Review is that on Church Rates, October, 1839. He wrote the History of Europe in the 'Annual Register' for 1806; and in 1820 a 'Biographical Sketch of Mr. Fox.' In 1830 he published a small but valuable constitutional work, called an 'Inquiry into the Rise and Growth of the Royal Prerogative in England,' which has been republished, with his final revisions, since his death. Dr. Allen published several other pamphlets, some of them on subjects of comparatively temporary interest. For some years before his death he held the lucrative appointment of Master of Dulwich College. He was a member of the Record Commission; and he held the office of under-secretary of the commissioners for treating with America in 1806. He died April 3, 1843. His character has been eloquently drawn by his friend Lord Brougham, in the third series of the 'Historical Sketches of the Statesmen of the Time of George III.," pp. 342-348.

ALLEN, JOSEPH W., a landscape painter of considerable reputation, was born at Lambeth, Surrey, in 1808. His father was a schoolmaster, and the son was designed to follow the same profession. Having completed his education at St. Paul's school, he for a time practised as an usher at Taunton, but he soon threw aside the pen and the ferula, and returned to London in the hope of maintaining himself by the pencil. While acquiring the technicalities of his art he was often reduced to great straits. At first he was constrained to paint signs and transparencies for blind-makers; and when he was more advanced he had for a long period to manufacture paintings for picture-dealers. Under the necessity of producing many showy pictures at low prices he soon acquired considerable mechanical

dexterity, and he was led not unnaturally to turn his attention to scene-painting for theatres—then a very popular branch of art. After working for a while as assistant to Stanfield and others, he obtained the situation of principal scene-painter at the Olympic Theatre, when that establishment first came under the management of Madame Vestris; and his clear style and vigorous pencil did much to secure the success of the brilliant spectacles which formed the distinguishing feature of the management. Allen's early oil-paintings were generally of small size, and represent quiet, homely, pastoral scenery, which was rendered with great delicacy and a nice appreciation of the freshness of natural colour. But though they found purchasers among well-known patrons of art, his reputation extended slowly, and he attributed his tardy progress to the placing of his pictures at the annual exhibition of the Royal Academy. He joined himself therefore to the newly-founded Society of British Artists, and became one of its most ardent supporters. All his more important works were thenceforward exhibited in the first instance on its walls; and he eventually became its secretary.

Allen did not attain the position his early pictures promised. His inclination and his *forte* lay towards pastoral scenery. He loved and he could well depict those fresh, open, country scenes, so characteristic of our 'home counties,' which Milton describes as affording constant delight to the city dweller. For these Allen had all a Londoner's relish, and while he painted them with continual reference to the reality, his pictures commanded the sympathy of all who enjoy this style of art. But when he had obtained skill in producing those "brilliant effects," which are so attractive in conjunction with gas-light and theatrical 'properties,' he began to employ them in his pictures, and though he succeeded by such means in sparing himself much thought and labour, while he rendered his pictures more attractive in the exhibition-room, it was at the expense of those higher qualities of truth and propriety which are essential to lasting fame. And the evil was fostered and strengthened by another influence under which he fell, when he appeared to be about to escape from that of the theatre. From the first establishment of the Art-Union his landscapes won the favour of the prize holders. Seldom possessing any knowledge of art, their taste is commonly caught by glare and glitter; and Allen permitted himself to be driven by the pressure of his circumstances to paint more and more with a special regard to them. His earlier pictures have many admirable qualities, and his latest display great technical and manipulative skill; but his life was not one of artistic progress, and his is not a name that can permanently take a high place among the artists of England.

Allen died August 26, 1852, of disease of the heart, at the early age of 49; leaving a widow and eight children, for whom unhappily he had not been able to secure a sufficient provision.

ALLEN, WILLIAM, was born August 29, 1770. His father was a silk-manufacturer in Spitalfields, and a member of the Society of Friends. Having at an early period shown a predilection for chemical and other pursuits connected with medicine, William was placed in the establishment of Mr. Joseph Gurney Bevan, in Plough-court, Lombard-street, London, where he acquired a practical knowledge of chemistry. He eventually succeeded to the business, which he carried on in connection with Mr. Luke Howard, and acquired great reputation as a pharmaceutical chemist. About the year 1804 Mr. Allen was appointed lecturer at Guy's Hospital on chemistry and experimental philosophy, and he did not wholly retire from this institution until 1827. He was elected a Fellow of the Royal Society in 1807, and the Society's 'Philosophical Transactions' contain accounts of several of the more important of his chemical investigations, which were carried on in conjunction with his friend Mr. Pepys. They established the proportion of carbon in carbonic acid, which was different from that adopted at the time in all systems of chemistry; and they also demonstrated that the diamond was pure carbon. The 'Philosophical Transactions' for 1829 contain a paper by Mr. Allen, based on elaborate experiments and calculations which he had made on the changes produced on atmospheric air and other gases by respiration. Mr. Allen was mainly instrumental in establishing the Pharmaceutical Society, of which he was president at the time of his death. Besides his public labours as a practical chemist, he pursued with much delight in his hours of relaxation the study of astronomy. Many years before his death, Mr. Allen purchased an estate near Lindfield, Sussex, and withdrew from business. Here, while still zealously engaging in public schemes of usefulness and benevolence, he carried out various philanthropic plans for the improvement of his immediate dependants and poorer neighbours. He erected commodious cottages on his property, with an ample allotment of land attached to each cottage; and he established schools at Lindfield for boys, girls, and infants, with workshops, out-houses, and play-grounds. About three acres of land were cultivated on the most approved system by the boarders, who also took a part in household work. The subjects taught were land-surveying, mapping, the elements of botany, the use of the barometer, rain-gauge, &c., and there was a good library with various scientific and useful apparatus. Mr. Allen died at his house near Lindfield, December 30, 1843. (*Pharmaceutical Journal and Transactions* for February, 1844; *Memoirs of William Allen*; *Minutes of Committee of Privy Council*, 1842-3, 'Lindfield School,' p. 551.)

ALLEYN, EDWARD. The lives of actors are seldom associated with any circumstances of permanent interest. They strut and fret their little hour, are applauded, and are forgotten. It is of small consequence to us now, that Nashe, in 1593, says that "the name of Ned Alleyn on the common stage was able to make an ill matter good;" that Ben Jonson compares Alleyn with the great actors of Rome, and Thomas Heywood pronounces him—

"Proteus for shapes, and Roscius for a tongue;"

that a grave chronicler, Sir Richard Baker, says of Burbage and Alleyn, "They were two such actors as no age must ever look to see the like;" and that Fuller writes, "He was the Roscius of our age, so acting to the life that he made any part, especially a majestic one, to become him." Strong as these testimonies are to the professional merits of Alleyn, they would scarcely warrant any lengthened notice of him, were there not circumstances connected with his public history and his private character which lend an interest and importance to his career rarely attaching even to the most celebrated of his class.

Alleyn was born in 1566, in the parish of St. Botolph without Bishopsgate, London. The register of this parish shows the day of his birth, Sept. 1, which corresponds with entries in his own Diary. His father, Edward Alleyn, was a citizen and inn-holder in this parish, as we learn from his will, dated the 10th of September, 1570, and proved on the 22nd of the same month. He bequeathed to his wife a life interest in all his lands and tenements, and afterwards to his three children. Mrs. Alleyn, who was of a good family in Lancashire, married a second time. Her husband, whose name was Brown, is described as a haberdasher, but he was also an actor; and thus Fuller was no doubt correct when he states that Edward Alleyn was bred a stage-player. Born only two years later than his great contemporary Shakspeare, and labouring in the same vocation with him for nearly thirty years, the career of Alleyn must offer many parallel circumstances with the career of Shakspeare; and it thus acquires a secondary interest of no inconsiderable value. John Alleyn, the elder brother of Edward, was, like his father, an inn-holder, as we learn from a document bearing the date of 1588-89, in which Edward Alleyn purchases of one Richard Jones, for the sum of thirty-seven pounds ten shillings, his share of "playing apparels, play books, instruments," &c., which Richard Jones has jointly with the brother and step-father of Edward. Mr. Collier conjectures, with great probability, from the circumstance of John being mentioned as an inn-holder whilst he was evidently engaged in a theatrical speculation, that "the old practice of employing inn-yards as theatres had not then been entirely abandoned; and it is not at all impossible that in the time of their father, the yard of his inn had been converted to that purpose, and was so continued by his son John, who succeeded him." John Alleyn however became a distiller in 1594; and before this his brother is celebrated by Nashe (in another passage besides that just quoted) as "famous Ned Alleyn." It is established that he was famous in Greene's 'Orlando Furioso' and Marlowe's 'Jew of Malta,' both of which belong to the early period of the drama. In 1592 he married Joan Woodward, the daughter of Agnes Woodward, a widow, who previous to this period had become the wife of Philip Henslowe, one of the principal theatrical managers of that day. Alleyn and Henslowe now entered into partnership in their stage concerns. Within six months after his marriage the plague broke out in London, and all the theatrical houses being as usual closed, to prevent the spread of infection, Alleyn and his company, then known as Lord Strange's players, went upon a strolling expedition into the provinces. In the collection of papers in Dulwich College there are letters to and from Alleyn at this period, which are printed in Mr. Collier's 'Memoirs.' Alleyn left his wife and his father-in-law behind him during this temporary emigration, and it is not improbable that Henslowe, who appears to be an ignorant and rapacious person, had infringed the order against dramatic exhibitions, for Alleyn writes to his wife:—"Mouse, I little thought to hear that which I now hear by you, for it is well known, they say, that you were by my lord mayor's officer made to ride in a cart, you and all your fellows, which I am sorry to hear." At this period the players were in constant dispute with the corporation, and this was probably some petty exercise of tyranny from which the company of Henslowe and Alleyn were not protected. Even the queen's players, of whom Shakspeare was one, supported as they were by the highest authority, had often to contend with the municipal love of power. And yet at this period, leading a life which was denominated vagabond as far as his provincial excursions were concerned, Edward Alleyn was a man of property, derived either from marriage or inheritance, or from both. In 1596 he sells "the lease of the parsonage of Firle," near Beddingham in Sussex, for the large sum of 3000*l.*, to be received in twenty annual payments of 150*l.* He was probably the lay improPRIATOR. Here alone was an ample provision for Alleyn and his family, according to the value of money in those days, yet for many years he continued an actor and theatrical manager. The theatre which he and Henslowe owned from the period of his marriage was the Rose on the Banks; but in 1600 they built a new theatre, the Fortune, in Cripplegate, near Red Cross-street. The inhabitants of the neighbourhood petitioned the Privy Council to sanction this

theatre, and the parochial favour seems to have been very skilfully acquired. The householders approved the scheme "because the erectors of the said house are contented to give a very liberal portion of money weekly towards the relief of our poor," and "because our parish is not able to relieve them." We may thus form some idea of the profits of the early dramatic performances when audiences were contented to be delighted and instructed with the words of a play without the aid of costly decorations. But Alleyn and his father-in-law had other sources of profit: they were the owners of the dogs and bears which were exhibited at Paris Garden, and in time Henslowe and Alleyn became patentees of the office of "the mastership of His Majesty's games of bears, bulls, and dogs." In 1603 the plague again drove Alleyn and his company out of London, and a letter from his wife to him at this period brings us closer to Shakspeare than any other contemporary record. The good lady says, in this torn and mutilated paper, "Aboute a weeke a goe there came a youthe who said he was Mr. Francis Chalouer, who would have borrowed x^d to have bought things for . . . and said he was known unto you, and Mr. Shakspere of the Globe, who came . . . said he knew hym not, onely he herde of hym that he was a roge . . . so he was glade we did not lead him the monney." After the accession of James, Alleyn's company became 'the Prince's Players,' as Shakspeare's was the King's; and having purchased the patent office of master of the king's games, Henslowe and Alleyn, in 1606, rebuilt Paris Garden for those disgusting exhibitions in which the court and the populace equally delighted. The patentees had the right of sending bear-wards into the country; and accounts at Dulwich exhibit the expense and profits of such exhibitions. Thus accumulating property in various ways, Alleyn was so thriving a man in 1606 as to have purchased the manor of Dulwich from Sir Francis Calton. Upon the death of Henslowe in 1616, and of his wife in the following year, Alleyn succeeded to the greater part of their theatrical property; and he had previously acquired other property of the same nature, particularly by a large purchase in the Blackfriars Theatre in 1612, which Mr. Collier supposes was Shakspeare's share, sold by him on his retirement from London. There is, however, no distinct evidence for this assumption. It is nowhere stated to whom the money, being a total of 59*l.* 6*s.* 8*d.*, was paid for this portion of the lease and other property.

Alleyn commenced the building of Dulwich College in 1613. Previous to this he appears to have discontinued appearing on the stage as an actor; but Aubrey, in his 'Miscellanies,' connects the foundation of Dulwich College—"the college of God's Gift," as Alleyn called it—with a circumstance which strongly recommends itself to the imagination of the credulous antiquarian: "The tradition was, that playing a demon with six others in one of Shakspeare's plays, he was in the midst of the play surprised by an apparition of the devil, which so worked on his fancy that he made a vow which he performed at this place" (Dulwich). This is clearly an adaptation of the story told with great solemnity by Prynne, in his 'Histrio-Mastix,' in his recital of the judgments against players and play-haunters: "Nor yet to recite the sudden fearful burning, even to the ground, both of the Globe and Fortune playhouses, no man perceiving how these fires came: together with the visible apparition of the devil on the stage at the Bel Savage playhouse, in Queen Elizabeth's days (to the great amazement both of the actors and spectators), whiles they were there profanely playing the History of Faustus (the truth of which I have heard from many now alive, who well remember it), there being some distracted with that fearful sight." It is evident that Alleyn, having considerable riches and no family, had, before he resolved upon the particular appropriation of his wealth, not only acquired a reputation for benevolence, but intimated an intention to make an endowment for some charitable institution. Samuel Jeynens, probably a clergyman, applies to Alleyn to render some assistance for the completion of Chelsea College, by letter, in the beginning of which he says, "Blessed be God, who has stirred up your heart to do so many gracious and good deeds to God's glory." The object of Chelsea College was "that learned men might there have maintenance to answer all the adversaries of religion." The same writer adds, "Or, if I might move another project to yourself, that it would please you to build some half a score lodging rooms, more or less, near unto you, if it be no more but to give lodging to divers scholars that come from the university." Alleyn took his own course. In 1616 he had nearly completed his establishment at Dulwich, and in the autumn of that year the Earl of Arundel writes to him with a familiarity which shows the respect entertained for Alleyn's character, and the knowledge amongst the higher ranks of his benevolent purposes. The earl addresses the player as his "loving friend," and says, "Whereas I am given to understand that you are in hand with an hospital for the succouring of poor old people and the maintenance and education of young, and have now almost perfected your charitable work, I am at the instant request of this bearer to desire you to accept of a poor fatherless boy to be one of your number." The incumbent of St. Botolph's, the parish in which Alleyn was born, was at this period Stephen Gosson, who six and thirty years before was the furious adversary of poets and players, and "such like caterpillars of a commonwealth." The papers of Dulwich College show that Alleyn was solicitous to give a preference to the poor of his native parish in selecting the inmates of his hospital; and that Gosson was particu-

larly diligent in recommending individuals to his favour. There were legal difficulties in the establishment of 'God's Gift College' as a foundation; and no less a person than the Chancellor Bacon thought it his duty to resist the completion of Alleyn's wishes. The chancellor thus writes to the Marquis of Buckingham: "I now write to give the king an account of the patent I have stayed at the seal: it is of license to give in mortmain eight hundred pounds land, though it be of tenure in chief, to Allen that was the player, for an hospital. I like well that Allen playeth the last act of his life so well, but if His Majesty give way thus to amortize his tenures, the Court of Wards will decay, which I had well hoped should improve. But that which moved me chiefly is, that His Majesty now lately did absolutely deny Sir Henry Saville for two hundred pounds, and Sir Edward Sandys for one hundred pounds, to the perpetuating of two lectures, the one in Oxford, the other in Cambridge, foundations of singular honour to His Majesty, and of which there is great want; whereas hospitals abound, and beggars abound never a whit less. If His Majesty do like to pass the book at all, yet if he would be pleased to abridge the eight hundred pounds to five hundred pounds, and then give way to the other two books for the universities, it were a princely work, and I would make an humble suit to the king, and desire your lordship to join in it, that it might be so." The opposition of the chancellor was however overruled, and Alleyn was allowed to dispose of his munificent endowment of eight hundred pounds a year according to his own wishes. The college was for the support and maintenance of one master, one warden, and four fellows, three of whom were to be ecclesiastics, and the other a skilful organist; also six poor men, six women, and twelve boys to be educated in good literature. The patent passed the great seal on the 21st of June, 1619; and on the 13th of the following September Alleyn formally and publicly disposed himself of this the greater part of his property, and thenceforward he and his wife lived in this foundation upon a footing of equality with those whom they had raised into comfort and comparative opulence. Thomas Heywood, in his 'Vindication of Actors' (a remodelling of his 'Apology for Actors'), says, "When this college was finished, this famous man was so equally mingled with humility and charity that he became his own pensioner, humbly submitting himself to that proportion of diet and clothes which he had bestowed on others." Alleyn appears to have had a full and earnest enjoyment in his rare munificence. In his diary, under the date of May 26, 1620, is this passage: "My wife and I acknowledge the fine at the Common Pleas' bar of all my lands to the college: blessed be God that has lent us life to do it." He had property enough to bestow on other charitable objects. In 1620 we find him founding almshouses in Finsbury. His diary gives us a curious picture of his habits after his retirement to Dulwich. He was still master of the king's games; and thus we find him on one day baiting before the king at Greenwich; on another, giving the twelve brothers and sisters of the college their new gowns; and on another, going to Croydon fair to sell his brown mare. His property still went on accumulating. In 1620 he bought the manor of Lewisham. In 1621 the Fortune Theatre, of which he was the chief proprietor, was burnt. He enters the fact in his diary, without a single observation, and quietly sets about rebuilding it. His wife Joan died in 1623. He was very soon married again, to a lady whose Christian name was Constance, and who is supposed to have been a daughter of the celebrated Dr. Donne. Alleyn lived with his second wife only about two years. His will, dated November 13, 1626, states that he was sick in body; and on the 25th of the same month he died, and was buried in the chapel of his college, called Christ Chapel, in a plain manner, according to his special direction. By his will he endowed twenty almshouses, ten in the parish of St. Botolph, and ten in St. Saviour's, Southwark; and he left considerable legacies to his wife and other relations. Fuller, some forty years after the death of Alleyn, when the opinions of the Puritans had thrown discredit upon the noblest as well as the most innocent actions of those who had been connected with the theatre, thus writes of the founder of Dulwich College: "He got a very great estate, and in his old age, following Christ's counsel (on what forcible notice belongs not to me to inquire), 'he made friends of his unrighteous mammon,' building therewith a fair college, at Dulwich in Kent, for the relief of poor people. Some, I confess, count it built on a foundered foundation, seeing in a spiritual sense none is good and lawful money save what is honestly and industriously gotten. But perchance such who condemn Master Alleyn herein have as bad shillings in the bottom of their own bags, if search were made therein."

The founder of Dulwich College had a singular partiality for persons bearing his own name. Advantage was probably taken of this peculiarity, which we must call a weakness. Dekker writes to him to introduce the son of a Kentish yeoman: "He is a young man loving you, being of your name, and desires no greater happiness than to depend upon you." Howes, the continuator of Stow's 'Chronicle,' mentions about 1614, that Alleyn was building his college, and that he intended the master always to be of the name of Allen, or Alleyn. This limitation continues to exist. Dulwich College now possesses very large revenues; and the situation of master especially is one of great value. Alleyn left a collection of pictures there, to which additions were gradually made; but in 1810 Sir Francis Bourgeois bequeathed to the college his valuable collection, which he had pre-

viously offered, but without success, to the government, upon the condition of building a gallery for its reception. This collection is easily accessible to the public, without fee.

Within the last few years considerable discussion has arisen with reference to the proper distribution of the funds of the college, and at the beginning of 1856 a scheme was recommended by the Charity Commissioners, with consent of the college authorities, for the future management of the charity. The present members are to be paid annually as follows:—Master, 1015*l.*; Warden, 855*l.* (to be raised to 1015*l.* should he survive the master); First and Second Fellows, 500*l.*; Third and Fourth Fellows, 466*l.*; poor brethren and sisters, 150*l.* from Michaelmas next for their respective lives. Twelve governors are to be appointed: an upper, or classical, school to be constituted, the head-master with a salary of 350*l.* a year, and 30*s.* half-yearly for each scholar over fifty, to have the general superintendence of the charity, subject to the governors; the under-master to have 250*l.* with 10*s.* half-yearly for each boy above fifty, in addition to his own pupils. Day scholars and boarders to be admitted to this school. Foundation scholars, not to exceed twenty-four in number, may be maintained at the expense of the charity. Scholarships, not exceeding eight in number, at 100*l.* a year each, tenable for four years, may be provided for scholars (not private boarders) in the upper school. A lower school, for foundation scholars and day boys, is to be carried on at Dulwich, the master to receive 150*l.* a year, and 10*s.* half-yearly for every boy exceeding fifty. Twelve boys may be allowed exhibitions, or scholarships, not exceeding 30*l.* a year each, for four years. The number of alms-people not to exceed twenty-four in the first instance, half to be brethren, and the other half to be sisters; who are to have residences and a weekly stipend not exceeding 20*s.* Out-pensioners may be appointed, not exceeding sixteen, with stipends of not more than 10*s.* weekly.

The papers at Dulwich College, whether in the writing of Alleyn or his partner Henslowe, throw some light upon the literary history of the drama. Alleyn appears to have taken much of the management with regard to the authors who wrote for the theatres in which he was so deeply interested. For example, there is an entry in Henslowe's papers, "Lent unto my sonne E. Alleyn, the 7th of November, 1602, to give unto Thomas Deckers for mending of the play of Tasso, the some of xxx*s.*." and again, "Lent unto Mr. Alleyn, the 25th of September, 1601, to lend unto Benjamin Johnson, upon his writing of his adycions in Jeronimo, xxx*s.*." Henslowe again lends unto "Ben-gemy Johnsons, at the apoyntment of E. Alleyn and William Birde," in earnest for plays undertaken, "the some of xl*l.*" The caution with which the elder partner makes his son-in-law a sort of security for needy authors is very curious. Alleyn appears to have been a man of a kindly heart towards those with whom he was brought in contact; and all these documents show that the theatrical writers—men who have earned their immortality—were for the most part poor and wretched. The partners however in all probability screwed their authors very hard. There is a letter from Robert Daborne to Henslowe, in which he earnestly begs for twenty shillings, saying, "Good sir, consider how for your sake I have put myself out of the assured way to get money, and from twenty pounds a play am come to twelve." There is a heart-rending document also from Field, Daborne, and Massinger, in which they earnestly beg for five pounds to deliver them from prison. The number of eminent men who were associated with Henslowe and Alleyn in producing dramatic novelties was very great, including Munday, Drayton, Dekker, Chettle, Massinger, Jonson, Rowley, Heywood, Porter, and Chapman. These men were dependent upon the players for the small gratuities which they received for works of high genius and laborious art. Yet Alleyn is not to be blamed for this penurious reward of authors. The writers for the theatres were almost innumerable; and excellence up to a certain point was very generally attainable by them. Perhaps some of the higher excellence of Shakspeare may be attributable to the fact that he was at ease in pecuniary matters; that almost alone he could produce the most attractive novelties for his own theatres; that he was not dependent upon managerial caprice; that in fact he was making a fortune, as Alleyn himself was making it, by his property in a species of enterprise which had universal supporters, and which in his case had the especial support of the wealthiest and best educated of the community. The details of the life of Alleyn ought to be attentively studied by those who desire to form a competent notion of that unequalled chapter in literary history, the annals of the English stage during the half century of its greatness.

(Fuller, *Worthies of England*; Kippis, *Biographia Britannica*; Collier, *Memoirs of Alleyn*, published by the Shakspeare Society; Malone, *Historical Account of the English Stage*.)

ALLINGHAM, JOHN TILL, a very successful dramatic writer, some of whose farces especially were what is called stock pieces at the beginning of the 19th century. They have no great pretensions to wit or humour; but they are full of liveliness and bustle, and were adapted to the peculiar talents of the most popular comedians of the time. 'The Weathercock' and 'Fortune's Frolic' are the best known of his productions. Allingham was the son of a wine-merchant in London, and was brought up to the legal profession. We neither can ascertain the date of his birth nor the exact period of his death. In an edition of 'Fortune's Frolic,' forming one of the series of dramatic

pieces published by a bookseller named Cumberland, about twelve years ago, we find this notice of Allingham: "We remember him some twenty years since in the busy throng about 'Change, in the capacity, we believe, of a stock-broker. He has been dead some years."

ALLORI, the name of two distinguished Italian painters, father and son. The father, *Alessandro*, was born at Florence in 1535, and was brought up by his uncle Angelo Bronzino, likewise a very distinguished painter. Allori, from his connection with his uncle, was also frequently called *Bronzino*, and he sometimes wrote the name upon his pictures. He was one of the most distinguished painters of the anatomical school, and was a devoted admirer of Michel Angelo; but he appropriated nothing more of that great master than his affected display of anatomy, which Allori seems to have considered the greatest quality in art. In 1590 he published a treatise upon anatomy for the use of artists. He died in 1607, and his portrait by himself was placed in the Florentine gallery of painters' portraits.

Allori's works, both in oil and fresco, are numerous, and many on a large scale. His greatest work is the Montaguti Chapel in the church of the Annunciata, painted in oil in 1582. He has painted there, a Last Judgment, Christ disputing with the Doctors, and Christ driving the Money Changers from the Temple. In the second he has introduced the portraits of Michel Angelo and Giacomo da Pontormo in their own costume, besides several other portraits of his contemporaries. He was an excellent portrait-painter, and he constantly introduced portraits of his friends into his historical pieces.

The son, *Cristofano Allori*, born at Florence in 1577, was a better painter than his father, whose style he abominated; he used to call him a heretic. He studied with Gregorio Pagani, and rivalled that painter in richness of colour, and surpassed him in delicacy of execution. But he was idle and fastidious, and his works are scarce. In execution he was equal to anything, and he had of course a corresponding skill in copying. He is said to have made some copies of Correggio's Magdalen with some slight alterations in the background, which now pass as duplicates by Correggio; he generally made a slight variation in the background; the original of this work is at Dresden. Cristofano was an excellent landscape-painter. His master-pieces are considered the Miracle of San Giuliano, in the Pitti gallery; San Manetto, in the church de' Servi; Judith and Holophernes; and a Magdalen, which was the portrait of his own mistress, a very beautiful woman. The Judith is also her portrait, and the Holophernes was painted from himself: it was engraved by Gondolfi for the 'Musée Napoleon.' He died in 1621; his portrait is likewise in the Florentine portrait gallery.

(Baldinucci, *Notizie de' Professori del Disegno*, &c.; Lanzi, *Storia Pittorica*, &c.)

ALLSTON, WASHINGTON, a distinguished American historical and landscape painter, was born in South Carolina in 1779, and was educated at Harvard College, which he entered in 1796, having spent a preparatory term, by the advice of his physicians, at Newport, Rhode Island. Having determined to follow painting as a profession, he resolved to visit England for that purpose; he accordingly set out in 1801 with another artist for London, and entered the Royal Academy of Arts of London as a student, in which he remained three years, during the presidency of West.

In 1804 he went with a friend to Paris, and thence to Rome, where he remained four years. In 1805 he attracted considerable notice there by a picture of 'Jacob's Vision.' He excelled chiefly in colouring, and is said to have created considerable sensation among the painters in Rome, by the peculiar effects which he accomplished, through a great use of asphaltum after the manner of Rembrandt. He painted several pictures at Rome, which were admired for their colour and chiaroscuro; among them a portrait of himself, and several landscapes.

In 1809 Allston returned to America, and at Boston married the sister of Dr. Channing. In 1811 he again visited England, where he obtained the 200 guineas' prize from the British Institution for a picture of the 'Dead Man raised by Elisha's Bones,' which was afterwards bought by the Pennsylvania Academy of the Arts for 3500 dollars. In 1813 he had the misfortune to lose his wife, at a time when he was himself in a very weak state of health. In 1814 he published a book entitled 'Hints to Young Practitioners in the Study of Landscape Painting.' In 1817 he paid a second visit to Paris, with Leslie the Academician; and he returned in the following year to America, to Cambridgeport, a village in Massachusetts, where he resided until his death in July, 1843. He was an Associate of the Royal Academy of London; his election took place in 1819.

Allston was regarded with deep affection by friends in England. Of him Coleridge said he was "gifted with an artistic and poetic genius unsurpassed by any man of his age." His residence was not far removed from Boston or from Harvard University; but Allston lived in much seclusion. The American writers notice that, although somewhat neglected by his countrymen, Lord Morpeth (Earl of Carlisle), Mr. Labouchere, and M. de Tocqueville, sought him in his retreat to offer their tribute of respect.

ALMAGRO, DIEGO DE, one of the adventurers who went from Spain to the conquest of America. He was a foundling and brought up by a clergyman of Almagro, according to Gomara; but according to Zarate, of Malagon. When the success of Columbus's voyage

became known in Spain, numbers of adventurers, prompted either by religious zeal, or by ambition for military glory, or the desire of gain, flocked to the new world; and many remained in obscurity until an opportunity was offered to them to become known. Of Almagro nothing is said by the historians previous to the year 1525, when he entered into a sort of partnership with Pizarro and a wealthy clergyman, named Hernando de Luque, at Panamá, to undertake jointly the conquest of Peru. Pizarro took the command of the troops; Almagro engaged to procure the supplies of men, arms, provisions, &c.; and Luque was to remain at Panamá, to forward, with the governor of that place, the interests of the company. Pizarro set out first, and Almagro afterwards joined him. Some time after the execution or murder of the Peruvian Atahualpa, Francisco Pizarro was informed of the arrival of Pedro de Alvarado with some troops to undertake the conquest of Peru, and sent Almagro to them to ascertain their intentions. Almagro met them on the coast, near the present port of Callao. After some negotiation, the greater part of the troops of Alvarado being from Estremadura, and tempted with the offer of 100,000 gold crowns to be divided among them, joined their fellow-countrymen, and marched together to Cuzco.

Almagro was informed by one of his party that he had been appointed governor of Nueva Toledo. He interpreted this to mean that Cuzco also was part of his governorship, and assembling the Ayuntamiento, openly declared to them his views. The two brothers of Pizarro, Juan and Gonzalo, refused to obey the self-made governor, and were put under arrest. Francisco Pizarro, upon hearing this news, left Truxillo, where he then was, and proceeded to Cuzco in great haste; when Almagro acknowledged his fault, and Pizarro not only pardoned him, but even lent him a considerable sum of money. Pizarro and Almagro entered now into an agreement by which the latter promised upon his solemn oath to leave Cuzco, and never to return within thirty leagues of it, even though the Emperor Charles should order him to do so. In 1535 he was sent to the conquest of Chili, which he partially effected, after having suffered much fatigue and privation; and it is said that he was presented by several caciques with 600,000 ducats in pieces of gold.

Five months after, Juan de Rada and Rui Diaz, whom he had left at Cuzco to recruit men for his army, brought him the intelligence that Fernando Pizarro, whom his brother Francisco had sent to Spain to solicit honours and titles for the discoverers, had returned from thence, bringing the title of Marquis of Peru for Pizarro, Governor of Nueva Toledo for Almagro, and Bishop of Peru for Luque. Some of Almagro's friends advised him to return to Cuzco. On his way thither he met Noguera, an officer who had been sent by Pizarro to ascertain whether he was in want of any assistance to pursue his conquests, Pizarro himself being then employed in building Lima. Almagro availed himself of this opportunity to get full information of the state of affairs at Cuzco, the safety of which, at that time, was much endangered by a revolt of the Indians; and having ascertained that he might easily obtain possession of that city, he immediately proceeded thither. Having subdued the Indians, he entered Cuzco without opposition; imprisoned Gonzalo and Fernando Pizarro, and pillaged their house. Francisco Pizarro, upon hearing of these events, sent from Lima two successive detachments against Almagro; and after having obtained the liberty of his two brothers, joined the army with the rest of his forces; successfully attacked Cuzco; and, having taken Almagro prisoner, caused him to be tried by a court-martial, which condemned him to death for having rebelled against his general and abandoned his post. This sentence was executed at Cuzco on the 25th April, 1538, Almagro being then in the seventy-fifth year of his age.

Almagro is described both by Gomara and Zarate as a brave, liberal, and open character. He never married, but left a son by an Indian woman, who was also called Diego de Almagro, and had as eventful a life and as tragical an end as his father.

(Gomara, *Historia General*, &c., ch. 125-128; Zarate, *Historia de la Conquista del Peru*, b. iii.; Pizarro, *Varones Ilustres del Nuevo Mundo*.)

AL-MAMUN. [ABBASIDES.]

ALMANSOR, properly *Al-Mansur*, or, with his complete name, *Abu Jafar Abdallah al-Mansur*, the second kalif of the Abbasside dynasty [ABBASIDES], was born at Hama in Syria, A.D. 713, and succeeded his brother and predecessor Al-Saffah, in 753. His reign was occupied chiefly with contests for the throne, and in repressing insurrections, some of which were of a sectarian character. From one of these he took a dislike to his residence at Kufa, and laid the foundation of the town of Baghdad, which became from this time the abode of the kalifa.

Al-Mansur died, September, 776, at Bir Maimuna, on a pilgrimage to Mecca. His son Al-Mohdi succeeded him in the kalifat. Al-Mansur first showed that predilection for literature which for several centuries became a distinguishing feature in the character of the Mohammedan sovereigns. During his reign translations into Arabic were commenced of the works of ancient Greek writers on metaphysics, mathematics, astronomy, and medicine.

ALMEIDA, FRANCISCO, seventh son of the Conde de Abrantes, was the first Portuguese viceroy of India. In his youth he distinguished himself against the Moors in the Peninsula, particularly in the conquest of Granada. In 1505, while paying a visit to his brother,

the Bishop of Coimbra, he was sent for by King Manoel, or Emanuel, and intrusted with the important office of viceroy of the recently acquired possessions in India. On the 25th of March, 1505, he set sail from Lisbon. "His embarkation," says Barros, "was the most brilliant that had ever taken place in Portugal. His force consisted of 1500 men, all belonging to very respectable families; many of them were noblemen of the king's household, all anxious to serve under so distinguished a leader."

After a prosperous voyage Almeida arrived at Quiloa, on the 23rd of July. The Moorish king of that city Habrasmu, or Ibrahim, was not friendly to the Portuguese. Almeida complained of his not having paid due respect to the Portuguese flag, when Ibrahim apologised, and promised to visit the viceroy on the morrow. But instead of the king, a messenger from him came to make a fresh apology. Almeida told the messenger to inform his master that he himself would pay him a visit at his own house. At the approach of the Portuguese, Ibrahim fled, and Almeida gave the crown of Quiloa to Mohammed Anconi, a worthy man, and a great friend of the Portuguese. Almeida received the homage of the new king in the name of his master, built a fortress to keep the inhabitants in subjection, and then proceeded to the town of Mombaza, which he destroyed. On his arrival at Cananor, on the Malabar coast, he received an embassy from the King of Bisnagur, who was desirous to form an alliance with the Portuguese. Almeida erected here another fortress to protect the factories, or commercial establishments, of Cananor, Cochin, and Coulan, and loaded eight vessels with spicery, which he sent to Portugal. This squadron on its way to Europe discovered the island of Madagascar.

The governor of Cochin, Trimumpara, had resigned in favour of one of his relations, and the viceroy went to that town with the object of renewing the alliance with the new king. Almeida sent his son Lorenzo against the King of Calicut, who had offered some injuries to the Portuguese merchants. Lorenzo, after having taken ample satisfaction for the insult, went to make an establishment at Ceylon, and also took the Maldive Islands. At the same time, four vessels, which had come from Portugal, formed a commercial alliance with the King of Malacca, and established two factories in the island of Sumatra.

The Soldan, or kalif of Egypt, with the aid of the republic of Venice, which always looked with an envious eye on the success of the Portuguese, had fitted out a naval expedition, and given the command of it to an experienced Persian, named Mir Hocem. The King of Calicut, expecting this assistance, made preparations for war, upon which the viceroy sent his son against him. When Lorenzo was in the port of Chaul, the Egyptian fleet, which had been reinforced with twenty-four vessels of the governor of Diu, appeared. Lorenzo at first mistook them for the squadron of Albuquerque, which he was expecting. The fire of Mir Hocem however soon made him discover his error. The two squadrons fought till night-fall without any considerable advantage on either side. Some of his officers advised Lorenzo to avail himself of the obscurity of night in order to cross the bar, and get out into the sea; but the gallant young man, though severely wounded, said, that to go away at night was nothing else than to run away, and that was a thing which he never would do. As the Portuguese squadron was sailing out in the morning, the Egyptians opened a brisk fire upon it. Lorenzo's vessel was the last, and the enemy directed their principal fire against her. At last she was separated from the rest of the vessels in a very sandy and rocky place. As the tide was running out with great rapidity, the other vessels could not render her any assistance, and the enemy showered their fire upon her with a sure aim. Lorenzo was requested by his men to save himself in the boat, but he would not consent to abandon them. A shot carried off one of his legs. He caused himself to be tied to the mast, where he continued to animate his men until another shot carried off the left side of his chest. The galley was by this time upon a sand-bank; it was boarded without difficulty, and twenty-four men, who remained in it, were carried away captives. The rest of the vessels proceeded to Cananor, and informed Almeida of the disaster. He bore it with fortitude, and was making preparations to revenge his loss, when Alfonso de Albuquerque, who was appointed governor of India in his place, arrived. Almeida received him very coolly, and a quarrel ensuing, Albuquerque was sent to Cochin, where he was kept three months under arrest. [ALBUQUERQUE.]

Almeida, whose only object now was to gratify his vengeance, sailed to Onor, where he burnt some vessels of the king of Calicut, entered the port of Dabal, or Dabul, belonging to the king of Goa, on the 18th of December, 1508, took the town, and after having plundered it reduced it to ashes. He then went in search of the Egyptian fleet, and found it near Diu in the kingdom of Cambay, and obtained a complete victory over it. Mir Hocem, with only twenty-four men, escaped: eight of his vessels were taken, and the rest sunk.

Almeida, having thus punished his enemies, returned to Cochin, where Marshal Coutinho, who had arrived from Portugal, urged him to return home. The viceroy released Albuquerque, surrendered his government, and sailed from Cochin on the 13th of November, 1509. On his way to Portugal, after having doubled the Cape of Good Hope, he stopped at Saldanha Bay to procure a supply of fresh water. His soldiers had a dispute with the natives, and an affray ensued. One of his officers, Mello, seeing the venerable old man alone in the midst of that inhospitable country, observed to him in a sarcastic manner,

"Here I should wish to see by your side one of those whom you favoured in India." Almeida very composedly answered, "This is not the time to think of that; think rather how to save the royal standard; as for me, I am old enough, both in years and in sins, to die here, if that be the will of the Lord." From this moment Mello never abandoned either the standard or his general, until Almeida fell pierced by a lance.

"That the man who had trampled over countless thousands of the Asiatics," says a contemporary writer, "who had humbled their sovereign princes, and annihilated in the seas the powers of the Egyptian Soldan, should perish on an obscure strand, by the hands of a few savages, should be a salutary lesson for human ambition."

Almeida was a man of noble appearance, prudent, courteous, and very much esteemed for his generosity. During his administration of India he made the Portuguese name respected. He is represented by some writers as a conceited man, who thought nobody so well qualified to govern India as himself; but perhaps we only do him justice in believing that his ruling motive was a desire to elevate the fame and power of his native state.

(Barros, *History of the Portuguese Conquests in the East*, decade i., book 8 to the end—ii., book 1-4; Damian à Goes, *Chronica do Senhor Rey Dom Manoel*; Mariana, book xxix. chap. 16; Lardner, *Cabinet Cyclopaedia, History of Spain and Portugal*, vol. iii., p. 306.)

ALMOHADES, the name of a Mohammedan dynasty, which began in Africa and Spain with Abdelmumen, in the year 542 of the Hegira, A.D. 1147. Mohammed-ben-Abdallah, a native of Herga, in Africa, was the son of a lamplighter in a mosque. He received his education at Cordova; and having finished his studies, he travelled to the East to improve his knowledge, and visited Cairo and Baghdad. In Baghdad he attended the school of the philosopher Abu-Hamid-Algezali, who had written a book on the revival of learning and the law, which was condemned at Cordova as dangerous to the faith of Islam. Ali, the Almoravidian king of Cordova, approved of this decision, and the book was given up to the flames. Algezali perceiving a stranger in his school, and having ascertained that he was from the west, asked him whether he had ever been at Cordova, and heard of his book. Abdallah informed him of the fate of his work. The doctor turned pale, tore the book which he had in his hands, and looking to heaven, exclaimed, "May God thus tear the kingdom from the impious Ali!" Abdallah joined him in his prayer, and added, "Pray God to make me an instrument of thy vengeance."

After three years' residence at Baghdad, Mohammed returned to Mauritania in 510 (A.D. 1116), where he rendered himself conspicuous by the simplicity of his dress, by his austerity, and by his bold preaching against the vices both of the king and the people. On his arriving at a village called Tejewa, he met a youth of prepossessing appearance, by name Abdelmumen, who was going with his uncle to study in the East. Abdallah promised to give him the instruction which he desired, but taught him all that was most conducive to his own designs. He communicated to him a prophecy in which it was foretold that the empire of life and of the law would only arise with Abdelmumen. Having thus prepared him, he named him his vizier. They both went to Fez, and thence to Morocco. Entering one day into the mosque of the latter city, Mohammed placed himself in the seat of the Imam. One of the ministers represented to him that nobody could occupy that place except the king of the faithful. Mohammed answered him with much gravity in these words of the Koran, "Inna'l mesajida lillahii"—"certainly the temples only belong to God." Shortly after the king entered, and prayers being said, Mohammed arose, and addressing himself to Ali, said to him, "Put a remedy to the evils and injustices prevailing in thy kingdom, for God will require of thee an account of thy people." The king at first treated him with contempt; but as he continued to preach and attract the multitude, Ali at last assembled his council, and though severe measures were proposed, the king contented himself with expelling him from the city.

Mohammed now built a hut in a burial-ground, and multitudes flocked there to hear his doctrine. He preached to them about the coming of the great Mehedi, who was to establish the empire of justice upon earth. The king ordered him to be imprisoned and beheaded, but he escaped to Agmat, and thence to Tinmal in the land of Sous. One day while he was expounding the prophecy of the coming of the great Mehedi, Abdelmumen observed, "That prophecy evidently applies to thee; thou art the true Mehedi." Upon this, Abdelmumen, with fifty others of his disciples, acknowledged him as their Mehedi. After these, seventy more swore allegiance to him. Mohammed established two councils. The fifty who first acknowledged his authority were those with whom he entrusted the affairs of greater consequence, and to the latter seventy he confided those of less importance.

He then went to the mountains, preaching the unity of God, and was followed by 20,000 men of the tribe of Mas-amuda, to whom he gave the name of Mowahedun, that is, Unitarians, from which the name of Almohades is derived. The command of this army was given to Mohammed Alakhir.

Abu-Is'bac-Ibrahim, Ali's own brother, marched against the rebels; and the two armies were ready to fight, when a sudden terror seized the foremost ranks of Ibrahim, who, turning their horses, began to fly in all directions, trampling down their own fellow-soldiers. The

Almohades possessed themselves of the rich baggage, and in consequence of this success several other tribes joined them. Ali now called his brother Temin from Spain, and with a powerful army sent him against the Mehedi, who had retired to the mountains. This general, though more successful than the preceding, never could defeat the Almohades. They fortified themselves at Tinmal, and from this place they sallied forth to devastate the surrounding country.

In 1125 (513 of the Hegira), they laid siege to Morocco, but were defeated in a vigorous sally made by the besieged. Three years afterwards, Abdelmumen marched at the head of 30,000 men, and obtained a complete victory over the Almoravides. On his return to Tinmal, the Mehedi came out to greet the victorious general; and the next day he called his men at the mosque, and took his last leave of them. Shortly after Abdelmumen waited upon him. The Mehedi gave him the book of Algezali, and departed from this world. He had made several reforms in the Mohammedan religion, among which was the adoption of a more simple profession of faith, and of prayers which they were allowed to say on their march, and even when fighting, which gave them a superiority over their enemies.

The chiefs of the Almohades now assembled to determine the form of government they should adopt after the death of the Mehedi; and having decided in favour of a moderate monarchy, the election fell upon Abdelmumen, who was declared Imam and Amir-al-Mumeinin. He pursued his conquests with vigour, and in three years reduced the empire of the Almoravides to very narrow limits. He took Oran and Fez, and laid siege to Morocco, the only city now left to the Almoravides in Africa. Whilst Abdelmumen was engaged in reducing that city, he sent Abu-Amran with a numerous army to invade Andalusia. Many of the petty chiefs of Spain joined the Almohades. In the mean time the siege of Morocco was pursued with vigour, and the inhabitants defended it heroically. The besieger swore he would not retire until he had sifted the town through a sieve. Famine had carried off three-fourths of the population, and the remaining part could make but a feeble defence, when the city was taken by a general assault in the year 543 of the Hegira, A.D. 1148. The young emperor Ibrahim was put to death, the few surviving inhabitants inhumanly massacred, and the town demolished. According to Marmol, Abdelmumen literally fulfilled his oath. He afterwards rebuilt the city, and called some tribes from the desert to re-people it.

The arms of the Almohades were not less successful in Spain than in Africa. Almost all Andalusia acknowledged their dominion. Cordova, the last hold of the Almoravides, was taken by Abu-Amran, and Abdelmumen was proclaimed sovereign both of Mauritania and Spain.

Not content with the territory he possessed in Spain, Abdelmumen published in 557 (A.D. 1161) the *Jihad*, or holy war, with an intention of subduing the whole of the Peninsula. He levied an army of 100,000 horse and 300,000 foot, but in the midst of his preparations death overtook him in 558.

His youngest son, Yussuf-Abu-Yacub, succeeded him. This prince, not being so warlike as his father, dismissed the army which he had assembled at Sulé, and in the first few years of his reign he cultivated the arts of peace. In 566 (A.D. 1170) however, he invaded Spain, and, after conquering the rest of the Mohammedan dominions in the Peninsula, fell in an engagement with the Christians.

Yussuf-ben-Yacub, better known by the name of Almansor, landed at Algeciras, and defeated Alfonso III. of Castile in the plains of Alarcos. The prisoners he had made in this battle he immediately restored to liberty—an example of very rare occurrence among the Mohammedans. After this signal victory he took Calatrava, Guadalajara, Madrid, and Salamanca, and afterwards returned to Africa, where he died in 595 (A.D. 1198). This prince was the ornament of his age, and the most liberal and magnanimous of the Almohadian dynasty.

His son Mohammed-Abu-Abdalla, who succeeded him, though an effeminate and weak prince, was not insensible to the glory of arms. He mustered a most powerful army, one of the five divisions of which, if we are to give credit to the Arabic and Spanish historians, amounted to 160,000 men: his design was to conquer the whole Peninsula. Such was the terror which this vast armament inspired among the Christians, that Innocent III. proclaimed a crusade, and several bishops went from town to town to rouse the Christian princes. The kings of Castile, Aragon, and Navarre, with a numerous body of foreign volunteers, advanced to stop the progress of the Moslems. The two armies met in Las Navas de Tolosa, between Castile and Andalusia; and on the 12th of June, 1211, the Christians obtained so complete a victory over the Africans, that Mohammed himself had a narrow escape, and left no less than 170,000 men on the field; the rest fled for safety. After this signal defeat he retired to Morocco, gave up the care of the government to his son, Yussuf-Abu-Yacub, who was only eleven years of age, and passed the last days of his life in licentious pleasures. He died in 610 (1213).

Abu-Yacub died without issue in 620 (1223). His death was the signal of a civil war which ended with the destruction of the Almohades. After several disputes, Almamun-Abu-Ali, brother of the governor of Valencia, was proclaimed emperor. He projected a reform in the constitution, and prepared the way towards it by writing a treatise against the institutions of the Mehedi. The two councils instituted by the Mehedi, against whom Almamun's reform was princi-

pally directed, deposed him, and chose Yahya-ben-Anasir in his stead, supplying him with troops to oppose Almamun. Yahya landed in Andalusia, and was defeated by the emperor near Medina Sidonia. Almamun speedily crossed over to Africa, and arriving at Morocco unexpectedly assembled the senate, and after upbraiding them for their conduct, caused them to be beheaded in the court of the palace. All the walls suspected of partiality for this body underwent the same fate, and their heads were left to putrefy on the ramparts of Morocco.

In Spain, Ibn-Hud, an Andalusian sheik, who had formed the project of rescuing the country from the yoke of the Almohades, after a series of victories expelled them from the Peninsula. Almamun, harassed by so many disasters, died in 629 (1231). His successors in Africa lived in a continual state of intestine warfare. The last of them was Idria, who fell in a battle against the Marini, and with him ended the dynasty of the Almohades.

(Casiri, *Bibliotheca Arabico-Hispanica*; Conde, *Historia de la Dominacion de los Arabes en España*, ii. 26-58; Marmol, *Descripcion General de Africa*; Rodericus Toletanus, *De Rebus Hispanicis*; D'Herbelot, *Bibliothèque Orientale*.)

ALMORAVIDES, an Arabian tribe, who came out of the country of Himyar, and established themselves in Syria in the time of the first kalif, Abu-bekr. They passed afterwards into Egypt, penetrated into Africa towards the west, and settled about the Desert of Sahara. They extended themselves gradually, and gave the name to a sect called Molthemim, or Molathemin, on account of their wearing veils. Their religion seems at a very early period to have been Christian, but by mixing with the Mohammedans they lost every trace of it; and even of the religion of Islam they hardly knew anything beyond the formula, 'La ilah illa Allah Mohammed rasul Allah'; that is, 'There is but one God, and Mohammed is his envoy.'

Yahya-ben-Ibrahim, a very patriotic man of the tribe of Gudala, which was one of these tribes, on his return from Mecca, meeting with Abu-Amran, a famous Fakih (that is, lawyer and theologian), of Fez, informed him of the state of ignorance of his tribe, and of their tractable disposition, and requested him to send some teachers. Abdallah-ben-Yasim, a disciple of another Fakih, offered to accompany Yahya. Having met with an enthusiastic reception from the tribe, he induced them to wage war against the tribe of Lametounah, who were made to acknowledge his spiritual authority; and he gave his followers the name of Marabauth, or Morabitin, which signifies men devoted to the service of religion. Abdallah having fallen in battle in the year 450 of the Hegira, A.D. 1058, Abu-bekr-ben-Omar-Lametouni was appointed sovereign prince. This chief led his tribe westward, established the seat of his empire at the city of Agmat, and laid the foundation of Morocco.

The tribe of Gudala had declared war against that of Lametounah, and Abu-bekr marched speedily to its assistance, leaving the command of the army to his relation, Yusef-ben-Taxfin. Yusef subdued the Berbers, completed the building of the city of Morocco, and entirely expelled the Zeterides, commonly known by the name of Zegries, from Mauritania. Having by his exploits and by his affability won the affections of his men, he declared himself sovereign prince, and married the beautiful Zainab, sister of Abu-bekr. This chief having returned from his expedition, encamped before Agmat; but finding his opponent too strong to be attacked, had an interview with Yusef, and returned to his native deserts. Yusef made him a magnificent present, which he continued to send to Abu-bekr every year till his death.

Yusef now assumed the title of Amir-al-Muslemim, or 'Prince of the Believers.' Having been invited by some of the Mohammedan kings of Spain to assist them against Alonso VI., he sailed in 1086 at the head of a numerous army, landed on the coast of Andalusia, and marched to Estremadura. King Alonso hastened from Aragon to stop his progress, and met the Almoravides in the plains of Zalaca. The Christians fought like heroes, but were compelled to retreat at night-fall, and the king himself was severely wounded.

Yusef was called back to Africa, and left the command of the Almoravides to Syr-ben-Abu-bekr. The next year he returned with considerable reinforcements, and defeating one by one the Moorish kings of Spain, established the seat of his empire at Cordova, and caused his son Ali to be proclaimed his successor. Yusef died at Morocco in the year 1106, at the advanced age of 97. Clemency and humanity were prominent virtues in his character. Contemporary historians state that he never pronounced a sentence of death. The vast empire of the Almoravides, which now reached from Mount Atlas to the Sierra Morena, was destroyed by the Almohades in the year 543 of the Hegira, A.D. 1148. [ALMORAVIDES.]

(D'Herbelot, *Bibliothèque Orientale*; Conde, *Dominacion de los Arabes en España*; the Chronicle of Rodericus Toletanus; Casiri, *Bibliotheca Arabico-Hispanica*.)

ALOMPRA, founder of the reigning dynasty of Birma, appears to have been born about the year 1711. When Beinga Dalla, king of Pegu, conquered Birma (1750-52), Alompra was known by the designation Aumzga, or 'the huntsman.' He was at that time chief of the inconsiderable village of Monchaboo, situated to the west of Keoum-mecum, and about twelve miles distant from the Irawaddy. The terms of the proclamation issued by Beinga Dalla on reaching his capital, announcing that Birma was annexed as a conquered province to his kingdom, excited great exasperation among the Birmanese.

Alompra, who had collected a band of about one hundred devoted followers, strengthened and repaired the stockade around his village. There was a garrison of about fifty Peguan soldiers placed in Monchaboo, which Alompra attacked and captured unexpectedly some time in the autumn of 1753, putting every man to the sword. Apporaza, the brother of Beinga Dalla, and governor of Birma, gave directions to place Alompra in strict confinement when he should be brought in by the party which had been dispatched against Monchaboo as soon as the massacre of the garrison had been heard of. The Peguan troops expected no resistance from the much inferior force assembled in Monchaboo, and were confounded at finding the stockade closed and manned against them. At daybreak next morning Alompra made a sally, and, taking the besiegers by surprise, defeated and pursued them for the space of about two miles. Returning to Monchaboo, he sent emissaries to all the neighbouring towns and villages, inviting the Birmanese to join his standard. Many hesitated to engage in what appeared a desperate undertaking, but as many obeyed the summons as placed him at the head of a thousand men. Dotachew, the son of Apporaza, who was at the head of three thousand men, hesitated whether to advance and crush the insurrection, or wait for reinforcements. Alompra, learning his indecision, took the bold part of marching at once upon Ava. Before he reached the city Dotachew fled from it, and the Birmanese rose and overpowered the troops he left behind him. Alompra, on receiving this intelligence, sent his second son Shembuan to take possession of Ava, and returned to Monchaboo. All these events took place before the close of 1753.

A large force was assembled at Pegu, placed under the command of Apporaza, and dispatched up the Irawaddy in war-boats. The fleet set sail in January, 1754, at the time of the year when the river is lowest and barely navigable. The obstructions it met with left the Birmanese time to collect their forces. Alompra recruited his army, and assembled a fleet at Keoum-mecum. In the vicinity of Ava the Peguans were molested by frequent desultory attacks; but their leader, after summoning the city without effect, judged it more advisable to proceed at once against the main force of the enemy than to waste time on a siege. A battle took place near Keoum-mecum, which, although only the fleets were engaged, was obstinate and bloody, and ended in the defeat of the Peguans. Apporaza, with the wreck of his army, sought shelter within the frontier of Pegu.

The Peguans avenged themselves by a massacre of all the Birmanese within their power. On the 13th of October they put to death the King of Birma, who was a prisoner at Pegu, and several hundreds of his subjects of both sexes and all ages. The Birmanese, who were numerous in the frontier towns, flew to arms and revenged their friends with equal barbarity. The eldest son of the murdered king found his way to Monchaboo at the head of a strong body of Quois. He attempted to assert his hereditary claim to the throne; but seeing Alompra determined not to recognise it, and doubtful of his personal security, he retired to Siam. After the departure of the prince, Alompra caused nearly a thousand of the Quois to be put to death, alleging that they had conspired against him. Their kinsmen threatened vengeance, and at the same time Alompra received intelligence that a fleet from Pegu had blockaded Prome. A Birmanese officer, dispatched by Alompra, succeeded in throwing a reinforcement of men and provisions into Prome; and in the space of forty days Alompra collected his troops, left his two eldest sons in command of Ava and Monchaboo, and descended the river at the head of a formidable fleet. Immediately on his arrival at the blockaded town he attacked the fleet of Pegu. The enemy fled; he pursued them immediately, and without loss of time pushed on his troops to within a few leagues of Bassein. Beinga Dalla retired to Pegu, and his forces, discouraged by his retreat, evacuated Bassein on February 17, 1755. On the 23rd the Birmanese entered the town, and having set it on fire, returned the same day to a station where the branch of the river flowing towards Syriam separates from that which passes Bassein. About the middle of April he defeated Apporaza at Synyagong, and obliged the forces of Pegu to fall back upon Syriam, leaving the whole delta west of that town in possession of the Birmanese. Early in May Alompra fixed his headquarters at Dagon, a few miles from Syriam, to which he afterwards gave the name of Rangoon.

About the middle of June Alompra was obliged to leave his post at Dagon by an insurrection in Birma, and a simultaneous advance of the Siamese upon his frontier. Having restored tranquillity he made some stay at Monchaboo, where in the month of September he concluded an alliance with the envoy of the British resident at Negrais, and immediately afterwards returned to Dagon.

Alompra remained apparently inactive before Syriam till the month of July, 1756; the enemy, imagining he calculated on reducing it by famine, were lulled into security. Availing himself of their negligence, he carried the place by a night attack. Advancing thence, he shut up the King of Pegu in his capital, cut him off from all communication with his own fertile territories of Dalla and Bassein, and from the possibility of foreign aid. As soon as the rainy season was at an end, and the swamps of Syriam and Pegu had emerged from the inundation, Alompra ordered his general, Meinla-Meingang, to advance upon Pegu with a strong detachment. He followed himself with the whole army in a few days. The surrounding country was laid waste, the city invested, and shortly afterwards taken by storm.

On his return to Monchaboo, Alompra spent some months in that town, which he had enlarged and made his capital. In 1758 a revolt in Pegu broke out. His presence crushed the insurrection; but the impression entertained by the Birmese that it had been excited by foreign intrigues, stimulated Alompra to seek revenge on other enemies.

The English at Negrais were suspected. An alliance, offensive and defensive, had been concluded between Alompra and the British resident at Negrais; notwithstanding which it was alleged that British traders had supplied the people of Pegu with arms. The position of the British government in India at that time had rendered it expedient to recal the resident at Negrais (he reached Calcutta on May 14, 1759), but a few persons were left to preserve the right of possession in case it should be resolved at any future period to re-establish the settlement. On the 6th of October following, Negrais was treacherously attacked by a party of Birmese who had entered it as guests, a number of Europeans and Hindoos slain, the rest carried off prisoners, and the place destroyed, though it does not appear that this assault was made by command of Alompra, or even with his previous knowledge; but he tacitly sanctioned the outrage after it had been committed.

The Siamese too were suspected of having stirred up the insurrection in Pegu; upon them Alompra sought to take open vengeance. Mergui and Tenasserim fell an easy prey; and, inspired with these successes, the victor resolved to carry the war into the heart of Siam without delay. The enemy harassed his army as it advanced, but did not venture upon a general engagement. They retarded its march however, and a month elapsed before he approached Bangkok. Two days after the Birmese had completed their lines of circumvallation and erected their stockades, Alompra was taken ill. He felt that his disease was mortal, and anxious to reach his capital in order to settle the succession, and take other precautions for averting civil disorder after his death, he broke up the siege, and commenced his retreat by the most direct route. The progress of his disease however was so rapid that death overtook him within two days' march of Martaban, about May 15, 1760.

Alompra at the time of his death had not completed his fiftieth year. It is said that his person did not exceed the middle size, but was strong and well proportioned; that his features were coarse and dark. He was prone to anger, severe in punishing. He was as deceitful and reckless of human life as most Asiatic conquerors. He was a braggart, like all his successors; but he did something to brag of. As a soldier, he commanded success by the promptitude and vigour of his movements. "The wisdom of his councils," says Major Symes, speaking of his civil government, "secured what his valour had acquired; he reformed the Rhooms, or courts of justice; he abridged the power of the magistrates, and forbade them to decide at their private houses on criminal causes, or property where the amount exceeded a certain sum; every process of importance was decided in public, and every decree registered."

(Symes, *Account of an Embassy to the Kingdom of Ava in the Year 1795*; Crawford, *Journal of an Embassy to the Courts of Siam and Cochin-China*.)

ALP-ARSLAN (that is, 'the Brave Lion'), or, with his complete name, *Muhammed-ben-David-Alp-Arslan*, born in 1030, was the nephew of the Seljukide Sultan Togrul-Beg, whom the Abbaside Kalif Ka'im-bism-illah had, for the protection of his throne, invested with the dignity of Emir-al-Omara, or Commander-in-Chief of the whole empire, and who, when nearly 75 years old, had also married a very young daughter of that kalif. Togrul-Beg died in 1063, and, as he left no children, his nephew, Alp-Arslan, who had till then been governor of Khorassan, succeeded him as Sultan of the Seljuks. Alp-Arslan restored the youthful widow of Togrul-Beg to her father, demanding at the same time to be appointed Emir-al-Omara in the place of his uncle, a request which the kalif could not refuse. One of the first acts of Alp-Arslan's reign was to put to death the grand vizir of Togrul-Beg, together with 600 of his adherents. Nizam-al-Mulk, who was chosen for that office by Alp-Arslan, has earned the reputation of one of the greatest statesmen of the East. Alp-Arslan was about to extend his dominions by conquests in Transoxiana, when a revolt in Azerbaijan, instigated by Kutulmish, required his presence there. He defeated the rebellious prince near the city of Rei, and resumed in the ensuing year (1065) his conquests in Transoxiana, while his vizir Nizam-al-Mulk endeavoured to promote the welfare of the interior, and to advance the interests of literature and education by establishing colleges in the principal towns of the empire. The greater part of Syria was at this time already in the hands of the Turks, and the troops of the Greek emperor offered but little resistance to their further progress. Romanus Diogenes, who came to the throne in 1068, resolved to take more vigorous measures against them. He joined his army in person, and defeated the Turks in several battles in Cilicia and near Malatia; but he was unsuccessful in an expedition against Khelat, and was, in 1071, taken prisoner in a battle near Malazkurd (or Melezghird) in Armenia. Alp-Arslan treated him generously, and on his promise to pay a considerable ransom, released him and all the noble prisoners from their captivity. But the Greeks had in the meantime placed Michael Parapinacius upon the throne, by which circumstance Diogenes was prevented from fulfilling his engagement. This caused a renewal of hostilities. Alp-Arslan's son,

Malek-Shah, conquered Georgia, while the Sultan himself was preparing an expedition against Turkistan. He crossed the Jihon, and commenced the war by taking the fort of Berzem; its governor, Yussuf-Kothual, was led before Alp-Arslan as a prisoner, and when reproached by him for the trouble he had given him by his long and useless resistance, became so incensed, that he rushed upon the Sultan and with a dagger inflicted a mortal wound upon him, of which he died (1072). Alp-Arslan was buried at Merw in Khorassan. His son Malek-Shah succeeded him in the government.

ALSTRÖMER, JONAS, was born on Jan. 7, 1685, at Alingsöes, at that time a small town of about 150 inhabitants. His parents were so poor, that after being taught to read and write, he was sent to service at the house of a colonel in the neighbourhood; but he soon left this place for the shop of a small trader in Eksjö, where he continued till the ill-treatment of his master forced him to leave: after a few more changes he set out for Stockholm to seek his fortune. Here a merchant of the name of Alberg, who had resolved to set up in business in London, engaged him to accompany him as book-keeper. The young adventurer assumed the name of *Alström*, from the name of the stream on which he was born, being the first of the family who had aspired to the dignity of a surname. On his passage he took his share of work with the sailors, a circumstance which had nearly turned much to his injury, for he had scarcely set foot on land in London, May 1, 1707, when he was laid hold of by a press-gang, and rescued with difficulty out of their hands by a comrade, who could hardly persuade them that he was a clerk. In the course of three years Alberg failed. In the same year, 1710, the clerk set up in business on his own account as a ship-broker, and procured letters of naturalisation. His first thought, on his success, was to impart a share of it to his family. His father was dead, but he sent support to his mother, who was still living, and he invited over to England his younger brother and two sisters. The brother he instructed in trade, and then sent out to Portugal, where he died in 1716. Of the two sisters, the elder managed the household affairs, and the younger learned book-keeping and trade, at which she became so clever, that during Alström's occasional absences from the counting-house she used to carry on the business and maintain an extensive correspondence. Alström was now comfortably settled, if it had not been for the contrast which he could not help drawing between the prosperity of the country he lived in and the misery of that he had left behind. "As a citizen he was an Englishman," says his biographer, "but he was at heart a Swede." He watched impatiently for the return of Charles XII. from his captivity at Bender to lay before him his plans of improvement; and when the welcome news arrived he hurried off to Sweden, but soon found that during the life of that king there was no chance of his schemes being listened to. He did not return however without effecting something; for, having observed that the English woollen manufactures constituted the principal exports to Sweden, he took with him a stock of thirty sheep for the purpose of improving the Swedish wool, and presented them to friends at Gottenburg and Uddevalla; and this flock was the origin of a great improvement in the wool of Sweden. On leaving Stockholm he went to Germany, and the ship in which he sailed being captured on the voyage by a Danish cruiser, he claimed and obtained his liberty in the character of an English merchant. For the next four or five years he travelled in different parts of Europe, still with the view of finding manufactures to transplant, and then found it necessary to attend closely for two or three years to business in London, where he was nominated Swedish consul. In 1723 he left London for Paris, and sent on before him to Sweden a Dutchman, who established the first cotton-printing manufactory in the country at Sickla. From Paris he wrote to Stockholm to obtain the privileges he considered necessary for the establishment of a factory for weaving, and at St.-Germain engaged some English stocking-weavers to accompany him to Sweden. The privileges were granted, and in 1724 weaving was fairly commenced at Alingsöes, the native place of Alström, which he had selected eight years before as an eligible spot for his purpose: after a time he found that his capital was not sufficient to carry on the undertaking, and his neighbours were more disposed to be a hindrance than a help. When just on the point of throwing everything up and returning to England, he heard that a meeting of forgemasters was about to take place at Caristad on business, and he determined to make a last effort. He travelled to Caristad, got into conversation with one of the forgemasters, and by his assistance the whole body was prevailed on to advance Alström some money for present needs, and appoint a meeting at the fair of Christinæhamn. The crisis was now past; at the fair a joint-stock company was formed, and soon after the king, Frederick of Hesse-Cassel, took forty shares, and as a matter of course, many of the nobility and the senate followed the royal example. From this time the main interest of Alström's biography ceases, and nothing remains to be told but a series of useful efforts and merited honours. He procured, with difficulty and expense, we are told, a skilful 'spinster' from England, who first instructed the Swedish women in the art of spinning wool. He imported flocks of sheep from England, Spain, and Eiderstedt, and goats from Angora. He made experiments for the introduction of different kinds of dyeing-plants, and also of tobacco and potatoes. He introduced improvements in the manufacture of cutlery, in

tanning, and in ship-building, from foreign countries. By these multifarious occupations he contributed more to the benefit of his country than to the augmentation of his own fortune. What he lost in wealth however was made up in honour. In 1739 he was made a member of the Council of Commerce, with an understanding that he was to give as much of his time to it as he could spare from the factory at Alingsås; but he took such an interest in the occupation that he often gave all his time to the Council. In 1748, when the royal order of the North Star was instituted, he was one of the earliest knights; and in 1751, at the coronation of King Adolphus Frederick, he was ennobled, and also honoured, as is customary on such occasions, with an additional syllable to his name, which was changed from Alström to Alströmer. From that time he had a great influence on all the resolutions of the states with regard to commerce and manufactures, and they testified their regard to him on various occasions. So early as 1749, when a great part of the buildings at Alingsås was destroyed by fire, they voted a public contribution for their restoration. In 1760 they passed a resolution that a bust of Alströmer should be made at the public expense, and placed in the Exchange at Stockholm. About the same time the Academy of Sciences ordered a medal to be struck in his honour. He did not long survive the distinctions awarded him by the States and Academy. He died on June 2, 1761. He was twice married, and had six sons and two daughters, but only four of the sons survived him, three of whom, Patrick, August, and Clas, but more especially Clas, rose to eminence. It is stated by Hirsching, that at the time of their father's death, 18,000 persons were employed in the silk and woollen manufacture in Sweden.

Alströmer was the author of a few short works on the practical questions which occupied his life.

(Kryger, *Aminnelse-Tal öfver J. Alströmer*; Rosenhane, *Anteckningar rörande till Vetenskaps-Akademiens Historia*, pp. 173, 444; Aurivillius, *Catalogus Bibliothecæ Upsaliensis*, i. 23; Hirsching, *Historisch-Literarisches Handbuch*, i. 36.)

ALTDORFER, ALBRECHT, painter and engraver, and one of the most celebrated of the old German masters, was born at Altdorf in Bavaria in 1488. This has been shown by Heineken, who acquired his information from a senator of Regensburg (Ratisbon), who found documents concerning the family of Altdorfer in that city. Those who speak of him as a Swiss have been misled by Sandrart, who was the originator of the error.

Altdorfer was himself a member of the interior senate of Regensburg, of which city he was enrolled a burgess in 1511; he was also architect to the city of Regensburg. He was probably the son of Ulrich Altdorfer, an artist of Regensburg, who gave up his right of burghership in 1491.

Altdorfer did not paint much, but his pictures show a surprising patience and industry. There is in the Pinakothek at Munich a picture by him, representing Alexander's battle of Arbela, of which the labour is prodigious. It bears the date 1529; it is not of large dimensions, but contains almost an innumerable mass of small figures, all in the German military costume of the day, every article of dress or military implement being made out with the greatest exactness; and all the various and probable incidents of a battle profusely introduced. There is perhaps not another picture in existence which contains so many figures; the design is however strictly gothic, and Altdorfer has wholly neglected the powerful aid of aerial perspective. This picture was formerly at Schleisheim, whence it was taken by the French to Paris, and Napoleon was so much delighted with it, that he ordered it to be hung up in his bath-room at St. Cloud, where it remained until 1815. Though one of the most interesting and remarkable productions of German painting, it has never been engraved; the very sight of it however would probably appal many engravers. His other pictures are in a similar style; he scarcely ever painted large figures: the Saviour with Mary and John, St. Peter, St. Catherine, and another saint, at the convent of Molk, which are the size of life, are the only known exceptions, and these have been attributed to Albert Dürer, who is supposed by some to have been the master of Altdorfer, but it is a mere conjecture.

There are several of Altdorfer's pictures at Schleisheim, near Munich; some at Nürnberg and Regensburg; a Birth of Christ at Vienna, and a Susannah and the Elders in the Pinakothek at Munich.

As a wood-engraver Altdorfer is more generally known, and he is inferior to Albert Dürer alone, of the old German or little masters; he is called by the French *Le Petit Albert*: his cuts, amounting to about eighty, are slight, and occasionally ill drawn, but they are executed with great freedom. Holbein is said to have studied Altdorfer's cuts, which, from a certain similarity of style, notwithstanding the superiority of Holbein, is not improbable.

His metal plates on copper and pewter are more numerous than his woodcuts, and amount to about 112, but they are inferior to his cuts, and very inferior also to the engravings of Dürer and Aldegrever; they are extremely hard, occasionally very badly drawn, and generally bad in the extremities.

From the dates on his works he appears to have been in earlier life an engraver, and in about the year 1525 to have given up engraving for painting. His prints are dated from 1500 to 1525, and on two of his principal pictures we have the dates 1526 and 1529: 1538, the reported year of his death, is found upon one picture. He lived

chiefly at Regensburg, and died without issue. Regensburg at one time possessed many of Altdorfer's works, but they have been removed to Munich; among them is nearly a complete collection of his prints, which were presented to the town library by the Stadtgerichts-Assessor Peuchel. The subjects of Altdorfer's prints are historical, sacred and profane, and mythological; with a few landscapes, and some designs for goldsmiths. Heineken, Huber, and Bartsch have given lists, more or less complete, of Altdorfer's prints.

(Sandrart, *Teutsche Academie*, &c.; Heineken, *Dictionnaire des Artistes*, &c.; Fiorillo, *Geschichte der Zeichnenden Künste*, &c.; Huber, *Manuel des Amateurs*, &c.; Bartsch, *Peintre-Graveur*.)

ALTHEN, EHAN, or **JEAN**, who introduced madder into France, was born in Persia in 1711; died 1774. His infancy and the first years of his life were passed amidst luxury and opulence. The son of the governor of a province, he might anticipate the most brilliant future, and confidently hope to succeed to the honours of his father, who had been ambassador at the court of Joseph I. of Germany. The usurpation of Thamas-Kouli-Khan overthrew the Persian empire, and with it the fortunes of the Althen family. They were all massacred, with the exception of Ehan, or Jean, who escaped by flight, but only to fall into the hands of a horde of Arabs, who, without pity for his tender age, sold him into slavery. He was carried into Anatolia, where, for fourteen years, he laboured in the cultivation of madder and of cotton; but even the hard condition of a slave could not break his spirit, nor drive from his heart the remembrance of the past, and the hope of a happier future. Endowed with that persevering character, that true energy which obstacles only tend to stimulate, he succeeded in escaping from his master's house, and took refuge in Smyrna with the French consul. He was afterwards brought under the notice of the French ambassador at the Porte; the ambassador wrote to the consul at Versailles, and Jean Althen embarked in a vessel bound for Marseille. He carried with him the means of simply repaying the hospitality of France: among his modest luggage he had secreted some of the madder-seeds, taken from the soil of Smyrna. In thus acting he endangered his life; for the exportation of these precious seeds was punishable with death. It so happened however that he eluded all the researches of a suspicious and despotic power; but on arriving at Marseille he met with no support in that city; and want of money prevented his proceeding to Versailles, where the recommendations of the ambassador were already forgotten.

The Persian was not discouraged. He knew the power of an energetic will, and trusted to time and his own exertions. He wearied the authorities with constant solicitations. But an unlooked-for event promoted his views more than all his own endeavours. He was young and handsome; a young girl of Marseille fell in love with the foreigner; she became his wife, and brought him a portion of a hundred thousand crowns. Marriages of a nature similar to this were of frequent occurrence, and no one in Marseille was astonished at it. Althen embraced the Catholic religion.

He then went to Versailles; the letters of the ambassador and the consul, to which he referred, gave him access to the ministerial saloons: he even obtained an audience of Louis XV. This audience lasted two hours, and the Persian's judicious language made a lively impression on the king, who was not wanting in sense and penetration. Althen gained the permission he desired. He wished to introduce a new system for the cultivation and manufacture of silk. He began his enterprise near Montpellier, but the prejudices of an ignorant population impeded his progress. Louis XV. forgot him; the government, absorbed in important matters, gave him no pecuniary aid. Althen consumed his wife's patrimony in fruitless endeavours. He wrote, he implored, he made several journeys to Versailles; he was invariably repulsed.

He returned to Marseille. In his various journeys he had several times passed through the Comtat Venaissin; he was struck by the similarity of the nature of this soil and that of Smyrna; the temperature and the climate were similar. He thought that madder might be cultivated successfully in the Comtat. With the promptitude with which he carried out all his decisions, he immediately converted into money the remainder of his property and went to Avignon, which was then included in the States of the Church. He there met with powerful patronage from Madame de Clausenette, who allowed him to make his first experiment on one of her estates. The cultivation of madder was successful.

In 1763 another attempt at the cultivation of madder was made on the left bank of the Rhône, upon an estate belonging to M. de Caumont; the trial was successful, but there was as yet no market for this produce. It was the union of Avignon and the Comtat Venaissin with France, the immense rise in the cotton trade produced by the continental blockade, and the development of every kind of manufacture, which caused the cultivation of madder to yield, in the department of Vaucluse, on an average twenty million francs a year in agricultural produce. One fact will suffice to prove the immense service which Althen rendered to the Comtat. The whole territory of Montoux, in the arrondissement of Carpentras, has since increased one hundred-fold in value. Althen could foresee these results, which were fast realising, whilst his own life was closing in circumstances bordering on indigence. He expired at Caumont, leaving an only daughter, who died as poor as her father.

At last, in 1821, the council-general of Vaucluse remembered Althen, and to acquit its debt of gratitude, voted a marble tablet to be placed in the Calvet Museum at Avignon, with the following inscription:—"To Jean Althen, a Persian, who introduced and first cultivated madder in the territory of Avignon, under the auspices of M. le Marquis de Caumont in M.DCC.LXV., the Council-General of Vaucluse M.DCCC.XXI." (*Portraits et Histoires des Hommes Utiles, publiés par la Société Montyon.*)

ALTHORP, LORD. [SPENCER, EARL.]

ALUNNO, NICCOLO, one of the old Umbrian painters of the 15th century, less known than he deserves to be. There are very few of his works extant, and Vasari notices him only in the 'Life of Pinturicchio,' and treats him as his contemporary. Mariotti however, in his 'Lettere Pittoriche Perugine,' states that Alunno was established as a painter at Foligno as early as 1460, and that he painted at least two years before that date. He was a native of Foligno, and his works are signed 'Opus Nicolai Fulginatis,' or 'Nicolai Fulginatis Opus,' but there was a Niccolò Deliberatore, likewise of Foligno, and therefore all the works with this signature may not be by Alunno.

His chief works were in a chapel of the cathedral of Assisi, of which there is now scarcely a trace left; Vasari speaks of a Pieta as a part, with two angels bearing torches, and weeping so naturally, that in his opinion no painter could have done them much better. Besides which Vasari mentions as capital works, a Nativity, in the church of Sant' Agostino, at Foligno; an altar-piece for San Francesco, and another for the high altar of the cathedral of Assisi. There is still at Foligno, over a side altar of the church of San Niccolò, a picture of that saint and the infant Christ, which was painted by Alunno in 1492: it had formerly a predella, or a long picture in various compartments, which served it originally as a base, according to the old Italian custom with altar-pieces; but being one of the paintings which the French thought fit to send to Paris, it was returned at the general restoration of the plundered works of art, without its predella, which is now in the gallery of the Louvre. It contains six pictures, one of which is an allegorical piece, of two angels holding a scroll, upon which are written some verses which are legible with difficulty, celebrating the abilities of Alunno, and the generosity of a lady of the name of Bressida. The other five pictures are from the life of Christ. They are drawn in a dry and meagre style, and are very brown in colouring, and have strong contrasting lights; but they have much expression, and are executed with facility. Alunno excelled in expression; he was in the habit, in his large pictures, of painting the heads from the life, which gave them a truth and reality not found in the works of many of his contemporaries. The period of his death is not known, but he painted after 1500; he painted in the old manner in water-colours, or à tempers. Alunno painted also some standards used in religious processions; they are called gonfaloni. There is still extant a gonfalone of this description by him, made of very fine canvass, in the church of Santa Maria Nuova, at Perugia, with the inscription—"Societas Annunciata fecit fieri hoc opus, 1466."

(Vasari, *Vite de' Pittori*, &c.; Lanzi, *Storia Pittorica*, &c.; Rumohr, *Italienische Forschungen*.)

ALURED, ALFRED, or ALFRED, of Beverley, an English historian, who lived in the 12th century. He is the author of an Epitome of British History, from the time of the fabulous Brutus to the 29th year of the reign of Henry I., which Thomas Hearne published at Oxford in 1716, under the title of 'The Annals of Alured of Beverley.' It is written in a Latin style remarkable for its correctness, considering the age in which the author lived: and more attention appears to be paid in it to the dates of the events recorded than in most of our ancient chronicles. It exhibits however in many places so strong a resemblance to the similar work which bears the name of Geoffrey of Monmouth, that Leland, and others after him, have considered it to be merely an abridgment of Geoffrey's work. On the other hand, it would rather seem that Alured's History was really published before that of Geoffrey, so that, where they agree in expression, the plagiarism or copying ought probably to be charged upon the latter. Geoffrey's work has always been regarded as principally a translation from a British or Armorican original; and he and Alured may have drawn their information, to a considerable extent, from the same sources. Of the personal history of Alured, the little that has been handed down rests entirely on the worthless authority of Bale, in his 'Illustrium Magnæ Britannis Scriptorum Catalogus, a Japheto, per 3620 Annos.' He is said to have been born in the town of Beverley, in Yorkshire; to have received his education at Cambridge, where he became distinguished for his skill in divinity, as well as in various branches of profane learning; and having afterwards turned secular priest, to have been made one of the canons and treasurer of the church of St. John in his native town. His death is conjectured to have taken place in 1129, the year in which his annals terminate. Bale makes him the author of many other works; but the catalogue appears to be manufactured by the process of representing each of the books of his annals as a distinct treatise. Among the works that have been attributed to Alured is a History of St. John of Beverley; which the writer of his life in the 'Biographia Britannica' considers to be a collection of charters and other records respecting that ecclesiastical foundation still preserved among the Cottonian manuscripts in the British Museum. But for the opinion that this collection is the history said

to have been written by Alured, there do not appear to be sufficient grounds.

ALVARADO, PEDRO DE, one of the most distinguished of the companions of Hernan Cortes in the conquest of Mexico. He was born at Badajoz in Spanish Estremadura at the close of the 16th century. His father was a knight of the order of St. James, and had the 'Encomienda' of Lobon in that province. Pedro was one of many sons. Having, with four or five of his brothers, crossed the Atlantic, he was at Cuba in 1513, and was appointed to one of three vessels fitted out by Velasquez, the governor, for exploring the American coast, under the command of Grijalva. After touching at the island of Cozumel (or Acozamil, the 'Isle of Swallows'), and several places in Yucatan, they sailed up the rivers Tabasco and de Banderas. They were so much pleased with the appearance of the country, the cultivation of the fields and inclosures, the beauty of the Indian edifices, and the signs of civilisation, that Grijalva gave it the name of New Spain. Here the Spaniards first heard of Montezuma and his extensive empire. Alvarado was despatched to Cuba with a report of the regions which they had explored; and all the gold which they had collected. As Grijalva, by his instructions, was strictly forbidden to colonise, he continued his course along the coast, visiting several points and collecting more treasure.

In February 1519 Cortes sailed from Havanna with 11 vessels; his force amounted to 508 officers and soldiers, and 109 seamen and artificers. Alvarado had command of one of the vessels, and four of his brothers embarked with him. The fleet was separated by a storm, and Alvarado arrived at Cozumel, the appointed rendezvous, three days before the rest. Cortes here reviewed his little army, held council with his eleven captains, and prepared for immediate service.

As Alvarado, although eminently distinguished in this campaign, was only a secondary personage, the main events of it belong to the biography of Cortes, but we occasionally fall upon individual traits of a marked character peculiarly his own, and which, painting to the life the Spanish soldier of the age of Charles V., deserve a brief record. In the first voyage with Grijalva he entered alone the river Papaloava, and trusting himself among the natives, who were in that quarter of doubtful temper, obtained from them fish, fruits, and other supplies. Grijalva reprimanded him for running into danger; but the sailors, admiring his intrepidity, gave the river the name of the young officer, which it still retains—El Rio Alvarado, the mouth of which is about forty miles to the south-east of Vera Cruz. The estimation in which he was held by Cortes is attested by the unbounded confidence which he reposed in him. At the fight of Tabasco, the great battle of Otumba, and the final reduction of the capital city after many and great difficulties, dangers, and reverses, Alvarado was intrusted with the most important operations, and mainly contributed to success. When the shrewd vigilance of Cortes prompted him to oppose personally any interruption to his great design—for the envious spirit of Velasquez, the governor of Cuba, caused him frequent anxiety and trouble—on all such occasions he left the command with Alvarado, who discharged his duties with unswerving fidelity.

When Cortes was called away to meet Narvaez, who had been sent by the governor of Cuba, with a force very superior to his own, to dispossess him of his command, he left the city and the royal captive in Alvarado's charge, with a force of a hundred and fifty men, according to Herrera, but by Solis stated not to have exceeded eighty. During the absence of the chief a dangerous commotion took place in the capital, and when Alvarado sent messengers to tell Cortes that he was hard pressed by the Mexicans, Montezuma sent with them others to say that he could not restrain the fury of his subjects, but that he was well content in the hands of Alvarado, and had no desire to be separated from him.

Las Casas charges Alvarado with an atrocious attack upon the Mexicans for the purpose of plunder; but Herrera and Solis assure us that a plot was laid for the massacre of the Spaniards, and that Alvarado kept the whole Mexican population at bay with his small band until the return of Cortes from his victory over Narvaez, and with the troops of that captain incorporated with his own. In the valuable series of original memoirs published at Paris by Mons. Ternaux-Compan, there are statements by native Mexican authors, contemporary and other, which increase the difficulty of coming to a satisfactory decision on many points of the conquest of Mexico.

Alvarado was in every fight until the final reduction of Mexico. Afterwards, in 1523, he was sent with 300 foot, 160 horse, and four pieces of cannon, with some Mexican auxiliaries, against the tribes of Indians on the coast of the Pacific in the direction of Guatemala. He reduced the provinces of Zacatulan, Tecoaatepec (now Tehuantepec), Soconusco, and Utlatlan. In a conflict at Cayacatl on the coast of the Pacific, where the Indians fought with great courage, Alvarado was lamed in one of his legs by an arrow, and it was ever after three inches shorter than the other. Having beaten off all opponents, he passed on to Guatemala, called by the natives Quahatemalan, and on the border of the Lake Atitlan took some Indian prisoners. He sent them to their chiefs with overtures of peace. The chiefs answered that they had never been conquered, but since he behaved so bravely, they were willing to be his friends; accordingly their chiefs came, touched his hands, and remained peaceable. As he proceeded, all the people round the lake brought him presents, and assurances of

friendship were reciprocated. He then founded a city, which he called Santiago de los Caballeros (now Guatemala la Vieja), with a church of the same name, and Cortes sent him 200 Spaniards to increase its population. Alvarado also sent his brother Diego to form a settlement in Tecuiltran, which he called San Jorge, and he then established a port on the Pacific, fifteen leagues from the city of Santiago, which he called Puerto de la Posesion. He then embarked for Spain, where he was received with a distinction worthy of his fame. The Emperor Charles V., on his landing, desired he would go post haste to court. In acknowledgment of his services, Alvarado obtained the governorship of Guatemala, and all the gold and valuables which he had brought were declared his own. During this visit he formed a matrimonial alliance with Doña Beatriz de la Cueva, a lady of an ancient and noble Spanish house, from which the dukes of Albuquerque are descended, and shortly afterwards he returned with a numerous band of knights, gentlemen, kinsmen, and friends, to Guatemala, which speedily became a handsome and prosperous city; and the province, says Herrera, flourished while he had the command of it. ('Dec.' 4, lib. 2, cap. 3.)

Great enterprises were still in prosecution in South America under Pizarro and Almagro, who had gained possession of Peru, and projected the conquest of Chili. Alvarado was not of a temper to be idle while others were in arms. Quito with its rich city was not considered within the boundary of Pizarro's command; and Alvarado, having authority from the Emperor Charles to extend his discoveries, but with special caution not to interfere with the conquests of other captains, determined to go thither. After sending one of his officers, Garcia de Holguin, who had signalised himself in the Mexican campaigns, to reconnoitre, and receiving from him encouraging accounts, he embarked on the Pacific with 500 soldiers, 227 of whom were horsemen, with an intention to land at Puerto Viejo; but the voyage being unpropitious, and a mortality spreading among the horses, he landed at a bay called Bahía de los Caraqueas, near Cape San Francisco, sending on at the same time his pilot, Juan Fernandez, to ascertain the limits of Pizarro's government, on which he declared he had no wish to intrude. From Caraqueas he marched into the interior, and with a courage and perseverance almost without a parallel, which may be read with interest in the 'Decads' of Herrera, he reached the country he was in quest of. Notwithstanding all his care (for he set an example to the hardiest of his men by frequently dismounting his horse and placing a sick man upon it), he lost in the morasses near the coast and in the snows of the Andes seventy-nine of his soldiers; six Spanish women also who accompanied them perished, and many horses. On ascending the Andes, Alvarado learnt that an armed force under Almagro was in readiness to meet him. He took some of their scouts, treated them well, and sent them back, with a civil message that he did not come to breed disturbances, but only to discover, under the royal commission, new lands along the South Sea, and that he was ready to meet them on friendly terms. They met at Riobamba, on the plain of that name, and it was adjusted that Alvarado should relinquish his project, leave such of his followers as were willing to remain, together with all the vessels except those necessary for his return, and receive 120,000 castellanos, or pieces of eight, as an indemnification for his outlay and losses. This he did, as he affirmed, to avoid injury to his sovereign, and the evils of civil warfare. Pizarro came up with an additional force, but being informed of what had taken place, the affair ended with lively rejoicings, and Alvarado departed with valuable presents.

His renown spreading throughout the Spanish possessions, he was called to Honduras to help the settlers out of some difficulties. He was received with great joy, and the government was resigned into his hands. He founded there a town, which he called 'Gracias a Dios,' because his men, having suffered much in travelling over barren mountains, exclaimed, when they reached that place, "Thanks to God, we are come into a good land." He also formed another settlement, which he called San Juan de Puerto de Caballos, in the Bay of Honduras.

Ferdinand Pizarro having, in 1534, gone to Spain with a great amount of treasure from Peru, and represented among other things the circumstances of Alvarado's expedition to Quito, the emperor had declared it an entire contravention of his orders, and expressed great indignation. He had sent out orders for Alvarado's arrest, and it was on this account, it is said, that he so readily answered the call to go to Honduras. The affairs of that district being brought into good order, Alvarado resolved to visit Spain a second time. He embarked with his wife at the port of Truxillo in Honduras Bay, on board a caravel bound for Havanna, and thence proceeded to his destination. He found means, by his arguments, or by the influence of his friends, so to soften the Emperor, that not only his disobedience was overlooked, but his government was enlarged with the addition of the province of Honduras to that of Guatemala. He returned with his wife, and landed at Puerto de Caballos. Honduras was again in great disorder, but he restored it to order, and "from that time," says Herrera, "Honduras, which had been continually troubled with broils and suffered great oppression, was peaceable under the government of Alvarado." These matters being adjusted, he proceeded to Guatemala, and set about new discoveries. He equipped a fleet of twelve large ships and two row-galleys, one of twenty, the

other of thirteen benches, and embarked at El Puerto de la Posesion, with 800 soldiers, 150 horses, and a considerable retinue of Indians. He sailed along the coast, but, the weather being very unfavourable, put into the port of Los Pueblos de Avalos on the coast of Michoacan. At this period (1541) the Chichimecas of New Galicia, a brave race of men, from whom, according to Clavigero, the Tlascalans, allies of Cortes, were descended, had revolted. Onate had marched against them, and been worsted: hearing that Alvarado was on the coast, he sent him advices of what had happened. Alvarado immediately landed at Los Pueblos with a part of his horse and foot, crossed in a night and a day the morass of Tonala, generally reckoned a three days' march, and on reaching the encampment of the Spaniards, held a consultation with the officers. The Indians had withdrawn, and fortified themselves on the mountain tops in a position difficult of access: they were numerous, obstinate, hardy, expert bowmen, and very dexterous in the use of the javelin. The Spaniards and their Indian allies attacked them with vigour, but were repulsed and driven back to the plain. The Indians followed in great numbers, and the ground being marshy and unfit for cavalry operations, the Spaniards continued their retreat to a river, which they forded; but the farther bank was so steep, that the troopers were compelled to dismount and lead their horses up it. Alvarado stayed, as usual, to bring up the rear: a horse climbing the bank slipped, and fell upon him. As he was in armour, the weight of the animal crushed his breast so severely that he died in three days. His death put a stop to the expedition.

(Herrera, *Historia General de los Castellanos*, &c.; Solís, *Conquista de Mexico*; Humboldt, *Political Essay on New Spain*; *Histoire des Chichimèques* par Don Fernando de Alva Ixtlilxochitl, publiée en Français par H. Ternaux-Compan, Paris, 1840.)

ALVAREZ, FRANCISCO, was mass priest and chaplain to Dom Manuel, king of Portugal, about the year 1515. He was a native of Coimbra, and at that time advanced in life. (Damian de Goes calls him "senex moribus inculpatis.") Of his early history nothing is known. In the year above mentioned Alvarez was appointed by the king to accompany Duarte Galvam on a mission to the Negus of Abyssinia, or as he was at that time called by the Portuguese, 'ho Preste Joam.' The mission, along with the Armenian, Matthew, who had visited Portugal as ambassador from the Negus, arrived at Goa in 1516; but Lopo Soares, who was at that time governor of the Portuguese possessions in India, detained it there under various pretences. After the death of Soares, his successor, Diogo Lopes de Sequeira, undertook to accompany the mission in person to the Red Sea. The expedition reached Massua on the 16th of April, 1520. Duarte Galvam died a few days previously at the island of Camaran, and Rodrigo de Lima was nominated to proceed to the court of Abyssinia in his stead, by De Sequeira, who said to the new ambassador, "Dom Rodrigo, I do not send Father Francisco Alvarez with you, but you with him, and you are to do nothing without his advice."

The mission was detained in Abyssinia till April 25, 1526, on which day it sailed from Massua on its return. Alvarez had gained the confidence of the Negus to such a degree, that he was accredited by him as the envoy to the Pope, along with a native Abyssinian, whom he calls at first Zagajabo, and afterwards (possibly a title) Liscante. The mission sailed to Cananor, and thence to Lisbon, where it arrived on the 25th of July, 1527. Dom Joam III., who had succeeded his father on the throne of Portugal in 1521, was in no hurry to forward the Abyssinian ambassador and Alvarez to Rome. The former, in spite of his urgent remonstrances, was detained in Portugal till 1539; but Alvarez was sent in 1533 to Clement VII., into whose hands he delivered his credentials in the January of that year, at Bologna, in the presence of the Emperor Charles V. Of the year of Alvarez's death no mention is made by any contemporary and trustworthy author, but Goes, in a memorial addressed to Paul III., and dated at Louvaine, Sept. 1, 1540, speaks of him in a way that leads us to infer that he was then dead.

According to Ramusio, Ludolf, and Leon Pinello, Alvarez compiled an 'Itinerary' of the mission in five books, which was never printed. The book entitled 'Ho Preste Joam das Indias: Verdadera Informaçam das Terras do Preste Joam,' printed 'in the house of Luis Rodriguez,' publisher to the King of Portugal, in October, 1540, consists merely of extracts from the larger work. Ramusio procured from Damian de Goes another imperfect copy of Alvarez's work, which he represents as differing materially from that published in Portugal. Both, he says, were in the highest degree mutilated and corrupt. The 'Journey in Ethiopia,' by Francisco Alvarez, in Ramusio's collection (first edition, 1550), is compiled from these two abridgments. What became of the original 'Itinerary' does not appear. Goes says that Paulus Jovius had undertaken to translate it into Latin, and possibly it may have fallen into his hands.

Ramusio's compilation consists of 149 chapters; the book published in Portugal in 1540 contains 141 chapters, which bring down the narrative to the departure of the mission from Massua on its return; and nine additional chapters narrating its return to Portugal, and its reception there, which correspond pretty closely with the last eight chapters of Ramusio. The main difference between the Portuguese and Italian versions consists in the additional matter contained in some of Ramusio's chapters. The Italian has added little to the information respecting Abyssinia given in the Portuguese edition, but

he has inserted some digressions which throw important light on the history of the early discoveries under the auspices of the kings of Portugal. The names of places in Abyssinia are written in the Portuguese version in a manner that corresponds pretty closely with that adopted by the most recent and accurate Oriental scholars: in Ramusio's version they are much disfigured.

The extracts from the 'Itinerary' have been made in a manner which fully justifies the harsh terms in which Ramusio speaks of them. They contain a good deal of the transactions of 1521, very little of those of 1524, and a good deal of those of 1526. They convey some valuable information relative to the history and constitution of the Abyssinian government, and some pregnant hints respecting the geography of the country. The style of the Portuguese version evinces a manly and judicious spirit, that leads us to regret the loss of the entire work. A search in the archives of Portugal, or the library of the Vatican, might lead to its recovery.

(Leon Pinello, *Epítome de la Biblioteca Oriental y Occidental*, fol. Madrid, 1737; Damian de Goes, *Fides, Religio, Moresque Ethiopum*, &c., Paris, 1541; Ramusio, *Viaggi e Navigazione*, fol. Venice, 1613; *Ho Preste Joam das Indias, Verdadera Informaçam das Terras do Preste Joam segundo vio e escreveo ho Padre Francisco Alvarez, Capellam del Rey nosso Senhor. Impresso em Casa da Luis Rodriguez Livreiro de sua Alteza*, fol. 1540.)

ALVAREZ, DON JOSÉ, a very distinguished Spanish sculptor, and one of the most eminent artists of the 19th century, was born at Priego, in the province of Cordova, in 1768. His father was a stonemason, and Alvarez's youth was spent as a labourer, in that business, as his father was too poor to support him otherwise. He however evinced an ability for sculpture at an early period, and employed what time he could spare from his daily labour with a view to educate himself as a sculptor. In his twentieth year he made such progress as to obtain admission into the academy of Granada, in which he soon distinguished himself for his ability in modelling. A lion destroying a serpent, which he made for a fountain at Priego, obtained for him the patronage of Don Antonio de Gongora, the bishop of Cordova, the founder of the academy of that place, who took Alvarez into his house, and caused him to be elected a member of the academy. Notwithstanding his proficiency however, in 1794 he left Cordova and entered as a student into the academy of San Fernando at Madrid, of which as 'the Andalusian' he soon became the most distinguished student. He obtained the first prize of the academy, for a basso-relievo of the procession of Ferdinand I. and his sons carrying barefooted the miraculously discovered body of St. Isidore to the church of San Juan de Leon.

In 1799 he was granted a pension of 12,000 reals by Charles IV. to enable him to prosecute his studies in Paris and in Rome. In Paris he paid great attention to anatomy, and studied in the public dissecting-rooms; and he gained there additional academical honours. He obtained the second great prize in sculpture awarded by the Institute. Alvarez was a devoted admirer of the sculptures of the Parthenon which Choiseul Gouffier had brought to Paris from Constantinople; he made many drawings of them, and his improved taste was manifest in a statue of Ganymede, which he made in 1804, and by which he acquired the reputation of one of the first of modern sculptors. Napoleon I., then emperor, paid two visits to the studio of Alvarez, and presented him with a gold medal of the value of 500 francs. Notwithstanding this personal honour, Napoleon's after-conduct regarding Spain excited in Alvarez an invincible aversion to him; he would never model his bust, and when Joseph Bonaparte was proclaimed King of Spain, Alvarez, then at Rome, was imprisoned in the castle of St. Angelo for refusing, as a pensioner of the Spanish government, to take the oath of allegiance to the new king; he was however released shortly afterwards. After the completion of his statue of Ganymede, Alvarez's pension was increased to 28,000 reals, and he left Paris for Rome, where he thenceforth chiefly resided. In Rome he executed or modelled many much-admired works, the best of which was a group of Antiochus and Memnon in 1818, for which he was nominated court-sculptor by Ferdinand VII., who commissioned him to execute the group in marble: it is now in Madrid.

In 1825 he was appointed principal sculptor to the king of Spain, and was decorated with the cross of Civil Merit. In 1826 he visited Madrid for the purpose of selecting the best statues and other sculptures in the king's palaces to be placed together in the museum of the Prado; but he died within twelve months of his arrival, in the 60th year of his age. From his office, the circumstances connected with his death, and the honourable commission about which he was engaged, it is evident that the reports which appeared in the French newspapers at the time of his death about his extreme poverty bordering upon destitution must be false. There are many of his works at Madrid; several from ancient mythology, some full-length statues, and a few busts. Busts he did not willingly model, but the few he did are reputed excellent likenesses, and among them are those of Rossini, the composer, and Ceán Bermudez, the author of the 'Dictionary of Spanish Artists.'

It is generally admitted that Alvarez excelled in many qualities of a high order—in invention, in expression, and in design; and he is by his admirers compared with Canova. That he is less generally known than many of his more fortunate or more renowned contemporaries,

is probably more owing to an ignorance of his works than to their inferiority. He was a member of the Institute of France, of the Academy of St. Luke of Rome, and of the academies of Carrara and Naples. He left three sons, who were allowed to retain a portion of their father's pension. The eldest, who promised to be a sculptor of ability, died at Burgos in 1830, in his 25th year.

There was another distinguished Spanish sculptor of this name, *Don Manuel Alvarez*, who was born at Salamanca in 1727. After acquiring the rudiments of his art with two sculptors of Salamanca he repaired to Madrid, and became the pupil of Don Felipe de Castro, the king's sculptor, whom he assisted in many of his works. He obtained the first prize of the academy of San Fernando in 1754, by which he was entitled to study in Rome, with a pension from the Spanish government; but he declined the advantage on account of the weak state of his health. In 1757 he was elected a member, in 1762 Vice-Director, in 1786 Director of the Academy of San Fernando; and in 1794 sculptor to the king. He died in 1797, generally regretted, in the 70th year of his age. His statues and busts are very numerous in the churches, palaces, and monasteries of Spain, especially at Salamanca, Toledo, Zaragoza, and Madrid. Alvarez was commonly called by his fellow artists El Griego, or 'the Greek,' on account of the purity and vigour of his design, and his accuracy of execution—a great compliment.

(*Archive für Geschichte*, &c., 1829, No. 15; *Seminario Pintoresco Español*, No. 52; Ceán Bermudez, *Diccionario Historico de los mas Ilustres Profesores de las Bellas Artes en España*.)

ALYATTES, a king of Lydia, the father of Croesus, who seems to have been some time associated with him in the government; he died about B.C. 562, after a reign of fifty-seven years. On his accession he continued a war with Miletus, which was left unfinished by his father Ludyattes. In the fifth year of the conflict a temple of Minerva was burnt by him. Soon after he sent for advice under sickness to the oracle at Delphi, but was refused a response till the temple was restored. He rebuilt the temple, recovered from his sickness, and made peace with Miletus. From B.C. 590 he was engaged during five years in a war with Cyaxares, king of Media, in consequence of receiving some Scythians who had offended that monarch. In the course of hostilities Alyattes expelled the Cimmerians from Asia, captured Smyrna, and attacked Clazomenæ. A battle between the forces of the three kings was interrupted by an eclipse of the sun. This event led to a peace, which was consummated by a marriage between Argenis, the daughter of the Lydian king, and Astyages, the son of Cyaxares. The place where the eclipse was seen is not mentioned by Herodotus; but we may fairly conjecture it was in the upper latitudes of Asia Minor, and between the Halys and the higher waters of the Euphrates. This eclipse was predicted by Thales of Miletus, but all that the historian can be made to signify is that he predicted the year.

Near the Lake Gygæa, which is a few miles north of Sardinia, now Sartsis, in Asia Minor, is still seen the immense mound of earth which was raised to his memory. Herodotus, who gives the first account of it (l. 98), says, that the circuit round the base was 3800 Greek feet, and the width 2600 feet; the height is not given. It rested on a foundation of great stones, which are now covered by the earth that has fallen down; but the mound still retains its conical form, and rises up like a natural hill.

AMADEUS (Ital. *Amedeo*), the name of nine sovereigns of Savoy. *Amadeus I.* was count of Maurienne in Savoy; it is uncertain whether he survived his father, Humbert the Whitehanded, who was living in 1030; but he styled himself count in an undated deed, and is reckoned by historians among the ancestors of the house of Savoy. *Amadeus II.* was the nephew of the preceding, the second son of Oddo, count of Maurienne, and of Adelaide, marchioness of Susa, with whom, after his father's death, he governed the territories, and who survived him. He died in 1078. *Amadeus III.* succeeded his father, Humbert II., in 1103; joined in the crusade with Louis VII. of France, and died in Cyprus on his return in 1148. *Amadeus IV.*, born in 1197, succeeded his father Tomaso I. in 1233; he considerably increased his possessions, and died in 1253. His brother Peter was long in England, being uncle to Eleanor, queen of Henry III., by whom he was made Earl of Richmond, and built the Savoy palace in London. *Amadeus V.*, born in 1249, succeeded his uncle Filippo in 1285; he acquired the county of Bresse and the district of Asti; he died in 1323. *Amadeus VI.*, 'the Green Count,' born in 1334, succeeded his father 1343; he defeated the French at Arbrette in 1364; he nearly doubled his territories in Piedmont, and extended them in other directions; he died in 1383. *Amadeus VII.*, 'the Red Count,' born in 1360, succeeded his father in 1383; he acquired Nice in 1388, and died in 1391. *Amadeus VIII.*, born in 1383, succeeded his father 1391. By the extension of various branches of his family, whose possessions he inherited, he came to rank among the great powers of Europe, and was created Duke of Savoy, 1416. He was the legislator of his dominions, and published a code in 1430 called 'Statuta Sabaudia.' In 1434 he resigned the sovereignty, and retired to a monastery at Ripaille. In 1439 he was elected Pope, and proclaimed as Felix V.; this occasioned a schism which lasted till 1449, when he resigned the papacy, and again retired to Ripaille. He died in 1451. *Amadeus IX.*, born in 1435, succeeded his father Louis, son of Amadeus VIII., in

1463. After a reign troubled by the insurrections of his brothers he died in 1472. (For a more detailed account of these sovereigns, see the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

AMADIS DE GAULA, the hero of an old romance of chivalry, written in Spanish prose by Vasco Lobeira, towards the end of the 12th century. It was afterwards corrected and edited in more modern Spanish by Garcia Ordoñez of Montalvo, about the beginning of the 16th century, and became a very popular book in Italy and France; it was translated into French by D'Herberay, and printed in 1555, with many additions, under the mis-translated title of 'Amadis des Gaules,' meaning France. In the original Spanish romance Gaula is Wales, and the subject, characters, and localities are British. The story alludes to fabulous feats between the Welsh and the English, previous to those of Arthur and the Knights of the Round Table; the Romans and Saxons are united against the Prince of Gaula or Wales, and the Saxons are represented as faithless and treacherous. It is probable that Vasco Lobeira took the groundwork of his story from some older British or Welsh legend. The 'Amadis' is considered as one of the most interesting works in the whole library of chivalry and romance. The French version of D'Herberay was translated into English by Anthony Munday (1619), and part of this version was freely rendered into verse by William Stewart Rose (1803). In 1803 Southey published a prose translation from the Spanish version of Garcia Ordoñez.

AMALARIC, the last Visigoth king of Spain, was the son of Alaric II, and grandson of Theodoric II. At the death of his father, A.D. 506, he was only five years of age; and Gensaleic, a bastard son of Alaric, was elected king of the Goths in Spain. Theodoric, who was then in Italy, sent his general Theudis with a powerful army to protect the rights of his grandson. Gensaleic was defeated, and Theudis was entrusted with the guardianship of the child and the government of Spain. When Amalaric became of age he was acknowledged king of the Goths, both in Spain and in Gothic Gaul. In order to secure his French possessions he solicited and obtained the hand of Clotilda, daughter of Clovis, king of the Franks; but this marriage proved in the end an unfortunate one. It is stated that in consequence of religious differences he barbarously treated his queen. Her brother Childebert, or Childibert, king of Paris, mustered a large army and marched against his brother-in-law. The two armies met, according to some authors, in Gothic Gaul, and, according to others, in Catalonia. Both French and Spaniards fought with equal valour and obstinacy. At last the Spaniards were defeated, and Amalaric took refuge in a church, where he was killed, in the year 531. The conqueror, after having plundered the Arian churches, returned to France with his sister.

Amalaric was the last of the Visigoth kings, and the first who established the court at Seville. On his death, Theudis, an Ostrogoth or Eastern Goth, was elected king.

(See Mariana, v. 7; Procopius, *De Bello Gothorum*, i.)

AMALIE, ANNA, princess of Prussia, was a daughter of Frederick William I, king of Prussia, and sister of Frederick the Great. She was born on the 9th of November, 1723. The Princess Amalie showed great talent from her childhood, and especially for music, which she cultivated so perseveringly that, at least in theoretical and historical knowledge, she was scarcely equalled in her time. Music was throughout life almost her sole occupation. At the age of twenty-one she became princess-abbess of Quedlinburg, where she devoted all her time to music, with the exception of what she had to give to the administration of the extensive estates of the abbey. She died March 30, 1787.

AMALIE, wife of the Duke of Saxe Weimar, lost her husband when she was hardly twenty years of age, and found herself at the head of the government in troubled times, during the wars between the two great German powers, Austria and Frederick of Prussia. The Duchess of Weimar however contrived to direct in safety the affairs of her little state, and after the restoration of peace she turned all her thoughts to the internal improvement of her country. The city of Weimar became the resort of the most distinguished literary men of Germany, whom the duchess encouraged by her liberal patronage to come and reside at her court. Wieland, Gothe, Herder, and Schiller, formed a constellation of genius of which any city might be proud. Wieland was appointed tutor to the two sons of the duchess. Gothe was induced to settle at Weimar in 1775, where he resided ever after, and filled a distinguished place in the ducal council. Herder was appointed court chaplain, consistorial councillor, and inspector of the schools. The Duchess Amalie withdrew from public life in 1775, having given up the sovereign authority to her eldest son, then of age: she retired to her delightful country residence of Tiefurth, where she continued to surround herself with men of talent and learning. In 1788 she undertook a journey to Italy, partly to restore her health, and partly to gain a more direct knowledge of the works of art in which Italy abounds. She returned from this journey in 1790, accompanied by Gothe, and henceforth continued to live surrounded by poets, scholars, and artists, and devoting her own time to the cultivation of literature, until the year 1806, when the misfortune of the battle of Jena, and the humiliation of Germany, broke her heart. Gothe says that, although she did not complain of illness, and showed no symptom

of suffering, she gradually wasted away. Her death took place on the 10th of April, 1807.

AMALRIC, or **ARNAULD**, an influential chief of the crusade against the Albigenes, was born about the middle of the 12th century, and died September 20, 1225. He was first Abbot of Poblet in Catalonia, then of Grandelve, and lastly of Cîteaux. He was in the enjoyment of this last dignity when in 1204 Innocent III. associated him with the legates Raoul and Pierre de Castelnau in the mission to extirpate, throughout France, the heresy of the Albigenes. He preached a crusade against them; many of his contemporaries, several of whom were princes and lords, took part in it; and he was nominated generalissimo of the crusaders. In 1209, after taking several castles and many times routing the enemy's forces, he besieged and took Béziers. Sixty thousand inhabitants were massacred, and the town, plundered and depopulated, was made a prey to the flames. Before the commencement of the massacre the crusaders inquired of their commander Amalric how they were to distinguish the Catholics in the town from the heretics, "Kill them all," replied the abbot; "God knows his own." On the termination of this bloody expedition Amalric conducted his army to Carcassone, to which place he laid siege. The garrison, commanded by the Viscount Raimond Roger, after a long and obstinate resistance, was obliged to capitulate. Amalric permitted them to pass out of the town in their shirts and trousers; but, contrary to the conditions of the treaty, he detained the viscount, whom he caused to perish in close confinement. Amalric was presented to the archbishopric of Narbonne in 1212; thence he went into Spain with the troops, and contributed to the defeat of a Moorish king. On his return to France he embroiled himself in a quarrel with Count Simon de Montfort about the title of Duke de Narbonne, which he had assumed. Amalric excommunicated Simon, and entered into a league against him with the Count of Toulouse. (*Nouvelle Biographie Universelle*.)

AMALTEO, **POMPONIO**, a distinguished painter of the Venetian school, born at San Vito in the Friuli, in 1505. He was the scholar of Pordenone, and painted much in the style of that master, though he was less bold in execution, and inferior to him in invention. His Three Judgments however, in the court of justice, or loggia, at Ceneda, which were completed in 1536, were long supposed to be the works of Pordenone, both on account of their style and the mis-statement of Ridolfi. They are the Judgment of Solomon, the Judgment of Daniel, and a Judgment of Trajan; and are considered Amalteo's masterpieces. Vasari praises, in the 'Life of Pordenone,' some frescoes by Amalteo in the castle of San Vito, for which he was ennobled by Cardinal Grimani, the signor of San Vito, and patriarch of Aquilea. Amalteo was distinguished for good drawing, a quality rare among the Venetian painters. The date of his death is not known.

Pomponio's brother and pupil, *Girolamo Amalteo*, who died young, had also great ability, but he generally painted small pictures highly finished.

(Altan, *Memorie intorno alla Vita di Pomponio Amalteo*, in the *Opuscoli Calogeriani*, vol. xlviii.; Renaldi, *Della Pittura Friulana*; Lanzi, *Storia Pittorica*.)

AMAN, **JOHANN**, an architect who executed many important buildings in Germany, was born at St. Blasien in Baden, in 1765. In his early practice as an artist he was remarkable for his ability as a painter on glass. His practice as an architect commenced in 1791, and he was employed by various German princes, and by the Emperor of Austria, till his death in 1834.

AMARA, or **AMARASINHA**, an ancient Hindoo grammarian, and author of one of the oldest and most esteemed original vocabularies of Sanskrit nouns, called after his name, 'Amara Kosha,' that is, the Thesaurus of Amara, but sometimes quoted under the title of 'Tri-kanda,' that is, the Tripartite. Owing to the almost total want of records on the internal history of India, the era at which Amara lived can only be ascertained by conjecture. Numerous authorities assert that he was a contemporary of king Vikramaditya; and his name is included in a memorial verse among the Nine Gems, or nine distinguished poets and scholars who adorned the court of that prince. The exact date of this Vikramaditya's reign is however still subject to discussion, as in Indian history several kings of that name occur. Tradition places Amara and the Nine Gems generally under the first Vikramaditya, 56 years before our era. Mr. Bentley ('Asiatic Researches,' vol. vii. pp. 242-244) supposes the Vikramaditya under whose reign Amara lived, to be the successor of Raja Bhoja-deva, as sovereign of Dhara in Malwa, who reigned during the latter part of the 11th century. Mr. Colebrooke ('Algebra from the Sanskrit,' Introd. pp. 45-51) from astronomical data in the work of Varahamihira (another of the Nine Gems), has assumed the close of the 5th century, or about the year 472, as the probable epoch when that astronomer wrote, and Vikramaditya and the Nine Gems lived. This opinion, with regard to Amara, is supported by the frequent reference made to his Dictionary as to an ancient and classical work of standard authority, by numerous writers, to many of whom an antiquity of several centuries at least can be confidently attributed.

Of Amara's life little is known. He embraced the tenets of the Buddhas, a heterodox sect; and all his compositions, with the exception of his Dictionary, perished in the persecutions raised by the

Brahmans against the persons and writings of the Buddhas, which began in the 3rd century, and reached their height during the 5th and 6th centuries.

Like other original Sanskrit vocabularies, that of Amara is in metre to aid the memory. The whole is divided into three books. In the first two, words relating to kindred objects are collected in one or more verses, and placed in chapters. Thus the first book commences with words for heaven; next follow the names and attributes of the several deities; then come terms for space, the cardinal points of the compass, &c. The third book is supplementary: it contains epithets, a list of homonymous words (arranged alphabetically like many Arabic dictionaries, according to the final consonants), particles, and adverbs (considered as indeclinable nouns by the Hindoo grammarians), and remarks on the gender of substantives. The Sanskrit dictionaries or 'Koshas,' do not include the verbs of the language, the stems or roots being arranged and explained in separate lists. The 'Amarakosha' contains only about 10,000 different words. In a language so copious as the Sanskrit this number appears small; but in consequence of the great regularity and consistency with which, in this language, compound nouns and derivatives are formed, very few of these require to be inserted and explained in a dictionary. Real deficiencies in the list of Amara are supplied partly by commentaries on it, and partly by more recent dictionaries, one of which, the 'Trikanadaseha,' by Purushotamadewa, is, what its title implies, purposely compiled as a supplement to the tripartite work of Amara.

An excellent edition of the 'Amarakosha,' with marginal explanations and notes in English, and an alphabetic index, was published by Mr. H. T. Colebrooke at Serampore, 1808, 4to.; reprinted, 1829, 8vo. An edition of the mere Sanskrit text, and table of contents likewise in Sanskrit, appeared at Calcutta in 1813 in a volume with three other original Sanskrit vocabularies.

(*Asiatic Researches*, vii. p. 214, seq.; Wilson, *Sanskrit Dictionary*, Preface, p. 5, seq., first edit.)

AMARAL, ANDRES DO, a Portuguese by birth, and knight of the order of St. John of Jerusalem, of that branch called 'the language of Castile,' at the time that the order was in the possession of the island of Rhodes. In the year 1510 he was sent on an expedition against the fleet of the sultan of Egypt, then lying in the Gulf of Ajasso, in company with Villiers de l'Isle Adam, with whom he quarrelled. On the death of Carretta, the forty-second grand master, in 1521, Amaral put himself forward as candidate; but Villiers de l'Isle Adam was chosen by a large majority. Stung by his failure, Amaral seems to have conceived a deadly hatred not only of his successful rival, but of the whole order. On the day of the election, Jan. 22, 1521, he said in the church of St. John, where it took place, to one of his friends, a knight of Castile, that L'Isle Adam would be the last grand master of Rhodes. Rumours arose of approaching danger to Rhodes from a large armament in preparation by Sultan Solymán I. On June 26, 1522, all uncertainty was dissipated by the appearance of the Turkish fleet off the island, consisting of four hundred vessels, and carrying an army of one hundred and fifty thousand men. To oppose this force, L'Isle Adam had about five thousand soldiers, including six hundred knights. The Turks landed without opposition, and the siege of the city began; but after repeated losses, the Turkish commanders were compelled to call for the sultan himself to animate the courage of his troops, and on the 28th of August, Solymán arrived to assume the command in person. The Turks sustained, nevertheless, a defeat on September 24, and were, it was thought, about to retire from the siege. On October 30, some of the guard having for some days before noticed a servant of Amaral's, named Blas Diez, going frequently to a part of the fortifications called the bulwark of Auvergne at unseasonable hours, with a bow or arblast in his hand, conceived misgivings of his purposes, and carried information to the grand master, who ordered his immediate arrest and examination. He would confess nothing till he was "put to the Gehenna," and then he revealed a startling tale. Since the election of L'Isle Adam, his master had, he stated, commenced and kept up a secret correspondence with the Turks: it was he who, by means of a Turkish captive, had apprised the sultan of the weak state of the order, and had invited him to come and conquer Rhodes; who had since informed him of the most secret councils in which he had taken part as grand prior of Castile; had pointed out the weak parts of the fortifications; and finally, since the failure of the assault in September, had exhorted him to persevere, and success was certain. His master was in the habit, he stated, of communicating with the Turkish camp by means of letters fastened to arrows and shot from the bulwark of Auvergne. Amaral was instantly arrested, and the grand master ordered him to be examined by two of the grand cross knights, in conjunction with the magistrates of the town. There was other circumstantial evidence, and both his servant and himself were sentenced to death. Diez was hung on November 4, and on the same day Amaral was solemnly stripped in the church of St. John of his robes of knighthood, and delivered over to the secular arm: on the next day he was beheaded.

The evidence seems quite sufficient to prove the crime of Amaral, but in later times his guilt has been doubted. Though the order continued to exist for some centuries, the prediction was verified that L'Isle Adam would be the last grand master of Rhodes. By the advice of his council, though against his own opinion, he surrendered

the place on honourable conditions, and on Christmas-day, 1522, Sultan Solymán took possession of Rhodes.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

*AMARI, MICHELE, an Italian historian, was born at Palermo, July 7, 1806. He was educated at home till the age of fifteen, his studies being guided by Professor Domenico Scinà. In his sixteenth year he obtained a situation in a government office. Soon after this, in 1822, his father was condemned to death for being engaged in a conspiracy for effecting the independence of Sicily. Seven of his companions were executed, but the sentence of the elder Amari was commuted to thirty years' imprisonment. Michele was not deprived of his office, but the duty of supporting his mother and family of three younger children out of his scanty salary devolved upon him. Rendered reckless by the misfortune which had fallen upon his family, Michele now abandoned study, and devoted his leisure hours to the practice of bodily exercises, with a view to fit himself for a guerilla leader. But from this morbid state he is said to have been aroused by an attachment he formed for an English lady; and though unsuccessful in his suit, it led him to the ardent study of the English language, of which the first-fruit was a translation of 'Marmion,' published at Palermo in 1832. He now devoted himself to the study of English and French literature, and especially moral philosophy and history; and an answer which he published to a pamphlet which asserted that Sicily had always been dependent upon Naples, gained so much applause, that he determined to undertake a history of Sicily from the commencement of the Bourbon dynasty. In this work he had made some progress when he abandoned it, in order to investigate thoroughly the subject of the Sicilian Vespers. In 1837 Palermo was ravaged by the cholera, and the populace, excited by political agitators, rose in revolt and expelled the Neapolitan garrison. The insurrection was soon suppressed; but though Amari had been among the most active of the officials in endeavouring to arrest or palliate the disease, and took no part in the political proceedings, he was deprived of his office, and transferred to a different department at Naples. Here he steadily prosecuted his historical labours. Having completed his task, he obtained leave to visit his family at Palermo; and there, in April 1842, published his history under the title of 'La Guerra del Vespro Siciliano.' The book had received the licence of the censors; but a few months after its publication it was discovered by the authorities that in describing the French dominion the author had been really discussing that of Naples, and under the mask of Charles of Anjou he had been tracing a likeness of Ferdinand II. The book accordingly was prohibited; the censors who had permitted it to pass were dismissed from their offices; five journals which had reviewed it were suppressed; the publisher was banished to the Isle of Ponza, where he soon after died; and Amari himself was summoned to Naples, but he fortunately succeeded in escaping to France.

Amari had, there can be little doubt, like many other authors living under a strict censorship, written of the past with a constant though latent reference to the present; but the great object of his history was to rectify what he believed to be the erroneous view commonly taken of the Sicilian Vespers. For centuries it had been the received opinion that the great massacre so named was the result of a widely-extended conspiracy, the work of John of Procida. Amari, on the contrary, undertook to prove—we quote his own words—"that the Vespers were not the result of any conspiracy, but rather an outbreak occasioned by the insolence of the ruling party, and owing its origin and its important results to the social and political condition of a people neither used nor inclined to endure a foreign and tyrannical yoke; and this view is undoubtedly confirmed by new documents which throw light upon the causes of the revolution—the letter of Charles himself, that of the Sicilians, and several inedited papal bulls. It was to her people, not to her nobles, that Sicily owed the revolution which in the 13th century saved her from the extreme of misery and degradation, from servile corruption, and from sinking into insignificance." The 'History of the Sicilian Vespers' at once excited general attention, and its bold denial of the common theory—supported as it was by a large body of new documents—though much canvassed, gained almost universal acquiescence. In Italy the prohibition ensured for it a wide circle of readers; it was translated into German by Dr. J. F. Schröder of Hildesheim, and into English under the care of the Earl of Ellesmere. A fourth edition of the original, with a new preface and additional documents, was published at Florence in 1851.

At Paris Amari applied diligently to the study of Arabic, in order to fit himself for the preparation of a history of Sicily during the Mussulman occupation. He succeeded in mastering the language, and formed large collections of original materials for his projected history from the libraries of Paris, London, and Oxford. These he was busily employed in collating and digesting when intelligence reached him of the revolution in Sicily, January 1848, and he at once cast aside his books and proceeded to the seat of war. Before he could reach Palermo, however, the Neapolitans had for the time succumbed. Amari had in his absence been named by the provisional government professor of jurisprudence in the university of Palermo. He was now named a member of the revolutionary committee, and elected a deputy for Palermo to the parliament which at its meeting in April decreed the deposition of the Bourbon dynasty. He soon after received the office

of minister of finance, but though he refused the salary of his office, and did his best to perform his duties, he found it impossible to satisfy the popular expectations; and after enduring what he calls official martyrdom for five months, he was glad to exchange his post for a mission to Paris. The object of this was to obtain the intervention of the republican government; but in this he failed, and at the renewal of hostilities in Sicily, March 1849, he again repaired to Palermo. He saw at once that further resistance was hopeless, and he left the city April 22, the day before it surrendered to the Neapolitan general. He reached Paris in safety, and once more returned to his literary pursuits. Soon afterwards he published a political brochure, 'La Sicile et les Bourbons.' His subsequent publications have been suggested by his Arabic researches: 'Solwan-al Mota, ossia conforti politici di Ibn-Zafer, Arabo-Siciliano del XII secolo;' and some papers in the 'Asiatic Journal.'

AMASIS, or AMOSIS, the eighth king, according to Africanus, of the twenty-sixth dynasty of Egyptian kings, reigned from B.C. 569 to B.C. 525. Amasis was a native of Siouph, in the nome (district) of Sais, in the Delta. Being sent by Apries (the Pharaoh Hophra of Scripture, Jerem. xlv. 30) to stop a mutiny in the Egyptian army, he was proclaimed king by the rebels, and defeated his master, who was supported by a force of 30,000 Carians and Ionian Greeks. Amasis became King of Egypt, and Apries, being surrendered to the Egyptians, was put to death.

Amasis married a Greek wife from Cyrene, and allowed Greek merchants to settle at Naucratis, and to build temples and bazaars. Pythagoras and Solon are said to have visited Egypt in his reign. Amasis decorated Sais with magnificent propylæa to the temple of Athena, with colossi and androphinxes, and a monolith (one-stone) temple brought 600 miles down the river from the quarries of Syene. Sais, the royal residence of Amasis, which is now called Sa-el-Hajar, or Sa, 'the Rock,' exhibits only mounds of rubbish and pottery, and sun-dried bricks.

He placed a colossus 75 Greek feet long, flanked by two figures 30 feet high, in front of the temple of Hephaestus (Phtha) at Memphis. He placed another at Sais, of the same size. Amasis also extended the commerce of Egypt by the conquest of Cyprus. Agriculture no less flourished during his reign. He was succeeded by his son Psammenitus, who was conquered by Cambyses the Persian, B.C. 525.

(Description de l'Égypte, Antiquités, vol. v.; Herod., ii. 162-182.)

AMATI, the name of a family of violin-makers, resident at Cremona from the first half of the 16th to the termination of the 17th century, of which the brothers Andrea and Nicolo appear to have been the first who rivalled the eminent Tyrolese workmen.

Andrea Amati was a violin-maker previous to the year 1551, for in 1789 the Baron de Bagge possessed an instrument which bore his name and that date. For some years afterwards, Andrea, in conjunction with his brother Nicolo, continued the manufacture of violins, violas, and violoncellos, which to this day are justly valued by all connoisseurs for their excellent form and finish, and their sweet and brilliant tone. Of their violoncellos few at present are known to exist, and these are highly admired and prized. Nicolo, whose reputation is more especially identified with these instruments, is sometimes erroneously confounded with his great nephew of the same name.

Antonio Amati, son of Andrea, was born at Cremona in 1565, and for some time worked with his brother Geronimo. The violin which Antonio made for Henry IV. of France is still in existence, richly ornamented and in perfect order. Its date is 1595. The instruments of Geronimo Amati are considered less valuable than those of his brother. Nicolo Amati, the son of Geronimo, was living in 1692, at a very advanced age. He followed the form and proportions of the violin which his ancestors had adopted, and which are thus described by Jacob Otto of Weimar, who, in the course of his business as a violin-maker, professes to have had thirty of their instruments pass through his hands:—"All their instruments were constructed after the simplest rules of mathematics, and the six which came into my possession unspoilt were made after the following proportions. The belly was strongest where the bridge rests; it then diminished about a third at that part where the *f* holes are cut, and where the belly rests on the sides it was half as thick as in the middle. The same proportion is observed in the length. The thickness is equally maintained all along that part on which the base bar is fixed; from whence to the upper and under end blocks the thickness decreases to one half. These proportions are best adapted for producing a full, clear, and brilliant tone."

(Fétis, *Biographie Universelle des Musiciens*; Otto, *On the Violin*; *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

AMATO, GIOVANNI ANTONIO D', a distinguished painter of the early half of the 16th century, and one of the best of the Neapolitan painters, was born at Naples in 1475. His master is not known; he seems to have educated himself chiefly by studying the works of Maestro Buono, who died in 1485, and an altar-piece of Pietro Perugino, which is in the cathedral of Naples.

Amato possessed that reverential feeling which associated art with religion. He never commenced a picture of the Madonna and Bambino, his most favourite subject, without first taking the sacrament,

and thus purifying himself for the holy task. He carried his feeling of propriety so far as to consider it wrong to paint even a partially naked woman; and impressed with this feeling he refused to paint the decorations of the triumphal arch which was erected in honour of Charles V. when he visited Naples: he recommended Andrea da Salerno to the authorities in his place.

Though as a painter he lived chiefly in the 16th century, his style is more that of the quattrocentisti, and is very similar to that of Perugino, but, with equally good colouring, the forms of Amato are fuller than those of Perugino. He painted in oil and in fresco, but his frescos have almost all disappeared: they have either been white-washed, or have disappeared in the repairing of their localities. His best picture is considered to be the Dispute on the Sacrament, in the Cathedral of Naples.

Amato was a man of general acquirements, and devoted much of his time with assiduity and delight to the cultivation of letters. He wrote a commentary upon difficult passages in the Sacred Scriptures. He died at Naples in 1555, aged 80.

Of Amato's numerous scholars, his own nephew of the same name, born in 1535, was one of the most distinguished. He was called Il Giovane, the Young, to distinguish him from his uncle, who, however, was himself sometimes called Il Vecchio, or the Elder. The nephew after the death of his uncle studied with Gio. Bernardo Lama, an older scholar of the elder Amato. His best work is a large and admirable altar-piece of the Infant Christ, in the church of the Banco de' Poveri at Naples: he was a beautiful colourist. He died at Naples in 1598.

(Dominici, *Vite de' Pittori, &c., Napoletani*.)

AMATO, or AMATUS, JOANNES RODERICUS, often called Amatus Lusitanus, a very eminent physician of the 16th century. Amato was of a Jewish family, and was born at Castel-Branco, in the province of Beira in Portugal, in 1511. Like many of his nation, concealing his religious faith, he was educated at Salamanca; after leaving which he travelled in France, the Netherlands, Germany, and Italy. He remained for some time both at Venice and Ferrara, giving lectures on the medical art. Before 1549 Amato had removed to Ancona, where he resided and practised his profession till 1555. While here he had the honour of being several times called to Rome to attend the Pope, Julius III. Dread of the Inquisition, however, whose notice had been attracted to him as a concealed Jew, induced him, in 1555, to withdraw to Pesaro. From Pesaro he some time after retired to Ragusa, and from thence, in 1559, to Thessalonica (Saloniki), where he made open profession of the religion of his forefathers. He is ascertained to have been alive in 1561, but no notice of him occurs after that date, and it is not known when he died. Amato is the author of two works, both of which were long ranked among the most esteemed medical treatises of modern times. The one is entitled, in the first edition, printed in 4to, at Antwerp, in 1536, 'Exegemata in Priores duos Dioscoridis de Materia Medica Libros;' and in subsequent editions, 'Enarrationes in Dioscoridem.' The other is his 'Curatium Medicinalium Centuriæ Septem.' In both these works the author is said to show an intimate acquaintance with the writings of the Greek and Arabic physicians; and they are also stated to contain many curious notices both in medicine and in natural history. Some of his biographers mention a translation into Spanish by Amato of the 'Roman History' of Eutropius.

AMAZIAH, or AMAZIAHU, means literally 'one strengthened by Jehovah,' and is the name of the ninth king of Judah, who began to reign when he was twenty-five years old, about the year B.C. 838, after his father Joash had been murdered in the house of Millo by his own servants Jozachar and Jehoabab. (2 Kings, xiv.) Amaziah reigned twenty-nine years in Jerusalem; his mother's name was Jehoaddin of Jerusalem. He fought with the Edomites, of whom he slew 20,000, and took Selah, and called it Joktheel. The name of Selah is translated Petra, 'rock,' by the Greeks. The remains at this place in Arabia Petraea, between the Dead Sea and the Eilatitic Gulf, are described by Irby and Mangles ('Travels,' p. 336, &c.)

Amaziah next declared war against Jehoash, the king of Israel, but was defeated and taken prisoner. Jerusalem was also taken and plundered. Amaziah, however, recovered his liberty, and reigned fifteen years after the death of Jehoash, when a conspiracy having been formed against him, he fled to Lachish; but he was pursued and slain there, and buried in Jerusalem. He was succeeded by his son, Azariah, 'help of Jehovah,' or Uziah, 'power of Jehovah,' who was sixteen years old (2 Kings, xiv.; 2 Chron. xxv.; Jos., 'Antiq.,' ix. 9, 10).

AMBERGER, CHRISTOPH, a celebrated old German painter of the 16th century, was of a family of Amberg in the Ober Pfalz, whence his name; but Amberger himself was, according to Von Mechel, born at Nürnberg about 1490. His father was a stonemason, and his grandfather was a carver in wood at Amberg. Nothing is known of Amberger's early history previous to 1530, when he was already a painter of some note, and in great employment at Augsburg. The works which he executed at this time however were chiefly in distemper. He painted the exteriors of some houses in this manner; and, upon canvas, twelve pictures of the history of Joseph in Egypt, which are still at Augsburg.

Amberger painted also in oil and in fresco. His oil pictures are chiefly portraits, much in the style of Holbein, whose portraits he

studied and copied. Fiorillo states that many of Amberger's copies pass as the originals of Holbein. His historical pieces in oil are very small, and executed in the hard manner and sharp gothic style of the period in Germany, without any feeling for aerial perspective, though the rules of linear perspective are well observed in his works: his colouring is rich. His best works are at his native place, Amberg, in the Church of St. Martin and in the Franciscan convent there.

Amberger is generally supposed to have died about 1563 at Augsburg: he was however still living in 1568, according to some judicial records in that place.

(Sandrart, *Teutsche Academie*, &c.; Mechel, *Catalogue des Tableaux, &c. de Vienne*; Waagen, *Gemälde Sammlung zu Berlin*; Nagler, *Künstler-Lexicon*.)

AMBOISE, CARDINAL GEORGES D', an eminent French ecclesiastic and statesman. He was born in 1460, at the château of Chaumont on the Loire, the seat of his family, which was one of the most illustrious in France. Being a younger son he was educated for the church, and was made Bishop of Montauban by the time he had attained the age of fourteen. His first preferment at court was given him by Louis XI., who made him his almoner. After the death of this prince, however, in 1483, having connected himself with the Duke of Orleans, who unsuccessfully disputed the regency with Anne of Beaujeu, he shared the misfortunes of his party, and was along with the duke himself put into confinement, from which he was not released till six or seven years after, when the new king, Charles VIII., attained his majority. Soon after being restored to liberty he was promoted to the archbishopric of Narbonne, which, in 1493, he exchanged for that of Rouen. Here, besides presiding over his diocese, he acted as the deputy of his friend the Duke of Orleans, who held the office of governor of Normandy, and in that capacity introduced several valuable reforms into the administration of the province. In 1498 the duke became king by the title of Louis XII., and from this time D'Amboise may be considered as prime minister of France. The memorable events of the reign of Louis XII. are connected with the assertion of his rights to the duchy of Milan, and the protracted wars which he carried on in Italy to maintain that claim. In this part of his conduct it is probable that Louis acted rather according to his own views than by the advice of his minister; but he seems to have intrusted to the latter almost the entire management of the domestic affairs of his kingdom. In this department D'Amboise displayed equal ability and disinterestedness. By the financial reforms which he effected he was enabled both considerably to reduce the customary imposts, and to supply the heavy demands of the war without any increase of taxation. He exerted himself also, with considerable success, to rectify the existing corruptions both in the law and the church, introducing various regulations, with a view to diminish the length of processes in the former, and by his example as well as by his authority discountenancing the scandalous rapacity of the higher order of ecclesiastics. He would never accept any other benefice in addition to his archbishopric; and even the greater part of his episcopal revenue he distributed among the poor, or devoted to other pious purposes. With all this moderation, however, in regard to the more common objects of human desire, he was far from being without ambition. Very soon after the accession of Louis XII. he had obtained a cardinal's hat, and subsequently the Pope appointed him to the high office of legate. But on the death of the infamous Alexander VI., in 1503, it appeared that the chair of St. Peter itself was the place which he aspired to occupy. He failed however in this object through a piece of mismanagement, which made him at the time very much laughed at, though it was only discredit to him as a politician. A large military force of the king his master occupied Rome, by placing which in an imposing attitude he might easily have controlled the election; but the Cardinal de la Rovère having suggested to him that such a mode of securing his object would both have a bad look, and was moreover quite unnecessary, inasmuch as he would most certainly be elected for his own merits, if he left the matter to the free voices of the conclave; he followed this crafty advice, and withdrew the troops. The result was that in a few weeks the Cardinal de la Rovère was Pope himself, with the title of Julius II. No other vacancy in the ecclesiastical throne occurred during the life of D'Amboise, who died in the convent of the Celestines at Lyons, on the 25th of May, 1510. It is said that, on his death-bed, he expressed his sense of the vanity of those worldly honours which he had sought so anxiously during his life—exclaiming, as he named the monk who attended him, "Brother John! ah, why have I not all my life been brother John?" He was buried in the cathedral of Rouen, where his mausoleum is still to be seen. Notwithstanding some faults and weaknesses, D'Amboise was undoubtedly a great benefactor to France. This his countrymen themselves so strongly felt, that they used affectionately to call him 'the people's father.' Most of the accounts of his life that have appeared in France are written in the most panegyric style. One is by an author who calls himself the *Sieur des Montagnes*, printed in 12mo, at Paris, in 1631. There is another work, entitled 'A History of the Administration of the Cardinal D'Amboise,' by the *Sieur Michel Baudier*, historiographer to his majesty, published in 4to, at Paris, in 1634. The letters of Louis XII. and Cardinal D'Amboise were published at Brussels in 4 vols. 8vo, by Jean Godefroy, in 1712.

AMBROSIUS, ST., commonly called Ambrose, was born in Gaul, probably at Trèves, about A.D. 340, his father, a noble native of Rome, being then prætorian prefect of Gaul. His infancy was signalised by a prodigy similar to that recorded of Plato; while he was sleeping in his father's palace, a swarm of bees invaded his cradle and rested on his lips, and then suddenly ascending high into the air disappeared. Another tale is also told prophetic of his ecclesiastical dignity. One day, while yet a boy, he stretched forth his hand to his mother and sister, and bade them kiss it, in homage to the future bishop. His education however was that usually bestowed on distinguished civilians, and his first profession was the law. His rank and character personally recommended him for advancement, and at an early age he was made consular of Liguria, a province comprehending the North of Italy from the Mediterranean to the Adriatic, and having Milan for its capital.

The conflict between the Catholics and the Arians was then raging, and in A.D. 374, Auxentius, the Arian archbishop of Milan, died. The choice of a successor occasioned the most violent tumults, and the presence of the governor was necessary to appease them. He assembled the people in the principal church; and when he had addressed them on the subject of their civil duties, the necessity of social order and public discipline, they replied with unanimous acclamation, "We will have Ambrose for our bishop." Ambrose was then a catechumen only, and as far as is known, without much theological instruction. He professed, besides, the most determined repugnance for the proposed dignity. He yielded however at length to the persevering entreaties of the people; and on the eighth day after his baptism, having passed with the shortest canonical intervals through the intermediate steps, he was ordained to the see. That which he had obtained by the popular voice he preserved by popular talents and virtues—a commanding eloquence, which inflamed the souls of the faithful—daring and unconquerable firmness—humanity, where the interests of humanity were consistent with those of the orthodox faith—perfect contempt for wealth, and unbounded benevolence to the poor and afflicted. He renounced his private property, and on one occasion sold some of the sacred utensils for the redemption of prisoners. It is also related that he possessed, and sometimes exercised, the gift of miracles. He immediately proclaimed his adhesion to the Catholic faith, and laboured for the extirpation of Arianism. The empress Justina, an Arian, demanded that one church should be appropriated at Milan to herself and those who held the same opinions. Ambrose refused, and a long and violent struggle ensued, in which the civil and military authorities were successfully opposed and thwarted by the energy of the prelate, armed only with spiritual power and supported by the enthusiastic devotion of his faithful people.

This was his first triumph; his second, though accomplished with less risk, has gained him more celebrity. In A.D. 390 Theodosius I. commanded an indiscriminate massacre of the inhabitants of Thessalonica, and many thousands suffered. Ambrose was shocked by the enormity of the crime, and determined that the church ought not to overlook it, even in a wise and powerful Catholic emperor. He remonstrated; and when the prince pleaded for his sin the example of David, Ambrose replied, "Since thou hast imitated his offence, imitate likewise his penitence;" and stopped him as he was entering the sacred precincts. Theodosius submitted. For the space of eight months he was debarred from the holy offices, and finally, after some other humiliations, he condescended to the performance of public penance, as the condition of reconciliation with the church. This was, indeed, a signal display of spiritual authority at a period scarcely fourscore years removed from the last persecution, and long preceding the origin of that system of ecclesiastical despotism so generally ascribed to the ambition of Rome. But it was the flagrancy of the crime which gave colour and success to the prelate's audacity. Ambrose, as well as Martin of Tours, expressed his indignation at the persecution of Priscillian and his followers; his humanity was offended by the execution of the heretics. Yet had he no comprehension of what we call toleration. The severe laws of Gratian against heretics are by Tillemont ascribed to his influence; and in 390 he held a council for the condemnation of the opinions of Jovinian. His ecclesiastical principles were as high and as rigid as those of the Gregories and the Innocents, but a milder disposition tempered them in execution.

Ambrose died in 397, at no advanced age, beloved by his faithful people, and even by the princes whom his virtues awed, and respected by the barbarians themselves. He left behind him what the church has commonly considered as a model of the episcopal character. His works, which are numerous, by no means reflect the vigour and energy of his actions; they are rather remarkable for the excellence of their principles and precepts, than for power of thought or diction. The most remarkable is that 'De Officiis,' which his panegyrists have not feared to compare with the 'Offices' of Cicero. It is, of course, a Christian work, and the first proposition is the following:—"The proper office of a bishop is to teach the people." He composed some very voluminous expositions of Scripture. Many lives of Ambrose are extant. The most ancient is one by Paulinus, a priest of Milan, and the secretary of the prelate. The best edition of his works is in 2 vols. fol. Paris, 1686—1690. There is also one by Erasmus in 2 vols. fol. apud Froben, 1527.

The name of Ambrosius is connected with the earliest improvement of church music. The writings of the early fathers concur in recording the employment of music as a part of public worship, although no regular ritual was in existence to determine its precise form and use. This appears to have been first supplied by Ambrosius, who instituted that method of singing known by the name of the 'cantus Ambrosianus,' which is said to have had a reference to the modes of the ancients, especially to that of Ptolemaeus. This is rather matter of conjecture than certainty, although the eastern origin of Christianity and the practices of the Greek fathers render the supposition probable. The effect of the Ambrosian chant is described in glowing terms by those who heard it in the cathedral of Milan. "The voices," says Augustine, "flowed in at my ears, truth was distilled into my heart, and the affection of piety overflowed in sweet tears of joy." Whether any genuine relics of the music thus described exist at the present time is exceedingly doubtful; the style of singing it may however have been preserved; and this is still said to be applied at Milan to compositions of a date comparatively recent.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

AMBROSIUS, AURELIANUS, a British chieftain at the time of the Saxon invasion in the 5th century. It is difficult amid the obscurity of the history of that period, to obtain a satisfactory account of him. It is probable however that he was a descendant of Constantine, or a branch of his family.

The account given by the author of the 'Flores' and by Geoffrey, is, that Ambrosius, on the usurpation of the sovereignty of Britain by Vortigern, took refuge in Armorica, whence he returned with a strong force; that after being elected king in a general assembly of the Britons (A.D. 465) he besieged Vortigern, who had taken refuge in a castle built by him in Wales, and destroyed him by fire (466); that he then fought against the Saxon Hengist with dubious success at Wippedefete (473), against another band of Saxons under Ella, with better but yet not with decisive success (485) at Mearcres-burn, and finally, with complete success (487), at Maisebely, and on the banks of the Don (489), both in the north of England, against Hengist, who was in the last battle taken and put to death; that after this he besieged Octa, son of Hengist in Eboracum (York), and having obliged him to surrender, granted to him and his followers a settlement on the Scottish border; that he defeated a body of Saxons, whom Pascentius, the son of Vortigern, had brought over; and that he died (497) of poison administered by a Saxon, an emissary of the same Pascentius, who had landed with a fresh body of auxiliaries from Ireland, to dispute with him the crown of Britain. This narrative appears to be so corrupted by fabulous intermixture as to make it very difficult to extract from it the historical truth.

That he was a competitor with Vortigern for the supremacy of South Britain is probable from an expression of Nennius, who enumerating the embarrassments which led Vortigern to call in the aid of the Saxons, says, "he was pressed by the attacks of the Romans, and also by the fear of Ambrosius."

It is tolerably certain that Ambrosius succeeded Vortigern in the supremacy of the British chieftains, and that he was engaged in the warfare directed against the Saxon settlers in the south part of Britain. The battles of Wippedefete and Mearcres-burn are recorded in the 'Saxon Chronicle,' which assigns them to the years 465 and 485 respectively; and from the same authority it appears that in the first, Hengist and his Jutes, and in the second, Ella and his South Saxons, were opposed to the Britons; it is also probable that Ambrosius commanded the latter on these occasions, as Bede records that he was the leader of the natives in their struggle against the invaders, though he notices only one particular battle, that of Mons Badonicus, supposed to be near Bath, which is reckoned by Nennius and others among the victories of the semi-fabulous Arthur. That Ambrosius was supported by Vortimer and Catigern, the sons of Vortigern, as allies, is also probable from the accounts of Nennius and Huntingdon. The 'Saxon Chronicle' makes Vortigern the leader of the British hosts against Hengist; but this is in all probability an error, arising from the similarity of the names Vortigern and Vortimer.

The story of the Yorkshire victories of Ambrosius, the capture and death of Hengist, and the surrender of the Saxons in York, is utterly irreconcilable with the ascertained circumstances of the time. Of the death of Ambrosius nothing certain is known. Amidst the uncertainty which prevails as to the life, actions, and death of Ambrosius, all historians who notice him appear to agree in praising him. Gildas (in a passage however of somewhat doubtful genuineness) describes him as "comes, fidelis, fortis, veraxque," "noble, faithful, brave, and true." In an undoubtedly genuine passage he speaks of him as "vir modestus," "a man of well-regulated desires;" and Bede repeats the encomium.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

AMELTON, HUBERT PASCAL, was born in Paris August 5, 1730, and died there December 23, 1811. He originally intended to enter into the clerical profession, but afterwards relinquished that intention. He published, while yet young, a 'History of the Commerce and Navigation of the Egyptians under the Ptolemies,' a work which was the occasion of his introduction, in 1766, into the Academy of Inscríp-

tions and Literature. In 1793 he was nominated a member of the Commission of Monuments. He warmly espoused the revolutionary cause. He had the merit of saving from destruction more than 800,000 volumes out of private libraries and religious corporations, confiscated during the revolution.

He was charged to collect in central depôts the libraries of all the suppressed religious houses. He was allowed only three hours for carrying off the library of St. Victor; at the end of that period the books were to be tossed out of the windows. Ameilhon by his representations obtained with difficulty three days; he immediately placed all kinds of vehicles in requisition, and transported the books to a neighbouring hospital. He transformed several churches into book magazines, and deposited all the confiscated libraries in them. He had thus the satisfaction of saving the libraries of Malesherbes and Lavoisier, and several others, which, when tranquillity was re-established, were restored to their rightful owners. Six or seven years of his life were devoted to the assorting and classification of the books intrusted to his care. He saved the triumphal arch of the Porte St. Denis, Paris, from destruction; and he had the courage to oppose the mob when it sought to enter the church of the Jesuits, where his books were deposited, under pretext of destroying the fleurs-de-lye.

When the Institute was organised in 1797, the city of Paris presented its library to that body. Ameilhon was immediately elected librarian to the Arsenal, an appointment which he held till his death.

The 'History of the Navigation and Commerce of Egypt under the Ptolemies,' and the last five volumes of the 'History of the Lower Empire,' begun by Le Beau, are the only books published by Ameilhon. But his contributions to the periodical literature and the academical memoirs of his country were numerous and valuable.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

AMELOT DE LA HOUSSAYE, ABRAHAM NICOLAS, a political writer, was born at Orleans in 1634. He accompanied the President of St. André, appointed ambassador of France at Venice in 1669, as secretary. A stay of several years in that city having enabled him to become acquainted with its history and politics, probably induced him to translate Velferus's 'History of the Government of Venice,' and to add historical and political notes, which, at the same time that they threw a great light on the Venetian government, gave such offence, that, it is said, a formal complaint was made to Louis XIV., who sent Amelot to the Bastille. No other particulars of Amelot's life are recorded; all that is known is that he was extremely poor, and subsisted on the bounties of an Abbé. He died at Paris in 1706.

He left the following works:—Sarpis's 'History of the Council of Trent,' translated from Newton's Latin version. 'The Courtier,' translated from the Spanish. 'The Prince,' translated from Machiavelli. He endeavoured also to vindicate the author, by maintaining that he had only described what princes do, and not what they ought to do. A translation of Tacitus, with historical and political notes. He did not complete this work; the six last volumes are by François Bruys. 'Memoirs, Historical, Political, Critical, and Literary.' This work is also incomplete; it is arranged alphabetically, but does not go beyond half the letters. There are also some other works of no great interest, of which a list is given in 'Mémoires de Miéron,' vol. xxxv.

AMERBACH, JOHANN, an early printer, in great repute for the typographical correctness of his editions. He was born at Reutlingen in Swabia, studied at Paris under Jean de Lapiere, or Lapidanus, the prior of the Sorbonne, who had the honour of first inviting printers to that city, and took the degree of master of arts. Amerbach carried on the trade, or rather in his case the profession, of printing, at Baele, from 1481 till 1515, in which year he died. His chief publications were the works of St. Ambrose, issued in 1492, and those of St. Augustine in 1506, the latter the first edition of the collected works of that author, and a conspicuous undertaking. "The magnitude of the expence deterred the printers," says Erasmus, in a prefatory epistle to an edition of Augustine of the date of 1520. "The first who ventured on this great undertaking was John Amerbach, a man of singular piety, amply endowed with wealth, but still more with the stores of intellect, whom neither the immense expence of the work, the difficulty of procuring copies from all quarters, the fatigue of collating them, the necessary attention to other affairs, nor any other motive, could deter from the endeavour of making all Augustine common to all. This man was not led by the love of gain, but by a sincere piety, the spirit of which breathes in all his prefaces, and a desire to revive the original fathers of the church, whom he grieved to see become almost obsolete." Unfortunately Amerbach was unable to procure good manuscripts for his edition, and its critical value is therefore, after all his exertions, very small. The type in which it was printed was novel, and is still known among foreign printers by the name of the St. Augustine.

Amerbach was desirous of publishing a collection of the works of St. Jerome, and had his three sons, Bruno, Basil, and Boniface, all youths of great abilities, carefully instructed in the Latin, Greek, and Hebrew languages, in order that they might be fit to correct the press; a circumstance which calls forth from Maittaire a burst of admiration, and an indignant exclamation at the degeneracy of the printers of his

own time, rather more than a hundred years ago. All three became not only excellent scholars, for which we have the testimony of Erasmus, but so enthusiastic in favour of Jerome, that they spared neither their wealth nor their health for his sake. The good old man, at his decease in 1515, recommended the edition to their care, with an injunction to apply what property he left towards it. The edition was issued in the course of the ten years from 1516 to 1526, from the press of Froben, whom Amerbach had first invited to Basle.

(Letter on Basil by Boniface Amerbach in Munsterus, *Cosmographia Universalis*, lib. vi.; Erasmus, *Opera Omnia*, edition of Le Clerc, iii. 1249, &c.; Maittaire, *Annales Typographici*, tom. i. pars i. 37-42, where all the original authorities are referred to.)

AMES, FISHER, was born at Dedham, Massachusetts, on the 9th of April 1753. At the age of seven he lost his father, whose widow was left with a large family in straitened circumstances. Fisher, the youngest son, was sent to Harvard College at the age of twelve; and after remaining there four years, during which he studied hard, he took his degree, and quitted college with a high reputation for his attainments. His wish was to enter the legal profession, but for several years the urgent necessity of providing for his maintenance compelled him to act as teacher in a school. At length, in 1781, he was enabled to enter on the practice of the law. The display of his ability as a speaker, and the notice he attracted by political contributions to the public journals, combined to procure for him, in 1788, a seat in the Massachusetts Convention for ratifying the constitution. In due course he became a member of the House of Representatives in the State Legislature. In this position his talents were soon so widely known, that he was sent from the district of Suffolk as their first representative to the Congress of the United States. In this situation he remained for eight years, the whole period of the presidency of Washington, of whose measures he was an ardent supporter. As a speaker he was soon acknowledged as second to none in the Congress, and as a practical man of business his services were most valuable. He was always a thorough advocate for British connection, and entertained the utmost horror of the excesses of the French Revolution.

On Washington's retirement Fisher Ames also quitted public life, and retired to Dedham, where he both occupied a farm and practised his profession until increasing debility obliged him to give it up. In 1804 he was elected president of Harvard College, but declined the honour on account of ill health. He continued in an increasing state of debility until the 4th of July 1808, when he died, completely worn out. His remains were carried to Boston, and honoured with a public funeral.

In 1809 'The Works of Fisher Ames' were published. They consist entirely of his speeches and letters, collected from the journals of the day.

AMES, JOSEPH, was the son of Mr. John Ames of Yarmouth, where he was born on the 23rd of January 1689. His father appears to have afterwards settled in London, where he died when his son was in his twelfth year. At this time he was at a little school in Wapping. When fifteen he was put apprentice to a plane-maker, near Guildhall, in the city of London. Having served out his time, he then settled in Wapping, Horace Walpole says, as a ship-chandler; but according to other accounts, as an ironmonger. Whatever was his business, he seems to have pursued it with success, and to have attained by it, if not wealth, at least a competency. He also found time to supply the defects of his early education by reading; and this led at length to authorship. The study to which he was most attached was that of antiquities, and particularly those of his own country. He had formed an acquaintance with the Reverend John Lewis; and it is this gentleman who is said to have first suggested to him, about the year 1730, the preparation of a history of English printing, the execution of which became the object of his life. The work, in a quarto volume of above 600 pages, appeared in 1749, under the title of 'Typographical Antiquities; being an Historical Account of Printing in England, with some Memoirs of our Ancient Printers, and a Register of the Books printed by them, from the year 1471 to 1600; with an Appendix concerning Printing in Scotland and Ireland in the same Time.' This is Ames's principal work, and still indeed serves as the basis of the only elaborate history we have of English printing. It has probably preserved a good many title-pages, and other facts connected with its subject, that would have been lost had the recording of them been longer deferred; and it is, upon the whole, creditable to the industry of its compiler. But the task, to be well performed, required much more learning than Ames possessed. The most valuable part of his book has been added to it by its subsequent editors, and especially by Mr. Herbert, whose edition, extended to three volumes quarto, appeared in 1785, 1786, and 1790. A still more augmented, and much more splendid, edition was published by the Reverend Dr. Dibdin, in 4 vols., 4to., 1810-12. Ames's next most considerable work is that entitled 'Parentalia; or, Memoirs of the Family of Wren,' folio, 1750. The book professes to be 'by Stephen Wren, Esq.' (the grandson of Sir Christopher), 'with the care of Joseph Ames; but Ames is understood to have been really the writer. He is also the author of a 'Catalogue of English Heads,' 8vo., 1748; of a 'Catalogue of English Printers,' in two leaves quarto, and of an 'Index' to the Catalogue of Lord Pembroke's Coins, printed, but not published.

Mr. Ames was a Fellow of the Royal and Antiquarian Societies, and secretary to the latter from 1741 till his death. He died suddenly, on the 7th of October, 1759.

(*Life of Ames*, by Mr. Gough, prefixed to Herbert's edition of the *Typographical Antiquities*, and since republished with additional notes in that of Dr. Dibdin.)

AMHERST, JEFFERY, BARON, a distinguished British military commander, was the son of Jeffery Amherst of Riverhead, in Kent, Esq., and was born on the 29th of January 1717. He received his ensign's commission in 1731, and having some years after gone to Germany as aide-de-camp to General Ligonier, was present at the battles of Dettingen and Fontenoy. In 1756, while still abroad, he received the colonelcy of the 15th Regiment of Foot. Two years after he was recalled from the continent and sent to America as major-general of the troops destined for the siege of Louisburg in Cape Breton. After the reduction of Canada in 1760, to which he had materially contributed, he received the thanks of the House of Commons, and was made a Knight of the Bath. Soon after he was appointed commander-in-chief of all the forces in America. On the peace in 1763 he returned to England, when he received from the king the governorship of Virginia. A misunderstanding with his majesty in 1768 occasioned his sudden dismissal from the army; but the matter having been cleared up, he was in a few months reinstated both in his former rank and in the royal favour. In 1770 he was made governor of Guernsey, and, two years later, lieutenant-general of the ordnance and commander-in-chief of the forces in England. In 1776 he was created Baron Amherst of Holmesdale in the county of Kent. He retained his appointment of commander-in-chief till the breaking up of the North administration in 1782, when, on his resigning it, the king gave him the office of gold stick in waiting. In 1787 he received a second patent of nobility, with the title of Baron Amherst of Montreal in Canada, and with remainder to his nephew. On the 22nd of January 1793 he was again appointed to the command of the army, which he held till the 10th of February 1795, when he was succeeded by the Duke of York. On this occasion it is understood that an earldom and the dignity of field-marshal were offered to him, both of which honours he declined at the time, though the following year he accepted the field-marshal's bâton. Lord Amherst died at his seat at Montreal near Sevenoaks, Kent, on the 3rd of August 1797, in the eighty-first year of his age.

(*Gentleman's Magazine* for 1797, p. 800; and Chalmers, *Biographical Dictionary*.)

AMHURST, NICHOLAS, was a native of Marden, in Kent. The date of his birth is not recorded, but he became a pupil at Merchant Taylor's School, in London, in 1713, and was elected from it to St. John's College, Oxford, in June 1716. While at college Amhurst published several poems and tracts, and displayed his enmity to the high church clergy in a poem entitled 'Protestant Popery; or, the Convocation,' in five cantos, which is a satire directed against all the writers who had opposed Bishop Hoadley in the Bangorian controversy. He subsequently discovered this temper more fully in 'A Congratulatory Epistle from His Holiness the Pope to the Rev. Dr. Snape, faithfully Translated from the Latin Original into English Verse.' In June 1719 Amhurst was expelled from college, apparently upon a charge of libertinism, irregularity, and insulting behaviour to the president; but, according to his own account, because of the liberality of his sentiments on religious and political subjects.

Amhurst's resentment was violent and lasting. In 1721 he displayed it by the publication, in fifty semi-weekly numbers, of a periodical intended to satirise the learning and discipline of the University of Oxford, and to libel the characters of some of its principal members. The title of this work was 'Terre Filius.'

After leaving Oxford, Amhurst settled in London, and became a writer by profession. His principal literary undertaking was the political paper called 'The Craftsman.' He conducted it for several years, during which it was more read than any other publication of the kind. It reached a sale of ten or twelve thousand copies, and had a considerable effect in rousing the popular indignation against Walpole's administration.

The political services of Amhurst were overlooked by the party to which he had devoted himself, when, early in the year 1742, they came into office; and his early death, which took place at Twickenham, on the 27th of April in that year, is attributed in a great measure to the effect of this neglect.

(*Biographical Dictionary of Useful Knowledge Society*.)

AMIGONI, JACOPO, one of those painters who, by some chance not quite apparent, obtained a popularity in his lifetime immeasurably beyond his deserts, according to more modern critics. He was born at Venice in 1675. After he had acquired some reputation in Venice, he added considerably to it in the service of the elector of Bavaria by some works he executed in Munich, and particularly some fresco ceilings at Schleissheim. He met with equal success in London, where he came in 1729, and painted a few staircases in fresco, and many portraits in oil. He painted also Shakspeare and the Muses over the orchestra of the then new theatre at Covent Garden. He returned to Venice in 1739, having saved 5000*l.* during his ten years' stay in London. In 1747 he went to Madrid, with the appointment of painter to the king, Ferdinand VI. He died at Madrid in 1762.

Amigoni's frescoes are purely ornamental, mere variegated decorations. He painted some small conversation pieces in the style of some of the Dutch painters, which Lanzi prefers to his larger works. Of the latter, one of the best is a Visitation, at the Padri di San Filippo at Venice. The prints after Amigoni are very numerous.

(Zanetti, *Della Pittura Veneziana*, &c.; Bermudez, *Diccionario Historico*, &c.; Walpole, *Anecdotes of Painting in England*, &c.; Lanzi, *Storia Pittorica*, &c.; Heineken, *Dictionnaire des Artistes*, &c.)

AMILCAR. [HAMILCAR.]

AMIOT, or AMYOT, JOSEPH, a Jesuit missionary to China, was born at Toulon in 1718. At the close of 1750 he arrived at Macao in company with two Portuguese missionaries, sent also by the Jesuits, and the brethren of that order already established at Peking presented a petition to the reigning emperor, Kien-Loong, to the effect that the new comers were well acquainted with mathematics, music, and medicine, and might be found useful to the empire. A persecution against the Christians was going on at the time, but the reply of the emperor to this representation was favourable, and he directed the missionaries to be conveyed to Peking at the public expense. Amiot gives an interesting account of the journey in a letter inserted in the collection entitled 'Lettres Edifiantes et Curieuses,' from which these particulars are taken. On arriving at the capital, where an underhand sort of toleration was extended to the missionaries at the very time that their religion was proscribed elsewhere, he applied himself to the study of the Chinese, and afterwards to the Manchoo-Tartar language and literature, in both of which he made great proficiency. From that time he appears to have acted rather as a missionary of learning than of religion. While his name scarcely figures at all in the 'Lettres Edifiantes,' not a year seems to have passed without his dispatching to Europe some information on the history and manners of the Chinese and Tartars, to the illustration of which he contributed more than any other writer of the 18th century. He remained at Peking for forty-three years, during which time the order to which he belonged was dissolved, and more than one vigorous persecution was directed against the Christians in China. At the time of Lord Macartney's embassy, in 1793, Amiot (for though his name is not mentioned by Staunton, the person described by him can be no other) wrote a letter to the ambassador on his arrival in Peking, "expressive of the most fervent wishes for his success, and offering every assistance that his experience could supply;" but he was then so infirm as not to be able to wait on Lord Macartney. In the following year, 1794, he died at Peking, at the age of 76.

AMIR-OMRAH. [EMIR-AL-OMRAH.]

AMLETH, a prince of Jutland about the second century before Christ, according to Saxo Grammaticus, who relates his adventures at great length. By Saxo's account he was the son of Horvendill, a feudatory prince of Jutland, who had married Gerutha, the daughter of Roric, his superior lord, the fifteenth king of Denmark from Danus. Fengo, the brother of Horvendill, inflamed with envy, treacherously murdered him; and, persuading Gerutha that he had done the deed because her husband meditated putting her to death, succeeded to her bed and to the principedom. Amleth, afraid of sharing his father's fate, counterfeited madness; and Saxo relates a number of stories to show with what remarkable sagacity he gave his speeches and actions the appearance of insanity, while they were in reality full of meaning. A courtier of Fengo's suggested a plan of ascertaining if the madness were assumed, by admitting Amleth to an interview with his mother, and he offered to play the spy on their meeting, concealed from both. Fengo consented, and the courtier hid himself in the straw on the floor of Gerutha's apartment. Amleth, suspicious of treachery, when he met his mother began crowing like a cock, and jumping idiotically about the room, till he jumped on the unhappy spy, who, being thus detected, paid for his officiousness with his death. Amleth then addressed his mother on the enormity of her marriage with his father's murderer, aroused her to repentance, and made her the confidant of his intended revenge. Fengo, still disquieted with suspicion, but afraid of provoking Gerutha, conceived the plan of sending Amleth on a mission to England, in company with two of his courtiers, who carried with them letters cut in wood (*litteras ligno insculptas*), requesting the king of England to take Amleth's life. On the voyage Amleth got possession of the letters, and substituted others, requesting the king to put his companions to death, but to grant to himself his daughter in marriage. The altered instructions were obeyed; and, after a year's time, Amleth unexpectedly made his reappearance at the court of Jutland, where he had long been supposed to be dead. At a feast which was given in honour of his return he kept himself sober, while he took care to make all the nobles drunk; and while they lay about, he loosened a curtain made by his mother which hung above the hall, and, letting it fall on their prostrate bodies, fastened it tight by pegs to the ground, and set the building on fire. He then hastened to the bedchamber of Fengo, who had retired at an earlier period of the evening, aroused him from sleep, informed him of the destruction of all the courtiers, and told him he came to take revenge for the murder of his father. After slaying Fengo he at first concealed himself; but finding that the usurper's death was not much lamented, he made a speech to the

people, unfolding to them the whole of the course he had taken, and was afterwards elected to the throne of his father.

This is only the first part of the story of Amleth in Saxo. His subsequent adventures have no relation to the story upon which Shakspere founded his great tragedy of 'Hamlet.' That such a person as Amleth existed seems to be supported by national tradition. Saxo mentions that there was in his time (about 1200) in Jutland "a field distinguished by the burial and the name of Amleth." Whatever may be thought of Saxo's story, his chronology must be rejected.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

AMMAN, JOST, a very celebrated Swiss engraver and designer of the 16th century, born at Zürich in 1539. Though a Swiss by birth, he was a German by adoption, for he established himself in Nürnberg in 1560, and gave up his right of burghership in Zürich in 1577. As is the case with most of the old German masters, little or nothing is known about Amman's life. Many writers speak of him as a painter, yet there is not a single painting of his known. Sandrart and Doppelmayr speak of him as a painter on glass only. Amman's designs are extremely numerous: a painter of Frankfurt, of the name of Keller, who lived with Amman four years, told Sandrart that the drawings he made whilst he was with him would fill a large waggon. Though he did not live long, he surpassed every artist that preceded him in the number of his designs. There are about a thousand woodcuts attributed to him, but whether he cut all or even any of them himself is not known. Bartsch also doubts whether all the etchings attributed to Amman are etched by him; he supposes some to have been etched by Stephen Hermann. His designs generally appeared as the illustrations of books; few books were published in Amman's time without illustrations. Siegmund Feyerabend of Frankfurt was the publisher of most of Amman's works; many of them were published after his death. He died at Nürnberg in 1591.

His works comprise nearly every subject—history (sacred and profane), general costume, military costume, field-sports, natural history, heraldry, and other subjects. His drawing is generally good, and in the costume very accurate, and evidently drawn from nature; his animals also are executed with much spirit. Strutt, speaking of his style of engraving, says, "It is neat and decided; but if his strokes are more regular than was usual with the engravers on wood of his time, it is to be feared that as much as he gained by the pains he took with this part of his execution, he lost in freedom and spirit."

Amman was also an author. He wrote a book on poetry, painting, and sculpture, which was published at Frankfurt, first in 1578, and later as a Manual of Painting, 'Artis Pingendi Enchiridion.'

(Sandrart, *Teutsche Academie*, &c.; Doppelmayr, *Historische Nachrichten*, &c.; Strutt, *Dictionary of Engravers*; the *Dictionaries* of Heineken, Füssli, and Nagler; and *Le Peintre-Graveur* of Bartsch.)

AMMANATI, BARTOLOMEO, sculptor and architect, was born at Florence in 1511, and bred in the very height of the golden age of Italian art. Thus educated in such a nursery, with Baccio Bandinelli and Sansovino for his tutors, he could not easily fail to produce works worthy of his opportunities and his education. His father, Antonio da Setignano, died when Bartolomeo was young, but he left him master of sufficient property to be in a condition to choose his own profession and to follow it.

When Ammanati returned from Venice to Florence, Michel Angelo was at the height of his reputation as a sculptor, and Ammanati became one of his most devoted admirers and imitators, and, like many other painters and sculptors, catching chiefly the defects of Michel Angelo's style, fell into the error of treating the limbs as the most essential part of man. In this spirit Ammanati executed several works in various cities in Italy. Ammanati was much employed in Rome by several popes—by Paul III., Julius III., and afterwards by Gregory XIII. During the interval between the two periods that he was employed by these pontiffs, he attained great fame at Florence as an engineer and an architect. He constructed the celebrated Ponto della Trinità, which spans the Arno in three light and elegant elliptical arches, calculated to allow the sudden floods of that river to pass without the slightest risk; it still exists, and withstood in 1844 the most impetuous flood that had visited the Arno for centuries, in which even the newly-constructed iron suspension-bridge was swept away. Ammanati made also some additions to the Pitti Palace, which had been commenced from a model by Brunelleschi, and has been finished only within the last thirty years. At Rome he built the Palazzo Rucellai, afterwards Ruspoli; the court and façade of the Collegio Romano, built by the Jesuits by order of Gregory XIII.; and the Palazzo Sacripanti for the Corsini family. His principal works of sculpture in Rome are the figures of Justice and Religion and the other sculptures of the tomb of the Cardinal del Monte in the church of San Pietro in Montorio.

The wife of Ammanati, to whom he was married in 1550, was the celebrated Laura Battiferri of Urbino, distinguished as a poetess. She died at Florence in 1589, aged 65 years. Ammanati survived her three years, and died, according to Baldinucci's copy of the inscription on his monument, in 1592, aged 81.

(Baldinucci, *Notizie dei Professori del Disegno*, &c.; Ciognara *Storia della Scultura*.)

AMMIANUS MARCELLINUS, a soldier and author who lived in the 4th century, and wrote a history of the emperors from the accession of Nerva, A.D. 96, to the death of Valens in 378; the last profane history written by a Roman subject in the Latin language. He was of a Greek family, and born at Antioch; at least Libanius claims him as a fellow-citizen. At an early age he entered the army, in the distinguished service of the household guards of Constantius, son of Constantine. He was peculiarly attached to the fortunes of Ursicinus, the master of the horse, under whom he served, first in the East in 350, afterwards in Gaul, whither he went in 355. He was again sent with Ursicinus into the East, and served under the Emperor Julian in his Persian war, which he related at length and with considerable power. Later in life he retired to Rome, where he wrote his history, in thirty-one books. The first thirteen are lost, which contained an epitome of the history of two centuries and a half. The fourteenth begins just before the death of Constantius, and the transactions of the reign of Julian extend nearly to the end of the twenty-fifth. The question whether Ammianus was a Christian or a Pagan has been agitated. Though he has not expressly stated his sentiments, yet from the terms he applies to the heathen deities, it seems evident that at least he was not a Christian. In style he is inflated and vicious; but passages of considerable effect and eloquence occur in his work, which has every appearance of being a faithful and unprejudiced narration of public transactions, in many of which he had been personally engaged. Gibbon calls him "an accurate and faithful guide." Some suppose the Greek life of Thucydides to be written by him. The edition of Gronovius, 4to., Lugd. Bat., 1693, contains the life and prefatory matter of the Valesii. This has been the base of two other editions, with the notes of later commentators, both published at Leipzig, one by Ernesti in 1773, one by Erfurd in 1808. There is an old English translation by Philemon Holland (Lond. 1609), and a French one by Moulins (Berlin, 1775; Lyon, 1778).

AMMONIUS, an eminent ancient surgeon of Alexandria, whose date is not exactly known, but who must certainly have lived some time before Christ, and who (from the date of the other surgeons with whom his name is coupled by Celsus, 'De Medic.' vii. Præfat. p. 368, ed. Argent.) may be conjectured to have lived in the reign of Ptolemæus Philadelphus, B.C. 283-247. He is said (Celsus, lib. vii. cap. xxvi. s. 3, p. 436) to have been the first person who thought of breaking a calculus in the bladder, and so extracting it piecemeal, when it was found to be too large to be taken out entire. For this invention he received the cognomen of Lithotomus, a word which is used by the ancients in reference to the operation called by the moderns 'lithotomy,' and not to that of lithotomy. His mode of operating is described by Celsus with tolerable minuteness, and very much resembles that introduced by Civiale and Heurteloup; proving that, however much credit they may deserve for bringing it out of oblivion into public notice, the praise of having originally thought of it belongs to the ancients. (*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

AMO, ANTONY WILLIAM, a negro born in Guinea about the year 1703, was brought when an infant to Amsterdam, and presented in 1707 to Antony Utric, duke of Brupawick-Wolfenbüttel, who gave him to his son Antony William. At a proper age he was sent to study at the university of Halle, where in 1729 he sustained a thesis and published a dissertation 'De Jure Maurorum.' He afterwards removed to the university of Wittenberg, where in 1734 he published another treatise, on the occasional absence of sensation in the human mind while still present in the body. In the same year Amo was præsides at a thesis sustained by John Theodore Mainer, 'on those things which are suitable to the mind or body.' He was afterwards made a councillor of state by the court of Berlin; but on the death of his patron, the Duke of Brunswick, he quitted Europe. In the life of David Henry Gallandat, the founder of the Zealand Scientific Society, it is stated that in 1753, on a voyage to the Gold Coast, he visited Amo at Axim. "He was living there like a hermit," according to Winkelman, the biographer of Gallandat, "and had the reputation of being a soothsayer. He spoke several languages—Hebrew, Greek (?), Latin, French, German, and Dutch." He was then about fifty years of age. Amo afterwards left Axim, and removed to St. Sebastian, a fort belonging to the Dutch at Chamah, another town on the Gold Coast, after which nothing further is known of him. (*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

AMONTONS, GUILLAUME, a diligent mechanic and experimenter in natural philosophy, was born at Paris in August, 1663. He was, during all his life, afflicted with deafness, in consequence of a fever in his childhood; and, after a sickness which lasted but a few days, he died in October, 1705, being in the forty-third year of his age.

The taste of Amontons led him, at first, to the study of architecture and the processes of land-surveying; and he appears to have been occasionally employed in the practice of both those branches of art. It is said that he was induced to apply himself to the study of mathematics by the desire of constructing a machine which should exhibit a perpetual motion: an opinion of the possibility of such a machine certainly lingered among the half-learned of that age; and, if Amontons really attempted to form one, his failure had the good effect of disposing him to cultivate the legitimate branches of science.

At that time the instruments employed for measuring the density,

temperature, and humidity of the atmosphere were in an imperfect state; and several years of the life of Amontons were spent in improving them or in devising others. He invented a barometer, consisting of a slender conical tube of glass containing a column of mercury whose length varied by the variations in the upward pressure of the atmosphere on the base of the column; the open end of the tube, which was the greatest, being below, and the mercury being retained in the tube by a leathern bag. He also invented one, consisting of a tube bent so as to form three parallel columns, of which the first and the third contained mercury, and the intermediate one only air. Amontons contrived what he called a 'universal thermometer;' it was a tube of glass, 30 inches long, containing mercury, and to which was adapted a scale of inches; and, by comparing its indications with those of a column of mercury in an ordinary barometer, he was able to determine the expansion due to temperature alone; he also invented a species of hygrometer, consisting of a coloured fluid contained in a glass tube which terminated below in a leathern bag. The contraction or expansion of this bag, in consequence of variations in the humidity of the air, produced corresponding variations in the length of the column of fluid.

But the most remarkable circumstance in the life of Amontons is his invention of what must be considered as a species of telegraph. His proposal was to have signal-posts established at intervals between the two extreme stations, which were to be Paris and Rome; a man at each post, being provided with a telescope, was to observe the signal (a letter of the alphabet) made at one station, and to repeat it to the next; the process being carried on thus along the whole line. Two experiments are said to have been made by him in 1702, in presence of the royal family of France, but it is not said with what success. Dr. Hooke had however anticipated the discovery about eighteen years.

The only work which Amontons published is one entitled 'Remarques et Expériences Physiques sur la Construction d'une Nouvelle Clepsydre, sur les Baromètres, Thermomètres, et Hygromètres,' Paris, 1695. He was, subsequently to the publication of this work, chosen a member of the Académie des Sciences; and among the 'Mémoires' of that body are those of Amontons on the Expansion of Fluids by Heat, on the Muscular Strength of Men and Animals, and on the Friction of Materials.

(*Biographic Universelle; Fontenelle, Eloge d'Amontons.*)

AMOROS, COLONEL FRANCIS, the first establisher of gymnastic education in France, was born at Valencia in Spain in 1769. He entered the military service of his country in 1787, and was raised by successive steps, each one the recompense of some distinguished action, until he attained the rank of colonel. When called upon to serve in an administrative capacity he was successively employed by Charles IV. and by Joseph-Napoleon as councillor of state, governor of a province, minister of police, and commissary-royal of the army in Portugal. In 1807 he was entrusted with the education of the Infant Don Francisco de Paula. Forced to quit his country when the French were expelled, he sought an asylum in France, and there he endeavoured to establish an institution till that time wanting. After subduing numerous difficulties by great perseverance, he at length, under the auspices of the government, established a gymnasium for the development of the physical forces, to which at the same time he gave the most useful direction. In 1831 he was appointed director of the normal military gymnasium at Paris. He wrote and published several works upon administration and upon education, besides his 'Manual of Physical Education, gymnastic and moral,' Paris, 1830. He died at Paris in 1843.

AMORY, THOMAS. This eccentric individual was the son of Councillor Amory, who attended William III. in Ireland, and was appointed secretary for the forfeited estates in that kingdom, where he possessed extensive property in the county of Clare. Thomas was not born in Ireland, as some accounts state; but little is recorded of his early life. He was born about 1691, and is said to have been educated for the profession of physic, though it does not appear that he ever followed that or any other profession. About 1757 he was living in a very secluded way upon a small fortune in Westminster; and he had also a country residence at Bedford, near Hounslow. He was married, and had a son named Robert, who practised for many years at Wakefield in Yorkshire as a physician. He died at the age of ninety-seven, on November 25, 1788.

In 1755 Amory published, in 1 vol. 8vo, 'Memoirs of several Ladies of Great Britain.' The ladies whose memoirs are given were all, like Amory himself, zealous Unitarians, in addition to which they are made beautiful, learned, and ingenious.

In 1756 appeared, in 8vo, the first volume of 'The Life of John Bunce, Esq.; containing various Observations and Reflections made in several parts of the World, and many extraordinary Relations;' the second volume was published in 1766. This book, in which it has been supposed Amory intended to sketch a picture of his own character and adventures, may be considered in some measure as a supplement to his 'Memoirs.' A writer in the 'Retrospective Review' styles his 'Memoirs' and 'Life of John Bunce' two of the most extraordinary productions of British intellect; and, without disputing his enthusiastic promulgation of Unitarian principles, assigns to him a deep veneration for the New Testament, an intense conviction of its

truth, a vivacious temperament, a social heart, great erudition, and acute reasoning powers: on the other hand, Chalmers, in his 'Biographical Dictionary,' calls them the effusions of a mind evidently deranged.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

AMOS, the prophet, was a native of the town of Thekoa, which was about six miles south of Bethlehem. He was not a prophet's son, but a herdsman, and a gatherer of sycamore fruit, and the Lord took him as he followed the flock, to prophesy unto Israel. (Amos vii. 14, 15.) Amos saw his visions concerning Israel in the days of Uzziah, king of Judah, and in the days of Jeroboam II., king of Israel, two years before the earthquake. (Amos i. 1.) This earthquake is mentioned by Zachariah (xiv. 5), and happened, according to the opinions of the later Jews, when Uzziah went into the temple to burn incense upon the altar; and Azariah, the priest, went in after him, and with him fourscore priests, valiant men, who withstood Uzziah, and said, It appertaineth not unto thee to burn incense, but to the priests that are consecrated: go out of the sanctuary. Then Uzziah was wroth, leprosy rose in his forehead, and the priests thrust him out from thence. (2 Chron. xxvi.) It is probable that the prophecies of Amos were delivered between the years 798-784 before Christ.

Many having repeated St. Jerome's saying, that Amos was "rude in speech, but not in knowledge," Bishop Louth, in his twenty-first lecture, shows that Amos was not behind the chief prophets in eloquence. The book of Amos is written in an excellent Hebrew style, but the orthography differs occasionally from the usual standard. Amos, the herdsman, has taken many figures from pastoral life, but he alludes also to history, geography, and astronomy.

AMTÈRE, ANDRÉ MARIE, was one of the many scientific men who since the commencement of the present century have distinguished themselves by the application of the highest branches of mathematical analysis to physical propositions, and particularly to such as relate to electricity, magnetism, and light.

Of his private life little is known; and his history, like that of most of the men who have passed their days in scientific pursuits, consists merely in statements of his birth and death, with a list of the works which he composed. He was born at Lyon in 1775; and it appears that he resided in or near that city till about the year 1804, when he removed to Paris, where he died in 1836. Before this removal he was professor of physics in the central school of the department of Ain, and subsequently he held the appointment of professor of analysis in the Polytechnic School of Paris.

His first publication is entitled 'Considerations sur la Théorie Mathématique du Jeu' (Lyon, 1802), in which it is satisfactorily proved that, if a person play habitually in society, he must infallibly, even though he play on equal terms, be ruined; since he is, as it were, playing with finite means against an opponent who may be considered as infinitely rich, and who therefore may continue the game indefinitely. In 1805 Ampère presented to the Class of Physical and Mathematical Sciences of the National Institute a paper entitled 'Recherches sur l'Application des Formules Générales du Calcul des Variations aux Problèmes de Mécanique;' and in the 'Annales de Chimie' (1814), there is published his letter to Berthollet on the subject of 'Definite Proportions, or the Atomic Theory.'

Some connection between the electric, galvanic, and magnetic powers in nature had been long suspected, on account of the observed effects of lightning on the directive property of a magnetised needle; and in 1819 M. Oersted observed that the wire connecting the opposite poles of a galvanic or voltaic battery caused a magnetised needle, suspended near it, to deviate from that position which it assumes when beyond the influence of any disturbing power. This remarkable phenomenon being made public, the philosophers both of this country and of the continent repeated the experiment in various ways; and almost immediately, by the discoveries to which their researches led, raised up a new branch of science. Among the earliest of these philosophers was Ampère, who in September, 1820, read before the Académie Royale des Sciences a paper in which it was stated that the voltaic pile, or galvanic trough itself, produced a like effect on a needle suspended near it, when its opposite poles are connected by a wire; and soon afterwards he communicated an important discovery which proved that some, at least, of the phenomena of magnetism could be represented by electricity alone. He showed that if two wires connect the opposite poles of a battery, they attract one another when so disposed that the currents pass along them in the same direction, and repel one another when the currents flow in contrary directions; and he contrived a delicate apparatus by which the phenomena were exhibited.

Faraday having discovered that if a wire be suspended over one pole of a magnet, and the galvanic fluid be made to pass along the wire, or if the wire be fixed and the magnet suspended over it, the wire in one case, and the magnet in the other, would revolve about the fixed object; Ampère, to whom the discovery was communicated, immediately repeated the experiment, and subsequently contrived an apparatus in which the suspended magnet was, by the influence of the wire, made to revolve on its own axis. He also invented the well-known apparatus, consisting of a copper cylinder surrounding one of zinc, and containing diluted sulphuric acid, both of which cylinders being supported by conical points over one end of a magnet, placed in a vertical position, revolve about the magnet; from right to left if the

north end be uppermost, and in a contrary direction if the south end be uppermost. M. Arago afterwards, in conjunction with or at the suggestion of Ampère, succeeded in communicating magnetism to a needle by placing it within a helix of copper wire, the extremities of which were connected with the poles of a battery.

From the mutual attractions and repulsions existing apparently in electrical, or, as they may be called, electro-magnetic currents, Ampère inferred that such currents revolve continually about a magnet; at first he supposed that the centres of their revolutions were in the axis of the magnet, but he was subsequently led to consider that currents revolve about each atom in planes a little inclined to the general axis of the magnet: setting out with this principle, he satisfactorily deduced, by analytical processes, the phenomenon of electro-magnetism, or, as he designated the science, electro-dynamics. He conceived moreover that the magnetic action of the earth is the result of currents circulating within it, or at its surface, from east to west in planes parallel to the magnetic equator: he also imagined that these currents act on balanced or suspended bodies which, like magnetised needles, contain electric currents, causing them to place themselves in such positions that the currents on their under sides may flow in the same directions as those of the earth. He contrived several ingenious machines in which terrestrial magnetism was an agent: among others, he disposed a wire, bent in the form of a rectangle or a spiral, so that the plane might turn on a vertical axis; and, placing it in the position of the magnetic meridian, he allowed the electric current to enter at either extremity, when, exactly as a magnetised needle would do, it turned till it became at right angles to that meridian. He also exhibited to the Royal Academy of Sciences a copper wire bent in the form of a helix which possessed the properties of a magnet; the two extremities of the wire returned along the axis of the helix, each way, to the middle, whence they passed out in opposite directions, and served as pivots on which the spiral might turn. When the pivots were connected with the poles of a battery, each end of the helix, on a pole of a common magnet being presented to it, was attracted or repelled.

Ampère published at Paris, in 1822, a work entitled 'Recueil d'Observations Electro-Dynamiques;' in 1824, one which was designated 'Précis de la Théorie des Phénomènes Electro-Dynamiques' (both of these are in 8vo.); and in 1826, in 4to, 'Théorie des Phénomènes Electro-Dynamiques.' Two years afterwards he published a 'Mémoire sur la Détermination de la Surface Courbe des Ondes Lumineuses,' &c.; and six years subsequently an 'Essai sur la Philosophie des Sciences,' &c. Besides these works there were published separately several memoirs relating to his experiments in electro-dynamics; also, in the 'Mémoires de l'Institut,' in the 'Journal de l'École Polytechnique,' and in other works, are many papers relating to Mechanics, Optics, and Natural History.

(*Address of H. R. H. the Duke of Sussex to the Royal Society of London, 1836; Barlow, Essay on Magnetic Attractions; Turner, Elements of Chemistry.*)

AMURATH. [MURAD.]

AMYOT, JAQUES, is chiefly known in our times for the high merit which belongs to him as having been one of the most distinguished among those early writers of French prose whose works gave consistency and elegance to the modern language. He was born at Melun in 1513; and overcoming, it is said, formidable obstacles interposed by poverty, studied successively at Paris and at Bourges. His first preferment was the professorship of Greek and Latin in the university of Bourges, an appointment obtained for him through the patronage of Francis I.'s sister, the Princess Marguerite. While he held that office he extended his literary reputation by translations from Heliodorus and Plutarch, and having apparently by this time entered the church, he was intrusted in 1551 with a delicate mission to the Council of Trent, which he discharged with so happy a mixture of boldness and dexterity as to earn the character of a skilful diplomatist and man of business. Possessing such a combination of accomplishments, he had excellent claims to the appointment which he received about the year 1558 as tutor to Henry II.'s sons (afterwards Charles IX. and Henry III.); and contriving to retain the favour of his royal pupils as they successively ascended the throne, he continued during the remainder of his life to receive one lucrative and dignified office after another. His most considerable preferments were—the post of Grand Almoner of France, conferred upon him in 1560; and the bishopric of Auxerre, to which he was raised in 1570. During this most prosperous period of his life he is represented as having exhibited a rapacity in seeking wealth, and a parsimony in using it, which, as well as his readiness of wit, the memoirs of the time depict in several characteristic anecdotes. Upon one occasion, when he asked from Charles IX. a new abbacy, in addition to several which he had already held, the king demurred to granting the application. "Did you not once assure me," he asked, "that your ambition would be quite satisfied with a revenue of a thousand crowns?" "True, sire," replied the bishop; "but there are some appetites which grow as you feed them." Amyot died at the seat of his diocese in 1598, leaving a fortune which for the times was very considerable.

As a literary man, Amyot stands very high. His translation of Plutarch's 'Lives,' which was made from the Latin, is spirited and elegant, and is still read in modern editions. It is remarkable that what we may call the best translation of Plutarch in English, North's

is made from Amyot's French. His other works consist of French translations of other Greek works, of which the principal are the 'Æthiopic History of Helioidorus,' seven books of Diodorus, the 'Pastoral Loves of Daphnis and Chloe,' &c. He has besides given an 'Account of his Journey to Trent,' in a letter addressed to M. de Morveilliers. He composed a treatise on 'Royal Eloquence' for the use of his pupil, Henri III., which was printed for the first time only in 1805, under the reign of Napoleon I. It was at the suggestion of Amyot that Henri III. founded in 1575 a Greek and Latin library.

AMYOT, THOMAS, was born at Norwich about 1775, and settled in that city as a solicitor. In 1802 he was appointed law-agent for Mr. Windham in a contested election, and this led, on Windham's becoming Secretary-at-War in 1806 in the Grenville administration, to his being appointed his private secretary. His tenure of this office was something less than a twelvemonth, but during it he had obtained also one of the ordinary clerkships in the Colonial Office; and in 1807 he was appointed Registrar of Records in Upper Canada, an office executed by deputy. In 1810 Mr. Windham died; and in 1812 Mr. Amyot published the speeches in parliament of his late patron, with a short sketch of his life. Mr. Amyot's leisure was now devoted to the study of the antiquities and history of his country, all his other works being contributions to the 'Archæologia,' his principal papers being on the Bayeux Tapestry, and on the asserted existence of Richard II. in Scotland. In 1823 he was appointed treasurer of the Society of Antiquaries, an office which he filled very effectively till within a short time of his death, which took place in London, September 28, 1850.

ANACHARSIS, a Scythian of princely family, was, according to Herodotus, a son of Gnurus, or, according to others, of Daucetas, and the brother of Saulius, who was king of the Scythians. Notwithstanding the great aversion of the Scythians to everything foreign, especially Greek, the natural good sense and talent which Herodotus ascribes to all the Scythians, and which Anacharsis possessed in a higher degree than any of his nation, created in him such a desire of knowledge that he broke through the custom of his people, and went to Greece for the purpose of satisfying his wishes. He arrived at Athens just at the time when Solon was engaged upon the work of his legislation, and is said to have formed an intimate friendship with him. The novelty of his appearance, his natural wit, which contrasted with the more refined and artificial manners of the Athenians, his humour, and his anxiety to learn, created a great sensation among the Greeks. Many of his witty sayings are recorded in Diogenes Laertius, Plutarch, Athenæus, and Lucian. He is said to have likened the legislation of Solon to a spider's web, in which the weak might be caught, but which the strong would break through. The fact that at Athens political matters were discussed by the prytanes before they were laid before the people for their approbation, led him to say that at Athens wise men deliberated, but left the decision to fools. Some writers reckoned Anacharsis one of the seven sages of Greece, and it was probably more to these and similar sayings than to anything else, that he owed his reputation as a wise man and a philosopher. It is said that he was the only barbarian that ever received the Athenian franchise, and was initiated in the Eleusinian mysteries; but Lucian justly doubts the correctness of the statement. His fondness for religious mysteries however is said to have been the cause of his death. On his journey homewards, when he reached Cyzicus, the inhabitants were celebrating the mysteries of Cybele, the mother of the gods. Anacharsis prayed to the goddess, and vowed that if he reached home in safety, he would solemnise these mysteries in the same manner. He carried his vow into execution in a wooded district called Hylæa, but he was discovered by a Scythian, and denounced to the king, his brother. The king came to the spot to convince himself; and when he saw Anacharsis performing the Greek rites, he shot him dead with an arrow. The Scythians were so indignant at the conduct of Anacharsis, that, as Herodotus says, they afterwards pretended not to know him if anybody asked them about him.

There once existed several works which were ascribed to Anacharsis. Among them are some letters addressed to various illustrious personages of the time. Aldus, in his collection of the Greek 'Epistolographers' (Venice, 1499, 4to), published nine letters under the name of Anacharsis. But Bentley has justly remarked that, like other ancient productions of the same class, they are forgeries. The other works ascribed to Anacharsis, such as an epic poem of eight hundred verses, a work on war, on the laws of the Scythians, and some Greek customs, are now lost; but they were unquestionably not more genuine than the letters and the numerous inventions that were ascribed to him.

(Herodotus, iv. 46, 76; Cicero, *Tusculanæ Questiones*, v. 32; Strabo, vii. 301, 303; Plutarch, *Solon*, 5; Diogenes Laertius, i. c. viii.; Athenæus, iv. 159, x. 428, 437, xiv. 613, ed. Casaub.; *Ælian*, *Varie Historiæ*, v. 7; compare Lucian, *Scythia, seu Conciliator Hospitii*, and *Anacharsis, vive de Exercitationibus*.)

(*Biographical Dictionary of Useful Knowledge Society*.)

ANACREON was a native of Teos, a maritime town of Ionia in Asia Minor, and born, according to the common opinion, about B.C. 560. He spent his early life in his native town, and there imbibed the light and volatile spirit and the love of enjoyment which characterised the Ionic nation. About B.C. 540, when Ionia fell under the yoke of the Persians, and Teos was taken by Harpagus, the general of Cyrus,

most of the Teians quitted their native town, and settled at Abdera in Thrace, and Anacreon is said to have joined his countrymen in their emigration. If this statement is true, Anacreon cannot have remained long at Abdera, for it was about the same time (B.C. 540) that Polycrates became tyrant of Samos; and it is stated that Anacreon was invited from Teos by the father of Polycrates, at the request of Polycrates, and before he became tyrant, to be his instructor and friend. Hence the account of his emigration to Abdera is rejected by some critics. Anacreon remained in Samos till after, or at least till shortly before, the murder of his friend and patron in B.C. 522. About the time of the death of Polycrates, Hipparchus, the son of Pisistratus, is said to have invited Anacreon to Athens, and to have sent a ship of fifty oars to Samos to bring him over. At Athens he lived for some time. His death is said to have been occasioned by a dried grape, which choked him. The statement that he was a lover of Sappho is, if not impossible, at least in the highest degree improbable, and arose from the practice, so common among writers of antiquity, of placing persons of the same character in some sort of relation to one another. His native town, proud of the poet, placed his full figure and sometimes his bust only on its coins, some of which are still extant. On the acropolis of Athens there was likewise a statue of Anacreon, representing him in a state of intoxicated joyousness.

We still possess numerous fragments of the genuine poems of Anacreon, which enable us to form a notion of the character of his poetry, and which justify the universal admiration of antiquity. The praise of beauty, love, and wine, was the substance of his poems from his earliest to his latest age; and the cheerful and joyous old man, as Anacreon describes himself in some of his latest productions, has made so strong an impression, that we can scarcely picture him to ourselves in any other form than that of an old man, although the greater part of his fragments belong to the period which he spent at Samos and Athens.

Besides the numerous fragments of the genuine poems of Anacreon preserved in ancient writers, there is a collection of fifty-five odes, which have been generally considered as poems of Anacreon, most of which however are productions of a much later age. This collection was first published by H. Stephens at Paris, 1554, 4to, from two manuscripts, which he describes very vaguely, and which no one else has seen. The same poems however were subsequently found in the 'Codex Palatinus' (now at Heidelberg) of the Greek Anthology, though arranged in a different order from that in the edition of Stephens. Most of these fifty-five poems are pretty in their way, but exhibit very little of the character and spirit which we perceive in the genuine fragments of Anacreon; and all modern critics are agreed that they are not the work of this poet, although they have been translated into all European languages, and have with the majority of persons been the ground-work upon which they have formed their notions of Anacreon. Of those who have attempted to present Anacreon in an English dress, the most celebrated, and the most successful, are Cowley, who translated twelve odes, and Moore. But the translations of the former should rather be called paraphrases; and the version of the latter is too much loaded with ornament, too studiously brilliant, to convey an exact idea of the style of his original. Some pretty specimens of the poet (including one or two of Cowley's translations) will be found in Merivale's 'Anthology.' The genuine remains of Anacreon are published in several collections of the minor Greek poets; the best separate edition is that of Theod. Bergk, Leipzig, 1834, 8vo.

(Müller, *History of the Literature of Ancient Greece*, i. 180, &c.; Bode, *Geschichte der Lyrischen Dichtkunst der Hellenen*, i. 350, &c.; Wolper, *De Antiquitate Carminum Anacreonteorum*, Leipzig, 1825, 8vo.)

(*Biographical Dictionary of the Useful Knowledge Society*.)

ANANIAS, a convert to Christianity at Jerusalem in the apostolic age, was struck dead, with his wife Sapphira, for falsehood. (Acts v. 1-11.)

ANANIAS was son of that Onias, the high priest, who being exiled from Jerusalem, built a Jewish temple near Heliopolis, in Lower Egypt, and founded the town of Onion on the eastern frontier of the Delta. Ananias and his brother Helcias, or Chelcias, were appointed the commanders of the Egyptian army, by Cleopatra, when she warred against her son Lathurus, in the year B.C. 102. Ananias remonstrated against the intention of Cleopatra to seize the dominions of her confederate Alexander Jannæus, and assured her that the Jews would take revenge if she succeeded in killing Jannæus. Cleopatra, considering that Ananias and Jannæus were related to each other, and that many Jews served in her army, gave up her treacherous plan. (Jost, *Geschichte der Juden*, vol. ii. p. 309-311.)

ANANIAS, the son of Nebedæus, was high-priest from the year 50 to 66 after Christ. He was sent to Rome by Quadratus, the governor of Syria, in order to exculpate himself concerning the quarrels of the Jews with the Samaritans. Agrippina interceded for Ananias, and he was set at liberty. He condemned the apostle St. Paul. (Acts xxii. 23, 24; and xxv. 1.) At the commencement of the Jewish war, Ananias and his brother concealed themselves in an aqueduct, but were discovered and killed.

ANASTASIUS I., emperor of Constantinople, succeeded Zeno, A.D. 492, through the interest of Ariadne, Zeno's widow, who afterwards married him. Anastasius was then sixty years of age. He was

called *Silentarius*, because he had been one of the officers whose duty it was to maintain peace and silence within the precincts of the imperial palace. Longinus, Zeno's brother, who aspired to the throne, was sent to Alexandria, where he took priest's orders. The beginning of Anastasius's reign was favourable; he abolished several obnoxious taxes, and checked the abuse introduced by Zeno of selling the public offices to the highest bidder. He also encouraged men of letters, and was himself a man of some learning. Theodoricus, king of the Goths, who, after defeating Odoacer, had made himself master of all Italy, sent an embassy to Anastasius, who recognised his title to the kingdom of Italy, and sent him the purple in token of it. But their good understanding did not last long. Theodoricus invaded part of Illyria and Moesia, and defeated the Greek troops near the river Margus, now the Morava, in Servia. Anastasius, on his side, sent a fleet and army, which ravaged the coast of Italy as far as Tarentum, in 508.

Anastasius became obnoxious, on account of his avarice, to the people of Constantinople, who pulled down his statues and dragged them through the streets; and he was himself assailed with a shower of stones while in the Circus, and with some difficulty saved his life. To add to his misfortunes, the empire was attacked by the Bulgarians, the Arabs, and the Persians. The Persians invaded Armenia, and took the town of Amida, or Diarbekr, on the Tigris, but were defeated by Justinus, who afterwards became emperor. A truce was concluded between Anastasius and Cabades, king of Persia, which lasted twenty years. Anastasius, like many other Byzantine emperors, had the vanity of appearing as a theologian, and of meddling in religious controversies. This nearly cost him his crown; his attempt to introduce some changes in the liturgy occasioned tumults at Constantinople, attended by fires and bloodshed. Several provinces also revolted, and raised to the command one Vitalianus, a Scythian, who advanced to the gates of Constantinople, and Anastasius only obtained peace on condition of becoming reconciled to the church. He had involved himself in disputes with Pope Symmachus, for defending the memory of Acacius, the late Patriarch of Constantinople, who had been excommunicated by Pope Felix II, under the reign of the emperor Zeno. The Council of Chalcedon having declared the Bishop of Constantinople to be next in place to him of Rome, Acacius had contested this decree, and had endeavoured to assert his own precedence, which became a source of schism between the two sees. Anastasius's religious principles however seem to have been very unsteady, and he was even accused of favouring Manicheism. Anastasius died suddenly, in 518, at a very advanced age, and was succeeded by Justinus I.

ANASTASIUS II., emperor of Constantinople. His original name was Artemius, while he was secretary to the emperor Philippicus Bardanes. After the deposition of Philippicus in 713, he was proclaimed emperor, and sent a new exarch to Italy, and declared himself a follower of the Western Church. Constantinople being threatened by the Saracens, Anastasius, to effect a diversion, sent a large fleet with an army to Alexandria, but the troops revolted on arriving at Rhodes, and returned to Constantinople, where they proclaimed emperor one Theodosius, a receiver of the taxes, who however alarmed at his dangerous promotion, ran away from them. The insurgents plundered and burnt part of the city, and Anastasius having retired to Nicæa, in Bithynia, was defeated and obliged to surrender, with permission to retire to a convent, and become a monk. Theodosius III. was then proclaimed emperor in 716, but being unequal to the task, he resigned the crown the following year to Leo, called the Isaurian. Anastasius, from his convent at Thessalonica, made an attempt to recover the throne, and having obtained assistance from the Bulgarians, appeared before Constantinople. Leo however bribed the chiefs of the Bulgarians, who delivered Anastasius into his hands. Anastasius was beheaded, with several of his followers, and their property was confiscated by Leo, in 719.

ANASTASIUS I., Pope, a native of Rome, succeeded Siricus about the year 398. He was a contemporary of St. Jerome, who speaks highly of his probity and apostolic zeal. He condemned the doctrine of Origen, and excommunicated Rufinus, who in a controversy with Jerome had been the advocate of Origen. Rufinus wrote an apology, which is found in Constantine's collection of the 'Epistles of the Popes.' Anastasius died in 402, and was succeeded by Innocent I.

ANASTASIUS II., a native of Rome, succeeded Gelasius I. in 496. He endeavoured to put an end to the schism then existing between the see of Constantinople and that of Rome about the question of precedence. Two letters written by him on the occasion to the emperor Anastasius, are still extant. He also wrote a congratulatory letter to Clovis, king of the Franks, on his conversion to Christianity. He died, after a short pontificate, in 498.

ANASTASIUS III., likewise a Roman, succeeded Sergius III. in 911, and died the following year.

ANASTASIUS IV., Cardinal Conrad, bishop of Sabina, was elected Pope in 1153, after the death of Eugenius III. Rome was then in a very disturbed state, owing to the schism of Arnaldo of Brescia and his followers. Anastasius died in 1154, and was succeeded by Adrian IV.

ANAXAGORAS, a philosopher of the Ionic school, born at Clazomenæ, one of the Greek towns of Ionia, in the first year of the 17th Olympiad, or in B.C. 500, three years before the death of Pythagoras, and ten years before the battle of Marathon. Born both to rank and

wealth, he had leisure to apply himself to philosophy and astronomy, under the instruction of Anaximenes. In the twentieth year of his age (that of the battle of Salamis) he went to Athens, where he continued thirty years, engaged in the propagation of his philosophical opinions. He numbered among his hearers Pericles, Euripides, Socrates, Archelaus, who succeeded him as head of the school known by the name of Ionic, and some say, Democritus. He obtained the surname of *νοῦς* (the mind). It is said that he was the first who taught the distinction between mind and matter; but this is improbable, unless we understand the first who taught the doctrine at Athens. Of the persecutions which drove him from that city there are different accounts. One is, that he was accused of being in communication with the Persian king, and condemned to death in his absence; another, that he was banished for his opinions, and starved himself to death at Lampacæ; a third, that he was found guilty of impiety for his opinions respecting the sun, and condemned to death, but saved by the intercession of Pericles; while Plutarch affirms that Pericles was his only accuser. Montucla, without citing his authority, says it was for an essay on the cause of eclipses that he was condemned. However this may be, he departed from Athens, and lived at Lampacæ on the Hellespont till his death, a period of twenty-two years. He died B.C. 428, aged 72.

A writer in the 'Biographical Dictionary of the Society of Useful Knowledge,' gives the following analysis of the philosophical opinions of Anaxagoras:—"Anaxagoras wrote a treatise in the Ionic dialect, on Nature, which was highly valued. Several fragments of it have been preserved by ancient writers, especially by Simplicius. He denied that there was either generation or destruction; there was only union and separation of things already existing, so that generation ought to be called union or mixture of things, and destruction ought to be called separation. He began his treatise by representing all things as originally in a state of mixture or confusion, till *Nous* gave them order. These elemental things were infinite in number and minuteness, and, as all things were mixed, nothing was perceptible owing to its minuteness. As he supposed the primal elements to be infinitely small, he did not adopt an atomic theory, for, as Bayle has correctly said, the atomic theory, though it supposes the whole number of atoms to be infinite, involves the supposition of the number being finite in any given body. He denied that there was chance or accident; these were only names for unknown causes. Yet he did not assume a fate or necessity. He maintained that there was a moving power, and he called it *Nous*. *Nous* was conceived as the cause of the union and separation of things; it has given order to all that has been, and is, and will give order to all that is to be. He conceived matter to be infinite in quantity, duality, and minuteness, and *Nous* as arranging it in order, and so producing the beautiful and the good. Thus he distinguished between the moved and the moving power, which itself had no motion, and thus he established two independent principles in opposition to the sole principle of Anaximander. His general doctrine as to *Nous* is expressed with sufficient clearness in a passage preserved by Simplicius: '*Nous* is infinite, self-potent, and unmixed with any thing. It exists by itself. For, if it did not, but were mixed with anything else, it would have a part in all things by being mixed with any one; for in all there is a portion of all.' He adds that '*Nous* is the most subtle and the purest of all things, and has all knowledge about all things, and infinite power (*λαχύνει μέγιστον*).' He may have conceived *Nous* as diffused through all things, but not mixed with anything."

Among the particular opinions attributed to Anaxagoras are the following:—That all substances are composed each of their proper parts, which are small and capable of infinite divisibility (Lucretius, i. 830, &c.)—that the stars are stones torn from the earth, and set on fire by the ether which pervades the whole upper part of the universe—that the sun is a burning plate or globe, bigger than the Peloponnesus—that the moon receives light from the sun (Plato says this opinion is anterior to him), and has seas, hills, and valleys of her own—that the milky way is the shadow of the earth thrown upon the heaven; others say, he thought it consisted of stars of too feeble light to be seen by day—that the rainbow is caused by the clouds being held before the sun as a mirror—that winds are caused by the sun's heat rarefying the air—that earthquakes are caused by the effort of confined air to ascend—that snow is not white, but black (this opinion of his is reported by Cicero)—that the earth is flat, and that its inclination is the cause of the seasons—that the soul has an aerial body—and that sound and echo are conveyed to us by the air. Montucla protests against many of these opinions being supposed to be those of Anaxagoras, but we cannot see with what reason. That they are given by very various and doubtful authorities is true; but there is nothing so absurd in the opinions themselves, compared with others which we know to have existed at the same time, to warrant us in rejecting any one of them on that ground.

ANAXIMANDER was a native of Miletus. According to Apollodorus, he was born in B.C. 610, and lived to be somewhat more than sixty-four years of age. He is said to have been the disciple or friend of Thales, who was about thirty years older. The facts of his life are few and doubtful. He is mentioned as having conducted a colony to Apollonia. Strabo, Diogenes Laertius, and Agathemerus attribute to him the invention of geographical tables, or a kind of

map; and, according to Diogenes, he set up a dial at Lacedæmon, though Pliny attributes this to Anaximenes ('Hist. Nat.' ii. 76), who, he adds, discovered the use of the gnomon; but this is not consistent with the statement of Herodotus, who attributes the invention of the gnomon to the Babylonians. Pliny also states somewhat obscurely that he discovered the obliquity of the ecliptic. He considered the earth to be spherical and in the centre of the universe; that the moon received her light from the sun; and that the sun was not less than the earth, and was pure fire. Plutarch states his opinion of the magnitude of the sun somewhat differently, and by no means intelligibly; and, according to some authorities, he made the earth a cylinder, with a length three times that of its diameter. Pliny states that he predicted a great earthquake, which happened at Sparta. He briefly recorded his opinions in a small book, which is the oldest prose work on philosophy that is mentioned among the Greeks.

He is said to have introduced the use of the word *Arche* (*ἀρχή*) for the universal principle, which he considered to be infinite, and which it seems he viewed as a mixture of various parts, out of which things, as we call them, were formed by the union of similar parts. All things, considered as all, were an eternal unit. The objects of our sensuous perceptions were the product of the moving power that belonged to this unit; this motion separated like from unlike, and brought like and like together. This generation was only a change of relative position among the infinite parts of the eternal unit: generation was no change in the nature of the elements. This view is in accordance with the notions of the other mechanical philosophers, such as Anaxagoras and Empedocles, and opposed to the dynamical school. According to Anaxagoras, warm and cold were first separated; the cold occupied the centre, and the warm lay all around; the process of separation went on till sea and earth were formed, and all the heavenly bodies.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ANAXIMENES, the son of Eurystratus, a native of Miletus. The time of his birth is variously given. According to Apollodorus he was born in the 63rd Olympiad (B.C. 528-525.)

Anaximenes wrote in the Ionic dialect in a simple style, and Theophrastus compiled a work on his opinions. This is all that we know of his life. His doctrines are to be collected from writers of various ages, many of whom certainly had very inexact notions of his doctrines, the blame of which may belong both to Anaximenes and themselves.

The opinions of Anaximenes belong to that branch of the Ionic school, if this term may be used, which is called the dynamical, as opposed to the mechanical, to which Anaximander belonged. According to Anaximenes, the primal principle was *Aer*, of which all things are formed, and into which all things are resolved.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ANCILLON, DAVID, a learned French Protestant clergyman. He was born March 17, 1617, at Metz, where his father was an eminent lawyer. Having attended for some years the Jesuits' College there, he went to Geneva in 1633, to complete his studies in philosophy and theology; and in 1641, was licensed to preach by the synod of Charenton, and appointed minister of Meaux, the most important of the stations under their jurisdiction then vacant. Here he remained till 1653, having in the meantime married a lady of large fortune. In 1653, however, he accepted a call to his native town of Metz; and here he continued to officiate with great reputation till the revocation of the Edict of Nantes, in 1685, when he retired to Frankfort. He was soon after chosen minister of the French church at Hanau. He afterwards proceeded to Berlin, where he was received with great favour by the Elector of Brandenburg. Here he continued to reside till his death, on the 3rd of September, 1692. He was the author of several works, principally in defence of the reformed faith. Perhaps, however, the most favourable impression of his varied learning is to be obtained from the work, entitled '*Mélanges Critique du Littérature, recueilli des Conversations de feu M. Ancillon*,' published at Basle, in 1698, by his son Charles, who was a lawyer of reputation, and a man of some literary distinction.

ANCILLON, JOHANN PETER FRIEDRICH, was born at Berlin on the 30th of April, 1766. He belonged to the celebrated French family of the Ancillons. His father, Ludwig Friedrich Ancillon, who was himself a man of great talent and knowledge, gave his son an excellent education. Friedrich Ancillon (as he is commonly called) studied theology, and on his return from the university he was appointed teacher at the military academy of Berlin, and preacher at the French church of the same town. He began his literary career by a work entitled '*Mélanges de Littérature et de Philosophie*,' Berlin, 1801, 2 vols., 8vo. As the French language was always spoken in the family, Ancillon spoke French with the same eloquence and facility as German. A few years after the publication of his first work, which was soon followed by others, in which he showed a great knowledge of modern history and of the political relations of Europe, he was elected a member of the Academy of Sciences of Berlin, and was at the same time appointed its historiographer. In 1806 he was appointed instructor of the Crown Prince of Prussia, and was further distinguished by the title of Councillor of State. During the unfortunate period for

Prussia which almost immediately followed the battle of Jena, Ancillon did not yield in patriotism to any genuine Prussian, and, with other men of influence, he exerted himself to raise Prussia from its fallen state, and to promote its regeneration. In 1814, when he accompanied the Crown Prince to Paris, he met with the most honourable reception. On his return to Berlin he was appointed actual privy councillor of legation in the ministry for foreign affairs, and became a member of the commission which was appointed to draw up a constitution for the kingdom of Prussia. The labours of this commission however, as well as those of a second commission appointed in 1819, of which Ancillon was likewise a member, were not followed by any results. In the conflict of opinions during that period, in which so many hopes were disappointed, Ancillon was one of the few statesmen who were bold enough to publish their views on constitutional freedom, and he examined the questions relating to it fairly and calmly. In 1825 he was placed at the head of the business department of the foreign office, and in 1831 he was intrusted with the direction of the department of foreign affairs, and in this exalted position he continued to his death on the 10th of April, 1837. (*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ANCRE, MARÉCHAL and MARQUIS D'. To this high military rank and title was raised a poor and obscure Florentine gentleman of the name of Concini dei Concini, son of a notary. He came to Paris in the suite of Maria de' Medici, whom Henri IV. of France espoused after he had repudiated Marguerite de Valois. Concini soon after his arrival married Eleonora Galigai, one of the queen's women of the chamber. Both were ambitious, persevering, and endowed with those abilities which at that time insured success at court. On Maria de' Medici becoming regent after the assassination of Henri IV., the elevation of Concini was extremely rapid. He was first made eunuch to the queen, then master of the horse, and soon after his purchasing the marquise of Ancre (under which name he is known in history) he was made first gentleman of the king's chamber. The dignity of Maréchal of France was also conferred on him by the queen-regent. Such sudden elevation and rapid accumulation of immense wealth not only gave rise to suspicions very unfavourable to his character, but excited the jealousy of the court. His insolence to the young king, and his overbearing manner to the nobles, were the cause of that hatred which brought him to a dreadful end. For some time attempts were made, but in vain, to hurl the Italian adventurer from his envied elevation; the princes themselves joined against him without success. However, a young man of the name of Luynes (known afterwards as Duc de Luynes), who was in great favour with the young king, persuaded him to deliver the queen-mother from the power of her favourite; and urged his insolent bearing to the nobility and his pernicious influence with so much success, that at last Louis XIII. ordered the maréchal to be arrested, and even to be put to death if he resisted. Vitry, a captain of the king's guard, was intrusted with this commission, which he executed to its fullest extent. Ancre was shot dead as he was entering the palace of the Louvre. On hearing the shot the king looked out at the window, and expressed his satisfaction, which he testified by raising Vitry to the rank of Maréchal of France. The body of the murdered man was first secretly buried at St. Germain l'Auxerrois, but was soon after torn from the tomb by the infuriated mob, who dragged it through the streets on hurdles, and then threw it into the highway. Concini's son, sixteen years of age, was obliged to fly to Florence, after having been exposed to all sorts of insults, and deprived of his father's titles and riches. Eleonora soon shared the misfortunes of her husband. She was accused and convicted of sorcery, judaism, and corruption; and was executed on the Place-de-Grève on the 8th of July, 1617. During her trial, and at the moment of her execution, she displayed the greatest firmness of mind, saying, the only sorcery she had used towards the queen "was the power of a strong mind over a weak one." It is said that she was the first instrument of the fortune of Richelieu.

ANCUS MARCIUS, the fourth king of ancient Rome, belongs to a period when it is difficult to separate history from fable. The reigns of the kings of Rome seem to mark the chief stages of progress in the political constitutions of the state, rather than the succession of individual monarchs. The names of Romulus, Numa, and Tullus Hostilius are respectively connected with the origin of the three patrician tribes, the Ramnes, the Tities, and the Luceres, and with their settlement upon the several hills called the Palatine, the Quirinal, and the Cælian. Thus, under the first three kings, the patrician part of the Roman constitution had received its full development. To Ancus Marcius tradition assigned the honour of laying the first foundation of the plebes, or commonalty—that important element in the state to which Rome, under the commonwealth, owed nearly all her greatness. His predecessor, attentive solely to war, had neglected the religious institutions established by Numa, and for his impiety had been destroyed by a thunderbolt with all his family. Ancus Marcius, whose mother, according to the tradition, was the daughter of Numa, restored the neglected rites, and endeavoured in all respects to imitate the pacific policy of his grandfather. But the neighbouring states, mistaking his love of peace for timidity or sloth, provoked him to hostilities by repeated aggressions on the Roman territory. In the successive wars with the Latins, the Veientes, and other states, which ensued, he was invariably successful. From the Latins he took the towns Poli-

torium, Tellus, Ficana, Medullia, and transferred their inhabitants to his capital, giving them as a place of abode, not indeed any ground within the walls, but a part of the Aventine and the valley near the temple of Venus Murcia which separated that hill from the Palatine. Ancus was thus the founder of the plebes, and his assignment of part of the public domain to that body procured him in after times from one party the title of the 'Good Ancus' (Ennius, in Festus, v. 'Soa,' quoted too by Lucretius, iii. 1038); others condemned his unworthy love of popularity. (Virgil, 'Æn,' vi. 816.) The Latin towns just mentioned are supposed to have been situated between Rome and the coast; and indeed the conquests of the king extended to the mouth of the Tiber, where he established a colony under the name of Ostia, thus securing to Rome the navigation of the river. In his war against Veii he was equally successful; and to protect his people on that side he fortified the Janiculum, and connected it with the city by means of the Sacred Bridge called the Pons Sublicius, in the construction of which no brass or iron was used. This bridge, repaired from time to time under the direction of the college of priests called Pontifices (bridge-makers), who religiously adhered to the principle of excluding all metal, lasted until the year B.C. 23, when it was carried away by an extraordinary inundation of the Tiber, and its place supplied the following year by a stone bridge erected by the censor Æmilius Lepidus. A still more durable monument connected with the name of Ancus is the prison formed out of a quarry in that side of the Capitoline hill which overlooks the Forum. It would be idle to copy from Dionysius the detailed account of the transactions which are said to have filled the reign of twenty-three or twenty-four years assigned by the chronologists to this monarch. It has been already stated that Ancus Marcius was said to be the grandson of Numa. In this tradition Niebuhr sees a trace of the regulation by which the kings of Rome were chosen alternately from the two leading tribes. The plebeian family of the Marcii vainly endeavoured to refer their origin to this king.

(Livy, i. 35-45; Dionysius, iii. 36-45; with Niebuhr's *Roman History*, translated by Hare and Thirlwall, vol. i., pp. 346-350.)

*ANDERSEN, HANS CHRISTIAN, was born at Odense, in Funen, Denmark, April 2, 1805. His father, who was a shoemaker and in but humble circumstances, having died while Hans was yet a child, he was removed from school almost as soon as he had learned to read, and placed in a workshop. As the boy grew up he evinced an increasing fondness for books, and found friends who encouraged his inclination; but the reading of some plays having excited in him a fancy for the life of an actor, he contrived to save from his earnings a few shillings, and with these in his pocket he set out when fourteen years of age for Copenhagen. His application for employment at the theatres was unheeded, and his stock of money becoming exhausted, he was glad again to find employment at a handicraft. After a time however Professor Siboni, who had heard him sing, and was pleased as much with his manner as with his voice, offered to train him as a singer, and introduce him to the stage. For more than a year Hans pursued his musical studies, when his voice broke, and his tutor told him he must give up all thoughts of succeeding as a vocalist. He now took to preparing occasional pieces for the stage; but from this ill-paid drudgery he was rescued by some literary friends, who procured him admission as a royal scholar to the gymnasium, and subsequently to college. Here he distinguished himself by his poetical exercises, and on the publication of a volume of poems in 1831, Oehlenschläger and some other eminent Danish writers having brought their merits before the king of Denmark, his majesty granted Andersen a sum sufficient to enable him to travel through Germany, France, Switzerland, and Italy. During his travels he formed an intimacy with several eminent artists and literary men, and laid up a rich store of observations. Of these journeys he, soon after his return to Copenhagen, published various sketches, which secured for him considerable reputation. The 'Improvisatore,' suggested by his Italian travels, marked him out as the possessor of an original turn of genius; which his 'O. T.,' 'Only a Fiddler,' 'Danish Fairy Legends and Tales,' &c., established beyond dispute. Other works, chiefly short tales and sketches, followed in quick succession, and his name began to be heard of beyond his own country. In 1840 he travelled into the East, and on his return gave to the world as the fruit of his journey the 'Poet's Bazaar.' In 1845 he received from his old patron, the king of Denmark, a pension which placed him beyond the risk of pecuniary need. In the next year he travelled through Rome, Naples, and the Pyrenees, and wrote his 'True Story of My Life.' The following year he visited England, and met with a hearty reception. His English visit appears, from subsequent writings, one of which he entitled 'Christmas Greetings to my Friends in England,' to have afforded him singular pleasure; and he has since written one of his longest works, the 'Two Baronesses,' in the English language. His 'Hyldemoer,' 'En Nati Roeskilde,' 'Ols Lukois,' and other phantasies and vaudevilles are written in prose and verse.

Andersen's writings are very numerous. The collected edition of his works, published at Leipzig in 1847, is in 35 volumes 12mo., and he has since added considerably to the number. He is undoubtedly a man of original genius, but his genius is less comprehensive than his himself imagines, or his admirers are always ready to allow. He is greatest in fairy tales and brief stories. In them his poetical spirit, bright and lively imagination, earnestness of manner, quaint humour,

always supported by kindness of feeling and often by deep pathos, and his thorough geniality of temper, with the wholesomeness of purpose which they plainly though unostentatiously exhibit, never fail to delight every class of reader; and at the same time they have an artistic finish and completeness which place them as works of art among the foremost of their class. In his longer works he so magnifies the common-place, so elaborately depicts the ordinary incidents of every-day life, so indiscriminately paints all the minutest details, that while the parts are tiresome the whole is unimpressive. Even his travels, pleasant as they are at first, become, like the naive vanity of the author, after a time wearisome from the constant iteration. But in his own peculiar style Anderson is one of the most original writers of the day, and few have delighted so wide a circle of readers. His more popular stories have been translated into most of the European languages, and everywhere they have speedily become favourites with both young and old.

ANDERSON, ADAM, was born in Scotland, in 1692. Having come to London, he obtained the situation of clerk in the South Sea House, with which establishment he continued to be connected for forty years, having risen at last to be Chief Clerk of the Stock and New Annuities. In the charter, granted in 1732, for the establishment of the colony of Georgia in America, Mr. Anderson was appointed one of the trustees to carry that object into execution; and he also held a seat in the court of assistants of the Scotch Corporation of London. He died, at his house in Red Lion-street, Clerkenwell, on the 10th of January, 1765. The chief occupation of many years of Mr. Anderson's life was the composition of his voluminous and well-known work, the 'Historical and Chronological Deduction of Trade and Commerce,' which was first published in two vols., folio, in 1762. In a work written before the publication of the 'Wealth of Nations,' by a man who was a laborious searcher after facts and not a philosopher, it will readily be supposed that there are many politico-economical errors. The theory of a balance of trade is carefully adhered to, and a nation's prosperity is estimated by the excess of the exports over the imports. Anderson was an enthusiastic admirer of the colonial system, and believed that foreign possessions were a benefit at any cost, while he was totally unconscious of the influence of capital on the extent of a nation's trade. On the other hand, he held many opinions on important subjects which the progress of political economy has not subverted, and which procured him from Adam Smith the character of a "sober and judicious writer." He viewed landed wealth as the creature of industry, and considered rent as a per centage on the commercial transactions of a country. He was alive to the danger of any issue of inconvertible paper currency; he supported a labour-test as a sound principle in poor-laws; and he attacked all internal monopolies and restrictions on trade. 'The Annals of Commerce,' published by Macpherson in 1805, are merely an improved and corrected edition of Anderson's book.

ANDERSON, ALEXANDER, a native of Aberdeen, Scotland, who, in the beginning of the 17th century, while yet a young man, appears to have settled as a private teacher of the mathematics in Paris. Neither the year of his birth nor that of his death is known. He is the author of the following works:—'Supplementum Apollonii Redivivi,' 4to., Paris, 1612; 'Ἀριστολογία, pro Zetatico Apolloniani Problematis a se jampridem editio in Supplemento Apollonii Redivivi,' 4to., Paris, 1615; 'Ad Angularium Sectionum Analyticarum Theoremata Καθολικώτερα, a Francisco Vieta Fontenensensi primum excogitata, at absque ulla Demonstratione ad nos transmissa, jam tandem Demonstrationibus confirmata,' 4to., Paris, 1615; 'Vindiciæ Archimedis,' 4to., Paris, 1616; 'Exercitationum Mathematicarum Dicas Prima,' 4to., Paris, 1619. All these works are very scarce. Mr. Anderson also appears to have been selected by the executors of the eminent Vieta, who died in 1603, to superintend the publication of his unprinted manuscripts. Two treatises of Vieta accordingly, entitled 'De Æquationum Recognitione et Emendatione,' appeared at Paris, in 4to., 1615, with a dedication, preface, and appendix by Anderson.

ANDERSON, ALEXANDER, M.D., for many years superintendent of the botanic garden in the island of St. Vincent. He was early in life sent to the Caribbee Islands, and made many observations on their geological character and vegetation. In 1789 he communicated a paper to the Royal Society of London, which was printed in the 'Philosophical Transactions,' being an 'Account of a Bituminous Lake or Plain in the Island of Trinidad.' In this paper, in addition to the account of the remarkable mass of bituminous matter occupying a space of three square miles, he describes the existence of several hot springs, and the general geological features of the island. In 1798 he forwarded a paper to the Society for the Encouragement of Arts and Manufactures, on 'The state of some of the most valuable Plants in his Majesty's Botanic Garden in the Island of St. Vincent.' Among the plants described was the bread-fruit tree of Otaheite (*Artocarpus incisus*). For this paper a silver medal was awarded him by the Society of Arts, and he was made a corresponding member. The paper was published in the 16th volume of the Society's 'Transactions.' In 1802 two papers appeared in the 20th volume of the Society's 'Transactions' by Dr. Anderson. One of the papers was on the clove-plant (*Caryophyllus aromaticus*), as cultivated at St. Vincent's. This was one of the first attempts that had been made to cultivate the clove in the West Indies. The second paper was on the cinnamon-

tree, as cultivated at St. Vincent's. For these papers the gold medal of the Society of Arts was awarded in 1802. Anderson died about the year 1813. (*Trans. Soc. of Arts*, xvi. xx.; *Phil. Trans.*, 1789; Callisen, *Medicinisches Schriftsteller Lexicon*.)

ANDERSON, SIR EDMUND, an eminent lawyer of the 16th century, in the early part of which he was born at Broughton, or, as other authorities state, at Hixborough, in Lincolnshire. His father, Thomas Anderson, Esq., was a gentleman of good estate, and the family was of Scotch descent. Edmund, who was a younger son, was educated at Lincoln College, Oxford, after leaving which he entered of the Inner Temple, and, having in due course been called to the bar, passed through the usual promotions, until, in 1582, he was made Chief Justice of the Common Pleas. This high office he held till his death, on the 1st of August, 1605. Chief Justice Anderson was one of the ablest and most learned of Queen Elizabeth's judges; but he was also one of the most rigid of the high prerogative lawyers of that time. He particularly distinguished himself by the zeal which he showed in favour of the Established Church, and the unwise harshness with which he endeavoured to put down dissent. He seems, by his severity, to have made himself unpopular and odious with all parties. His printed works are, 'Reports of Cases argued and adjudged in the time of Queen Elizabeth, in the Common Bench,' folio, London, 1644; and 'Resolutions and Judgments on the Cases and Matters agitated in all the Courts of Westminster, in the latter end of the Reign of Queen Elizabeth,' 4to, London, 1653. Both books are reckoned of great authority. Three families, descended from this chief justice through two of his sons, received baronetcies in the reigns of Charles I. and II.; and by his four daughters, who lived to be married, he became the ancestor of the earls of Pontefract, the Sheffield, dukes of Buckinghamshire, the earls of Warrington, and the lords Monson. (*Biographia Britannica*.)

ANDERSON, JAMES, was born at Edinburgh on the 5th of August, 1662; his father, the Rev. Patrick Anderson, was one of the ministers of that city. Having been educated for the law, he was admitted a writer to the signet in 1690. In 1705 he made his first appearance as an author by the publication of 'An Essay showing that the Crown of Scotland is Imperial and Independent,' being an answer to W. Atwood's tract, entitled the 'Superiority and direct Dominion of the Imperial Crown and Kingdom of England over the Crown and Kingdom of Scotland,' which had appeared the preceding year. As the subject discussed was one in which the people of Scotland at that moment took a warm interest, the parliament, besides bestowing upon Anderson a pecuniary reward for his performance, ordered its thanks to be publicly returned to him by the lord chancellor, in the presence of Her Majesty's high commissioner and the estates; Atwood's book being at the same time ordered to be burnt by the common hangman. Anderson was further honoured by the commands of the parliament to collect and publish such ancient documents as he might deem to be illustrative of the national independence; and an assurance was given that the cost of the undertaking would be defrayed from the public treasury. He therefore relinquished his profession. Soon after the Union, Anderson removed to London, where for many years his time was divided between the labours of completing his project, and a series of unsuccessful efforts to get his claims attended to by government. In Lockhart's 'Memoirs,' i. 371, the following curious illustration is given of the disappointments he was subject to:—"This gentleman, by his application to the subject of antiquities, having neglected his other affairs, and having in search after ancient records come to London, almost all the Scots nobility and gentry of note recommended him as a person that highly deserved to have some beneficial post bestowed upon him; nay, the queen herself (to whom he had been introduced, and who took great pleasure in viewing the fine seals and charters of the ancient records he had collected), told my Lord Oxford she desired something might be done for him, to all which his lordship's usual answer was, that there was no need of pressing him to take care of that gentleman, for he was *thee* man he designed, out of regard to his great knowledge, to distinguish in a particular manner. Mr. Anderson being thus put off from time to time for fourteen or fifteen months, his lordship at length told him that no doubt he had heard that in his fine library he had a collection of the pictures of the learned, both ancient and modern, and as he knew none who better deserved a place there than Mr. Anderson he begged the favour of his picture. As Mr. Anderson took this for a high mark of the treasurer's esteem and a sure presage of his future favours, away he went and got his picture drawn by one of the best hands in London, which being presented was graciously received (and perhaps got its place in the library), but nothing ever more appeared of his lordship's favour to this gentleman, who, having thus hung on and depended for a long time, at length gave himself no further trouble in trusting to or expecting any favour from him; from whence when any one was asked what place such and such a person was to get, the common reply was, a place in the treasurer's library."

While the great object of Anderson's life remained uncompleted, he was enabled to publish 'Collections relating to the History of Mary, Queen of Scotland,' 4 vols., 4to, 1724-1728—a collection of documents well known to those who study the history of the period. Anderson died in 1728. The editing of his great work was entrusted to Thomas Ruddiman, the learned grammarian; and it at length appeared at

Edinburgh in 1739, in the form of a magnificent folio, with the title of 'Selectus Diplomatum et Numismatum Scotiæ Thesaurus.' An elaborate preface was prefixed by Ruddiman. Anderson held the situation of postmaster-general for Scotland from 1715 to 1717.

ANDERSON, JAMES, LL.D., a writer on political economy, agriculture, and natural science, and one of the founders of the Scotch system of husbandry, was born in 1739, at the village of Hermiston, in the vicinity of Edinburgh. He lost his parents in early life, and at the age of 15 took on himself the management of a farm which the family had cultivated for several generations. At the early age at which he commenced practical farming, he began to perceive the utility of a knowledge of chemistry to the agriculturist, and he somewhat surprised Dr. Cullen with the novel spectacle of a young farmer attending the chemistry class in the University of Edinburgh, with a view to the pursuit of his profession. He was a very young man when he introduced among the Mid Lothian farmers the use of the small two-horse plough without wheels, now commonly known by the name of the Scotch plough. The use of this instrument is perhaps the most conspicuous single element in the superiority of the agriculture of Scotland. In 1763 he left his native place, and settled in Aberdeenshire, on a farm called Monkshill, consisting of 1300 acres of land almost wholly in a wild state. It was while residing here that he made his first attempt as a public writer in a series of essays on Planting, which he contributed in 1771 to the 'Edinburgh Weekly Magazine,' under the signature of Agricola. These essays he collected and published in 1777. From this time both his communications to periodical works and his separate publications were very frequent. In 1780 the degree of Doctor of Laws was bestowed upon him by the University of Aberdeen. Three years after he removed to Edinburgh. In 1784, in consequence of a pamphlet which he had printed on the 'Encouragement of the National Fisheries,' a subject which he had some years before discussed at greater length in a quarto volume, he was employed by government to make a survey of the western coast of Scotland, with a reference especially to that object. In 1791 he commenced the publication of the 'Bee,' a periodical which continued to appear till 1794. In 1797 Dr. Anderson took up his residence in the neighbourhood of London; and, in April 1799, established a periodical under the title of 'Recreations in Agriculture,' which was continued till March, 1802. Dr. Anderson died on the 15th of October, 1808, having been for some years before much broken down through the effects of the intense literary labour of many years. The list of his numerous publications attests the remarkable activity of his mind; and most of his writings evince great fulness of thought, varied information, and some of them no slight degree of ingenuity and originality. The most valuable papers in the 'Recreations' were contributed by himself. The work has lately attracted considerable attention from the circumstance that the doctrine as to the origin of rent, afterwards promulgated by Malthus, West, and Ricardo, had been there fully developed by Anderson. The exposition is contained in an essay called 'A Comparative View of the Effects of Rent and of Tythe in influencing the Price of Corn,' contained in the 30th number of the 'Recreations,' v. 401-428. In this essay, the principle that the portion of the value of the produce of land which goes to the proprietor in the form of rent, consists of the difference between the cost of raising produce on the more fruitful, and that of raising it on the less fruitful soils brought into cultivation, is clearly laid down, with a precision which no later political economist has surpassed. Anderson had promulgated the same theory at an earlier date in a tract now very rare, published by him in 1777, called 'An Inquiry into the Nature of the Corn Laws, with a View to the Corn Bill proposed for Scotland.' The passage containing this explanation of the theory is printed by Mr. McCulloch in his edition of Smith. There can be no question also that to the zeal and labours of Dr. Anderson was greatly owing the increased attention to the subject of agriculture which grew up after he began to write. His writings consist of between twenty and thirty separate works, besides numerous contributions to the 'Encyclopædia Britannica,' the 'Monthly Review,' and other periodicals, together with several tracts upon subjects of temporary interest.

ANDERSON, JAMES, M.D. and A.M., physician-general of the East India Company's army at Madras. The exact date of his birth and death are not known. He was distinguished for the zeal and ability with which he laboured for the purpose of increasing the productive resources of the British possessions in Hindustan. His first published work on this subject was a series of fourteen letters to Sir Joseph Banks, who was then president of the Royal Society, on the subject of the cochineal insect, which Dr. Anderson had discovered at Madras. These letters were published at Madras in 1787, 8vo.

The cultivation of the mulberry-tree for the purpose of rearing silk-worms, Dr. Anderson prosecuted with great diligence, and had the satisfaction of seeing his suggestions acted on with great vigour in various districts of the Madras presidency. In his published correspondence he treats on the introduction and cultivation of plants which yield articles of commerce adapted to the climate and soil of the various districts of Hindustan, and more particularly those of the Madras presidency. Amongst the principal of these may be mentioned the sugar-cane, the coffee-plant, American cotton, and the European apple.

ANDERSON, JOHN, the founder of the Andersonian Institution of Glasgow, and one of the earliest promoters of that popular instruction in science which has so greatly elevated the character of British artisans, was born in the parish of Roseneath, Dumbartonshire, in 1726. He was grandson of the Rev. John Anderson, an eminent Scotch Presbyterian minister and theological writer, and the first minister of the Ram's Horn church, now St. Stephen's, Glasgow. He was left an orphan at an early age, and was educated at Stirling by an aunt, and while there he became an officer in a burgher corps, raised in February, 1746, to defend the town against the forces of the young Chevalier Stuart. He received the more advanced branches of his education in the University of Glasgow; in 1756 he was appointed Professor of Oriental Languages there, and in 1760, when residing at Toulouse, he was appointed to the chair of Natural Philosophy, to the duties of which, on his return to Glasgow, he applied himself with the utmost ardour. Not contented with the ordinary duty of lecturing, he employed himself indefatigably in studying and exemplifying the applications of science to the useful arts, visiting the workshops of intelligent artisans, and exchanging his scientific information for their experimental knowledge. The better to carry out his views of popular education, Anderson commenced, in addition to his ordinary class, one which he styled his *œti toga* class, for the instruction of artisans and others unable to enter upon a regular academical course, to whom he delivered familiar extempore lectures illustrated by experiments. Mechanics were allowed to attend these lectures in their working-dress. Anderson appears to have had a taste for military science, which he displayed in designing fortifications (which have long since been removed) to defend the town of Greenock from an anticipated attack from the French; in experiments upon various projectiles; and in the invention of a cannon in which the recoil produced by firing was rendered harmless, by the condensation of air in the body of the carriage. This contrivance, after an ineffectual attempt to introduce it to the notice of the British government, he took to Paris in 1791, and presented to the National Convention, who dignified it with the title of 'The Gift of Science to Liberty.' On this occasion Anderson witnessed, and in some cases participated in, some of the earlier scenes of the French revolution. He was present when Louis XVI. was brought back from Varennes on the occasion of his attempted flight from Paris, and afterwards sung 'Te Deum' with the Bishop of Paris when the king took the oath to the Constitution in the presence of an immense assemblage. Among the ingenious suggestions recorded as having emanated from Anderson was a plan, which was actually carried into effect, for conveying newspapers and other communications from France into Germany by means of small paper balloons inflated with gas, and thereby evading the vigilance of a cordon of troops employed to intercept all ordinary means of communication.

In 1786 Anderson published a popular work, entitled 'Institutes of Physics,' which passed through five editions within ten years. He wrote many articles for periodicals, and a paper upon the Roman antiquities between the Forth and the Clyde, which was appended to General Roy's 'Military Antiquities of the Romans in Britain,' published in 1793, and also reprinted separately in 1800. He also wrote 'Essays upon War and Military Instruments,' which are said to have been translated and published in French, but of which we find no English edition referred to. Anderson closed his useful career on the 13th of January, 1796, in the 70th year of his age, after a connection with the University of upwards of forty years, during which time the liberality of his opinions led to some disagreements with his brother-professors. He was buried at Glasgow. He was a Fellow of the Royal Societies of London and Edinburgh, and of the Scottish Society of Antiquaries, and a member of several other scientific bodies; and he had the academical degree of A.M. Shortly before his death he devised his whole property by will to 81 trustees, for the establishment in Glasgow of an institution to be denominated Anderson's University, for the continued provision of those facilities for the unacademical classes of his townsmen which he had so long supplied by his own personal exertions. His comprehensive design was for an institution consisting of four colleges, with nine professors each, for arts, medicine, law, and theology; but as the funds proved insufficient for so extensive a scheme, operations were commenced in 1797 on a limited scale, by the appointment of Dr. Thomas Garnett as professor of natural philosophy. His first course of lectures was attended by nearly a thousand persons of both sexes. In the following year a professor of mathematics and geography was appointed; and, though the institution has never attained the magnitude contemplated by the founder, it has progressively increased and extended its usefulness, and has been productive of much public benefit. Dr. Garnett was succeeded in 1799 by Dr. Birkbeck, on occasion of his removal to the Royal Institution in London, which was formed on a similar model to that established by Anderson; and Dr. Birkbeck, who introduced a new course of instruction for 500 operative mechanics, free of all expense, was succeeded in 1804 by Dr. Ure. A portrait of Anderson was published in the 3rd volume of the 'Glasgow Mechanics' Magazine, which contains a memoir, upon which the above sketch is chiefly founded. Fuller memoirs are also given in Chambers's 'Biographical Dictionary of Eminent Scotsmen,' and in the 'Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.'

ANDOCIDES, the son of Læogoras, of a noble Athenian family, was born about B.C. 468. We find him, during the war of the Corcyreans and Corinthians, commanding jointly with Glaucon an Athenian squadron which was sent to aid the Corcyreans. (Thucyd. i. 51.) After this he appears to have been employed as ambassador on numerous foreign missions. During the Peloponnesian war (about B.C. 415) Andocides was involved in the charge of mutilating the Hermæ (ALCIBIADES), and, according to Plutarch, he saved himself by accusing his real or imaginary accomplices. The history of all this transaction is obscure. After this event Andocides went abroad, and visited many foreign parts. On his return to Athens, the Four Hundred (B.C. 411) directed the administration of affairs, and Andocides was accused, apparently on frivolous grounds, and thrown into prison. On the overthrow of the Thirty Tyrants by Thrasybulus (B.C. 403), Andocides returned to Athens, and recovered all the influence which talents and eloquence naturally gave an unprincipled man in the Athenian democracy. The remainder of his life is obscure.

It is unfortunate that the events of this orator's rambling life are not better known. The times during which he lived were full of important occurrences, and a minute account of his life and adventures would have thrown great light on the internal history of Athens and that of other states also. There is little doubt that he was a man of ability, but without any principle.

Four extant orations are attributed to Andocides: 'On the Mysteries;' 'On his (second) 'Return to Athens:;' 'On the Peace with the Lacedæmonians;' and that 'Against Alcibiades.' The authenticity of the third and fourth are disputed, that of the third at least, perhaps with good reason. The orations of Andocides were first published in the collection of Aldus, Venice, 1513, fol. They have been printed in the collections of H. Stephens, Reiske, and Dobson. The best edition of the text is by Imm. Bekker in his 'Attic Orators,' 1822, 8vo. They were edited separately by C. Schiller, Leipzig, 1835, 8vo.; and by J. G. Baiter and Herm. Sauppe, Zürich, 1835, 8vo. The oration on the Mysteries was pronounced when Andocides was about seventy years of age, in reply to an accusation brought against him by Callias of violating a law respecting the temple of Ceres at Eleusis. The oration contains, besides the immediate subject of the defence, much information on other parts of the orator's life. It is an admirable specimen of simple and perspicuous language, and equally remarkable for the skill with which the defence is conducted.

ANDRÉ, JOHN, was born in London, in 1751, of parents originally from Geneva. He was sent to Geneva for his education, but returned to England before the age of eighteen, and was thrown by the chance of residence into the literary circle of Miss Anna Seward, at Lichfield. He there formed an attachment for Miss Honora Sneyd, a young and accomplished friend of Miss Seward's. An intended marriage was prevented by the interference of the friends of the parties on the ground of their youth, and it was arranged that André should engage in mercantile pursuits, with a view of making some provision for his intended wife. He accordingly entered his father's counting-house in London; but he soon gave up all thoughts of business, and entered the army. According to Miss Seward, this step was the result of despair on hearing that Miss Sneyd had married another; but this is disproved by the object of the lady's choice, Mr. Lovell Edgeworth, who in his 'Memoirs' observes that André's first commission bears date on the 4th of March, 1771, while his own marriage to Miss Sneyd did not take place until more than two years afterwards. André joined the British army in America, and in 1775 he was taken prisoner at the capture of St. John's. He was a considerable time in prison, and on his release became aide-de-camp, first to General Grey, and then to Sir Henry Clinton, the British commander-in-chief, who esteemed him so highly that, on a vacancy occurring by the resignation of Lord Rawdon, he appointed André to the important post of adjutant-general, and almost forced the government to bestow the rank of major upon him, without which the office could not be held.

Soon after André engaged in the service which led to his untimely end. Sir Henry Clinton confided to him the management of the correspondence with the American general Arnold, who proposed to deliver up the important fortress of West Point to the British, with the magazines, including, among other things, the whole stock of gunpowder of the American army. In conducting this correspondence, which was facilitated by the circumstance of André's having been acquainted with Arnold's wife previous to her marriage, Arnold assumed the name of Gustavus, and André that of Anderson, while the real objects of the parties were concealed under the disguise of mercantile terms, as though the correspondence referred entirely to commercial affairs. So well was the secret kept, that the Americans had not the slightest suspicion of Arnold's fidelity. At length everything was so far arranged, that it only remained to settle the time and means of carrying the design into execution; and for this purpose Arnold required a personal interview with a confidential agent. André undertook the dangerous mission; and accordingly, on the 20th of September, 1780, a British sloop of war, the 'Vulture,' proceeded up the Hudson River nearly to the American lines, having on board André and Colonel Beverly Robinson, a loyalist officer, whose house was at that moment in possession of the Americans, and the headquarters of Arnold. It had been intended that the landing and the interview with Arnold should be effected under cover of a flag of

truce, the ostensible object being to effect some arrangement as to the sequestered property of the colonel. For this purpose a letter was sent from Robinson to Arnold, soliciting a meeting; but it happened to reach the hands of Arnold while in company with General Washington, instead of, as had been anticipated, after Washington's departure to pay a visit to the French General Rochambeau. To keep up appearances, Arnold judged it best to show the letter to Washington, and ask his advice upon it; and Washington strongly recommended him not to grant the request, but to refer Robinson to the civil authorities. This advice being publicly given, Arnold did not venture to act against it, and he therefore took measures for bringing about a secret interview. He prevailed on Mr. Joshua H. Smith, who resided within the American lines, to go on board the 'Vulture' at night, and deliver a packet to the parties he would find on board. Smith asserts, in a narrative of the transaction which he published at London in 1808, that he was the bearer of a flag of truce, but he assigns no reason for its being sent in the dark. He delivered his letters to Colonel Robinson, and was desired to return with André, who passed as Mr. Anderson, but wore his uniform. Arnold met them on the shore, and it was arranged that the attack on West Point should be made on the 24th or 25th of that month (September, 1780), about which time the return of Washington was expected; and proper passwords and signals were agreed upon. Arnold also delivered to André, for Sir Henry Clinton, a number of papers relating to the fortress, with maps and plans, and memoranda of the weakest points, as well as of the positions to which the American troops would be ordered by Arnold so as to assure the easiest success to the British forces. André intended to return to the 'Vulture' in the boat which had brought him ashore, but in the meanwhile the sloop, gulled by a fire from the American posts, had dropped lower down the Hudson, and the boatmen refused to row the distance. In this dilemma it was arranged that André should pass the day at Smith's house, a measure which made it necessary to enter the American lines, and should return next night to New York by land, the papers being concealed, at Arnold's suggestion, in the major's boots; and his military coat, also by Arnold's wish, being replaced by a plain coat of his host's. To prevent detention on the journey at any of the American outposts, both André and Smith, who was to be his guide, were provided with regular passports from Arnold. They started accordingly, but came in contact with an American party during the night, the captain of which represented the danger of night-travelling to be so great, that, for fear of awakening his suspicion, they thought it best to remain where they were till morning. The next day they proceeded to Pine's Bridge, a village on the Croton River, not far from the English lines, where Smith took his leave of André, as all danger seemed to be over. André had nearly reached Tarrytown, and was within sight of the English lines, when three American militiamen, who were on the watch for any well-dressed and mounted passenger who might possibly be an Englishman, rushed from a thicket and stopped his horse. A moment's presence of mind would have saved him, but instead of assuming the character of an American, he inquired to which party they belonged. They answered "To below," implying that they belonged to the English posts, and André exclaimed "So do I; I am an English officer on urgent business, and I do not wish to be detained." On being undecieved, he produced the passport of Arnold. But it was now too late; and he soon still further betrayed himself by offering them large sums of money if they would let him go. His offers were refused; he was dragged into the thicket, and his boots being drawn off, the papers were discovered. The militiamen took their prisoner at once to the commander of the outposts, Colonel Jameson, who, confused and bewildered, sent on André to his superior officer, General Arnold. The arrival and prompt interference of Captain Talmadge—an officer who lived long after to claim his share of credit in the transaction—alone prevented this; and at his suggestion André was sent for back, and the papers were forwarded to Washington. Colonel Jameson however thought it proper to send word to Arnold, that "John Anderson, the bearer of his passport, had been detained." This message saved Arnold's life; on receiving it he fled on board the 'Vulture,' and joined Sir Henry Clinton at New York. When Washington on his return reached West Point, and found it without a commander, the arrival of the messenger with the papers from Jameson cleared up the whole affair.

André retained his assumed character until he judged Arnold beyond reach, when he declared his real name and rank as adjutant-general of the British army. Washington referred his case to a board of general officers, who reported that, in consideration of his having been taken in disguise, and under a false name, with information obtained under that disguise within the American lines, he was a spy, and in conformity with the law of nations should suffer death. The most strenuous exertions were made by the British commander to save him: and, among other proceedings, General Robertson was despatched on a mission to Washington to represent that André having arrived in the American lines under a flag of truce, and having been directed in all his movements within them by a general in the American service—Arnold himself—he could not be considered a spy according to the rules of war. Sir Henry Clinton also permitted Arnold to forward two letters on the same subject, but their contents, those of one especially, which assumed a threatening tone, were not calculated to do any good. The American commander was inflexible. Washington

did indeed cause it to be intimated to Clinton that there was one way of saving André's life, by exchanging Arnold for him; but such a proposition of course could not be listened to.

André suffered death at Tappan, in the state of New York, on the 2nd of October, 1780, in his twenty-ninth year. He displayed the utmost firmness, which was shaken only for a moment when he knew that he was to perish by the halter, an ignominious death which he had most strongly entreated Washington, by a letter written almost in his last moments, to spare him. His fate excited the deepest sympathy even among the Americans. Among his own countrymen, and indeed throughout Europe, his death excited a powerful sensation; while the conduct of Arnold was viewed with almost equal detestation by the English and the Americans.

The whole British army went into mourning for André. A monument was raised to his memory in Westminster Abbey, and in the year 1821 his remains were disinterred at Tappan, and conveyed to a grave near his monument at Westminster. His friend Miss Seward published a monody on his death, which had great popularity in its day, and succeeded for a time in drawing down some share of popular indignation on Washington, more especially for refusing the only favour André asked, a soldier's death. In her 'Letters,' published after her death, Miss Seward withdrew her charges, and asserted that Washington, after the peace of 1783, sent one of his aides-de-camp to her purposely to disabuse her of the prejudices she entertained; among other things to assure her that he was outvoted by the rest of the council on the question of hanging Major André. It is by no means clear that Washington sat on or interfered with the council which originally condemned him; nor was Washington a man who would shrink from the infliction of a punishment which he judged to be necessary in order to show the world that America claimed and would exercise the powers of an independent nation. He held André to be a spy, and for a spy the punishment is death by the halter and not by the bullet. To have remitted the ignominious portion of the punishment would have argued some doubt as to its justice. To Miss Seward's 'Monody' are attached three letters of André's, written in his nineteenth year; but, however interesting in other points of view, as literary compositions they are without merit. He was more successful in his own published work, a satirical poem called 'The Cow Chase' (New York, 1780), the last canto of which was published in Rivington's 'Royal Gazette' on the very day of his arrest. It is a kind of parody on 'Chevy Chase,' devoted to the ridicule of an exploit of the American general Wayne, in attempting to drive off some cattle from the loyalists.

André was an artist of considerable ability. A miniature of Honora Sneyd, painted by himself, was the only portion of his effects which he preserved after his first capture by the Americans in 1775, and he succeeded only by secreting it in his mouth. A portrait of himself, sketched with much freedom in pen and ink, is engraved in Sparks's 'Life and Treason of Arnold,' from the original preserved in Yale College. It was drawn on the morning originally appointed for his execution, in order to be presented to an American friend—for he had many such during his imprisonment—and it is doubly interesting as affording proof of his powers as an artist, and of his courage as so trying a moment.

(*Biographical Dictionary of Useful Knowledge Society.*)

ANDREA DEL SARTO, or ANDREA VANUCCHI. [SARTO.]

ANDREOSSI, COUNT, was born at Castelnau, in the province of Languedoc, in March, 1761. His family was of Italian descent. At the age of twenty he was made lieutenant of artillery. In the beginning of the French revolution he shared in the general enthusiasm for the new order of things, and he afterwards served under Bonaparte in the early Italian campaigns, where he distinguished himself at the siege of Mantua, in 1796. He next followed Bonaparte to Egypt, where he took a conspicuous part both in the military and the scientific labours of that celebrated expedition. He was appointed a member of the Institute of Cairo, and wrote several memoirs, 'On the Lake Menzaleh,' 'On the Valley of the Natron Lake,' 'On the Waterless River,' &c. When Bonaparte returned secretly to France, Andreossi was one of the few officers who accompanied him, and he ever after proved devoted to the fortunes of his great commander. Andreossi served in the so-called Gallo-Batavian army under Augereau, on the banks of the Mayne. After the peace of Amiens he was sent as ambassador to England. When Napoleon assumed the imperial crown, Andreossi was made inspector-general of artillery, and a count of the new empire. He went afterwards as ambassador to Vienna, and having quitted his post when the war broke out again between Austria and France in 1809, he was present in the campaign of that year, and was appointed governor of Vienna after the taking of that city. He was next sent as ambassador to the Ottoman Porte, in which important situation he won the general esteem of both Franks and Turks. After the abdication of Napoleon in 1814, Louis XVIII. recalled Andreossi from Constantinople, and sent him at the same time the cross of St. Louis. Andreossi was living in retirement when Napoleon landed from Elba, but he then appeared again on the political stage to assist his old master in his last struggle. He was created a peer during the hundred days. After the battle of Waterloo he withdrew again to private life, and busied himself in revising and publishing several interesting memoirs which he had written during his residence

in Turkey. His work on 'Constantinople et le Bosphore de Thrace' is deservedly esteemed. His memoir 'On the Springs and Conduits by which Constantinople is supplied with Water,' contains much curious information on the art of hydraulics as practised by the Turks. Andreossi had written also in 1810 a 'History of the Canal of Languedoc,' in which he claimed for one of his ancestors, François Andreossi, the principal merit in the planning of that great work, which had till then been ascribed to the engineer Riquet. This book was the occasion of much controversy with Riquet's descendants, in which the astronomer De la Lande sided with the latter. Count Andreossi died in September, 1823, at Montauban.

ANDREW, SAINT, one of the apostles, the brother of St. Peter. His father's name was Janna. From the first chapter of St. John's Gospel, he appears to have been one of the followers of John the Baptist, whom he left at the call of Jesus, being the first disciple whom the Saviour is recorded to have received. Andrew introduced Peter to Jesus. According to St. Matthew and St. Mark, Jesus found Peter and Andrew together, following their occupation of fishermen, as he was walking by the Sea of Galilee, and called them, when they immediately left their nets and followed him; but this is supposed to have happened some time after the first interview recorded by St. John. That evangelist mentions Andrew as the disciple who intimated the presence of the lad with the few loaves and fishes, when the miracle of feeding the five thousand was performed. Such is nearly all that is stated respecting this apostle in Scripture.

The ecclesiastical historians however have professed to give us accounts in considerable detail of the latter part of his life. According to Theodoret, he employed himself for some years in journeying and preaching the faith throughout Greece; but Eusebius and other writers speak of Scythia as the province of his missionary labours. The common statement however is, that he suffered martyrdom at Patras, now Patras, in Achaia, having been put to death by order of Egeus, the pro-consul of that province. The year in which this event took place is not mentioned; but both in the Greek and in the Latin church the festival commemorative of it is held on the 30th of November.

ANDREWS, JAMES PETIT, an historical and miscellaneous writer, was a younger son of Joseph Andrews, of Shaw House, near Newbury, Berks, where he was born in 1737. He was educated under a private tutor, the Rev. Mr. Matthews, rector of his native parish. In 1788 he published a pamphlet calling attention to the hardships suffered by chimney-sweepers' apprentices, which is said to have produced the act passed during the same year (28 Geo. 3. c. 28) for their protection. In 1789 he published 'Anecdotes, &c. Ancient and Modern, with Observations,' London, 8vo, dedicated to his brother, Sir Joseph Andrews. In 1794 he published 'The History of Great Britain connected with the Chronology of Europe; with Notes, &c. containing Anecdotes of the Times, Lives of the Learned, and Specimens of their Works. Vol. i. from Cæsar's Invasion to the Deposition and Death of Richard II.' 4to. London. In 1795 he published a continuation, part 2, of vol. i. 'From the Deposition and Death of Richard II. to the accession of Edward VI.' The work is thus incomplete. It must have been a very useful fragment at the time when it appeared, and nothing but the progress which discovery in relation to British history has made in recent years would prevent it from still being so. A brief narrative of the internal civil and military history of England is given in what printers call the even page, and on the opposite or odd page there is a corresponding general chronology, to enable the reader to synchronise English history with that of the rest of the world. The continuous narrative is followed at intervals by a chapter containing 'incidents, biographical sketches, specimens of poetry,' &c., and another containing 'anecdotes and observations relating to the religion, government, manners, &c. of Great Britain.' In these departments the author shows an extensive knowledge of English literature and the history of legislation, and much research among county histories and in other obscure quarters, for illustrations of national manners. Andrews seems to have discontinued this work for the purpose of completing Henry's 'History,' which, in 1796, he brought down to the accession of James I. On the establishment of the London police magistracy in 1792, he was appointed magistrate for Queen Square and St. Margaret's, Westminster. He died in London, August 6, 1797.

ANDREWS, LANCELOT, an eminent English prelate, was descended from an ancient Suffolk family, and was born in the parish of All-hallows, Barking, London, in 1565. His father, who had spent the most part of his life at sea, was, towards the close of his life, Master of the Trinity House at Deptford. Young Andrews was educated first at the Coopers' Free school at Ratcliff, and then at Merchant Tailors' school, from which he was sent to Pembroke Hall, Cambridge, by Archdeacon Watts, on one of the exhibitions founded by the latter in that college. He greatly distinguished himself at the University by his studious habits and extensive acquirements; and also in certain lectures which he read as catechist displayed the first promise of that talent for pulpit oratory for which he was afterwards celebrated. Having taken orders, he soon became known as a preacher; he was rapidly preferred, and was Dean of Westminster when James I. came to the throne. With that monarch he immediately became a great favourite, and the bishopric of Chichester having become vacant,

he was presented to it, and was consecrated on the 3rd of November, 1605. The king at the same time made him his lord almoner. In 1609 he was translated to the see of Ely; and was soon after made a privy-councillor both for England and Scotland. When James, in 1617, visited the latter kingdom, Bishop Andrews was one of the persons by whom he was accompanied. In 1618 he was advanced to the bishopric of Winchester, and was at the same time made dean of the chapel royal. He died at Winchester-house, in Southwark, on the 25th of September, 1626, and was buried in the church of St. Saviour's.

The principal work which Bishop Andrews published during his life was a thick quarto volume, printed in 1609, with the title 'Tortura Torti,' being an answer to a treatise in which Cardinal Bellarmine, under the name of Matthew Tortus, had attacked the doctrine laid down by king James in his 'Defence of the Rights of Kings, respecting the authority of Christian princes over persons and causes ecclesiastical.' Andrews undertook his performance on the command of his majesty; and was considered to have executed his task with great ability. The work by which he is now best known is his 'Manual of Private Devotions and Meditations for every day in the Week,' and a 'Manual of Directions for the Visitation of the Sick.' After his death, a volume, containing ninety-six of his sermons, was, by the direction of Charles I., printed, under the care of Bishops Laud and Buckeridge; and another volume, consisting of a collection of his tracts and speeches, also appeared in 1629. His work entitled 'The Moral Law Expounded, or Lectures on the Ten Commandments,' was first published in 1642. His '*Ανορθωματα* Sacra, or Collection of Posthumous and Orphan Lectures, delivered at St. Paul's, and St. Giles's, Cripplegate,' appeared in a folio volume, in 1657. Bishop Andrews was also one of the authors of the common translation of the Bible. The portions in which he was concerned were the Pentateuch, and the historical books from the Book of Judges to the Books of Kings inclusive.

Bishop Andrews was indisputably the most learned of his English contemporaries, excepting Usher, in the Fathers, ecclesiastical antiquities, and canon law. He was the head of that school which began to rise in England in the 16th century, which appealed to antiquity and history in defence of the faith of the Church of England in its conflicts with Rome. To express his theological tenets briefly, he was of the school which is generally called the school of Laud, holding the doctrines of apostolic succession, that "the true and real body of Christ is in the Eucharist," and entertaining high notions of ecclesiastical authority. He was opposed to the Puritans, who in consequence called his doctrine irrational, atheistical, and worse than that of Arminians. They also charged him with popery and superstition, because of the ornaments of his chapel, and the ceremonies there practised. But Andrews was a man of more moderation than Laud, as this circumstance will suffice to show. In 1625 Laud urged King Charles to have the five predestinarian articles, which had been determined upon by the synod of Dort, debated in the convocation of the clergy, to show that they were never at any time the received doctrines of the church. The king recommended Laud to consult Andrews as to the propriety of the measure. Andrews strongly opposed the renewal of the disputation, which he said had already done too much mischief, and Laud ceased to agitate the subject.

All the writings of Bishop Andrews display abundant learning; but his eloquence, notwithstanding the delight it appears to have afforded his contemporaries, is but little calculated to please the present age. Overpread as it is with verbal conceits and far-fetched allusions, and exhibiting in this way a perpetual labour of ingenuity, it altogether wants that simplicity and directness of effect which is the soul of good writing. Not that there is not a great deal of excellent sense wrapped up in its tinsel tropes, and other puerile and grotesque decorations; but the whole life and spirit of every thought is most commonly suffocated under a load of dead verbiage. The bishop's style however would seem to have wonderfully fascinated every body in his own times. Fuller, who is greatly taken with it, and who affirms that Dr. Andrews was an "imitable preacher in his way," in an anecdote which he tells with the view of showing how difficult or impossible it was for those who attempted to copy him to match their model, unconsciously records a severe and, at the same time, well-deserved condemnation of the manner of writing which he so much admires. "Pious and pleasant Bishop Felton," he says, "his contemporary and colleague, endeavoured in vain in his sermons to assimilate his style, and therefore said merrily of himself, 'I had almost marred my own natural trot by endeavouring to imitate his artificial amble.'"

Casaubon, Cluverius, Grotius, Vossius, and other eminent scholars of the time, have all highly eulogised the extensive erudition of Bishop Andrews, which was wont, it appears, to overflow in his conversation, as well as in his writings. He was also celebrated for his talent at repartee, of which the following instance is told by the writer of a life of Waller, the poet, prefixed to his works. Waller having one day gone to see James I. at dinner, saw the Bishop of Winchester and Dr. Neale, bishop of Durham, standing behind the king's chair, and overheard the following conversation. His majesty asked the bishops,—“My lords, cannot I take my subjects' enjoy

when I want it, without all this formality in parliament?" The Bishop of Durham readily answered, "God forbid, sir, but you should; you are the breath of our nostrils." Whereupon the king turned, and said to the Bishop of Winchester, "Well, my lord, what say you?" "Sir," replied the bishop, "I have no skill to judge of parliamentary cases." The king answered, "No put offs, my lord; answer me presently." "Then, sir," said he, "I think it is lawful for you to take my brother Neale's money, for he offers it."

Bishop Andrews adorned his learning and shining talents by the highest reputation for piety, hospitality, charity, and munificence. One of Milton's early Latin poems is an elegy on the death of this distinguished prelate, in which he is bewailed in a strain of the most impassioned regret and admiration.

ANDRIEUX, FRANÇOIS-GUILLAUME-JEAN-STANISLAS, professor of belles-lettres, was born at Strasbourg on the 6th of May, 1759. He studied in the college of Cardinal-le-Moine at Paris. At the close of his academical course he was, in his seventeenth year, placed in a proctor's office, with a view to make him master of the technical details of law, his ultimate destination being the bar. His master had no reason to complain of his progress; but he composed verses during his leisure hours, some of which appeared in the 'Mercure' and in the 'Almanach des Muses.' He was admitted avocat by the parliament of Paris in 1781.

In the following year he became private secretary to the Duc d'Uzès. The death of his father, who had left his family in straitened circumstances, compelled Andrieux to accept this situation. In 1785 he resumed his attendance on the courts, as an assistant to the eminent lawyer Hardouin. The weakness of his constitution and voice confined him in a great measure to the business of a consulting lawyer and preparer of written pleadings. In 1786 he was employed in the latter capacity in the celebrated process of the diamond necklace. In 1789 his subordinate career under Hardouin terminated. During this apprenticeship to the practice of the courts Andrieux still continued to make verses. His comedy, 'Les Étourdis,' was brought upon the stage in 1787, and favourably received.

Andrieux was about to enter into the full privileges of his profession, when the Revolution swept away, with other institutions of the old monarchy, the parliaments and the order of avocats. His career from 1789 to the establishment of the empire in 1804 was that of many other professional men, called upon to discharge the legal and political functions to which they were educated, according to the forms prescribed by the ephemeral governments which succeeded each other with dizzy rapidity. His first appointment was financial 'chef de bureau de la liquidation générale': this he resigned after the revolution of the 31st of May. In 1796 he was elected a member of the Tribunal de Cassation. In 1798 the Electoral College of Paris elected Andrieux one of the Council of Five Hundred. He appears to have resigned his judicial situation previously, for in the national almanack for 1798 his name stands at the head of the practitioners in the Tribunal de Cassation. As a member of the Council of Five Hundred he supported the re-organisation of primary schools and the appointment of teachers by election; supported Berlier's motion on the liberty of the press; sought to modify the law regarding the deportation of priests; advocated the claims of public functionaries to an adequate remuneration; and in short distinguished himself by his support of moderate and national views and by irreproachable integrity at a period of universal excitement. In 1800 he was nominated one of the tribunes, and soon after their secretary. Andrieux's conduct in this capacity was similar to that which he pursued in the Council of Five Hundred; his independence gave umbrage to Napoleon, and he was removed from the tribunate before the body was finally suppressed.

This was a severe blow to him, who possessed no private fortune, and who had to support two daughters, an aged mother, and a sister. He does not appear to have made any effort to resume his profession of the law or to re-enter the field of politics. Fouché offered him the appointment of censor of the press, but his offer was declined. For the remainder of his life Andrieux was exclusively devoted to literary pursuits. His active career, the only memorials of which are to be found in some printed pleadings and reports preserved in collections of the pamphlets of the Revolution, closes here. Joseph Bonaparte, who had learned to esteem Andrieux in the Council of Five Hundred, appointed him his librarian, with a salary of 8000 francs, and obtained for him the Cross of the Legion of Honour. In 1804 he was made librarian to the senate, and soon after professor of grammar and belles-lettres to the École Polytechnique.

Andrieux was the first literary professor attached to the institution; the course of education having been previously confined to the physical sciences and pure and applied mathematics. He rendered the class extremely popular with the students, who used to quit their recreations to attend his lectures. The task of analysing the exercises in composition of the scholars, candidates for commissions, was delegated to Andrieux by the examiner, and was for nearly twelve years discharged exclusively by him. He was deprived of his chair at the restoration, and Aimé Martin was appointed his successor.

He retained however the appointment of professor of literature in the Collège de France, to which he had been called by the concurring votes of the college itself, the institute, and the minister of the

interior. He continued to officiate as a highly popular lecturer in his chair for nineteen years. It was no uncommon circumstance to all the places filled two hours before the commencement of the lecture. His organs of speech were remarkably weak, but as he said of himself, "I know how to make my hearers understand, by making them listen." He died on the 10th of May, 1833.

Andrieux was as indefatigable a writer during the revolution, under the empire and the restoration, as in his earlier life. His works may be classified as dramatic, professorial, and miscellaneous. His plays are fifteen in number. His professorial works are only three: 'Lectures on Grammar and Belles-Lettres for the Use of the Polytechnic School;' 'A Report on the Continuation of the Dictionary of the French Academy;' and 'Lectures on the Philosophy of the Belles-Lettres,' which does not appear to have been published. The miscellaneous works of Andrieux—his occasional poems, prose tales, éloges, and reviews—are very numerous. The collections of Andrieux's works, though published by himself, are not complete. One appeared in 1817, in three octavo volumes, to which a fourth was added in 1823. Another was published, in six volumes 18mo, a few years later. There is nothing in the writings of Andrieux to account for the popularity of his lectures. There is a good-humoured air of pleasantry in the lighter pieces, but nothing brilliant or original; though by some of his countrymen he is placed next after Molière, Regnard, and Destouches: his best pieces are 'Les Étourdis,' and 'La Comédienne.' The tragedies and didactic writings are common-place in the last degree.

ANDROMACHE, the wife of HECTOR. It is also the title of one of the extant tragedies of Euripides.

ANDROMACHUS, a native of Crete, and physician to the emperor Nero. He was the inventor of a celebrated compound medicine called Theriaca (*Θηριακὴ*), the preparation of which he described in a poem which has been preserved in the collection of Galen's works.

ANDRONICUS was the advocate of the Jews under the reign of Ptolemæus Philometor in their proceedings against the Samaritans in Egypt, who, by asserting the authority of the temple on Mount Garizim, or Gerizim, against the temple at Jerusalem, occasioned a controversy which terminated in bloodshed. The Egyptian Jews (although they had built, about the year B.C. 150, an heretical temple of their own, in the province of Heliopolis) zealously defended the authority of the temple at Jerusalem. After the arguments were exhausted, both parties took up arms, and having found that blows could not decide the matter, they appealed to the king, Ptolemæus Philometor, who appointed a solemn day of judgment. In full court it was agreed, that those who were found in error should be killed for the bloodshed already committed. The Samaritan advocates, Sabbai (Sabbæus) and Theodosius, lost their cause against Andronicus, and were put to death. The arbitrary administration of justice in those times, and the character of Ptolemæus Philometor, render this account not quite incredible. (Josephus, *Antiquities*, lib. xiii. cap. 7, ed. Aureliæ Allobrog., p. 434; Jost, *Geschichte der Juden*, vol. ii. pp. 308-309.)

ANDRONICUS COMNENUS, emperor of Constantinople, was grandson of Alexis I. In his youth he distinguished himself in the army under his cousin, the Emperor Manuel, against the Turks and Armenians, but having entered into a treasonable correspondence with the king of Hungary, he was arrested and confined in a tower of the palace, where he remained twelve years. He contrived to escape, and after several romantic adventures arrived at Kiew, in Russia, where he won the favour of the Grand Duke Jaroslaus. Andronicus, in his exile at Kiew, became instrumental in forming an alliance between the Russian prince and the Emperor Manuel, and thus obtained his pardon from the latter. He led a body of Russian cavalry from the banks of the Borysthenes to the Danube, and assisted the emperor against the Hungarians at the siege of Semlin. After the peace, having returned to Constantinople, he protested against the adoption of Bela, prince of Hungary, who had married the only daughter of the emperor, as presumptive heir to the throne. Andronicus was himself next in the order of succession. The Emperor Manuel however, having married a second wife, Maria, daughter of Raymond of Poitou, prince of Antioch, had by her a son, who was afterwards Alexis II. From his dissolute conduct and his intrigues he excited the anger of the emperor, and was at length banished to Enoe, a town of Pontus, on the coast of the Euxine, between Cape Heraclium and Cape Jasonium, where he remained till the death of Manuel in 1180, and the disorders of a disputed succession, induced the patriarch, and the principal patricians, to recall Andronicus, as the only man who could restore peace to the empire. He arrived in the capital in the midst of acclamations, acknowledged the young Alexis as emperor, but arrested the empress-mother, who had been in some measure the cause of the troubles. Andronicus was associated in the empire as colleague and guardian to Alexis. He then developed his ambitious views. He first caused the empress-mother to be tried on a false charge of treasonable correspondence. She was condemned unheard, and was strangled, and her body thrown into the sea. He next murdered young Alexis himself, and then assumed the undivided authority as emperor in 1183. He married Agnes, Alexis's widow, and sister to Philippe Auguste of France, who was still almost a child. "Andronicus's short reign," says Gibbon, "exhibited a singular

contrast of vice and virtue; when he listened to his passions, he was the scourge, when he consulted his reason, the father of his people. In the exercise of private justice he was equitable and rigorous; he repressed venality, and filled the offices with the most deserving candidates. The provinces, so long the objects of oppression or neglect, revived in prosperity and plenty, and millions applauded the distant blessings of his reign, while he was cursed by the witnesses of his daily cruelties. The ancient proverb, that bloodthirsty is the man who returns from banishment to power, was verified again in Andronicus." ("Decline and Fall of the Roman Empire.") Individuals and towns, for the gratification of his revenge, were treated with the greatest barbarity. At last, so many terrors drove the people of Constantinople to revolt. Isaac Angelus, one of the proscribed and a descendant in the female line from Alexis L. took refuge in the church of St. Sophia. A crowd assembled and proclaimed him emperor. Andronicus was then, with his young wife, in one of the islands of the Propontis; he rushed to Constantinople, but was overpowered, taken prisoner, and dragged to the presence of Isaac Angelus, who, without any form of trial, gave him up to the personal revenge of his enemies. He was insulted and tormented in every possible manner; his teeth, eyes, and hair were torn from him, and lastly, he was hung by the feet between two pillars. In his painful agony he was heard to appeal to heavenly mercy, entreating it "not to bruise a broken reed." At last some one ran a sword through his body, and put an end to his sufferings. This dreadful catastrophe happened in September, 1185; Andronicus was then past sixty years of age.

ANDRONICUS CYRRHESTES, an architect who constructed, or, at least, a person whose name is attached to, one of the existing remains of ancient Athens, commonly called the Tower of the Winds. This monument stands to the north of the Acropolis, and is thus described by Vitruvius:—"Those who have paid most attention to the winds make them eight in number, and particularly Andronicus Cyrrhestes, who built at Athens an octagonal marble tower, and cut on each face the figure of the several winds, each being turned to the quarter from which that wind blows; on the tower he erected a marble column (meta), on which he placed a Triton of bronze, holding out a rod in his right hand; and he so contrived it, that the figure moved round with the wind, and constantly stood opposite to it; the rod, which was above the figure, showed in what direction the wind blew."

This building was intended for a sun-dial, and it also contained a water-clock, which was supplied with water from the spring under the cave of Pan on the north-west corner of the Acropolis. Colonel Leake is disposed to assign the date of this building to about B.C. 159.

(Leake, *Topography of Athens*; *Elgin Marbles*, vol. i. p. 29, in *Library of Entertaining Knowledge*.)

ANDRONICUS LIVIUS. [LIVIVS.]

ANDRONICUS PALÆOLOGUS, the Elder, son of Michael, emperor of Constantinople, was raised by his father as his colleague to the throne in 1273; and after Michael's death, in 1282, he reigned forty-six years more. The reign of Andronicus was disturbed by religious controversies and wars. In 1303 a body of Catalonian and other adventurers came to Constantinople to assist Andronicus against the Turks. They defeated the Turks in Asia, but they ravaged the country, and behaved worse than the Turks themselves. Andronicus, partly by force and partly through bribes, succeeded at last in getting rid of these allies. In 1320, Michael, son of Andronicus, having died, Michael's son, Andronicus, distinguished by the historians by the appellation of 'the Younger,' revolted against his father; and after several years of war, was crowned as colleague to the old emperor in 1325. Another sedition broke out in 1329, which ended in the abdication of the elder Andronicus, who retired to a convent. He died in his cell four years after his abdication, and in the seventy-fourth year of his age. During these disastrous wars between the two Andronici, the Ottomans effected the conquest of all Bithynia, and advanced within sight of Constantinople. Andronicus, the Younger, died in 1341, in the forty-fifth year of his age, leaving by his wife, Jane or Anne of Savoy, a boy, John Palæologus, who was put under the guardianship of John Cantacuzenus. (Gibbon, *Decline and Fall of the Byzantine Empire*; Hammer, *Geschichte des Osmanischen Reichs*.)

ANDRONICUS RHODIUS, or the Rhodian, is said to have first arranged the works of Aristotle, after they had been brought to Rome in the library of Apollonius of Teos, by Sulla, B.C. 84. The manuscripts had been committed to the care of Andronicus by Tyrannion, the grammarian, who seems to have been originally employed to put them in order. Some authorities also refer to Commentaries of this Andronicus on certain of Aristotle's works. The last work however supposed to be by this writer, which was recovered in modern times, was a short treatise, published by David Hoeschelius, in 12mo, at Augsburg, in 1594, under the title of 'Andronici Rhodii Peripatetici Libellus *Ἐπὶ Ἠθῶν*.' There is also a Greek treatise on the 'Nicomachean Ethics' of Aristotle, which is attributed to this Andronicus. It was translated into English by W. Bridgman, London, 1807.

ANGELICO. [FIESOLE, FRA GIOVANNI DA.]

ANGELO, MICHEL. [BUONARROTI, MICHEL ANGELO.]

ANGELO'NI, LUIGI, born about the year 1758, at Frosinone, in the Campagna of Rome, was the son of a merchant of Lombardy,

who had settled and married in that town. He lived quietly till 1798, when the French republican armies, under Berthier and Massena, invaded the Roman States, and drove away the Pope, and set up the pageant of the 'Roman Republic,' under the protection of France. They appointed consuls, senators, and tribunes, from among those who were favourable to republican principles, and Angeloni being chosen as one of the tribunes, went to live at Rome.

In September, 1799, the Neapolitan troops took Rome, and the Roman Republic was at an end. The French garrison and the members of the republican government were allowed to embark at Civita Vecchia, and proceed to France. Thus Angeloni, with many of his countrymen, became an emigrant. He repaired to Paris, where Bonaparte having upset the Directory, had made himself First Consul of France. Bonaparte showed little favour to the Roman emigrants, whom he considered probably as unmanageable enthusiasts; and they, on their part, becoming intimate with other republicans, both Italian and French, hatched a conspiracy against him. Angeloni and other Roman emigrants became implicated, and they were arrested; but no proof being elicited against them, they were released. He was subsequently arrested upon another charge, and was imprisoned fourteen months. In 1810, Fouché, when sent by Napoleon in a sort of honourable banishment to Rome, offered to take Angeloni with him, but Angeloni refused. In 1811 Angeloni published at Paris a work of considerable erudition on the life and works of Guido d'Arezzo, the restorer of music. In 1814, after the downfall of Napoleon, Angeloni published a pamphlet, suggesting the manner in which he fancied that Italy ought to be governed. He was at the same time one of the first to claim for Italy, and especially for Rome, the restitution of the sculptures, paintings, and manuscripts taken away by the French in 1797-98. After the revolutionary attempts of Naples and Piedmont of 1820-21, a number of Italian refugees went to Paris, where they often met at Angeloni's house. Angeloni had previously, in 1819-20, been in correspondence with some of the leading men who figured in the movement of Piedmont. All this excited the suspicion of the French police; and Angeloni, with others, was in March, 1823, escorted by gendarmes to the sea-coast, and there shipped off for England. From that time till his death he resided chiefly in London. Angeloni having superadded to his democratic ideas certain phrenological notions which he laid hold of from Dr. Gall's writings and conversation, upon which he commented in his own way, came to the conclusion, that right and wrong, morality and immorality, are mere conventional names; that force constitutes right, and that men act and must ever act according to the disposition which nature gave them in shaping their brain. With a tenacity which increased with age, he continued to foretell the advent of universal democracy, for that was with him a fixed idea, which no disappointments could remove. Angeloni died in London at the beginning of 1842.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ANGLESEY, HENRY WILLIAM PAGET, MARQUIS OF, eldest son of Henry, first Earl of Uxbridge, was born May 17, 1768. He was educated at Westminster school, and Christchurch, Oxford; and entered Parliament as member for the Caernarvon boroughs in 1790. His predilection was however for a military life, and it found free scope at the outbreak of the revolutionary war in 1793, when he eagerly set about raising from his father's tenantry a regiment called at first the Staffordshire Volunteers, but which was admitted into the establishment as the 80th Foot. Of this regiment he was appointed lieutenant-colonel on its having made up its complement of 1000 men. At the same time he received corresponding preferment in the army, his lieutenant-colonel's commission bearing date September 12, 1793. In 1794 he joined the army of the Duke of York in Flanders, and greatly distinguished himself during the remainder of that campaign.

On his return to England, Lord Paget was transferred to the command of a cavalry regiment, and commenced the career which at no distant day caused him to be regarded as the first cavalry officer in the service. As commander of the cavalry he accompanied the Duke of York into Holland in 1799. This short and disastrous campaign afforded few opportunities of acquiring distinction, but in the general attack Lord Paget succeeded in defeating a much superior body of the enemy's cavalry; and in the retreat, where he occupied the rear, he gained a signal triumph over a much larger force under General Simon. From this time he remained at home diligently occupied in training the regiment of which he was colonel, and in carrying out the system of cavalry evolutions which he had introduced, until near the end of 1803, when, having previously been made major-general, he was sent into Spain with two brigades of cavalry to join the army of Sir John Moore. In forming this junction General Paget was perfectly successful, and on the road he succeeded in cutting off a party of French posted at Rueda—this being the first encounter between the English and French in Spain. On joining Sir John Moore the cavalry under Lord Paget was pushed forward, and on the same day, December 20, came up with a superior body of French cavalry, and defeated it, taking above 150 prisoners, including two lieutenant-colonels. These victories gave the English cavalry an amount of confidence in themselves and their commander which in the subsequent retreat was of the utmost value. During the retreat Lord Paget with his cavalry formed the rearguard. After the infantry and heavy artillery had

quitted Benevente he received intelligence that the enemy had arrived, and that their cavalry were crossing the Ezla. Lord Paget hastened to the ford, and directed the 10th Hussars under General Stewart to charge the Imperial Guard, who had crossed the stream. The French were driven back with considerable loss in killed, wounded, and prisoners, among the latter being General Lefebvre Desnouettes, commander of the Imperial Guard. At the battle of Corunna Lord Paget had the command of the reserve, and his charge in support of the right wing, which was menaced by a far superior force, decided the fortune of the day.

Lord Paget returned to England in 1809, and did not again serve abroad during the Peninsular war. In 1810 he was divorced from his first wife, by whom he had had eight children. Soon after the divorce Lady Paget married the Duke of Argyll, and Lord Paget married Lady Cowley, who had just been divorced from Lord Cowley. In 1812 he succeeded, by the death of his father, to the title of Earl of Uxbridge.

In the early part of 1815 the Earl of Uxbridge commanded the troops collected in London for the suppression of the corn-law riots; but a more important service soon devolved upon him. When Napoleon escaped from Elba, and startled Europe by the ease with which he re-assumed the imperial crown, the armies of the allied sovereigns were at once set in motion against him. The Earl of Uxbridge was appointed commander of the cavalry of the English army, and his management of this arm of the service excited general admiration. At the battle of Waterloo his gallantry, as well as his skill, was conspicuous amidst the almost unequalled gallantry of which that field was the theatre. It was the final charge of the heavy brigade, led by the earl, that destroyed the famous French Guard, and with it the hopes of the emperor. Almost at the close of the battle a shot struck the earl on the knee, and it was found necessary to amputate his leg. The limb was buried in a garden by the field of battle, and some enthusiastic Belgian admirers erected on the spot a monument, with an inscription commemorating the circumstance, which is always one of the objects shown to visitors to Waterloo. The service rendered by the earl at Waterloo was generally recognised and duly rewarded. Immediately the despatches of the commander-in-chief were received the earl was raised to the dignity of Marquis of Anglesey, and nominated a Knight Grand Cross of the Order of the Bath; while he received from the emperors of Austria and Russia, and other European sovereigns, corresponding knightly dignities. In 1818 he was elected Knight of the Order of the Garter; in 1819 he attained the full rank of general; at the coronation of George IV. he held the office of Lord High Steward of England; and in 1826 he received the sinecure office of Captain of Cowes Castle.

When Canning became prime minister, April 1827, the Marquis of Anglesey formed one of his cabinet, having succeeded the Duke of Wellington as Master-General of the Ordnance; but this office he resigned in the following spring to become, under the ministry of the Duke of Wellington, Lord-Lieutenant of Ireland. To the duties of this important station the marquis addressed himself with characteristic energy, and by his zeal, impartiality, and ardent temperament, won a remarkable share of popularity. But his ardour outran his discretion. He had already in conversation expressed opinions which the ministry regarded as imprudent, and found to be inconvenient; and when, in December 1828, he wrote a letter to the Roman Catholic primate directly favourable to Roman Catholic emancipation, he was at once recalled. The day of his departure from the castle was kept in Dublin as a day of mourning; the shops were closed, business was suspended, and his embarkation was attended by large numbers of all classes of the citizens. In the House of Lords the marquis was a warm advocate of the measure which his letter had done much to hasten forward. Earl Grey became prime minister in November, 1830, and the Marquis of Anglesey was restored to his vice-regal office. But his popularity did not return to him. He set his face against the proceedings of O'Connell, and his former services were forgotten. The coercion acts which he thought it needful to obtain for securing the public peace in Ireland led to great dissatisfaction: misunderstandings and recriminations occurred between O'Connell, who declared himself tricked, and the ministry, and in consequence Earl Grey resigned July, 1833; and with him the Marquis of Anglesey, who was regarded as the cause of the ministerial break-up, also quitted office. Of the thorough honesty of purpose of the marquis's administration of his vice-regal functions, after the temporary clamours against him had subsided, there has been nowhere any doubt. That he displayed any high order of statesmanship there can be no pretension raised. The institution by which his tenure of office is most likely to be remembered is the Irish Board of Education, which was originated and carefully fostered by him, and which has proved one of the greatest benefits conferred on Ireland in recent years.

From this time the marquis took little part in public affairs until the formation of the administration of Lord John Russell in July, 1846, when he again became Master-General of the Ordnance; the duties of which office he sedulously performed till February, 1852, when the Russell ministry was replaced by that of Lord Derby. He was made colonel of the Horse-Guards in 1842, and was advanced to the dignity of field-marshal in 1846. He died full of years and honours April 29, 1854. By his first wife the Marquis of Anglesey had issue two sons and six daughters; by his second wife he had six sons and

four daughters. He was succeeded in his title, and as lord-lieutenant of Anglesey, by his eldest son, the present marquis.

ANGOULÈME, DUC and DUCHESS D'. *Louis Antoine de Bourbon*, Duc d'Angoulême, and afterwards Dauphin of France, the son of the Comte d'Artois (afterwards king by the name of Charles X.), and of Marie Thérèse de Savoie, was born at Versailles on the 6th of August, 1775, and died at Göritz on the 3rd of June, 1844. He was fourteen years of age when the revolution broke out. The Comte d'Artois, in order to protest by his absence against those concessions for which he blamed his brother, the king, emigrated in 1789; his two sons followed him to Turin, the court of their grandfather, where for some time they devoted themselves to the military sciences. In 1792 the young duke received a command in Germany, but attained no distinction. The ill success of this campaign induced him to return to a state of inaction, in which he continued until 1814. In 1799 he married his cousin, the unhappy orphan of the Temple, whose whole life had been one continued series of misfortunes.

Marie Thérèse Charlotte, the daughter of king Louis XVI. by his marriage with Marie Antoinette of Austria, and who from her cradle bore the title of Madame Royale, was born at Versailles on the 19th of December, 1778, and died October 19th, 1851. She was not fourteen years old when the events of the 10th of August, 1792, overthrew her father's throne, and drove her entire family from the pomps of Versailles to the prison of the Temple. Her parents were led thence to the scaffold; and the young princess had successively to deplore her father, her mother, her aunt Elizabeth, and her brother. At last Austria remembered the grand-daughter of Marie Thérèse; negotiations were made in her favour; and on the 26th of December, 1795, at Riehen, near Bâle, they effected an exchange of the daughter of Louis XVI. for four members of the National Convention. Arrived at Vienna, the princess remained there more than three years, living on a legacy bequeathed to her by her aunt, the Duchess of Saxe Teschen. She married her cousin at Mittau on the 10th of June, 1799. The newly-married couple remained at Mittau till the commencement of 1801. They then sought an asylum at Warsaw. Fortune tossed them from place to place. Given up by Prussia, they returned to Mittau in 1805; and the following year the Emperor Alexander, in his turn, abandoned them. England, to which the power of Napoleon could not reach, alone offered them a lasting refuge. Here Louis XVIII. repaired towards the end of 1806, and some time after purchased a residence at Hartwell, in Buckinghamshire, where all the family were soon re-united. There the Duke and Duchess d'Angoulême lived in the most profound retirement, until the Anglo-Spanish army passed the Pyrenees, when the Duke d'Angoulême joined it, having landed at a Spanish port on the Mediterranean.

After the restoration of the Bourbon family the Duke and the Duchess d'Angoulême were at Bordeaux, which was regarded as an eminently royalist town, and very favourable to the Bourbon cause, when on the 9th of March the news of Napoleon's landing was conveyed to them from Paris. Having been appointed the preceding year colonel-general of the Cuirassiers and Dragoons, and high-admiral of France, the duke then received the extraordinary powers of a lieutenant-general of the kingdom. He immediately formed a government for the southern provinces, collected troops, and on the road to Lyon gained several advantages over the Bonapartists. On her part, the duchess evinced great resolution; reviewed the troops, visited them in barracks, and endeavoured to rekindle the dying spark of love for the Bourbons. It was no doubt concerning this conduct that Napoleon remarked of her, that she was "the only man of her family." Her efforts were however as fruitless as those of her husband. But the second abdication of Napoleon after the battle of Waterloo decided the question without a civil war.

On the accession of Charles X., September 16th, 1824, the Duke d'Angoulême took the ancient title of Dauphin.

The decrees of the 25th of July, 1830, re-opened the road which was for the third time to conduct the royal family to the land of exile. They arrived in England on the 23rd of August, and were received as private individuals. Charles X. asked and obtained leave to take up his abode, when at Edinburgh, in Holyrood Castle.

They soon after removed to the continent, and fixed their residence at Göritz, in Hungary. The duchess survived her husband seven years.

ANGOULÈME, CHARLES DE VALOIS, DUC D', the natural son of Charles IX. of France and Marie Touchet, was born April 28, 1573, about a year before the death of his father. Being educated for the church, he was at the age of fourteen made abbot of Chaise-Dieu, and two years after Grand Prior of France, that is, head of the Order of the Hospitaliers of St. John of Jerusalem, or Knights of Malta, in that kingdom. This same year however, having received by the bequest of Catherine de Medicis the earldoms of Auvergne and Lauraguais, he relinquished his ecclesiastical condition; and henceforth he appears chiefly in a military character. He was one of the first to give in his allegiance to Henry IV., in whose cause he fought with distinguished gallantry at Arques, at Ivry, and at Fontaine-Françoise. After the termination of the war however he is charged with having been concerned both in the conspiracy of the Marshal de Biron in 1602, and in that fomented in 1604 by the Marchioness de Verneuil, Henry's mistress, who was Angoulême's half-sister, being a daughter of Marie Touchet.

For his share in the first of these attempts he was sent to the Bastille, but was soon set at liberty; on the next occasion sentence of death was passed on him, but the punishment was commuted into perpetual imprisonment. In 1606 the possessions which had been left him by Catherine de Medicis were taken from him by a decree of the parliament, and bestowed upon the Dauphin, afterwards Louis XIII. In 1616 however he was released by that king from his long imprisonment; and in 1619 he was made Duc d'Angoulême, having till then borne the title of Comte d'Auvergne. He was also appointed general of the Light Dragoons of France, and in 1620 was sent on a special embassy to the court of the Emperor Ferdinand II. He afterwards resumed his military career. It was he who in August 1628 commenced the famous siege of Rochelle, where the Huguenots held out against the royal forces till they were obliged to surrender after an obstinate defence of nine months. After this he served for some years in Languedoc, Germany, and Flanders, in the war against the house of Austria, which occupied the last years of Louis XIII. and the commencement of the reign of his successor. He died at Paris, September 24, 1650. The following works by the Duc d'Angoulême were published during his life:—'Les Harangues prononcées en l'Assemblée de MM. les Princes Protestants d'Allemagne,' par le Duc d'Angoulême, 8vo, 1620; 'La Générale et Fidèle Relation de tout ce qui s'est passé en l'île de Ré, envoyée par le Roi à la Reine sa Mère,' 8vo, 1627; and 'Relation de l'Origine et des Succès des Schérifs, et de l'État des Royaumes de Maroc, de Fez, et de Tamand, écrite en Espagnol par Diego de Torres, et traduite par M. C. D. V. D'A.' (M. Charles de Valois d'Angoulême), 4to, Paris, 1636. In 1667 an account of the duke's embassy to Ferdinand II. was published at Paris in a folio volume by Henri, comte de Béthune, grandson of Philippe, comte de Béthune, who was associated with Angoulême on that occasion, and who took indeed the chief management of the negotiation. The Duke of Angoulême was married first, on March 6, 1591, to Charlotte, daughter of the Constable Henri de Montmorency; and secondly, on February 25, 1644, to Françoise de Narbonne, who survived him many years, dying August 10, 1715, at the age of 92.

ANGUISCIOLA, SOFONISBA, a celebrated painter of Cremona, where she was born of noble parents about 1533. She was instructed first at Cremona with her sister Helen (who subsequently turned nun) by Bernardino Campi, and afterwards at Milan by Bernardino Gatti, called Soiaro. She had great ability for painting, especially portraits, in which she was one of the best artists of her time. Indeed she acquired so great a reputation by her portraits, that she was invited by Philip II. to Spain to enter into the service of the queen.

Sofonisba was in such favour with the king that he gave her a husband in the person of Don Fabrizio di Moncada, a Sicilian nobleman, and a dowry of 12,000 scudi; and allotted her a pension of 1000 scudi, or crowns. After her marriage she left Spain to reside in Palermo, but her husband died after she had resided there a few years. Having obtained leave from Philip II. to return to her own country, some time after her arrival in Genoa she was married to the captain of the galley in which she sailed, Orazio Lomellino. In Genoa she continued to paint and add to her reputation. When she grew old she became blind, but was still cheerful, and constantly received company: her house was a rendezvous of the virtuosi of Genoa. Vandyck when he was in Italy attended her parties, and is reported to have said, that he learnt more from the conversation of an old blind woman than by studying the great masters of Italy. There is nothing of that feebleness of drawing in the works of this lady which characterise those of Angelica Kauffmann. There are extant several portraits of Sofonisba by her own hand; one of them is at Althorp, Northamptonshire, in which she is playing upon the harpsichord.

ANGUS, EARLS OF. [DOUGLAS.]

ANHALT, PRINCES AND DUKES OF. The house of Anhalt is one of the oldest Saxon dynasties in Northern Germany, and is now divided into the branches of Anhalt-Bernburg and Anhalt-Dessau, both of which have the title of Duke, and were sovereign members of the German Confederation. In the middle ages this dynasty ruled over the greater part of Northern Germany, being invested with the duchy of Saxony and the margravate of Brandenburg. The branches of Saxony and Brandenburg became extinct in the 14th and in the 15th centuries; and the branch of the dukes of Saxe-Lauenburg, who were descendants from the dukes of Saxony, became extinct towards the end of the 17th century. Of the minor branches, Anhalt-Zerbst became extinct in 1793, and Anhalt-Köthen in 1847, the property in both cases reverting to the Duke of Anhalt-Dessau.

ANIELLO, TOMMASO, called by contraction *Masaniello*, a young fisherman, and a native of Amalfi, lived at Naples towards the middle of the 17th century, under the government of the Duke d'Arcos, viceroy of Philip IV. of Spain. Naples was then suffering all the evils of delegated absolute power; its treasures went to Spain, its youth were sent to fill up the ranks of the Spanish army, and both were wasted in ruinous wars for the ambition and selfish views of a distant court. The people were oppressed with taxes, and suffered from the injustice and wanton tyranny of the officers and other agents of a foreign power. In the year 1647 the Duke d'Arcos, in order to defray the expenses of a war against France, thought as a last expedient to levy a tax on fruit and vegetables, the common articles of food of the Neapolitan people. The edict which announced this fresh

impost occasioned the greatest ferment, especially among the poorer classes of inhabitants. An old priest of the name of Genoino, who had been in prison for some former offence, contributed to inflame the general discontent. Masaniello, who was then about 25 years of age, and who by his humour and natural quickness was a great favourite among the people of the Mercato, the great market-place of Naples, spoke aloud among his friends against the new tax. His wife had been arrested some time before at the gates of the city, as she was trying to smuggle in some flour, which like everything else was a taxed article. She was kept in prison several days, and her husband had to pay in order to obtain her release. Masaniello had accordingly, as we might expect, conceived a violent hatred against the Spanish government.

Masaniello was at the head of a troop of young men who were preparing for the great festival of Our Lady of the Carmel, by exhibiting sham combats, and a mock attack on a wooden castle. On the 7th of July, 1647, he and his juvenile troop were standing in the market-place, where, in consequence of the obnoxious tax, but few countrymen had come with the produce of their gardens; the people looked sullen and dissatisfied. A dispute arose between a countryman and a customer who had bought some figs, as to which of the two was to bear the burden of the tax. The 'eletto,' a municipal magistrate, acting as provost of the trade, being appealed to, decided against the countryman, upon which the latter in a rage upset the basket of figs on the pavement. A crowd soon collected round the man, who was cursing the tax and the tax-gatherers. Masaniello ran to the spot, crying out "No taxes, no more taxes!" The cry was caught and repeated by a thousand voices. The eletto tried to speak to the multitude, but Masaniello threw a bunch of figs in his face, the rest fell upon him, and he and his attendants escaped with difficulty. Masaniello then addressed the people around him in a speech of coarse hot fiery eloquence; he described their common grievances and miseries, and pointed out the necessity of putting a stop to the oppression and avarice of their rulers. "The Neapolitan people," said he, "must pay no more taxes!" The people cried out, "Let Masaniello be our chief!" The crowd now set itself in motion, with Masaniello at their head; it rolled onwards, increasing its numbers at every step; their rage fell first on the toll-houses and booths of the tax-collectors, which were burnt, and next on the houses and palaces of those who had farmed the taxes or otherwise supported the obnoxious system. Armed with such weapons as they could procure from the gunsmiths' shops and others, they proceeded to the viceroy's palace, and forced their way in spite of the guards; and Masaniello and others of his companions, having reached the viceroy's presence, peremptorily demanded the abolition of all taxes. The viceroy assented to this; but the tumult increasing, he tried to escape, was personally ill-treated, and at last contrived by throwing money among the rioters to withdraw himself into the Castel Nuovo. The palaces were emptied of their furniture, which was carried in the midst of the square and there burnt by Masaniello's directions. Masaniello was now saluted by acclamation as 'Captain-General of the Neapolitan people,' and a platform was raised for him in the square, where he sat in judgment in his fisherman's attire, holding a naked sword in his hand; thence he issued his orders, and his will was law. The citizens in general, besides the populace, obeyed him; a sort of commonwealth was organised, and the men were armed and distributed into regiments. The few Spanish and German troops of the viceroy were defeated, and obliged to defend themselves within the castles. The viceroy in this extremity proposed Cardinal Filomarino, the archbishop of Naples, who was a man of abilities, and withal popular, to act as mediator between him and the people. Articles were drawn up under Masaniello's direction, by which all imposts upon articles of consumption were abolished, and the privileges granted by Charles V. restored, besides an amnesty to all concerned in the insurrection. It was agreed that these were to receive the viceroy's signature, and an early day was fixed for the purpose. The cardinal, accompanied by Masaniello, dressed in splendid attire and mounted upon a fine charger, proceeded to the Castel Nuovo, followed by an innumerable multitude. The viceroy received Masaniello with every mark of deference, and the conditions were examined and accepted. As Masaniello loitered within the castle, the populace outside grew impatient and tumultuous, when the chief of the people appeared at a balcony, and by a sign of his hand silenced them immediately; at another sign all the bells tolled, and the people shouted "vivas;" and again, as he placed his finger across his lips, they all became mute. The viceroy being now convinced of the astonishing power of this man, the negotiation was soon concluded, after which the Duke d'Arcos put a gold chain round Masaniello's neck, and saluted him as Duke St. George. Masaniello returned in triumph to his humble dwelling, and peace was momentarily restored.

But Masaniello's mind gave signs of fatal decay: his sudden and giddy elevation, the multiplicity of questions that were referred to him, his total inexperience of business, the heat of the season, his want of sleep—all helped to derange his intellect. He had already complained of a sensation "like that of boiling lead in his head;" he became suspicious, and was in continual dread of traitors, especially after the attempt made by a troop of banditti who had mixed with the people to shoot him on his tribunal in the market-place. He

became capricious, absurd, and cruel, though cruelty does not appear to have been a vice natural to his character. He began to lose his credit with the multitude; the rebel government besides required money, and, as the only expedient, taxes upon eatables were resorted to again from sheer necessity. Masaniello at times felt his growing weakness; he talked of abdicating his power and returning to his fishing-nets; but he had gone already too far. Some betrayers, among whom was the old priest Genoino, who had been bribed to effect Masaniello's ruin, encouraged him in his mad career. On July 15th he repaired as usual to his judgment-seat; the people still clung to him, and he was still all-powerful; but he behaved so outrageously on that day that his friends became convinced of his insanity, and watched him during the night. On the morning of the 16th, being the great holiday of the Virgin, Masaniello escaped from the care of his friends, and ran to the church del Carmine, where the archbishop was performing mass. At the end of the service Masaniello ascended the pulpit, with a crucifix in his hand, and harangued the numerous audience. He earnestly and pathetically reminded them of what he had done for them; he tore his clothes, bared his breast, and showed his body, extenuated by watching and continual anxiety. He entreated them not to abandon him into the hands of his enemies. The people were affected by his address; but all at once Masaniello relapsed into one of his fits of aberration; he lost the thread of his discourse, and talked incoherently and wildly. The people began to laugh, and many left the church. Masaniello was taken down from the pulpit by the priests; the archbishop spoke to him kindly, and advised him to rest and calm himself awhile in the adjoining convent. He was taken into one of the cells, where a change of clothes was given to him, and he lay down on a couch and rested a few minutes. He soon started up again, and stood looking out of a window in a melancholy mood upon the tranquil and beautiful Bay of Naples which lay stretched before him, thinking perhaps of the happier times when he used to glide on the water: in his fishing-boat, when all at once cries were heard in the corridor calling him by name. Armed men appeared at the cell-door. Masaniello turned towards them: "Here I am; do my people want me?" A discharge from their arquebuses was the answer; and Masaniello fell, exclaiming, "Ungrateful traitors!" and expired. His head was cut off, fixed on a pole, and carried to the viceroy, the body dragged through the streets by a troop of boys, as he had himself foretold a few days before, and then thrown into a ditch. The revolt however was not quelled; the people, after appointing the Prince of Massa for their chief, whom they soon after murdered, chose Gennaro Annesse, one of the villains who had plotted against Masaniello's life. This chief was soon superseded by the Duke of Guise, who came to try his fortune at Naples as the representative of the ancient house of Anjou. [ARCOB, D'; GUISE.]

ANJOU, the Dukes and Counts of, were amongst the earliest noblesse of France. Some chronicler gives the title to the famous Roland. Charles the Bold, it is said, bestowed the province upon one of his courtiers, from whom the first family of counts, in general named Fulke, were descended. One of this name was amongst the peers who raised Hugh Capet to the throne. A count of Anjou, also styled Fulke, joined the early crusades, and became king of Jerusalem. His son Geoffrey married (in 1127) Matilda, or Maud, daughter and heiress of king Henry I. of England, to the crown of which kingdom he gave as heir, Henry Plantagenet. Thus merged the first house of Anjou. Soon after the conquest of the province by the French, it was bequeathed by Louis VIII., in 1226, to his fourth son, Charles of Anjou, who commenced the second house of Anjou. He espoused the daughter of Raymond Berenger, last count of Provence, and through her inherited that extensive fief, including the greater part of the south of France. He accompanied his brother St. Louis in his crusade to Egypt, when he was taken prisoner with that monarch, but was soon afterwards ransomed. He was subsequently selected by the Pope for the throne of Naples, in opposition to Manfred and Conradin, the last of the Hohenstauffen. Charles of Anjou therefore made his preparations in men and money for the conquest of Naples, whilst his ally, the Pope, opened to him his spiritual treasures, by preaching a crusade in favour of Charles against Manfred. The Angevin prince invaded Italy with an army of 30,000 men, in 1265; but that year, and almost another, passed away before the French entered the kingdom of Naples. Manfred, with a force of Neapolitans, Saracens, and Arabians, took post not far from Beneventum, in the plain of Grandella. The French accepted with alacrity the battle that was offered, and it was fought with the utmost gallantry on both sides, but Manfred was slain, and victory declared for Charles, who made a most cruel use of it. Not only was no mercy shown in the field, but the neighbouring town of Beneventum was given up with its population to the brutal fury and avarice of the soldiers. After this consummation of his crusade, Charles of Anjou made his triumphant entry into Naples. His government bore the same stamp with his conquest; it was but a succession of oppression and rapine.

Charles of Anjou, as head of the Guelphic party in Italy, was more than sovereign of Naples. Ramifications of the two great parties disputed Tuscany also, and Charles marched to chase his enemies, the Ghibelins, from that country. In this enterprise also he succeeded, and the Guelphs of Florence procured his nomination as political chief of that city for a period of ten years.

The Ghibelin party however rallied. They summoned young Conradin, nephew of Manfred, from Germany to support their cause, and the young prince advanced with a small but valiant army of Germans into Italy. The armies met at Tagliacozzo, 5000 on the German, and 3000 on the Neapolitan side. Of these 3000, Charles placed 800 in ambush, and with them waited till the Germans, having routed the rest, were scattered in the pursuit. He then quitted his ambush, and gained an easy victory. Conradin was taken in flight. Charles did not blush to bring his young competitor to a mock trial, when he was of course condemned to death. This infamous sentence, pronounced against the rightful prince, so stirred up the indignation even of Charles's friends, that his very son-in-law, Robert of Flanders, struck the judge whilst in the act of pronouncing the sentence, with a blow that proved mortal. Charles of Anjou was present with all his court at the execution of this sentence, in one of the public squares of Naples. When Conradin laid down his head for the executioner, he flung his glove amongst the weeping crowd, thus challenging an avenger. The glove was picked up and carried to Don Peter of Aragon, who had married the daughter of Manfred, and who, under this claim, became the competitor of the house of Anjou.

For the time however Charles reigned without opposition, not only over Naples, but over the whole of Italy. An interregnum of the pontificate left Rome at his disposal, whilst almost all the cities of Lombardy imitated Florence in acknowledging him as their protector, and in swearing allegiance to him. His superstition however led him astray; he was guilty of great crimes, and he could not neglect an opportunity of washing them away. This induced him, when his brother St. Louis set out upon a new crusade, to assume the cross. Charles however arrived in Tunis only in time to take command of the army which the death of St. Louis had left without a leader, and having satisfied his vow, Charles hastened to make peace on condition that Tunis should be tributary to Sicily. Gain was ever his first object. In returning, he confiscated all the vessels of his allies, the Genoese, which had been wrecked in a storm, claiming them as waifs, although they had been damaged in the service of transporting his army.

But Charles's power, and his dream of founding an empire in Italy, were overthrown by the hands that had raised him. A pope was elected (Gregory X.) who had at heart the interests of Christianity more than those of a party. Instead of crushing the Ghibelins, he sought to reconcile them to the Guelphs; and in order to remove the anarchy of Germany, he procured the nomination of an emperor in the person of Rodolph of Hapsburg, which materially checked the projects of Charles.

A vacancy of the pontificate enabled Charles to rally his party, and recommence his machinations for empire, and he succeeded in procuring the nomination of a pope in his interests. From Martin IV. (so the new pontiff was called) he obtained the preaching of a new crusade, directed against Greece. It was by occupying the throne of Constantinople that Charles hoped to rise superior to Rodolph, and make good eventually his imperial claim on Italy itself. While engaged in preparations for this great project, Peter of Aragon was making similar preparations for attacking Sicily and Naples.

Charles had raised an enemy amongst his own subjects more active and deadly than any kingly rival. This was John of Procida, a Sicilian noble, a partisan of the house of Hohenstauffen, who had suffered confiscation and exile on that account. This man never rested, even during the years of Charles's greatest triumph and power, from exciting dissatisfaction towards him, and he succeeded in procuring for the king of Aragon a subsidy from the Greek emperor. Peter fitted out a powerful fleet. But an accident in the meantime set fire to that train of disaffection and rebellion which John of Procida had prepared in Sicily.

It was on Easter Monday, in the year 1282, a day consecrated in Catholic countries to a mixture of gaiety and religion, that the citizens of Palermo set out, according to custom, to hear vespers at the church and village of Montereale, not far distant. The French soldiers and authorities unsuspectingly joined the procession, and according to their custom did not refrain from taking liberties with the young females whom they met or whom they accompanied. One Frenchman, more bold than the rest, under pretence of searching for arms, forbidden to a Sicilian, seized a young girl, and thrust his hand into her bosom. The betrothed of the girl instantly pierced the Frenchman with his own sword. This act was a signal; it corresponded so fully to the intentions and feelings of all present, that the cry of "Death to the French" ran from mouth to mouth. The deed accompanied the word, and every Frenchman in the procession was assassinated, whilst the vesper bell was still sounding. Excited by blood, the assassins rushed back to Palermo to complete the massacre. Not a Frenchman, save one, escaped: all, to the number of 4000, were butchered; and even Sicilian women, who had married Frenchmen, suffered the same fate, in order that the progeny of the hated strangers might be eradicated from the island.

This massacre, notorious under the name of the 'Sicilian Vespers,' was of course the signal of revolt. John of Procida hastened to Peter of Aragon, who after some delay landed in Sicily, and assumed the title of its monarch. His admiral, Roger de Loria, sailed for Messina, to which place Charles had laid siege, and experienced no difficulty in capturing Charles's fleet, and defeating all his projects of vengeance.

He was furious at his loss, and challenged Peter of Aragon to single combat; and Peter, whose object was to gain time, accepted the challenge, but subsequently declined it, and whilst Charles was struggling against repeated disasters, he died at Foggia, in the kingdom of Naples, at the age of seventy-five, in the early part of 1285.

The posterity of Charles of Anjou continued, notwithstanding, to fill for a time the throne of Naples and also that of Hungary, and thus became strangers to this province, and to France itself. In consideration of this, king John of France reunited Anjou to the crown, giving it soon after in appanage to his son Louis, who thus commenced the third house of Anjou. The county was elevated into a duchy, by an ordinance of John, in 1360, and Louis is thus the first of the ducal house. He was born in 1339, was taken prisoner with his father at the battle of Poitiers, and remained long in England, but at length broke his parole, and fled. On the death of his brother Charles V., he became regent, but used his power chiefly to recover the kingdom of Naples, to which Jeanne, the heiress of the last house of Anjou, had given him a title by adoption. The pope, as usual, seconded the attempt of the French prince, and Louis was accordingly crowned king of Sicily and Jerusalem at Avignon in 1382. He then led his armies to the conquest of Naples, but they perished, as Louis did himself, by disease, in 1384.

His son, Louis II., duke of Anjou, was also crowned king of Sicily by the pope, but he failed in establishing himself, and died in 1417.

Louis III., son of the last duke, attacked Naples in 1420, but was equally unsuccessful, and died at Cosenza in 1434.

He was succeeded, not so much in his kingdom as in his claim, by his brother René, surnamed the Good King René, who not only failed in recovering the Italian empire of his family, but was dispossessed of Anjou itself by Louis XI. [RENÉ.]

From the days of Louis XI. the title of Anjou lay dormant, whilst the sovereigns of France themselves prosecuted their claims to Italian dominion, as heirs of the Angevin princes. With Francis I. these hopes expired. His successor, Henri II., bestowed the duchy of Anjou upon his third son, who bore this title when elevated to the throne of Poland. As this prince however succeeded to the throne of France, he is better known under the name of HENRI III. Henri's younger brother, at first duke of Alençon, succeeding to the title of Anjou, is best known under this latter name.

This prince was born in 1554, and was first christened Hercules, a name that was afterwards changed for that of Francis at confirmation. He had the small-pox when very young, and was so 'horribly spoiled' that his mother, Catherine of Medicis, took a dislike to the boy, and sent him to Amboise to be educated apart from his brothers and from the court. Having once visited this place, Catherine spoke of him as 'a little moricard (black), who had nothing but war and tempest in his head.' The young prince naturally returned his mother's aversion; and this may have been the original cause of his liberality of opinion, since it threw him into the confidence and friendship of Catherine's enemies, the Huguenots. He was subsequently proposed as a husband to the queen of England, but the massacre of St. Bartholomew, which soon after occurred, created a distance and aversion between the two courts.

On that occasion the Duke of Alençon maintained an honourable part. He so openly expressed his abhorrence of the event, and his admiration for Coligny, that he became as much an object of suspicion as any of the Huguenots. He was sent against La Rochelle, as to a school of martial orthodoxy, where he was nearly killed by a shot from the ramparts, but the Huguenots continued to entertain a favourable opinion of him. Charles IX. was lingering under a mortal malady; his brother, the next heir, was in Poland. The Protestants hoped to elevate the Duke of Alençon to the throne in his place; thus exchanging a monarch whom they detested for one who favoured their own opinions. A plot was accordingly formed, which utterly failed through the perfidy and weakness of him whom it was designed chiefly to benefit. The Duke of Alençon, instead of escaping at the appointed moment, hurried to his mother's feet, and confessed the whole affair. The consequence was the arrest of all who were implicated, and the failure of the enterprise. To render the act more base on the part of Alençon, the whole weight of vengeance fell upon his confidants and followers. He however reaped no advantage from the act. Catherine of Medicis took him and Henry of Navarre with her, when, after the death of Charles IX., she went to welcome Henri III. on his return to Poland. She presented them as prisoners to the new king, who at first seemed severe, but inflicted no punishment. At length the Duke of Alençon became reconciled to the Huguenots. He escaped from court in the autumn of 1575, and placed himself at the head of the armies raised by the reformers. A truce first, and a peace afterwards, were the fruit of a year's show of hostility. The Duke of Alençon secretly proposed to desert his party once more; but the Huguenot chiefs insisted upon favourable terms, which they obtained, in name at least, in 1576. The duke on his part obtained advantages equally favourable, letters patent being soon after issued, which gave him the duchies of Anjou, Touraine, and Berri.

In this arrangement however the negotiators on both sides may be said truly 'to have reckoned without their host.' The Catholics, disgusted with the weakness of the monarch, formed the 'league,' which soon after rendered the articles of peace null. The Protestants on

their side, little trusting to empty promises, kept armed and in an hostile posture, and Henry of Navarre was now rising among them to fill the place of honour that the new Duke of Anjou had ceded. War in consequence recommenced, and, strange to say, the Duke of Anjou himself appeared in command of a Catholic army.

Catherine of Medicis and Henri III., reconciled to their son and brother, now laboured to procure for the Duke of Anjou those very prizes that Coligny had before sought to give him—the sovereignty of Flanders, and the hand of Queen Elizabeth. At the head of a French army the Duke of Anjou marched against Don John of Austria. He had at first some success, but not being so well received by the Flemings as he expected, his career of conquest was suspended. In pursuance of the other part of his scheme, he had deputed to Elizabeth his envoy, Simier. The French manners and gallantry of this personage quite won the English queen, who threw off much of her habitual prudery, and began to entertain serious thoughts of marrying Anjou.

He was elected sovereign of the Netherlands in 1581, and took possession of Cambray in spite of the Prince of Parma. Thus, crowned with honour, the duke hastened over to England to terminate in person his suit with the queen. Nothing could be more brilliant or warm than his reception. Elizabeth detained him for months, feasted, and promised, and avoided him; beguiling him and, perhaps, herself, with hopes of a union which her prudence could never permit.

At length the Duke of Anjou took his departure from England to govern the Netherlands. Unaccustomed to the free display of popular and personal independence, he mistook the rival influence of the Prince of Orange, and of the citizens of the several towns, for insults to his dignity and treason to his rights. Instead of making use of such means to overcome them, as were allowed and might have succeeded with the Flemings, he proposed to seize the Flemish fortresses by means of his soldiers, and thus to bridle the turbulence of an independent people. But he mistook the character of the people. The Flemish citizens mastered his soldiers everywhere; the people of Antwerp especially made a successful resistance, and not only Anjou himself, but the French were expelled by the united force, and amidst the general execrations of the country.

From this hour the Duke of Anjou sunk into insignificance. He was too low in fortune and in character to mingle, or to have influence with any party, or in any struggle. He expired soon after, in 1584, at Château Thierry.

ANKARSTRÖM, JOHAN JAKOB, the assassin of Gustavus III. of Sweden, was the son of a Swedish noble, and was born in the year 1759. He early entered the army as an ensign in the Royal Blue Guards, but quitted the service in a very few years. After leaving the army, he visited various parts of Europe, and resided for a short time in England, where he was reduced to great poverty. On his return to Sweden, he became connected with a large body of disaffected nobles, who, disgusted with the two regal revolutions of 1772 and 1789, and partaking of the Jacobinical opinions just then so triumphant in France, were ready to adopt any desperate measures to take vengeance on Gustavus for his past acts, and to prevent his threatened interference by arms in favour of Louis XVIII. His assassination was resolved on, and Ankarström was pitched upon to do the deed. Two others of the conspirators, Count Ribbing and De Horn, it is said, drew lots with Ankarström for what they considered an honour.

After two or three ineffectual attempts, the assassination took place on the 16th of March, 1772, during a masked ball at the Opera House at Stockholm. The king had received an anonymous letter in the morning, cautioning him not to go to the ball, as his life would be attempted; but he was too courageous to allow himself to appear afraid, and he resolved to go. He had been only a short time in the room, when, notwithstanding his mask and domino, he was easily recognised, and a number of masks began to crowd around him. One of them (Count de Horn) tapped him on the shoulder, with the salutation, "Bon soir, beau masque," which was the signal agreed on among the conspirators, and Ankarström immediately fired a pistol, fully charged with powder, balls, and rusty nails, point blank at the king. Gustavus fell into the arms of his favourite, the Count d'Essen, and the conspirators raised a preconceived cry of "Fire!" in order to escape in the confusion. The doors however were quickly closed, and no one was permitted to depart, until he had been registered by the police, and had signed his name in a book. Ankarström was the last to quit the place, and he passed with so easy and confident an air as to avoid all suspicion. After it was cleared of visitors the room was searched, and a pair of pistols, one loaded, the other not, and a formidable dagger, was found on the floor, where they had been left by the assassin. They were soon recognised as belonging to Ankarström by the gunsmith and cutler of whom he had bought them, and his arrest immediately ensued. On his examination he displayed great firmness, at once avowing and glorying in his crime, but denying that he had any accomplices. The researches of the police however in a short time led to the apprehension of between twenty and thirty of the principal conspirators.

The king survived his wounds twelve days. As his son was only thirteen years old, his brother, the Duke of Sudermania, became regent, and the dying Gustavus is said to have exacted a promise from him that only the actual murderer should suffer death. Ankarström, after a lengthened trial, was condemned, on the 29th of April, to suffer

a death of torture. He was ordered to be exposed to the people on three successive days in the streets of Stockholm, with the pistols and dagger suspended over his head, together with the inscription "Konungs Mördar" ("Murderer of the King"); to be beaten on each day with rods; and on the fourth day to be beheaded, his right hand being first cut off; to be then quartered, and his head and quarters set on wheels, according to the Swedish custom, in the chief places of the capital. The other conspirators were sentenced to various punishments. Counts de Horn and Ribbing, and Colonel Lilienhorn, the writer of the anonymous letter, were condemned to suffer imprisonment for life. Another conspirator, Baron Bjelke, had committed suicide before he could be taken.

Ankarström suffered with undaunted courage, having continued to declare his satisfaction in having "rid his country of a tyrant" to the last. Though his crime was held in detestation by the common people, many of the nobles regarded it with admiration.

There are numberless versions in books of the period, and of later date, of the motives of Ankarström in committing this murder, embracing almost every imaginable variety; but none appear to rest upon much better authority than mere conjecture. It is hardly necessary to search further for the exciting cause than the revolutionary spirit of the period, especially when the assassination is viewed in connection with the events which speedily followed in other countries.

ANNA BOLEYN. [BOLEYN.]

ANNA COMNE'NA, the daughter of Alexius Comnenus I., emperor of Constantinople, born December 1, 1083, best known as the author of the 'Alexiad,' a work written in Greek, containing the history of her father's life. She was the favourite child of Alexius, and her talents were sedulously cultivated by an education comprehending the study of eloquence, poetry, mathematics, natural science, and the philosophy of Plato and Aristotle (see her preface to the 'Alexiad'). She married Nicephorus Bryennius, a man of high birth, and of high literary attainments. Presuming on parental partiality, she solicited Alexius to name her husband for his successor, to the exclusion of her brothers, John and Isaac; and in this attempt she was assisted by her mother, the Empress Irene. Pressed on this subject, the dying emperor uttered some allusion to the vanities of the world, which drew from Irene the unfeeling speech, "You die, as you have lived, a hypocrite." Alexius died August 15, 1118, and John Comnenus, the lawful heir, possessed himself of the royal signet, and became master of the palace, and of the empire. Disappointed ambition drove Anna to conspire against her brother's life. All was prepared, but fear or remorse induced Bryennius to absent himself at the moment of action; and in her passionate disappointment the princess exclaimed, "that nature had mistaken the two sexes, and endowed Bryennius with the soul of a woman." On the discovery of the meditated treason, the life and fortune of Anna became justly forfeited. Her life was spared by the clemency of John, and the guilty princess escaped with no further punishment than a forced retirement from the world, and exclusion from the splendour and intrigues of a court. Thus thrown on herself, she relieved the heaviness of her solitary hours by composing the 'Alexiad,' a history of her father's life and reign in 15 books, from 1069, twelve years before he ascended the throne, to his death in 1118. She completed it in 1148, and died in the same year. The 'Alexiad' is distinguished by an air of filial piety both as regards the person and the fame of Alexius. The book is overloaded by rhetorical display, and by the affectation and misplaced obtrusion of science. Individuality of character is lost in indiscriminate panegyric, and the likeness is rendered suspicious by the barefaced flattery of the portrait. The most curious and important part of Anna's history, as of her father's reign, is that which relates to the first crusade. It is often at variance with the Latin authorities, and on no point more so than on the character of Alexius.

The 'Alexiad' forms a part of the collection of Byzantine historians. The first complete edition of it was published at Paris, 1651, by the Jesuit Poussines, with a Latin translation and glossary. A series of valuable notes on it, by the learned Du Fresnoy, will be found at the end of the 'Historiæ' of John Cinnamus, containing an account of the reigns of John and Manuel Comnenus.

ANNA IWANOWNA, empress of Russia, was the second daughter of the Czar Iwan or John I., the elder brother of Peter the Great, and for some time his associate on the throne. She was born on the 8th of February (O.S.), 1694. In 1710 she was married to Frederic William, duke of Courland, who died in 1711. On the death, without issue, of the Emperor Peter II., on the 29th of January, 1730, after an attempt by the family of the Dolgorukys to elevate the princess Catherine of that house, who had been betrothed by the late king, to the throne, and a second attempt by a party of the nobles to limit her authority, the conditions of which she had signed, but declared to be null as fraudulently obtained, and the authors of which were dismissed from her councils, she began to reign with all the privileges and authority of her ancestors.

The government of the empress for the first three years of her reign was mild and popular. The council of state, most of the members of which anticipated death as the consequence of their failure, was abolished, three of the four Dolgorukys were banished to distant parts

of the empire, and these were the only punishments inflicted for attempt at revolution. The administration was entrusted to departments of the senate, controlled after the second year of Anna by a cabinet, which had nearly the same powers as the former council of state. The army underwent a complete reformation under Marshal Münnich; the emoluments of Russian officers were equalised with those of foreigners, which had hitherto been double those of natives, and the obligation of serving in it was lightened. The gentry were allowed a greater freedom in the sale and disposal of their estates, arrears of taxes were remitted to the merchants, and the poll-tax was considerably diminished for the serfs. The empress established peace with Denmark by relinquishing the interests of the Prince of Holstein, the widower of Anna Petrovna, and with Persia, by giving up to Nadir Shah, then reigning, the provinces which Peter the Great had conquered, but from which the Russian nation then derived more disadvantage than benefit. After this prosperous period of three years everything altered for the worse, not through any change in the empress's character, or any reverse in fortune, but through the influence of Biren, who, from passing his time in indolence and luxury, took it into his head to manage the affairs of state, and was allowed by the weakness of his mistress to gratify his cruelty, ambition, and avarice to their full extent. This Biren (or Biron, as he called himself) was the grandson of a groom; he had been her acknowledged favourite at the court of Courland, and had followed her to Moscow very soon after her accession. On the death of Augustus II., king of Poland and elector of Saxony, in 1733, the empress declared against the election of his son as king of Poland, and in favour of the elevation of a native Pole to the dignity; but on the promise of the new elector to second her views in Courland, where she had the project of inducing the states to raise Biren to the dukedom, she at once espoused his cause. In consequence of the indignation of the Poles at her conduct, they unanimously elected Stanislas Leszczynski, the old enemy of Russia, who had once before been placed on the throne by Charles II., and who was now the father-in-law of the king of France, Louis XV. The Russians, under the command of Marshal Münnich, entered Poland; Stanislas was besieged in Danzig, from which he hardly escaped with his life; and the elector of Saxony, Augustus III., was seated on the throne. The Russian arms were equally successful in a war against the Turks and Tartars, begun in 1736, and conducted by Marshal Münnich, who conquered Moldavia, and took Azof and Ochakov or Oczakov. The ill success of the arms of Austria, however, the ally of Russia, obliged the empress, who found the whole power of Turkey on the point of being directed against her, to relinquish her conquests. At the suggestion of Biren, she sent full powers to the marquis of Villeneuve, the French ambassador to the Porte, to settle a peace with Turkey, which was accordingly concluded at Belgrade in 1739.

It was in the interior arrangements of the empire however that the influence of Biren was most pernicious. His tyranny was carried to a height which diffused universal terror throughout the empire. To gratify his revenge, which still brooded over the project of the Dolgorukys to exclude him from following the empress to Moscow, that unfortunate family was recalled from banishment to perish on the scaffold. They were accused of forging a will of Peter II., in favour of Catherine Dolgoruky; some were beheaded: Vasily Lukich and Ivan were broken on the wheel. Even after this, one of the cabinet ministers, of the name of Boluinsky, ventured, in 1740, at a council in which Biren took the part of the Poles, to throw out a sarcasm, that as he was not a vassal of Poland, he did not think himself obliged to defend the cause of the enemies of Russia. Biren felt the sarcasm was directed against himself as holding from Poland the fief of Courland, the dukedom of which his mistress had procured for him. He trumped up a set of charges against Boluinsky, one of which was that he had dared to present a Russian translation of Macchiavelli's 'Prince' to the empress, and the minister was condemned to death. The empress long refused to confirm his death warrant, and burst into tears when it was repeatedly brought for her signature. Biren at last demanded it with a threat, in case of refusal, to leave Russia for ever, and Boluinsky perished. It is easy to suppose that after this Biren met with little opposition in the cabinet. While he loaded his coffers with treasure, the revenues of the state were insufficient to support the expenditure, and the taxes were collected by the most violent means. Soldiers were directed, in place of receiving pay, to live at free quarters. "Whole villages," says Ustrialov, "were laid waste, many were burned, the inhabitants were sent to Siberia." Twenty thousand persons were driven into this species of exile by Biren. But during his time of power exile was almost to be considered a slight punishment: "many," says Ustrialov, "were knouted, many had their tongues cut out, many perished beneath the axe of the executioner, and not a few were broken on the wheel." The number of persons who lost their lives through Biren's tyranny is computed at eleven thousand. The conscience of the empress was touched by the death of Boluinsky, whom she knew so well and knew to be innocent, and it is supposed by many that remorse on that account brought her to the grave. She died at St. Petersburg on the 29th of October, 1740, in the forty-seventh year of her age, and left the crown to Joann Antonovich, the grandson of her elder sister, Catherine, from whom, according to her own doctrine of hereditary right, she had usurped it. As guardian of the prince, and regent during his minority, she nominated Biren.

The Empress Anna has the character of having been a humane and judicious princess, but her criminal affection for her worthless favourite made her reign as great a curse to her subjects as if she had been the most remorseless tyrant. The last seven years of her reign are spoken of with horror by Russian historians, who are not disposed to exaggerate the faults of the great. During her reign several public improvements were introduced. The senate was divided into departments, the army was much improved, the cadet establishment at St. Petersburg for the education of the higher classes was founded, schools for singing and music were established in Malorussia. In 1739 the Middle and Lesser Hordes of Kirghis Tartars submitted themselves to Russia. The empress received embassies from Persia and China. She patronised navigation, and during her reign some of the Kurile islands were explored and surveyed by Russians.

ANNE OF AUSTRIA, queen of Louis XIII. of France, and regent during the minority of Louis XIV., was daughter of Philip II. of Spain; she became the wife of the young Louis XIII. in the year 1615. The great Henry IV. of France had for his darling project the humbling of the House of Austria. His queen, Mary of Medicis, was averse to this policy, and no sooner was Henry in his grave than she took measures for a reconciliation with Spain, and sealed it by a double marriage, one of which was that of young Louis XIII. with Anne of Austria. The administration however fell in a few years into the hands of that master-spirit, Cardinal Richelieu, who resumed Henry IV.'s views of humbling the pride and ambition of the House of Austria. In this he instantly found an enemy in Anne of Austria, and a struggle ensued betwixt them, in which Anne, though a queen, and a queen regnant, was compelled to yield, as long as he lived, to the great minister.

Had Anne been a woman of greater talents or more pleasing character, it might have been otherwise, but her Spanish education, her coldness and gravity of demeanour, which only covered frivolity of thought, alienated, rather than attracted Louis XIII. Upon this feeling Richelieu worked, and he was able at once to inspire Louis with dislike and with jealousy of his queen. When it was generally known that the queen was in disgrace, and was the object of Richelieu's anger and mistrust, this was sufficient to rally around her the host of discontented nobles, with Gaston, the king's brother, at their head. It does not appear that Anne was more privy to their plan of resistance and rebellion than she could have avoided being. But her name was unavoidably implicated, and the artful cardinal made of this a specious tale for the king's ear. He represented Anne as disgusted with her royal husband, and endeavouring to get rid of him through conspiracy, in order to place Gaston, duke of Orleans, in his stead.

What gave most force to Richelieu's tale, was the court which the duke of Buckingham had openly paid to the queen of France. On one occasion, after having taken leave on his return to London, he hurried back from Amiens, found his way into the queen's sleeping-room, where it was usual for her to receive visits, flung himself on his knees by the bedside, and gave full vent to a passion that shocked the attendants, as passing beyond the bounds of etiquette. Anne gave but a gentle reprimand. Neglected by her husband (who partook not of her bed for twenty-three years after their marriage), Anne was not insensible to the chivalric attachment of a noble and a statesman, and might perhaps have given some handle to malicious insinuation. At all events, she remained without influence, alienated from the king's affections and council, till death took away monarch and minister, and left to Anne, as mother of the infant monarch, the undisputed reins of power.

There was then a change of policy similar to that which had taken place on the death of Henry IV. Mary of Medicis had counteracted and abandoned all his schemes for humbling Austria, by making peace with that rival power. Anne, of Austrian blood, now did the same, from hatred to Richelieu's memory, as much perhaps as from family affections. She did this with less abruptness, indeed, than Mary, having the good fortune and good sense to have and to choose for her minister a man bred in Richelieu's school, one who had learned his address, but who had never been endowed with his disinterestedness and high views. This was Mazarin.

Anne of Austria's policy in this choice, though perhaps the wisest, was still not the less fraught with danger. It alienated from her at once the party of the noblesse, which, crushed by Richelieu, had made common cause with Anne in her disgrace, and now raised its head to claim vengeance and spoil. Mazarin's advice compelled his mistress to resist the unreasonable demands of these, her former partisans; and the consequence was a general conspiracy against the queen and her minister. Mazarin, like his predecessor, might have triumphed over the noblesse alone; but this class now called to its aid a new, and hitherto neglected body, that of the citizens, or bourgeoisie. These were easily inflamed against Mazarin as a foreigner, and as a financier, fertile in the invention of new taxes. In addition to this, the great offices of the judicature, which had become venal, had fallen into the hands of the middle or citizen-class, and the magistracy, being possessed of the power of sanctioning or resisting the royal edicts, made common cause with the citizens, and thus a powerful combination was raised against the authority of Anne. An attempt on her part to treat the magistrates as she had treated the duke of

Beaufort, by imprisoning them, gave birth to a popular insurrection, which proved successful. The queen and court were for a time prisoners in the Palais Royal, and compelled to submit to the dictates of the mob. The queen threatened at first to fling the heads of the captive magistrates to the mob, rather than deliver their persons, but she was compelled to smother both pride and anger. The people had their will. The court however took the first opportunity of escaping from Paris and recurring to arms. A civil war commenced between Anne, her minister, and their adherents on one side; and the noblesse, the citizens, and people of Paris on the other.

One might think that the advantage in such a quarrel must necessarily remain to the latter. But Anne and Mazarin's address, after many vicissitudes of fortune, came off triumphant. The Frondeurs, as the insurrectionists were playfully called, were not very earnest in their rebellion. The young noblesse considered the campaign as a frolic, and a suspension, or rather a cessation of hostilities, was produced by the retirement of Mazarin.

He returned however, for Anne was but a cypher without her minister; and the war again broke out. The court had secured a defender in Turenne, who triumphed even over all the valour of the young noblesse, headed by the great Condé. The result of the rebellion, and of Anne of Austria's administration, was, that the nobles and middle classes, vanquished in the field, were never afterwards able to raise their heads, or to offer resistance to the royal power, up to the period of the great revolution. Louis XIV. is, in general, said to have founded absolute monarchy in France. But it was rather the blunders and the frivolity of those who idly espoused the cause of freedom during that monarch's minority which produced this effect. Anne of Austria's triumph was that of monarchy. She, or at least the events of her regency, contributed far more to it, than all the subsequent imperiousness of Louis XIV.; and hence the epoch of Anne's administration is one of the most important in French history.

Anne must have been of pleasing exterior, as her portrait in the Vienna gallery testifies. Though not a woman of talents, she was at least fortunate in her regency; above all, in her choice of Mazarin. Her influence over the fate and the court of France continued for a long time; her Spanish haughtiness, her love of ceremonial, and of all the pride of power, were impressed by education upon the mind of her son, Louis XIV., who bears the blame and the credit of much that was hers. Anne of Austria died at the age of sixty-four, in the year 1666.

ANNE, queen of England, the second daughter of James II. by his first wife Anne Hyde, was born at Twickenham on the 6th February, 1664. She was educated in the religion of the Church of England; and, in 1683, was married by the Bishop of London to prince George, brother of Christian V., king of Denmark. At the revolution in 1688, Anne and her husband adhered to the dominant party of her brother-in-law William III.; and, by the act of settlement, the English crown, in default of issue to William and Mary, was guaranteed to her and her children. During the reign of William she appears to have lived in much discomfort, neglected by her sister, and treated with coldness by the king; and she sustained the heavier affliction of losing all her children in infancy, except one son, the duke of Gloucester, who died at twelve years of age, in 1699. This event, as well as the previous death of queen Mary, rendered necessary an alteration in the act of settlement; and the princess Sophia, dowager electress of Hanover, and her descendants being Protestants, were declared next heirs to the throne, in default of direct heirs to William and his sister-in-law Anne. [GEORGE I.] The exiled king James II. died on the 16th November, 1701; and Louis XIV. of France having recognised the claims of James's son to the English throne, William III. commanded the return of his ambassador from France, and dismissed the French ambassador from England. Another cause of hostility between France and England had arisen in the recognition by Louis XIV. of the claim of his grandson, Philip of Anjou, to the crown of Spain, contrary to the Partition Treaties agreed to between France, England, and Holland, in 1698 and 1700, by which Joseph

Ferdinand, electoral prince of Bavaria, and upon the death of Joseph Ferdinand, the archduke Charles, was declared heir-presumptive to the Spanish crown. The will of Charles II. of Spain, who died November 1, 1700, by giving the crown to Philip of Anjou, had materially disturbed the balance of power in Europe established by the Peace of Ryswick in 1697; and the recognition by France of this testamentary disposition, in violation of the partition treaties, united, in 1701, England, Holland, and other European powers, against this attempt to bestow upon the French monarchy such a formidable preponderance.

Under these circumstances, Anne ascended the throne, upon the death of William III., on the 8th March, 1702. The hostility between the whig and tory factions at home, which went on increasing in violence to the end of the reign of Anne, was in its commencement greatly mitigated by the united opinion of the country in favour of the war with France and Spain. On the 4th May, within two months after Anne had succeeded to the throne, war was declared by England, the Empire, and Holland, against these powers. This memorable war bore the name of the War of the Succession. The extraordinary campaigns in the Low Countries and Bavaria, by which the military glory of England was raised higher than at any period since the days of Edward III., belong to the life of Marlborough; the successes of the English arms in Spain to that of Charles Mordaunt, lord Peterborough. Of the naval exploits of this war, the more signal examples were the capture of Gibraltar and Port Mahon.

The legislative union of Scotland and England, completed on the 27th July, 1706, was one of the most important events in the reign of Anne.

During the period of Marlborough's conquests, the spirit of political intrigue was stifled by the enthusiasm of the people. But as the War of the Succession slowly proceeded, Marlborough gradually lost his popularity, from the belief that his own avarice and ambition were the principal causes of the burdens which the war necessarily entailed upon the nation. A formidable party, too, had arisen, who asserted the supremacy of the church and the doctrine of the right divine of kings and the passive obedience of subjects—opinions which had expelled James II. from his kingdom, and had placed his childless daughter upon the throne. These opinions however were supposed to be indirectly encouraged by the queen, and were exceedingly popular amongst the people. The impeachment of Dr. Sacheverel for preaching these opinions—his mild punishment, which had the effect of a real acquittal—and his subsequent triumphant progress through the kingdom, furnished an unerring presage of violent changes. In the elections of 1710 the tory supremacy was established. The duchess of Marlborough, to whose talents and decision of character the queen had long submitted, was thrust out by the new favourite, Mrs. Masham. The ministry of Godolphin and Sunderland was displaced by that of Bolingbroke and Oxford. The command of the army was taken from Marlborough and bestowed upon the duke of Ormond. During the progress of these convulsive changes, which must have been distracting enough to the quiet temper of Anne, she was deprived of the sympathy of her placable husband. Prince George of Denmark died on the 28th October, 1708.

The first act of the tory ministry was to enter upon arrangements to bring the war to a conclusion. In 1711 negotiations were entered into with France, amidst the protestations of the allies of Great Britain; and these negotiations, after various difficulties, were terminated by the memorable treaty of Utrecht, April 11, 1713.

The subsequent events of Anne's reign are exceedingly interesting with reference to the intrigues for bringing back the Stuarts, to the exclusion of the House of Hanover.

The Pretender, whom the treaty of Utrecht obliged Louis XIV. to send out of France, had taken up his residence in Lorraine, which was nominally a separate country, but which was to all intents and purposes a part of France, and his residence in which was a complete evasion of the treaty. From here he carried on his intrigues in England with as much facility as he could have done at St. Germain. In the last parliament addresses had been sent to the queen by both Lords and Commons, praying her to endeavour to procure the Pretender's dismissal from the Duke of Lorraine's dominions. The new parliament speedily took up this subject, and eagerly pursued it. During this last year of Anne's reign the arrival of the Pretender in England was constantly expected: and great as the danger then appeared, facts which have been since brought to light show that it was even greater than was then supposed. The Stuart papers, contained in Macpherson's 'Original Papers,' and the extracts from Sir James Mackintosh's manuscript collections from the French archives, which were published in the 'Edinburgh Review,' vol. lxii. p. 1-36, prove that a design was on foot, of which Bolingbroke and Lady Masham were the chief promoters, in which all the principal ministers of state were more or less concerned, and which received countenance from Anne herself, to secure the succession to the Pretender, on the condition of his renouncing the Roman Catholic religion.—a condition to which the Pretender would not assent, but which, if he had been a person disposed to assent to it, would, it may be concluded, have been nugatory. The friends to the Hanoverian succession thought it necessary to bestir themselves, and among these were several members of the tory party, and almost all the bishops,

who joined with the whigs in the various motions now made in the houses against the government. By the advice of the leading friends of the house of Hanover in England, Schutz, the Hanoverian resident, applied to the lord chancellor for the electoral prince's writ of summons to the House of Peers as Duke of Cambridge, in order that he might come over and take his seat. This step caused great consternation and anger in the mind of Anne, and the scheme was given up.

On the 9th of July, Anne prorogued parliament; and the prorogation was almost immediately followed by the fall of Oxford, the victim of the intrigues of Bolingbroke and Lady Masham. Oxford had not entered with sufficient heartiness into the Jacobite intrigues to satisfy the favourite; but having made fair promises, had always endeavoured to put off their fulfilment by excuses, and, while professing to be favourable to the Pretender, had maintained a correspondence with the house of Hanover likewise. There had been jealousies, moreover, almost from the commencement of their joint ministry. The immediate cause of Oxford's dismissal is said to have been offence given to Lady Masham by opposition to a scheme from which she would have derived pecuniary benefit. Irritated by this, Lady Masham told Oxford, whom she had herself raised to royal favour and power, that he had never done the queen any service; and was incapable of doing her any. Oxford replied, "I have been abused by lies and misrepresentations: but I will leave some people as low as I found them." The altercation lasted till two in the morning in the queen's presence; and at the end of it, Anne demanded of Oxford the treasurer's staff. This was on the 27th of July. Three days after, the queen was seized with an apoplectic fit, and the day after she died. Immediately after Oxford's fall, Bolingbroke had made a number of new appointments, and the persons whom he had selected had been all Jacobites. The treasury was put into commission, Sir William Wyndham being made the chief commissioner, and Dr. Atterbury was appointed lord privy seal. The queen's illness, foreboding immediately a fatal result, came upon Bolingbroke before he could mature his plans for the restoration of the Pretender; and, unnerved by the suddenness of the crisis, he shrunk from the execution of his designs before the bold and firm measures taken to secure the succession of the House of Hanover by the dukes of Argyll, Somerset, and Shrewsbury. The day before the queen's death the council met at Kensington in a room close to that in which the queen was dying. The dukes of Argyll and Somerset, who had not been summoned, presented themselves at the council, pleading the queen's danger as their apology; and the Duke of Shrewsbury immediately thanked them for coming, and invited them to take part in the deliberations. The dukes of Argyll and Somerset then urged the necessity of the appointment of a lord-treasurer at a moment so critical for the country, and named the Duke of Shrewsbury as the person most fit to be recommended to the queen for the appointment. The council then adjourned to the queen's bed-side, Bolingbroke offering no opposition, and recommended to Anne to appoint Shrewsbury lord-treasurer. Anne nodded, and her nod was construed into assent. The council then returned to the room in which they had before sat, and, on the motion of Argyll, resolved to summon every privy-councillor who might be in London or the neighbourhood, to attend immediately. The aged and venerable Somers at once obeyed the summons, and many members of the whig party followed him. Prompt and vigorous measures were now taken, by order of the council, to prevent any attempt that might be made by the Pretender; and the heralds-at-arms, and a troop of Life-Guards, were kept in readiness to proclaim George I. the moment after Anne's death. Thus, in this critical moment, was the peaceful succession of the house of Hanover secured, after all the doubt and danger that had threatened it.

Anne died on the 1st of August, 1714, in the fiftieth year of her age. Her husband, Prince George of Denmark, had died about six years before. They had been unfortunate, to a degree which seldom occurs, in respect of children; for out of seventeen to which Anne gave birth, the greater number were still-born, and out of the remainder only one survived infancy, and that one was carried off at the age of eleven.

Anne had no abilities which enabled her to give of herself either impulse or direction to that great development of the national mind which, equally in politics and in literature, marked the period of her reign. And with every allowance for the strong bias of revenge in the Duchess of Marlborough, who has principally furnished what is known of Anne's habits and dispositions and private conversations, it cannot be said that the virtues of her character are so many or so great as to atone for her intellectual deficiencies. The influence which she exercised on public events was exercised through favourites, who for a time ruled everything. With Anne, reason did not determine her first choice of her favourites; and the disgrace of the Earl of Oxford, no less than that of the Duchess of Marlborough, proves that no amiable feeling moderated the whimsical passion which would suddenly turn her boundless love and confidence into aversion. Such was the queen to whom it may indeed be said to have been a happy accident that for a time her armies were led by Marlborough, and her councils guided by Somers and Godolphin, and whose reign is marked out in the history of England by the lustre of the literary names

which embellished it—Swift, Pope, Addison, Steele, Prior, Gay, Arbuthnot, and Bolingbroke.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ANNIUS of Viterbo, a well-known Dominican monk, who lived in the 15th century. His real name was Giovanni Nanni, but in conformity with the custom of the age he Latinised it, and dropped the first letter, in order to render it more completely classical. He was born at Viterbo in 1432, and died in 1502. He entered early into the Dominican order, and became famous for his acquaintance with the Eastern as well as the Greek and Latin languages. His works are voluminous: the most remarkable is entitled 'Antiquitatum Rariorum Volumina XVII., cum Commentariis Fr. Joannis Annii Viterbiensis.' This collection professes to contain a number of historians of high antiquity—Berosus, Manetho, Myrsilus the Lesbian, Fabius Pictor, Marcus Cato, and others. That those pretended historians were forgeries, there can now be no doubt. He published two other works which excited a great sensation from the circumstances of the times, and the recent capture of Constantinople, one entitled 'Tractatus de Imperio Turcorum,' the other 'De Futuris Christianorum Triumphis in Turcos et Saracenos ad Xystum IV., et Omnes Principes Christianos.'

ANNO. [HANNO.]

ANQUETIL DU PERRON, ABRAHAM HYACINTHE, was born at Paris on the 7th December, 1731. He received his early education in that capital. M. de Caylus, then bishop of Auxerre, induced him to study divinity, for which purpose Anquetil visited two theological seminaries. But his fondness for the literature of the East, especially the Arabian and Persian, did not allow him long to pursue his theological studies; and he returned to Paris, where he made use of the ample stores of oriental learning collected in the Bibliothèque du Roi. A French army being fitted out for India, Anquetil resolved to avail himself of this opportunity to visit India, and enrolled himself as a private soldier, in which capacity he quitted Paris on the 7th of November, 1754. It was only after his departure that his friends obtained for him a small pension (500 livres) from the French government, to assist him in the pursuit of his inquiries. Anquetil disembarked at Pondicherry, on the Coromandel coast, the 10th of August, 1755; hence he proceeded to Chandernagor, in Bengal, but was disappointed in his hope of finding there an opportunity of learning the Sanscrit language. At this place he was taken ill, and the capture of Chandernagor by the English soon obliged him to leave. He went to Surat, where he became acquainted with some 'deaturs,' or Parsi priests from Guzerat, whose assistance enabled him to make the necessary preparations for the translation of the Zend Avesta, which he published after his return home. The progress of the British power induced Anquetil to leave India. He embarked for Europe, and on the 4th of May, 1762, returned to Paris. The Abbé Bartholomé procured him an appointment in the Bibliothèque du Roi, and in 1763 he was elected a member of the Académie des Belles-Lettres. From this time Anquetil devoted himself entirely to literary labours. In 1771 he published his principal work, a translation into French of the 'Zend Avesta,' or the sacred writings of the Parsis, attributed by them to Zoroaster. The question concerning the genuineness or authenticity and the exact date of these writings is not yet ultimately settled. Of Anquetil's other works we shall here only notice his 'Recherches Historiques et Géographiques sur l'Inde,' which he published in 1786; and his Latin interpretation of Dara Shekub's Persian translation of the Sanscrit 'Upanishads,' or ancient and sacred treatises on the theology of the Brahmins, which appeared under the title 'Oupnekhat sive secretum tegendum,' &c. (Strasbourg, 1804, 2 vols. 4to.) Anquetil died on the 15th of January, 1805.

ANQUETIL DU PERRON, LOUIS PIERRE, the elder brother of the subject of the preceding article. He was born at Paris in 1723, and was, at an early age, appointed director of the Episcopal Seminary at Rheims. From this place he was removed in 1759 to the Priory of La-Bocé in Anjou, and thence to that of director of the College of Sens. He then became Curé of Château-Renard near Montargis. The new ecclesiastical arrangements made at the revolution transferred him from this village to that of La-Villette near Paris; and here he remained till 1793; when, in the general proscription of the clergy, he was seized and thrown into the prison of St. Lazare. The catastrophe of the 9th Thermidor (27th of July, 1794) delivered Anquetil along with the other victims of the overthrown tyranny. On the establishment of the Institute of Belles-Lettres in 1795, he was nominated one of the members of the second class. He was soon after appointed to a place under government in the foreign office, and this he held till his death on the 6th of September, 1808, at the age of 84. He is the author of a considerable number of historical works, of which, however, only one or two are now held in much esteem.

ANSALONI, GIORDANO, was born about the beginning of the 17th century at St. Stefano, a town in the diocese of Girgenti, in Sicily. He early entered the order of Preachers, and having heard of the persecutions suffered by the Roman Catholics in Japan, he became anxious to die a martyr in the cause of Christianity. With this express view he removed to Spain to a convent of his order at

Truxillo, and in 1625 obtained permission to go out as a missionary to the East. On his arrival in the Philippines he was sent for some time on duty to the hospital of the Chinese at Manilla, where, says Aduarte, he did not content himself with learning to talk their language, but learned to read and write their characters also, "a thing in which very few people have succeeded." He was thus enabled to pass for a Chinese on his entering Japan, in 1632, in company with some real Chinese, and dressed in their fashion. For two years he continued to officiate as a priest in Japan, but on the 4th of August, 1634, was discovered and made prisoner in the city of Nangasaki. After suffering a variety of the most dreadful tortures, he was hung up with the head downwards, and left to starve, in which horrible condition he lived seven days, dying on the 18th of November, 1634. Another priest, his companion, Father Tomas de San Jacinto, was executed in the same manner, and at the same time sixty-nine Christians were beheaded for their faith.

ANSELM, archbishop of Canterbury in the reigns of William Rufus and Henry I., commonly called St. Anselm, was by birth an Italian, and a native of Aosta, a town of the Alps belonging to the Duke of Savoy. He took the monastic habit in 1060, at the age of 27, at Bec in Normandy, where Lanfranc, afterwards archbishop of Canterbury, was prior. Three years after, when Lanfranc was promoted to the abbacy of Caen, Anselm succeeded him as prior of Bec; and when Herluin the abbot of that monastery died, Anselm became abbot of the house. Anselm came to England about 1092 by the invitation of Hugh Lupus, earl of Chester, who requested his aid in sickness. Soon after his arrival William Rufus also required Anselm's assistance, and finally nominated him (though with great difficulty of acceptance on Anselm's part) to the see of Canterbury, which had lain vacant from Lanfranc's death in 1089. Anselm, having first stipulated for the restitution of the possessions of the see as they had stood in his predecessor's time, was consecrated with great solemnity, December 4th, 1093. In the following year a stunted offer, as the king thought it, of 500*l.*, was the first cause of the royal displeasure towards Anselm; followed by further discontent when Anselm desired leave to go to Rome to receive the pall from Pope Urban II., whom the king refused to acknowledge as pope. Anselm, seeing no probability of terminating his disputes with the king, proposed a visit to Rome to consult the Pope, but was personally refused the royal permission to depart. His resolution however was fixed: he went a second time to court to ask for leave, and was again refused, but gave his blessing to the king, and embarked at Dover. As soon as the king had ascertained that Anselm had crossed the channel he seized upon the archbishopric, and made every act of Anselm's administration void. The archbishop got safe to Rome, and was honourably received by the Pope, whom he afterwards accompanied to Capua. Here he wrote a book upon our Saviour's incarnation; subsequent to which he assisted the pope at the synod or council of Bari, where he prevented Urban from excommunicating the king of England for his various and frequent outrages upon religion. The king however by presents and promises finally bribed the court of Rome to desert Anselm, who retired to Lyon, where (with the interval of an attendance at a council at Rome in 1099) he continued to reside till he heard of William Rufus's death, with that of Pope Urban shortly after. Henry I. immediately upon his accession invited Anselm to return to England, but fearing his brother Robert's arrival as a competitor for the throne, he was crowned by another prelate. The archbishop was received in England with extraordinary respect both by the king and people, but refusing to be re-invested by the king, and to do the same homage with his predecessors, he again fell under the displeasure of the court. Notwithstanding this, Anselm summoned a synod to meet at Lambeth, in which it was determined that the king might lawfully marry Matilda, the eldest daughter of Malcolm, king of Scotland, although she was generally reported to be a nun; he also rendered signal service to king Henry in other respects. In 1102 another national synod was held under Anselm at St. Peter's, Westminster, which was attended by the king and principal nobility. In the year following, at the request of the king and barons, Anselm himself took a voyage to Rome, to arrange if possible an accommodation; the king at the same time, in distrust, despatching an agent of his own to the papal court, who arrived before the archbishop. The Pope still continued inexorable, but wrote a ceremonious letter to the king, promising compliance in other matters if the king would but waive the matter of investiture. Anselm in chagrin again took up his residence at Lyon, while a fresh embassy to Rome from the king was still more unsuccessful than the former, the Pope levelling the heaviest censures of the Church against different persons of the English court who had dissuaded the king from parting with the investitures. Anselm now removed from Lyon to the court of Adula, countess of Blois, the king's sister, who during a visit which Henry I. made to Normandy contrived an interview between him and Anselm, July 22, 1105, at the castle of L'Aigle, when the king restored to him the revenues of the archbishopric, but refused permission for Anselm to return to England unless he would comply with the investiture. Anselm, still refusing, remained in France, retiring to the abbey of Bec; and though the English bishops, who till then had sided with the king, now changed their minds, and pressed Anselm to return, he refused, till he was further informed of the proceedings of the court of Rome. At length the Pope, adopting a middle course, refused to

give up the investitures, but was willing so far to dispense as to give leave to bishops and abbots to do homage to the king for their temporalities. This was in 1106. The king now invited Anselm to England, but the messenger finding him sick, the king himself went over into Normandy, and made him a visit at Bec, where all their differences were adjusted. Anselm, being recovered, embarked for England, and, landing at Dover, was received with extraordinary marks of welcome. From this time little that is remarkable occurred in the life of Anselm, excepting a dispute with Thomas, elected archbishop of York in 1108, who, wishing to disengage himself from dependency upon the see of Canterbury, refused to make the customary profession of canonical obedience. Before the termination of this dispute Anselm died at Canterbury, April 21, 1109, in the seventy-sixth year of his age.

The works of Archbishop Anselm were published first at Nuremberg, folio, 1491; at Cologne in 1573 and 1612; at Lyon in 1630; by Father Gerberon at Paris in 1675, reprinted in 1721; and again at Venice, 1744, in two volumes folio.

Anselm was the first who restrained the marriage of the English clergy, by passing the ecclesiastical canons of the years 1102 and 1103. The canonisation of Anselm took place in the reign of Henry VII. at the instance of Cardinal Morton, then archbishop of Canterbury—a singular mark of veneration for one who had been dead so long.

(Godwin, *De Præsulibus*; *Biogr. Brit.*, edit. 1778, vol. i., p. 205; Henry, *Hist. Brit.*, b. iii., c. 2; Chalmers, *Biographical Dictionary*, vol. ii., p. 280.)

ANSON, GEORGE, LORD ANSON, BARON SOBORTON, third son of William Anson, Esq., of Shugborough in Staffordshire, was born at the manor of Shugborough on the 23rd of April, 1697. The history of his boyish days is a blank. He entered the navy at an early age, as his name appears on the books of the Ruby in January, 1712. On the 9th of May, 1716, he was made second lieutenant of the Hampshire ship of war. From this period till the year 1724 George Anson saw a good deal of service in various seas, and advanced in rank with the equable, and not tedious, progress of a respectable officer who has good connections to back him. In 1718 he was promoted to be master and commander of the Weazel sloop, and in 1724 he was raised to the rank of post-captain, and the command of the Scarborough man-of-war.

During the greater part of the period which intervened between 1724 and 1735, Captain Anson was placed on the Carolina station. In his various employments he appears to have acted with an ability and discretion that gave general satisfaction. He acquired a considerable property in South Carolina, on which he erected a town, Ansonburgh, which subsequently gave name to a county. The high opinion entertained at the Admiralty of Anson's prudence, spirit, and seamanship, occasioned his being recalled in 1739, the year in which war was declared between Great Britain and Spain. The original intention of government was to dispatch one squadron under Anson by way of the East Indies, and another of equal force under Cornwall by way of Cape Horn, to rendezvous at Manila and await further orders, after having done the utmost possible damage to the trade and settlements of the enemy on their respective routes. The execution of this scheme was deferred, and ultimately fell to the ground. But the part of the plan intended to have been intrusted to Cornwall was still to be carried into effect, and Anson and his squadron were to be employed on that service.

The war of 1739 was forced upon Walpole by the mercantile interests, who were eager to share in the riches which they imagined Spain derived from her possessions in the South Sea. The expedition intrusted to Anson was of a motley character: viewed in one light it was little better than a buccaneering expedition against the Spanish trade and settlements; viewed in another, it was the first step in that brilliant career of maritime discovery in which Cook, Vancouver, and others have earned such laurels, and of busy colonisation to which their discoveries have ultimately led. Anson entered upon this charge in a spirit worthy of its fairer features. Before sailing he took care to furnish himself with the best printed and manuscript accounts he could procure of the Spanish settlements on the coasts of Chili, Peru, and Mexico. But the persons upon whom devolved the charge of fitting out the expedition appear to have been animated solely by the avaricious disposition which had wrung its undertaking from a reluctant minister.

Several of the vessels were inadequate to the voyage; they were insufficiently manned; and the troops sent on board were worn-out pensioners from Chelsea. The proper season was allowed to elapse before the fleet set sail. And what most of all revealed the character of those with whom the expedition originated, two persons, denominated agent victuallers, were sent along with it. They obtained permission to carry out goods to the value of 15,000*l.* on board the squadron to barter for supplies, and this mixing up of private interests with the general object of the expedition became subsequently the occasion of much suffering and loss of life.

The expedition sailed from St. Helen's on the 18th of September, 1740. Anson came to anchor at Spithead, after sailing round the world and encountering numberless hardships, on the 15th of June, 1744. This is not the place to give a detailed account of the adventures of the voyage. In doubling Cape Horn his ship (the *Centurion*) was separated from the fleet, part of which never rejoined him. By the time he reached Tinian his squadron was reduced to a single ship. His crew and soldiers had been picked up at random, instead of being selected with care for a voyage capable of trying the best constitutions. His ship was so deeply laden, in part with the merchandise of the victualling agents, as, in the words of Sir John Pringle, "not to admit of opening the gun-ports, except in the calmest weather, for the benefit of air." The misfortunes, increased by misarrangement against which Anson had in vain remonstrated, paralysed the expedition for any achievement of national importance; but afforded the commander an opportunity of showing what a powerful character can accomplish when thrown upon its own resources.

Before quitting St. Catherine's (Brazil), he gave directions to the other captains that would have rendered it unnecessary to abandon the undertaking even if he had been lost. When staying at Juan Fernandez, after the passage of Cape Horn, he set his officers the example of labouring with his own hands, and obliged them, without distinction of rank, to assist in carrying the sick on shore. His assiduity in sowing vegetables and planting fruit-trees on the island for the better accommodation of his countrymen who might afterwards touch there, looks like a renewal of the taste which had made him a coloniser in South Carolina. He had every coast and road he visited surveyed according to his directions and under his eye, and he collected all the Spanish charts and journals he could procure. With his weak equipment he took Païta and a number of ships, among others the famous *Manilla* galleon. His conduct towards his prisoners, and especially the females, was humane and delicate as that of a hero of romance. When his ship drifted out to sea at Tinian, leaving himself with many officers and part of the crew on the shore, and when in the moment of victory the *Centurion* took fire near the powder-room, he displayed the most imperturbable serenity and fertility of resource. At Macao he proved himself an able negotiator. In short, his conduct was such that in perusing the narrative of his voyage, the fact of its being a total failure in so far as the objects contemplated in fitting it out were concerned, is entirely forgotten; the reader feels only the personal triumph of a man over difficulties and dangers besetting him on all sides, the victory gained by his conduct over the misapprehension of the English character entertained by the Spanish Americans, and the re-discovery of the Pacific Ocean to the English public. In so far as the hero of this adventurous voyage was concerned, it ended most successfully. He conquered a fortune on board the galleon, and succeeded in carrying his acquisitions safely, under the shelter of a fog, through the midst of a French fleet cruising in the channel at his return.

A few days after Anson's return he was created rear-admiral of the Blue, and in a short time he was elected member of parliament for Heydon in Yorkshire. When the Duke of Bedford was appointed first lord of the Admiralty (27th of December, 1744), Anson was made one of the commissioners of the Admiralty. In June 1749 he was made vice-admiral, also a civil appointment. On the 12th of June 1751 he was made first commissioner in the room of Lord Sandwich, and he retained the office till the change of administration in November, 1756. While a member of the Admiralty he made two naval campaigns. He commanded the channel fleet during the winter of 1746-47. A plan which he had formed for attacking the French fleet under Admiral d'Anville was frustrated through the intelligence conveyed to the enemy of Anson's station and intention by the master of a Dutch vessel; but he had an opportunity of displaying on this harassing service the same patience and perseverance which had rendered his voyage round the world illustrious. In the spring of 1747 he was again at sea, and falling in with a French fleet bound to the Indies with merchandise, treasure, and warlike stores, off Cape Finisterre, obtained a brilliant victory on the 3rd of May. Six French ships of war carrying 2719 men and 340 guns, and three East Indiamen fitted out as men-of-war, carrying 400 men and 80 guns, were captured. In reward for this severe blow to the naval power of France, Anson was created a peer in the month of June under the title of Lord Anson, baron of Soberton, in the county of Southampton. In his administrative capacity Anson was of still more use to the service he belonged to than at sea. He carried into the discharge of his official duties the same provident and scientific spirit with which he had prepared himself for the expedition round Cape Horn. In common with his colleagues, he was loudly accused of having been the main cause of Byng's discomfiture off Minorca. He

and they were however acquitted of any blame or neglect of duty by the House of Commons, after an inquiry instituted subsequent to their resignation. The general justice of this verdict may be questioned; but it seems clear that any faults committed attached to the higher branches of administration, not to the Admiralty. On the 24th of February 1757 Anson was made admiral, and on the 2nd of July he was re-instated at the head of the Admiralty, where he remained for the rest of his life.

He was created Admiral of the Fleet on the 30th of July, 1761; and sailed in a few days from Harwich in the Charlotte yacht to convey the future queen of George III. of England. In February 1762 he was ordered to accompany the queen's brother, Prince George of Mecklenburg, to Portsmouth; and on this visit of ceremony he caught a cold which, settling upon his lungs, carried him to his grave on the 6th of June, 1762. Lord Anson married in April, 1748, Elizabeth, eldest daughter of Lord Hardwicke, who died without issue on the 1st of June, 1760.

'Lord Anson's Voyage Round the World' went through four large impressions the first year, and has been translated into most European languages. It was written by Mr. Benjamin Robins from materials furnished by Lord Anson, and digested under his own inspection. A 'Journal of Anson's Voyage' was published in 1745 by Thomas Pascoe, teacher of the mathematics on board the Centurion.

(*Biographical Dictionary of the Useful Knowledge Society.*)

ANSTEY, CHRISTOPHER, the author of a poem of almost unequalled popularity in its day, 'The New Bath Guide,' was born on the 31st of October, 1724. He was the son of the Rev. Christopher Anstey, D.D. of Brinkley, Cambridgeshire; received the rudiments of his education at the Free school at Bury St. Edmunds; was subsequently a king's scholar at Eton, and in due time became a scholar and a fellow of King's College, Cambridge. In 1746 he took his bachelor's degree. He was refused his master's degree, in consequence of a somewhat absurd opposition to the authorities of the university, who, having required the bachelors of King's to deliver certain declamations, Anstey recited an incoherent rhapsody instead of the composition which was required. His biographer says that he was "exemplary and regular in his moral conduct at the university." He held his fellowship till 1754, when, upon succeeding to the family estates of his maternal grandfather, he resigned it, and quitted Cambridge. Two years afterwards he married. During the next ten years he was an occasional resident at Bath; but his celebrated poem was originally printed at Trumington, near Cambridge, at which place he lived upon his own property. The first edition appeared in 1766, when the author was at the mature age of 42. Its success was decided. It is easy to understand the reason of this success. Without any knowledge of the personalities involved in some of the descriptions, 'The New Bath Guide' may still be read with pleasure, as a lively picture of a past state of society, droll if not witty, sparkling if not profound, and, with some exceptions, not more malicious in its satire than is agreeable to the mere reader for amusement. It is difficult however at the present day to understand how some of its grossnesses could ever have been tolerated. Its chief subjects of ridicule were doctors and Methodists. All the world was ready to laugh, and without any great harm, at the clever caricature of a fashionable community whose rulers were the physicians; where the bumpkin of fortune who is come to drink the waters sends for the doctor, and the doctor sends for the nurse, and the nurse recommends a consultation, and they all meet together to talk politics, till the patient begs them to think of his stomach and nerves.

In his gross satire upon the followers of Wesley and Whitfield, who, in the cant of that day, were universally called hypocrites, the author refers as an authority to Bishop Lavington's 'Enthusiasm of Methodists and Papists Compared.' It is a worthy authority—worthy of an age when all religious earnestness was held to be folly or cunning; and the orthodox teaching interfered in no degree with worldly gratification. The son of a doctor of divinity was no doubt held to do good service, by writing indecent verses against those who sought, however mistaken they might appear in some points, to rouse men from the prevailing indifference to all things that belong to their spiritual nature. The last editor of 'The New Bath Guide,' Mr. Britton, omits some of the more offensive of these passages; but it is difficult to purify what is radically corrupt. Mr. Anstey published several other poems, amongst which is the 'Election Ball.' Some of his own poems were translated by him into Latin verse, as well as some of Gay's 'Fables,' and Gray's 'Elegy.' All his works were reprinted in 1808 in one volume quarto, with a memoir by his son, John Anstey, who was himself the author of a poem which used to be familiar to students of the inns of court, 'The Pleader's Guide.' Christopher Anstey lived to the age of eighty-one, dying in 1805 at Chippenham. He was buried at Walcot, Bath; and there is a monument to him in Poet's Corner, Westminster Abbey, erected at a period when the world was not very discriminating in awarding the honours of that hallowed spot.

ANTAR, an Arabian warrior, best known to Europeans as the hero of a romance, translated into English in 1819 by Mr. Hamilton, oriental secretary to the British embassy at Constantinople. The hero is not a completely fabulous person: he was the son of an Arabian prince by a negro slave. Born therefore to his mother's

condition, and for a long time disowned as an Arab, and ill-treated by his father, he yet raised himself to high consideration by his extraordinary strength, courage, and poetical talent. He lived at the close of the 5th and beginning of the 6th century.

The romance of Antar is conjectured to have been put together in its present form, from the original legendary tales, about the time of the famous Caliph Harun-al-Rashid. This poem is curious, as presenting an early picture of the manners of the Bedouin Arabs; but there is too much sameness in it to render it, in its English form, very interesting to the reader.

ANTHEMIUS, a distinguished mathematician and architect of the 6th century. He is sometimes called Anthemius Trallianus, from his birthplace Tralles, in Lydia. Anthemius was the most distinguished of the architects employed by Justinian at Constantinople; he began to rebuild the church of St. Sophia, after it was destroyed by the populace in 531, and it was completed after his designs by Isidorus of Miletus, after the death of Anthemius, which seems to have taken place in the year 534. The church was not finished until 537, but the dome fell in twenty years afterwards, through the shock of an earthquake; it was however again rebuilt by Isidorus, and the dome then raised was the first that was ever built upon arches and piers, and still remains; it is 108 feet in diameter, and is built of stone. The mechanical genius of Anthemius is praised by Agathias, and he must have been distinguished also as a mathematician, as Eutocius has addressed to him his commentaries on the Conica of Apollonius Pergæus.

ANTHONY, ST., the first institutor of the monastic life, was born at a village in Upper Egypt in the year 251. His parents, who were wealthy, are said to have prevented him, when young, from acquiring any other language than his native Coptic. Having understood some passages of our Saviour's precepts in their literal sense, he distributed the property which came to him by inheritance, at an early age, partly among his neighbours and partly to the poor; and having placed a sister who was committed to his charge in a house of virgins, retired to a solitude in the neighbourhood of his native village, where he is represented to have been tempted by the devil in a great variety of shapes. He is said to have erected his first monastery at Phajum, near Aphroditopolis, about the year 305.

In 312, during the persecution under Maximinus, he went to Alexandria to encourage and give consolation to the Christians, who were suffering martyrdom; and about the same time built a second monastery called Pispir, near the Nile.

After a long residence in the place of his first retreat, he withdrew farther from his native village, to Mount Colzum, near the Red Sea, where he made a ruined sepulchre his residence.

Towards the close of life, about the year 355, St. Anthony again went to Alexandria, at the request of Athanasius, to defend the faith against the Arians. At this time he is said to have converted many to Christianity. Declining to accept an invitation from the Emperor Constantine to visit Constantinople, he returned to his cell, where he died in the year 356.

Seven of St. Anthony's letters, written originally in Coptic, but translated into Latin, are extant in the 'Bibliotheca Patrum.' His life was written by his friend St. Athanasius.

Among the miracles believed to have been wrought by his intercession, was the cure of the distemper called the sacred fire, since that time called St. Anthony's fire, and in modern days erysipelas. In 1095 a religious order was founded in France, called the Order of St. Anthony, the members of which were to take care of persons afflicted with this disorder.

ANTI'GONUS, surnamed Cyclops, or the 'one-eyed,' was the son of Philip, a prince of Elymiotis in Macedonia, and was born about B.C. 382. He accompanied Alexander the Great on his Asiatic expedition as commander of the allies; and at the siege of Halicarnassus (B.C. 334) he was among those who had distinguished themselves by their courage. In B.C. 333 this post was given to Balaerus, the son of Amyntas, and Antigonus was appointed satrap of Phrygia. After the battle of Issus (B.C. 333) some of the generals of Darius collected their scattered forces and attempted to recover Lydia, but Antigonus, although he had few troops at his command, gained three successive victories over the barbarians, and dispersed the enemy. The year following he made a successful campaign in Lycæonia. This is all we know about Antigonus during the reign of Alexander the Great, and the time in which he displayed his energy and ambition does not begin till after the death of Alexander. In the division of the empire which was then (B.C. 323) made, Antigonus obtained Lycia, Pamphylia, and the Greater Phrygia. Eumenes, a friend of Perdiccas, was to have Cappadocia, and Antigonus was commanded by Perdiccas to assist him in gaining possession of it; but Antigonus disobeyed the command of Perdiccas, who assumed the authority of sovereign, to which Antigonus was unwilling to submit. Perdiccas making preparations to punish him, Antigonus fled with his son Demetrius, afterwards surnamed Poliorcetes, to Antipater, the regent of Macedonia, who was at war with the Ætolians (B.C. 321). Antipater, Craterus, and Ptolemæus, who were themselves in danger, espoused the cause of Antigonus, and war broke out between these confederates and Perdiccas, but Perdiccas was murdered in the same year. Antipater, who succeeded him as regent of the empire, restored to Antigonus

his satrapy, and gave him the command of the greater part of the armies in Asia, for the purpose of making war against Eumenes and the other friends of Perdiccas. Antigonus gradually gained over nearly the whole army of Eumenes, who was at last besieged in the stronghold of Nora in Cataonia. Leaving a portion of his troops to maintain the siege, Antigonus marched with the rest of his forces into Pisidia to attack Alcetas and Attalus, who, as friends and relations of Perdiccas, still held out against Antipater. Both were defeated in the course of the winter of B.C. 320 and 319, and Antigonus came into the possession of a great power. The death of Antipater in B.C. 319 was a favourable event for Antigonus, who had for some time entertained the intention of making himself independent of the regent. When Polysperchon became the successor of Antipater, and Cassander, the son of Antipater, laid claims to the regency, Antigonus also refused to recognise Polysperchon in his new dignity, and allied himself with Cassander. Their alliance was joined by Ptolemæus, and Antigonus perceiving the advantage which he might derive if Eumenes also, whom he had blockaded in Nora, could be induced to join them, made overtures towards a reconciliation and offered favourable terms. Eumenes, unshaken in his adherence to the royal house of Macedonia, and unwilling to submit to a man who seemed to wish to usurp the throne, commenced negotiations, but availed himself of an opportunity which occurred during the transactions, and escaped from Nora into Cappadocia. Polysperchon now appointed Eumenes commander of the troops in Asia, and empowered him to make use of the royal treasures, which were kept in a place in Cilicia, and guarded by the Argyraspids, the veterans of Alexander's army, under Antigènes and Teutamus. Eumenes was well received on his arrival in Cilicia by the commanders of the Argyraspids, raised troops, and soon put himself in possession of nearly the whole of Phœnicia. But when Antigonus, who had gained a victory near Bysantium over Clitus, the admiral of Polysperchon, in the year B.C. 317, advanced, Eumenes withdrew to Upper Asia. Here the satraps of Persia, Carmania, Aria, and Bactria were in arms against Pithon of Media and Seleucus of Babylonia. Eumenes joined the satraps, and Antigonus allied himself with Pithon and Seleucus. On his arrival in Susiana Eumenes was joined by his allies. A considerable force was thus assembled, and if union had existed, the partisans of Eumenes might have maintained themselves against their enemy. But while they were considering who was to have the command, Antigonus, who had already arrived in Mesopotamia, hastened to meet Eumenes, hoping to overtake him before he was joined by his allies. The news that this junction had already taken place delayed his march a little, and he rested his exhausted troops. At Babylon he was joined by the troops of Pithon and Seleucus, and then crossed the Tigris towards Susa. The intelligence of his approach induced Eumenes to retire towards the mountains of the Uxii, along which the Pasitigris flows, and to leave the citadel and the treasures of Susa in the care of Xenophilus. Eumenes took up his position on the eastern bank of the Pasitigris. On his arrival at Susa, Antigonus made Seleucus satrap of the province of Susians, and giving him a sufficient army to besiege the citadel, he marched against the enemy. It was in the heat of the summer (B.C. 317), and it was not without great difficulty that he reached the river Copratas, the modern river of Dizful, a western tributary of the Pasitigris (the river of Shuster). Antigonus sent a part of his troops across the river, and Eumenes in the mean time recrossed the Pasitigris, and defeated that part of the army of Antigonus which had crossed the Copratas. Antigonus, who was unable to assist his troops which had crossed the Copratas, withdrew towards the town of Badaca, which Diodorus places on the Eulæus (the modern Shapur), where the army rested for several days, and then marched into Media, through the country of the Cossæans, to join Pithon. This march of nine days was through narrow defiles between high mountains, in which the troops were constantly attacked by the natives and suffered severe losses. The soldiers became disheartened and discontented, but Antigonus succeeded in inspiring them with fresh confidence, and on their arrival in Media a supply of provisions and pay restored their courage. The army of Antigonus received also great reinforcements here. Eumenes in the meantime marched to Persepolis, where Peucestas treated the army with the utmost liberality. About the autumn (B.C. 317), Antigonus marched into Persia, and Eumenes and his allies set out to meet him. The two armies encamped at a short distance from one another. Several days passed without any thing decisive, and Eumenes broke up in the night and marched towards Gabiene, to prevent Antigonus joining Seleucus. On discovering this diversion, Antigonus hastened in pursuit of the enemy. In Gabiene the two armies met, and a great battle was fought which, though indecisive, lasted during a whole day. In the following night the two armies quietly retreated. Antigonus, although his losses were greater than those of Eumenes, appeared master of the field, and withdrew to the district of Gadamarta in Media, where he found ample provisions and a favourable place for winter quarters. Eumenes took up his winter quarters in Gabiene, but his army was dispersed over the whole province, and the soldiers abandoned themselves to pleasure. Antigonus, who was informed of this, thought it a favourable opportunity for crushing his enemies. With a view to surprise them he broke up at the close of the year, and marched with the greatest precaution through the great salt

desert towards Gabiene. But Eumenes was informed of his movements, and hastily assembled his troops. Antigonus determined to fight a decisive battle at any cost. The elephants of Eumenes, while they were driven to his camp, nearly fell into the hands of Antigonus. The armies met in the neighbourhood of Gadamarta, and a fierce battle ensued. Antigonus had a decided advantage, and in the evening Eumenes retreated in order to deliberate on his future operations. No resolution was come to, and, on the next day (B.C. 316), the discontented and treacherous Argyraspids delivered Eumenes and their own commanders into the hands of Antigonus, who put to death Eumenes, Antigènes, and several other men of distinction.

Silver Coin. British Museum.

Antigonus, who had now the whole army of Eumenes at his command, was by far the most powerful among the generals of Alexander. He was however unwilling to share his booty with allies whom he treated as if he was their master. Pithon, dissatisfied with such conduct and dreading to fall into a state of complete dependence, endeavoured to raise the troops against Antigonus. Antigonus receiving intelligence of this, contrived to entice Pithon to come to him, and had him sentenced to death as a traitor by a court-martial. Seleucus, the other ally, with whom Antigonus purposely sought to quarrel by calling him to account for his administration, dreaded a conflict with his powerful and crafty rival, and fled to Ptolemæus in Egypt. Antigonus now distributed the satrapies of Asia according to his own pleasure, and laden with immense booty returned to Western Asia. His power induced all those who were anxious to maintain themselves in independence, to demand of him the recognition of their rights to certain provinces, and an equal division of the royal treasures; but Antigonus refused all negotiations, and a coalition was formed against him consisting of Ptolemæus, Seleucus, Lysimachus, Asander, and Cassander. Vigorous preparations were made to crush him by the united forces of these generals. The long struggle began in B.C. 315, and was carried on with one interruption, with great energy and varying success, partly in Syria and Phœnicia, partly in Asia Minor, and partly in Greece. Asander was defeated and capitulated in B.C. 313, and in B.C. 311 a general peace was concluded with Cassander, Ptolemæus, and Lysimachus, according to which Alexander Ægeus, for whose rights Antigonus pretended to have fought, was recognised as king of the whole empire, and Cassander as his chief-general in Europe, until the young king should be of age. Lysimachus received the command in Thrace, Ptolemæus in Egypt and the adjoining countries of Libya and Arabia, and Antigonus had all Asia. The Greek towns were to be left free, in order that none of the rulers might possess them, all being anxious to gain possession of them. Seleucus, who is not mentioned in this peace, had established himself the year before in Eastern Asia, and it was probably after the conclusion of the peace, that Antigonus made war upon him, but he had not time to strike a decisive blow; for (B.C. 310) fresh hostilities broke out in the west and called for his presence there. Hostilities were commenced by Ptolemæus, who took possession of several Greek towns in Asia Minor on the ground that they were still occupied by garrisons of Antigonus notwithstanding the peace which secured their independence. Cassander induced Ptolemæus, the nephew of Antigonus, who commanded the forces on the Hellespont, to abandon the cause of his uncle; Polysperchon also was persuaded by Cassander to revolt against Antigonus and to poison Hercules, the son of Alexander the Great by Barsine, who had been set up as a pretender, for Alexander Ægeus and his mother Roxana had been murdered by Cassander soon after the peace. Demetrius and Philip, the sons of Antigonus, soon recovered those parts of Asia Minor which had been taken by Ptolemæus. Ptolemæus had for some time entertained the plan of marrying Cleopatra, the sister of Alexander the Great, which would have increased his power and influence; and in order to prevent the marriage, Antigonus, who himself had at one time wished to marry her, caused her to be put to death. The last member of the royal family being thus got rid of, the bond which had hitherto united the distracted empire was broken, and the ambition of the generals was now undisguised. Greece seemed to be lost to Antigonus, since Cassander and Ptolemæus had got possession of it. But Antigonus determined to send a large force into Greece, and in order to gain the good will of the people, he declared his intention to carry into effect the terms of the peace of the year B.C. 311, and to restore all the Greek towns to independence. The command was given to his son Demetrius, who had scarcely accomplished the liberation of Athens and Megara when he was called back by his father (B.C. 306) and ordered to take possession

of the island of Cyprus, which had been occupied by Ptolemæus. The fleets of Demetrius and Ptolemæus met off Salamis, in Cyprus, and a great battle was fought in which Ptolemæus was completely defeated. After this victory Antigonus assumed the title of king, and gave the same title to his only surviving son Demetrius. Their example was followed by Ptolemæus, Seleucus, and Lysimachus; but Cassander did not venture to do the same, apparently from fear of the Macedonians. Elated by his success in Cyprus, Antigonus now resolved to crush Ptolemæus. In the year of the victory off Salamis, Antigonus marched into Egypt as far as the Nile, while Demetrius sailed with his fleet towards the mouth of the river. But the undertaking failed. The measures of Ptolemæus rendered it impossible for Antigonus to cross the river with his troops, and the fleet under Demetrius was scattered by a storm. Antigonus was obliged to return to Syria, and Ptolemæus celebrated a victory which he had won without striking a blow. In B.C. 305 Antigonus directed his forces against the island of Rhodes, partly to punish the islanders for having refused to join him in the Egyptian war, and partly to destroy their commerce, and thus indirectly to injure Egypt. The Rhodians refused to submit to the humiliating terms proposed by Antigonus, and Demetrius laid siege to the town of Rhodes. But his military skill was ineffectual against the brave defence of the islanders, and when at last the Athenians and Ætolians petitioned Antigonus to raise the siege and send more forces to Greece, where Cassander assumed a threatening position, Antigonus commanded his son to sail to Greece. After having concluded a peace honourable and favourable to the Rhodians in B.C. 304, Demetrius sailed to Greece, and, without much difficulty, got possession of the most important towns, such as Athens, Argos, Sicyon, and Corinth [DEMETRIUS.] Cassander soon found himself pressed so hard, that he sued for peace. The haughty Antigonus demanded unconditional surrender. This demand roused the last energies of Cassander; he formed an alliance with Lysimachus in Thrace, whose own dominions were exposed to danger if Macedonia fell into the hands of Antigonus, and the two allied ambassadors to Seleucus and Ptolemæus. These kings had learned by experience to view Antigonus as their most dangerous enemy, and the new coalition against him was soon formed, B.C. 302. Antigonus, now eighty years of age, determined to fight a decisive battle against Lysimachus, who had crossed into Asia Minor, before Seleucus could arrive from Upper Asia. But this plan was frustrated, and the whole of the year B.C. 302 was passed in inactivity. In the mean time Seleucus joined Lysimachus, and Antigonus was obliged to call his son Demetrius from Greece. The hostile armies met in B.C. 301, in the plains of Ipsus in Phrygia. The aged Antigonus, who had always gone to battle with great calmness, entered on the decisive contest with dark forebodings. The great battle of Ipsus was fought in the summer of the year B.C. 301, and Antigonus lost his empire and his life. Demetrius fled with his mother Stratonice, and the dominions of Antigonus were divided: Seleucus received the countries from the coast of Syria to the Euphrates, together with portions of Phrygia and Cappadocia, and Lysimachus the greater part of Asia Minor.

Antigonus was a bold and successful soldier, unprincipled and cruel when he had an object to accomplish. But he was not one of the worst men of the age in which he lived. He had a strong intellect and great knowledge of men. He despised flatterers, and he was not dazzled by his extraordinary success, which nearly raised him to the sovereignty of the empire of Alexander the Great. When a flattering poet once called him a god and a son of the sun, he replied, "My servant knows nothing about it." In his old age he had learned that gentle means were necessary to keep together what he had acquired by conquest.

Journal*, vol. ix.; and Professor Long, vol. xii.)

(*Biographical Dictionary of the Useful Knowledge Society*.)

ANTI'GONUS CARYSTIUS, probably a native of Carystus in Eubœa, is the reputed author of a work entitled a 'Collection of Wonderful Histories.' Antigonus is generally supposed to have lived in the age of Ptolemæus II. of Egypt. This collection, which on the whole is of very little value, was last edited by J. Beckmann, Leipzig, 4to, with a commentary.

ANTI'GONUS DUSON ('about to give') so named, because his promises were more ready than his performance, is said to have been the son of a Demetrius, who was the son of Demetrius Poliorcetes, and of course the brother of Antigonus Gonatas. Being appointed guardian to Philip, the infant son of Demetrius II., he was called to, or usurped, the throne, B.C. 229; but he acted the part of a kind of protector to Philip, who succeeded him. He enlarged the limits of the Macedonian monarchy, and took an important share in the affairs of Greece, for the most part in concert with Aratus and the Achæan league. He died B.C. 221 (Feb. 220, Clinton, 'Fasti Hellenici') regretted by the friends of Macedonia, and leaving a fairer character than belonged to most of the princes of that age.

ANTI'GONUS GONA'TAR, so named from being born at Goni, or Gonnos (Strab. p. 440), in Thessaly, son of Demetrius Poliorcetes. After the death of his father there were various claimants to the Macedonian throne, which was finally seized by Ptolemæus Ceraunus, to the exclusion of Antigonus (B.C. 281). Ceraunus was slain in battle against the Gauls. After the great overthrow of the barbarians in Thessaly, Antigonus defeated another division of them in Macedonia, and soon after gained possession of his paternal kingdom (B.C. 277), in spite of the opposition of Antiochus, whose sister Phila he soon after married. He was driven out of Macedonia by the celebrated Pyrrhus, king of Epirus, B.C. 272, and fled into Peloponnesus, where, like his father, he possessed a powerful interest. On the death of Pyrrhus before Argos, B.C. 271, he recovered Macedonia, but was again expelled by Alexander, son of Pyrrhus, and reinstated by his own son Demetrius. During the latter part of his life he held his own dominions in peace; but he was continually employed in extending his influence in Peloponnesus, both by force and fraud, and was brought into frequent collision with the Achæan league. He died B.C. 243, or 239 (Clinton, 'Fasti Hellenici'), leaving a son, Demetrius II., who reigned ten years.

ANTI'NOUS, a native of Bithynia, and favourite of the emperor Hadrian, the extravagance of whose attachment was shown by the institution of divine honours to Antinous after his death. Respecting the circumstances of his death there are many stories, but it seems generally agreed that he was drowned in the Nile while Hadrian was in Egypt. The town near which he died was rebuilt by the emperor, and called Antinoe or Antinopolis, instead of Besa, its former name. Its remains exist under the name of Ensené. A new star was said to have been discovered in the heavens, which was called the 'soul of Antinous.' Oracles were delivered by him, which must be taken as forgeries invented by Hadrian himself, or according to his order. Among the remaining treasures of ancient sculpture, the statues of Antinous, nearly as numerous as those of the Venus, and very similar to each other, rank among the most beautiful. That originally in the collection of Cardinal Alexander Albani, the most perfect perhaps of those executed for the Roman nobles, for the purpose of paying their court to the emperor, is a standing figure in marble. The head looks downwards, with a melancholy expression, which they all bear; the hair in all of them is arranged in the same manner, covering the forehead nearly as low as the eyebrows. The busts of Antinous are also very fine. (Xiphilinus; Bayle, *Dict. Hist.*, and the authorities there quoted; Winkelmann, ii. p. 464, &c., French trans.)

ANTI'ÖCHUS, a name best known from its being borne by many Syrian monarchs of the Seleucidan dynasty; but otherwise not uncommon in ancient history.

ANTI'ÖCHUS I., surnamed Soter, or Preserver, was the son of Seleucus Nicator, who, after the death of Alexander, raised Syria into an independent kingdom. [ANTIGONUS.]

Silver. British Museum.

Upon the murder of Seleucus, while engaged in his expedition to subdue Macedonia, B.C. 280, Antiochus succeeded to the throne and reigned nineteen years. He prosecuted his father's claim to the kingdom of Macedonia against Antigonus Gonatas, son of Demetrius, and his own brother-in-law; but the dispute was accommodated by a marriage between Antigonus and Phila, daughter of Seleucus and Stratonice, in consideration of which the Macedonian prince was allowed to retain the peaceable possession of his throne. Demetrius, the son of Antigonus, also married Stratonice, the daughter of Antiochus. The reign of Antiochus is distinguished by his defeat of the Gauls, who had crossed into Asia and obtained a settlement in the province named after them, Galatia. He was subsequently engaged in an unsuccessful war with Eumenes, king of Pergamus. He died B.C. 261.

(Appian, *Syriaca*; Justin, book xxvii.; *Anc. Univ. Hist.*, vol. viii.)

ANTI'ÖCHUS II., surnamed Theos, or God, son of the former, succeeded to the throne upon his father's death. His reign is chiefly memorable for the revolt of the Parthians, B.C. 250, under Arsaces, who succeeded ultimately in expelling the Macedonians, and thus became the founder of the formidable Parthian empire. The remote province of Bactria, and others lying eastward of the Tigris, followed this example; and Antiochus, apprehensive of the final loss of those regions, concluded a treaty of peace with Ptolemæus Philadelphus, B.C. 252, by which he agreed to repudiate his wife Laodice, and to marry Berenice, daughter of the king of Egypt, settling the crown upon his children by the latter. These conditions were fulfilled; but

on the death of Ptolemæus, two years afterwards, Antiochus restored Laodice to her conjugal rights, and in return was poisoned by her, B.C. 247, with the view of securing the succession to her eldest son, Seleucus Callinicus. (Schlosser, *Remarks on the Reign of Antiochus II., Universalkhistorische Uebersicht, &c.*)

ANTIOCHUS III., surnamed the Great, was the son of Seleucus Callinicus, and succeeded his brother Seleucus Ceraunus, B.C. 223. Antiochus owed his safety and his throne to the honesty of his cousin-german Achæus, who, though pressed by the army to assume the crown, retained it subject to the legitimate heir. The first care of the young king, or his advisers, was to appoint governors to preside over the several districts of the Syrian empire, which during preceding reigns had lost much of its original greatness. The kingdom of Pergamum had especially profited by the weakness of the Seleucidan dynasty; but under the able management of Achæus, those provinces which had been wrested from the Syrians were recovered, and Attalus was again confined within the limits of his proper kingdom.

Achæus, who had formerly so signalled his fidelity, finding that his distinguished successes had excited jealousy, and that plots were laid against his life by those who were in the king's confidence, proclaimed himself king of those provinces in Asia Minor which he had recovered, and which had been entrusted to his charge. Ptolemæus Philopator still held Cœlesyria and Palestine, which had been conquered by his predecessor, Ptolemæus Evergetes. By the advice of his council, the young monarch turned his arms first against Egypt. He marched into Cœlesyria, and, assisted by the defection of Theodotus, the governor of that province, gained possession of the greater part of it, including the capital, Damascus. The campaign was terminated by a truce for four months, and negotiations for a treaty of peace were set on foot; but the truce expired before anything was agreed to. War was resumed B.C. 218. At first Antiochus carried all before him; he penetrated into Phœnicia, forcing the passes of Mount Libanus, gained possession of Galilee, and subdued the inheritance of the tribes beyond Jordan. But these advantages he lost in the following year in a great battle fought at Raphia, near Gaza, in which he was defeated with great slaughter, and obliged to retreat to Antioch with the wreck of his army. Cœlesyria and Palestine returned to their allegiance to Ptolemæus; and the Syrian king, pressed at the same time by Achæus, was compelled to sue for peace with Egypt, which he obtained on condition of resigning his claim to the contested provinces. Being now at leisure, Antiochus turned his whole attention to the destruction of Achæus, whom he overpowered and put to death: by this act the provinces of Asia Minor were again annexed to the Syrian empire, B.C. 213.

Arsaces, the son of him who established the Parthian empire, had overrun Media while Antiochus was engaged in the wars against Ptolemæus and Achæus. He was unable to withstand the attack of Antiochus in person, and was soon driven out of his new conquest. The Syrian monarch in his turn invaded Parthia, and after several campaigns a treaty was concluded, by which Arsaces was left in quiet possession of Hyrcania, on condition of his assisting Antiochus to recover the rest of the revolted provinces. After an unsuccessful attempt to recover Bactria from Euthydemus, with whom he at last concluded a treaty, he crossed the mountains of Paropamisus (also called Caucasus) into India, formed a treaty of alliance with the king of that portion of the country, and, directing his march homeward through the provinces of Arachosia, Drangiana, and Carmania, intermediate between the Indus and Persia, re-established the supremacy of Syria in those distant regions. He returned through Persia to Antioch, having been employed for seven years in these eastern campaigns, and earned by his successes the most specious claim to the title of Great.

Ptolemæus Epiphanes, a child of five years old, succeeded to the throne of Egypt (B.C. 205) on the death of his father, Ptolemæus Philopator. Antiochus and Philip, king of Macedonia, united in a design to expel him, and share the Egyptian dominions between themselves. Antiochus regained possession of the provinces of Palestine and Cœlesyria in the course of two campaigns, and upon entering Jerusalem (B.C. 198) was received by the Jewish people with great joy. Antiochus now proposed a treaty of marriage between his daughter and the young king of Egypt, to be consummated when both came of age, by which Cœlesyria and Palestine were to be given with the princess as a dowry. Having thus purchased the neutrality of his most powerful enemy, he proceeded with a powerful fleet round Asia Minor. He crossed the Hellespont, and took possession of the Thracian Chersonese (B.C. 196); and here he came in contact for the first time with the power before which his own was compelled to retire. The Romans had already reduced Macedonia to the condition of a subject kingdom, when Antiochus crossed into Europe, and wrested the Chersonese from the impaired power of Philip. Jealous of this new interferer in the affairs of Europe, the Romans sent ambassadors to require restitution, not only of all that Antiochus had taken from Philip, but of all that he had taken from Ptolemæus, whose guardians, soon after his accession to the throne, had placed him under the wardship of the Romans, as a protection against the ambition of his Syrian neighbour. Antiochus replied to these requisitions in terms as haughty as those in which they were made; and it was evident that the quarrel would soon end in an appeal to arms. (Polybius, xviii. 33.)

BIOG. DIV. VOL. I.

In the following year, B.C. 195, Hannibal, driven from Carthage, came to Ephesus to seek the protection of the king of Syria, and his representations induced Antiochus to match his strength against the redoubted power of Rome. In the winter of B.C. 192 Antiochus was invited by the Ætoliæns to pass into Greece. He crossed over with an army, posted himself in the town of Demetrias, and was chosen by the Ætoliæns as their commander-in-chief. Antiochus appears to have managed affairs badly. He might have made the king of Macedon his friend instead of his enemy; and after his capture of Eubœa, instead of pushing on his conquests, he spent his time at Chalcis, and in negotiating with the petty states around him. The Roman consul, Acilius Glabrio, with Cato for his legate, now advanced against the Syrian king, who made a stand at Thermopylæ, but was utterly routed and compelled to retire to Asia, B.C. 191. The next year L. Cornelius Scipio was elected consul, and appointed to conduct the Syrian war; and his brother, the celebrated Africanus, served under him in the quality of lieutenant. Antiochus withdrew his forces from Lysimachia, in Thrace, and from the strong cities on the Hellespont, and thus gave the Romans free access into Asia. Yet they had no sooner crossed the Hellespont, than, struck with terror, he sent ambassadors to endeavour to negotiate a peace. The terms he offered, though tolerably humiliating, were not such as satisfied the ambition of the Romans, whose conditions Antiochus refused to accept, and, collecting his whole force, he met the consul Scipio (B.C. 190) in a pitched battle near Magnesia of Sipylus, in which he was defeated with immense slaughter. This was decisive; he retired hastily to Syria, and again sent to negotiate for peace, which he obtained on terms not materially harder than those before offered. He was to resign the provinces west of Mount Taurus; to pay 15,000 Euboic talents for the expenses of the war; to deliver up to the Romans his elephants and ships of war; and to place in their hands Hannibal and other foreigners who had taken refuge at his court. Hannibal, with another, preserved his safety by timely flight; the rest were delivered up, together with hostages for the observance of the treaty, of whom Antiochus Epiphanes, the king's younger son, was one.

In collecting means to pay the heavy burden imposed upon him, Antiochus was led to plunder a wealthy temple in the province of Elymaia. Indignant at the sacrilege, the people of the place rose in arms, and massacred him and his attendants (B.C. 187), in the 37th year of his reign and 52nd of his age. Antiochus did more to restore the greatness of the Syrian kingdom under the first Seleucus than any other of his dynasty; but he was unfortunate in meeting the first shock of that iron power before which all the great monarchies of the known world were destined to fall.

(Polybius, lib. 5, &c.; Appian, *Syriaca*; Liv., lib. 36, 37; Raleigh, *Hist. of World*; *Anc. Univ. Hist.*, vol. viii.)

ANTIOCHUS IV., surnamed Epiphanes, or Illustrious, the second son of Antiochus the Great, succeeded his elder brother, Seleucus Philopator (B.C. 175 or 176). Antiochus was, at the time of his brother's death, on his way from Rome, where he had been detained as a hostage.

Coin of Antiochus Epiphanes. British Museum.

The first events of his reign which require notice, are his hostilities with Egypt, which then reclaimed the provinces of Palestine and Cœlesyria, wrested from her by Antiochus the Great. In the first campaign (B.C. 171), he routed the Egyptians between Mount Casius and Pelusium, and fortified the frontiers of Palestine against further aggression. In the next year he overran all Egypt, except the strong city of Alexandria, and gained possession of the person of Ptolemæus Philometor, the young king. In the same year he sacked Jerusalem, and profaned and plundered the temple, as related in Maccabees i. c. 1, and ii. c. 5; after which he appointed Philip the Phrygian governor of Judæa. After the capture of the reigning prince, the Alexandrians having raised Ptolemæus Evergetes, commonly called Physcon, his brother, to the throne, Antiochus, under pretence of restoring the kingdom to Ptolemæus Philometor, renewed the war (B.C. 169), defeated the Egyptians, and laid siege to Alexandria. Being unable to reduce that city; he left Philometor as the nominal king of the country, but the rival brothers, seeing through his ambitious designs, agreed to hold the kingdom in common, and Egypt was restored for a time to its former tranquillity. Hereupon Antiochus undertook a fourth expedition (B.C. 163), entered and subdued Egypt, and was on the point of laying siege to Alexandria, when he was met by ambas-

sadors from Rome, who peremptorily required him to depart from Egypt, and the imperious mandate was obeyed. Returning through Palestine in the same year, he vented his spleen by ordering that great persecution of the Jews related in the second book of Maccabees. The steady and successful resistance of that high-spirited people drained Syria of army after army; and the difficulties of the king were increased by revolts in Armenia and Persia. Dividing his disposable force into two parts, he sent one under the command of Lysias into Judæa; and led the other himself into the revolted provinces, which he soon brought back to their allegiance. While thus employed, he received tidings of the total defeat of his armies in Judæa. Transported with passion, he hastened towards Antioch, when he was seized with violent internal pains, and he died at a town called Tabæ, B.C. 165, in dreadful agony both of body and mind. He was a prince of dissolute and undignified character, as well as stained with the darker vice of cruelty; he received from his subjects the nickname of Epiphanes, or the Madman, in parody of his assumed title of Epiphanes, or Illustrious. (Livy, xlii. &c.; Polybius.)

ANTIOCHUS V., surnamed Eupator, or well-fathered, son of A. Epiphanes, was a child nine years old when he succeeded to the throne, under the guardianship of Lysias. After a nominal reign of nearly two years he was dethroned, and put to death by his cousin-german, Demetrius Soter, son of Seleucus Philopator, who succeeded to the crown in B.C. 162.

ANTIOCHUS VI., the son of Alexander Balas, who was raised up by Diodotus, surnamed Tryphon, as a stalking horse, by the help of which he might displace Nicator, and make his own way to empire. The young pretender was at this time but seven years old; but he was readily raised to the throne, for the excesses of the reigning prince had alienated his subjects. After a nominal reign of two years he was put to death by Tryphon, who assumed the crown. (B.C. 144-2.)

ANTIOCHUS VII., surnamed Sidetes, was a younger son of Demetrius Soter, and brother of Demetrius Nicator. After the latter was expelled by Antiochus VI., A. Sidetes married his wife, Cleopatra, laid claim to Syria, and expelled Tryphon (B.C. 138), who had held it since the murder of Antiochus VI. His reign was comparatively prosperous and tranquil. He reduced many cities, which had taken advantage of the civil wars to assume independence, and among them Jerusalem (B.C. 134). He defeated Phraates, king of Parthia, in three battles, and recovered all which had been wrested from Syria, except the province of Parthia; but his life and reign were brought to an untimely close in a sudden onset made by the enemy upon his winter quarters. He perished, B.C. 129 or 128, leaving a fairer character for justice, generosity, and bravery, than belongs to most of the princes of this most profligate age.

ANTIOCHUS VIII., surnamed Grypus. After the death of A. Sidetes, Syria was again distracted by civil wars. Demetrius Nicator escaped from Parthia, and resumed the crown; but he was soon dethroned by Alexander Zebinas. Cleopatra, the wife successively of Balas, D. Nicator, and A. Sidetes, retained possession, however, of a portion of Syria; and Seleucus, her son by D. Nicator, regained some districts contiguous to those held by his mother, and proclaimed himself King of Syria. This raised her jealousy, and she murdered him with her own hand; then she recalled from Athens, her son Antiochus Grypus (named also Philometor, and, on his medals, Epiphanes), B.C. 125. Grypus soon expelled Alexander Zebinas. Cleopatra then became jealous of him also; and perished, being compelled to drink a poisoned draught, which she herself had offered to her son. Grypus then reigned in peace for eight years; at the end of which a fresh competitor for the throne started up in the person of his half-brother.

ANTIOCHUS IX., surnamed Cyzicenus, from being educated at Cyzicus, the son of Cleopatra by A. Sidetes. After a sharp contest the brothers agreed to divide the empire, B.C. 113 or 112: A. Cyzicenus occupied Colesyria and Palestine; A. Grypus, the rest of the empire. Grypus was assassinated, B.C. 96. A. Cyzicenus was defeated and slain by Seleucus, the son and successor of A. Grypus, B.C. 95. Seleucus perished after a reign of seven months.

ANTIOCHUS X., surnamed Eusebes the Pious, son of A. Cyzicenus, proclaimed himself King of Syria upon his father's death. For a time he disputed the throne with his cousins, Philip and Demetrius Eukæros, sons of A. Grypus; but (B.C. 83) he was compelled to fly into Parthia. He returned (B.C. 86), Eukæros being dead or banished; and while he was engaged in war with Philip, another Antiochus, surnamed Dionysius, full brother to Philip, seized upon Colesyria. The latter was soon slain in a war against the Arabians. After a brief period, the Syrians, wearied by the de-volating feuds of the Seleucidian princes, invited Tigranes, king of Armenia, to take possession of the country. Eusebes then fled into Cilicia (B.C. 83), and passed the remainder of his life in obscurity. The events of this reign are very confused.

ANTIOCHUS XI., surnamed Asiaticus, was the son of A. Eusebes. Tigranes being obliged to withdraw his troops from Syria to make head against the Romans, A. Asiaticus gained possession of part of the kingdom, B.C. 69. He retained it for four years, at the end of which Syria was reduced by Pompeius to the condition of a Roman province, B.C. 65. In Antiochus Asiaticus, the Seleucidian dynasty ended, having ruled Syria for 247 years, reckoning from the time when Seleucus Nicator began his reign in B.C. 312. (For the chro-

nology of the Syrian kings the reader should consult Clinton's 'Fasti Hellenici'.)

ANTIOCHUS OF COMMAGENE. [COMMAGENE.]

ANTI'PATER, Regent of Macedonia. He was a son of Iolaus, and a man of great talent. In his early years he had the advantage of the instruction of Aristotle. The prudence which he displayed in all his conduct, and his attachment to the royal house of Macedonia, gained him the favour of Philip II., who made Antipater his friend, general, and minister. The king's confidence in him appears from an anecdote, according to which Philip one day after getting up rather late, said, "I have slept soundly, but Antipater was awake." After the battle of Charonea, in B.C. 338, Antipater and Alexander the son of Philip, were sent to convey to Athens the bones of those Athenians who had fallen in the battle, and to conclude a treaty of friendship and alliance with the Athenians. Alexander had the same esteem for Antipater as his father, and when the young king was preparing for his Asiatic expedition, Antipater, with other men of influence, entreated him to marry, and give a successor to the throne of Macedonia, before embarking in his great undertaking. The advice was disregarded, but on setting out Alexander appointed Antipater regent of Macedonia, and placed at his disposal an army of 12,000 foot, and 1500 horse for the protection of the kingdom. In B.C. 331, Antipater was engaged in a war with some rebellious tribes of Thrace under Memnon, which the Spartans considered a favourable opportunity for recovering their supremacy in Greece, and accordingly Sparta, under her king, Agis III., and her Peloponnesian allies, rose against Macedonia. Antipater settled the affairs in Thrace as speedily as possible by a peace, and hastened to the Peloponnesus. In the neighbourhood of Megalopolis in Arcadia he gained a complete victory over the Greeks. Agis fell in battle, and the Greeks were compelled to keep quiet. [AGIS III.] The position of Antipater as regent of Macedonia was difficult, on account of the arrogance, the perpetual interference, and the petty jealousies of Queen Olympias, the mother of Alexander. Each often complained of the other by letters and messengers to Alexander. Whether it was that the accusations of Olympias or Antipater's own conduct raised suspicions in the king's mind, or that Alexander merely intended to put an end to these quarrels by removing the regent, in the year B.C. 323, when Alexander was at Babylon, he sent orders to Antipater to bring recruits to Asia, and appointed Craterus to lead back the Macedonian veterans, and succeed Antipater as regent of Macedonia. It is not improbable that Antipater's own conduct may have afforded grounds for suspicion, as it cannot be supposed that he was indifferent to the execution of his son-in-law, Alexander, son of Aeropus. But before Alexander's orders were carried into effect, he died at Babylon in B.C. 323. There is a tradition that Antipater was implicated in the death of Alexander the Great, and it is said that Aristotle, who was hurt by the king's conduct towards him, induced Antipater to administer poison to Alexander at Babylon, through his son Iolaus, who was the king's cup-bearer. But this report is contradicted by the best authorities, and it is not improbable that it arose several years after the death of Alexander through the slander of Olympias, the implacable enemy of Antipater and his family.

In the division of the empire after the death of Alexander, it was agreed that Antipater, in conjunction with Craterus, should have the government of the European parts, with the exception of Thrace, which was given to Lyimachus as a separate satrapy. The arrival of the news of Alexander's death had encouraged the Greeks once more to take up arms to recover their independence, and Antipater had now to carry on a war against a powerful confederacy of the Greeks, which was headed by the Athenians and Ætolians. The war which broke out is called the Lamian war, from the town of Lamia in Thessaly. The command of the army of the confederates was given to Leosthenes of Athens. Near Thermopylæ he defeated the Macedonians, and Antipater was obliged to throw himself into the town of Lamia. The town was besieged, and its surrender was daily expected. But the death of Leosthenes, and the withdrawal of the Ætolians, gave a favourable turn to the war for Antipater, who maintained himself in Lamia until Leonnatus came with an army to his relief. The Greeks now raised the siege, turned against Leonnatus, and an engagement with him ensued, in which he was defeated and killed. But discord among the Greeks prevented their following up this victory, and Antipater was enabled to join the remainder of the defeated army. He now withdrew beyond the river Peneus, where he was joined by Craterus. His forces became thus superior to those of the Greeks, whose disunion, though the battle of Cranon, which was now fought, was scarcely decisive on either side, destroyed all their hopes. The moderation with which Antipater used his victory induced the Greeks, with the exception of the Ætolians, to submit again to Macedonia. The confederacy was dissolved B.C. 322, as Antipater refused to treat with it, and each separate state had to implore his mercy. The Athenians obtained the alliance of the Macedonians only on the hard conditions of surrendering the leaders of the insurrection, and among them Demosthenes, who however made his escape, recalling the exiles of the Macedonian party, and paying a heavy contribution to defray the expenses of the war. In addition to all this, the democratical constitution of Athens was abolished, an oligarchy, headed by the faithful partisans of the Macedonians, was established, and a Mace-

donian garrison took possession of Munychia. The Ætoliæ had retreated to their mountains to wait for a favourable opportunity for renewing the contest.

After the close of the Lamian war, Antipater gave his daughter Phila in marriage to Craterus, in order to unite the interests of his colleague with his own. The two regents invaded Ætolia, B.C. 322, but they had scarcely entered the enemy's country, when Antigonus informed them that Perdiccas, the supreme regent of the Macedonian empire, entertained the plan of making himself master of the empire by marrying Cleopatra, the sister of Alexander, crushing all the other satraps, and divorcing Nicæa, the daughter of Antipater, whom he had married only a short time before. This intelligence induced Antipater to conclude peace with the Ætoliæ on terms favourable to them, and to direct all his efforts against Perdiccas. Antipater and Craterus immediately prepared to march into Asia, and entered into an alliance with Ptolemæus of Egypt, whom Perdiccas intended to attack first. In the spring of B.C. 321 the two regents of Macedonia crossed the Hellespont. Eumenes, the friend of Perdiccas, had received orders to oppose them, for Perdiccas was already on his march to Egypt. Neoptolemus, an officer who had deserted from Eumenes, assured the invaders that it would be an easy matter to defeat Eumenes; and trusting to this Antipater divided the Macedonian forces, and giving the command against Eumenes to Craterus, he himself marched through Cilicia towards Egypt. While Antipater was in Syria he received intelligence of Perdiccas being murdered by his own troops, and that Pithon and Arrhidæus had been appointed to the supreme regency in his stead. Near the town of Triparadisus, Antipater joined the army of Perdiccas, which was returning from Egypt, and as the two supreme regents were unable to contend against the perpetual interference of Queen Eurydice, who, together with her husband, Philip Arrhidæus, and the young king Alexander Ægus, was still with the army in Asia, they resigned their office, which was conferred upon Antipater. Immediately after, Antipater had to put down a mutiny of the army, which Eurydice endeavoured to turn to her own advantage and against Antipater. While at Triparadisus the regent made several new regulations respecting the satrapies which had become vacant by the recent occurrences; he left Antigonus to prosecute the war against Eumenes and the other partisans of Perdiccas, and returned to Macedonia in B.C. 321, together with Philip Arrhidæus and Alexander Ægus. He arrived in Macedonia about the spring of B.C. 320, and the peace which had been disturbed during his absence by the Ætoliæ had already been re-established by his generals. Soon after his arrival, he was seized by an illness which terminated his life, early in the year B.C. 319. During his illness the Athenian orator Demades came to him as ambassador from Athens, to petition for the withdrawal of the Macedonian garrison from Munychia, and Antipater had him put to death on the ground of having kept up a treacherous correspondence with Perdiccas. [DEMADES.] In his last days Antipater appointed Polysperchon his successor in the regency of the Macedonian empire: to his son Cassander he gave only the office of chiliarch. This slight to his own son may be accounted for in various ways. It may be that Antipater acted in this manner out of consideration for the interests of the royal family of Macedonia, which Cassander hated, or that he foresaw the troubles that would arise between Cassander and the Macedonians. The haughty and intractable character of Cassander was well known to the Macedonians, and he was much disliked by them.

(Flahe, *Geschichte Macedoniens*, i.; Droysen, *Geschichte Alexanders des Grossen*, and *Geschichte der Nachfolger Alexanders*; Thirlwall, *History of Greece*, vii.; which works contain the references to all the ancient authorities.)

ANTIPATER, son of Antipas, the governor of Idumæa, was himself a native and governor of that province during the high-priesthood of Alexander Jannæus. After that prince's death, his sons, Hyrcanus and Aristobulus, disputed the succession. Antipater was a zealous partizan of the former, who, after a bloody contest, was established in the high-priesthood by Pompeius the Great. This favourable issue was very mainly owing to the prudent management of the Idumæan, and he was rewarded by the confidence of his weak master under whose name he ruled in Judæa. When Cæsar, during the celebrated siege of Alexandria, was himself besieged in his camp by the inhabitants of that city, Antipater came to his help, and found opportunity to perform good service, and signalise his own courage. Cæsar in return obtained for him the citizenship of Rome, and appointed him to the administration of Judæa, which enjoyed tranquillity and prospered under his care. He was poisoned by a Jew named Malchus, B.C. 49, through jealousy of his influence with Hyrcanus. The guilt of the crime was heightened by the ingratitude of the murderer, who had been indebted for his life to the man whom he poisoned, and had received other benefits at his hands. Antipater left four sons, of whom two are known in history—Phasaël, governor of Jerusalem, and the infamous Herod, king of the Jews.

These are the two most remarkable persons bearing the name of Antipater; but it is one of common occurrence in ancient history.

ANTIPATER, L. COELIUS, a Roman historian of the Second Punic War. [COELIUS.]

ANTIPHILUS, a celebrated Greek painter, who lived in Egypt in the time of Ptolemæus Philopator, at the close of the 3rd century B.C.

He is praised by Quintilian for the facility with which he painted, and Pliny mentions several of his works, in various styles. Antiphilus was the inventor of a kind of caricatures called 'Grylli.' They were a species of grotesque monsters, part man and part animal or bird, of which the Greeks and Romans appear to have been fond. Antiphilus therefore added variety of style to facility of execution. He was a native of Egypt, and his time is fixed by a circumstance connected with him, mentioned by Lucian in his 'Treatise against Calumny.'

ANTIPHON, the son of Sophilus, is called the oldest of the ten Attic orators. He was born at Athens about B.C. 479, and belonged to the demus of Rhamnus in Attica, whence he is called Rhamnusius. He had a school of rhetoric at Athens, and among his pupils was the historian Thucydides, whom some careless Greek compilers have made the master of Antiphon. When Quintilian ('Instit. Orator,' iii. 1.) says that Antiphon was the first who wrote orations, he must be understood to mean the first who wrote speeches to be delivered in the courts of justice, for Gorgias had preceded him in the composition and publication of other kinds of orations. In the unornamental life of Antiphon, attributed to Plutarch, the events of his public life are vaguely recorded. He is said to have done good service in the Peloponnesian war, to have gained many victories, which however are not mentioned by Thucydides, and to have brought over many states to the alliance of Athens. Diodorus mentions Antiphon as archon eponymus in the year B.C. 418; but this may either be Antiphon of Rhamnus or another of the name. The statement of Thucydides rather leads to the conclusion that Antiphon took no active part in public affairs, though he was a busy manager behind the scenes. The chief event of his life was the overthrow of the Athenian democratical constitution and the establishment of the Council of the Four Hundred (B.C. 411), the planning and execution of which revolution Thucydides attributes solely to Antiphon, who employed Pisander and others as his agents. Antiphon, Phrynichus, and Theramenes were among the Four Hundred. But dissension soon arose in the new council. Theramenes and his party wished to recal Alcibiades from exile, a measure which Antiphon and his friends opposed, foreseeing that the consequence of the return of Alcibiades in the present state of affairs would be the restoration of the old constitution. To strengthen themselves at home, Antiphon, Phrynichus and ten others, went on an embassy to Sparta, for the purpose of making peace with the Lacedæmonians on any terms that they could, and at the same time they provided for the fortification of Estioneia, a projecting point of land which commanded the entrance to the Piræus, with the view of securing a landing-place for the Lacedæmonian forces, as Theramenes and his partizans said. The embassy failed, Phrynichus was assassinated soon after his return, in open day-light, the government of the Four Hundred overthrown after a short duration of four months, and Alcibiades was recalled to Athens (B.C. 411). In the same year Antiphon and Archeptolemus were brought to trial on the charge of high treason. Antiphon, says Thucydides, made an admirable defence. Thucydides does not mention the result of the trial, but we learn from the authority of the rhetorician Cæcilius, who is quoted by the Pseudo-Plutarch, that Antiphon was condemned and executed, his property was confiscated, his house levelled to the ground, and the site was marked out by boundary stones, on which was inscribed Antiphon the Traitor. All his descendants, both legitimate and illegitimate, were declared incapable of civil rights. This sentence, which was engraved on a bronze tablet, is preserved in an extract from Cæcilius in the Pseudo-Plutarch. Cæcilius was a contemporary of Cicero. Thucydides (viii. 60) says that Antiphon was inferior in virtue to none of his contemporaries; that he was equally distinguished by wisdom in counsel and by eloquence. Sixty of his orations were known to Cæcilius and others, but twenty-four of them Cæcilius considered to be spurious. Only fifteen orations are now extant, three of which relate to real cases. The other twelve are divided into tetralogies, or sets of four, and as they contain no proper names, we may assign them to the class of sophistical exercises, such as we learn from Cicero that Antiphon wrote. But all the speeches, real and imaginary, relate to cases of murder; and thus, according to a system of classification common among the Greek grammarians, they have all been put together, and are the only works of Antiphon that have been preserved. Each tetralogy consists of four orations, an accusation of the plaintiff, a reply of the defendant, a replication of the plaintiff, and the defendant's rejoinder. The arguments on each side turn mainly on the probabilities for and against, which may be derived from evidence insufficient in itself to establish the guilt or innocence of the accused party. These exercises are characterised by great acuteness in invention; they are in fact practical specimens of the method of discovering topics (the loci communes of Cicero) in argumentation. The titles of many of Antiphon's other speeches have been preserved. Considering the position which he occupies among the Attic orators, the loss of his orations is much to be regretted, especially that which he delivered on his trial, which was entitled 'On the Revolution:' it is several times cited by Harpocration. Antiphon was also the author of a 'Treatise on Rhetoric,' in three books at least, which is often cited by the ancient writers. Antiphon was hardly an orator in our sense of the term, nor was he a public speaker, like Pericles. His profession was the composition of speeches, which were delivered by others. There was no body of men at Athens who resembled the modern lawyer or even

the Roman orator, and those who had business in the courts, either as plaintiffs or defendants, had in the main to manage their own causes. The necessity of getting assistance to draw up a statement in the best form, and to enforce it by the strongest arguments and a reference to the law, called up a class of persons who were professional speech-writers; and of these Antiphon is said to have been the first at Athens. The study of the laws was thus in some measure made a special business, and the speech-writer may be considered as in some measure corresponding to the modern lawyer; yet there never was a scientific study of law at Athens as there was at Rome, nor was there ever a body of men like the great Roman juriconsults. The method and style of Antiphon should be studied in connection with the speeches in the work of his pupil Thucydides, and these two writers furnish the chief materials for the early history of Attic oratory. Clearness, energy, and the absence of rhetorical ornament, or figures of speech, are the characteristics of the old Attic oratory. But though the periods of Antiphon and Thucydides are unlike the full rounded sentences of the later orators, they are not constructed without reference to some principles of art. The argument is fully elaborated by the accumulation of every thing that is material to it, and though the nicer connection of the parts of sentences is wanting, which marks the style of the late orators, there is no want of due order in the arrangement of the thoughts. There is also a symmetrical balancing of the parts of sentences, with the view of giving on the one hand completeness to the form of expression, and on the other hand, precision by opposition or contrast. Thus there is a general parallelism or antithesis observable in all the writings of the old Attic orators, which indeed was never abandoned by their successors, though it was rendered less prominent by the introduction of more rhetorical ornament.

The orations of Antiphon were first printed in the collection of Aldus, Venice, 1513, folio; they are also in H. Stephens' collection of the Greek orators, 1575; in that of Reiske, 1773, of Dobson, and in that of Imm. Bekker, 1822. One of the most recent editions of Antiphon is by J. G. Baier and H. Sauppe, Zürich, 1838, 8vo. They were translated into French by Auger, with the orations of Isocrates, 1781, 12mo. (*Biographical Dictionary of Useful Knowledge Society.*)

ANTISTHENES, the master of Diogenes, and commonly reputed the founder of the Cynic school. The time of his birth, as well as that of his death, is uncertain; but he was the contemporary of Socrates, Plato, Aristotle, Xenophon, &c., and may be said in general terms to have flourished about B.C. 380. Diodorus Siculus mentions him as still alive B.C. 366. He was born at Athens, of which his father, named also Antisthenes, was a citizen. His mother was a native of Thrace, or, as Plutarch says, of Phrygia. He first attended the school of the rhetorician Gorgias; but, leaving him after some time, he became a follower, and eventually one of the most distinguished disciples, of Socrates. His dwelling was in the Piræus, and he used to walk daily the forty stadia (above four miles) to Athens to hear his new master, to whom he faithfully adhered to the end of his life. Diogenes says that he was the cause of the banishment of Anytus and the death of Melitus, the two chief accusers of his master Socrates; but the statement is vaguely made and not supported by other evidence. The time of his death is not mentioned: he is said to have reached his seventieth year.

Antisthenes is reckoned among the genuine scholars of Socrates, or those who preserved at least a portion of their master's doctrines and manner of teaching. He was a man of stubborn character, and he carried his opinions to extremes; yet he was an agreeable companion, according to Xenophon, and distinguished by temperance in all things. Socrates, perhaps, gives us an intimation of one of his failings in a story recorded by Diogenes Laertius. On one occasion, when he had turned his cloak so as to show the holes in it, Socrates said to him, "Antisthenes, I see your vanity through your cloak." Antisthenes is introduced in the 'Symposium' and the 'Memorabilia' of Xenophon as conversing with Socrates and others; and these, which are the best sources for the little that is really known of his character and principles, represent him in a favourable light. He is also mentioned in the 'Phædon' of Plato as present at the death of Socrates.

After the death of Socrates (B.C. 399) he established a school in the gymnasium of Cynosarges, adjoining the temple of Hercules, which he selected apparently for two reasons: the Cynosarges was the gymnasium for those Athenians who were not of genuine Attic stock, and Hercules was the ideal model of manly excellence to Antisthenes, and formed the subject of at least one of his treatises. The followers of Antisthenes were first called Antisthenicæ, and afterwards Cynics (*κυνικοί*), a term that either had reference to the name Cynosarges, or to the Greek word *κύων* (dog), which may have been given to the disciples of Antisthenes on account of the coarseness of their manners. Antisthenes was poor, but he boasted that he was really rich, for man's wealth and poverty, he said, were not in his house but in his mind; and it was his practical philosophy to limit his wants as much as possible. He is said to have worn a single garment, and to have adopted the wallet and staff, though some writers attribute to others the adoption of these external characteristics of the Cynics. It is not quite clear what is meant by the story of Antisthenes being the first who doubled his cloak (*επιβιβας*), but it seems that it was done to render it a more complete dress, for it was his only garment.

Many sayings of Antisthenes are recorded by Diogenes. They are

marked by a sententious brevity, a play on words, and a caustic humour, which may have contributed to affix on him and his followers the appellation of Cynic or snarling. He advised the Athenians to pass a decree that should declare asses to be horses; and when his proposal was treated as absurd, he replied, "Why, you have generals who know nothing, and are only elected to be such." In reply to one who told him that many persons spoke well of him, he said, "What vicious act have I done?" On being reproached for keeping bad company, he replied, "Physicians are with their patients, and yet they don't take the fever."

The doctrines of Antisthenes had chiefly a moral and a practical end. It is not possible to state them in anything like a systematic form from such evidence as we have. He had probably no great originality as a thinker; and the best part of his moral philosophy harmonises with that of Socrates. But, as in other like cases, many things may have been attributed to Antisthenes as the founder of a sect which belongs to the later Cynics.

ANTOINE DE BOURBON, duke of Vendôme, married, in 1548, Jeanne d'Albret, only child of Henry II., king of Navarre. Henry, Prince of Béarn, afterwards Henry IV. of France, was the offspring of this marriage. Antoine assumed the title of king of Navarre in right of his wife. The Bourbons were collaterals of the Valois dynasty, being descended from Robert, count of Clermont, a younger son of Louis IX. As such, Antoine de Bourbon aspired to be at the head of the administration of France after the accession of the youthful king Francis II.; but being himself of an indolent, wavering disposition, he was supplanted by the more enterprising and ambitious Guises, uncles to the young queen, Mary Stuart. After the death of Francis II. in 1560, the king of Navarre was named Lieutenant-General of the kingdom, and adviser to the queen-mother (Catherine de Medicis) during Charles IX.'s minority. When the civil and religious war broke out in 1562, the king of Navarre commanded the king's troops, and received a wound at the siege of Rouen, of which he died in November of the same year. [See BOURBON, and HENRY IV.]

ANTOINETTE, MARIE. [MARIE.]

ANTOMMARCHI, FRANCESCO, a surgeon of some reputation as an anatomist, but more likely to be remembered in his capacity of physician to Napoleon I. at St. Helena. Antommarchi, a native of Corsica, studied medicine at Pisa, and was towards the close of the year 1812 elected anatomical dissector to the hospital of Santa Maria Nuova of Florence, attached to the university of Pisa. This appointment rendered him the principal assistant of his anatomical teacher, Mascagni. In 1818 the Chevalier Colonna, chamberlain to Madame Mère, made overtures to Antommarchi for the purpose of inducing him to accept the appointment of surgeon to the Emperor Napoleon I., and he accepted the offer. The history of Antommarchi, from this time till his return to Europe in 1821, is part of the biography of Napoleon. Immediately on his return he was involved in a dispute with the heirs of Mascagni, who wished to reclaim from him the plates and manuscript of the 'Grande Anatomia,' which he had undertaken to edit, and he eventually gave them up. In 1825 a series of anatomical plates, the size of life, by Antommarchi, were announced as on the eve of publication at the lithographical establishment of Count de Laeteyrie at Paris. The heirs of Mascagni forthwith published a letter to the count, in which they asserted that Antommarchi's lithographed drawings were mere copies from the plates of Mascagni. A favourable report of the work however was presented to the Académie des Sciences by Magendie and Duméril. Fifteen parts of this work were published with the title, 'Planches Anatomiques du Corps Humain,' Paris, 1823-1826, royal folio, including forty-five finished and thirty-five outline lithographed drawings of inconsiderable merit. The controversy appears to have died away, through lapse of time, without a positive decision being pronounced in favour of the claims of either party. During the Polish revolution he went to Warsaw, where he was appointed general inspector of military hospitals.

The following account of another curious controversy, in which Antommarchi was engaged, is translated from the 'Nouvelle Biographie Universelle,' Paris, 1852:—"Soon after the revolution of July," says Doctor Bourdon, "Antommarchi remembered that he had taken a cast of the head of the dying hero. Now, about nine years after his return from St. Helena, he first decided on publishing this cast of the emperor. It created a great sensation [in Paris], and for a time drew Antommarchi from his obscurity, probably also relieving him from pecuniary distress; but at the same time it greatly injured his reputation. As it did not appear from this cast that Napoleon's skull presented that phrenological conformation which, according to Gall, ought to have indicated the most glorious and least contested of his faculties, the adversaries of that science made use of it as an argument against Gall and Spurzheim; and thence sprang the disputes which still continue. The fact is, that there were some reasons for doubting whether the cast published by Antommarchi had really been moulded at St. Helena after the death of the emperor: it was found to bear more resemblance to Bonaparte the first consul than to the illustrious exile, worn out by six years of sorrow and want of sleep, emaciated by disease, and with the furrows ploughed by fifty-two years. Neither does this cast of Antommarchi accord with what Dr. O'Meara and General Montholon have related of the thinness of Napoleon, and of the alteration of his features in the latter part of his existence. Sus-

picians were set afloat of Antommarchi's veracity; it was affirmed that he had unlawfully assumed the title of professor, and that nobody had been able to find two works that he said he had published—the one a treatise on the cholera, the other concerning physiology. The advocates of the new science of phrenology, in their spiteful ardour, went so far as to throw a suspicion upon the identity of the cast considered with regard to the material. 'Your cast,' they said to him, 'is of a fine plaster; it is white and pure, such as is only to be seen at Lucca, where beautiful statuettes are formed of it; you could not have found any such at St. Helena.' Wearied with all these vexations, Antommarchi about 1836 took the desperate step of emigrating, in order to practise homœopathically at New Orleans, and afterwards at the Havannah." He died at San Antonio, in Cuba, about 1844.

ANTONELLO DA MESSINA, a celebrated Italian painter, distinguished as the first Italian who painted 'in oils,' as it is termed. Neither his name nor any date connected with events of his life are exactly known. He was born at Messina about the year 1414, and was instructed in painting by his father, Salvatore d'Antonio; he then studied in Rome, and returned to Messina an accomplished painter for his time, and acquired considerable reputation by some works which he executed at Messina and at Palermo. In about the year 1442 he had occasion to visit Naples, where, in the possession of the king, Alfonso I., he saw a picture executed in a manner and with materials quite new to him: this was a picture of the Annunciation by Giovanni da Bruggia, as Vasari names John Van Eyck. Antonello no sooner saw this picture than he was possessed with an invincible desire to learn by what means it was painted; and having learnt the name and place of residence of the painter, he immediately set out for Flanders, where, by means of presents of Italian drawings and other works of the kind, he was not long in obtaining Van Eyck's secret. Antonello seems to have remained with Van Eyck until his death in 1445, when Antonello returned to Sicily for a few years; but before 1450 he was in Venice, by which time he had communicated the new method to Domenico Veneziano, who was murdered in Florence in 1464 by Andrea del Castagno, after he had obtained the secret of the new method from him. From Venice Antonello repaired to Milan, where he probably dwelt some years, and about the year 1470 he returned to and established himself at Venice. In Venice he lived upwards of twenty years in the enjoyment of the reputation of one of the most distinguished painters of his age. He died, aged 79, probably in 1493, just as he was about to execute some works for the palace of the signory of Venice.

Antonello appears to have made no secret of his new method of painting after his second visit to Venice, for in 1573 Bartolomeo Vivarini painted a picture in the new manner for the church of San Giovanni and San Paolo, and Antonello himself marked his pictures '66 pinxit.' There is at least one so marked in the possession of a gentleman at Utrecht: it represents Christ between the two thieves, and 'Antonellus Messaneus me 66 pinxit, 1475,' is inscribed upon it; it is a small picture painted upon a panel of wild chestnut. The '66' evidently signify 'oleo,' or in oil; a word however calculated to mislead, as the method of painting simply in oil was very old, and that of Van Eyck was not merely painting in oil; it was, according to Vasari, painting in varnish. Vasari says that Van Eyck, by boiling linseed, poppy, and nut-oils, with other mixtures, obtained that varnish which he in common with every other painter in the world had long desired. From this sentence it is evident that 'painting in oil' is strictly a misnomer, and it was adopted only as sufficiently descriptive in contradistinction to the then prevailing method of water-colour, or 'a tempera' painting.

Antonello's works were distinguished for tone, for brilliancy of colour, and for the excellence of their impasto, but those which remain are much darkened. In design they are similar to the works of the Bellini. Antonello's life was long, and he was industrious; the extreme scarceness therefore of his works cannot be otherwise accounted for than by supposing them to be attributed to other masters, or vaguely designated as of the school of Van Eyck—a very frequent designation in the continental galleries.

ANTONIA MAJOR, the elder daughter of Antonius the triumvir, by Octavia, the half-sister of Augustus, born B.C. 39. She married L. Domitius, the son of Cn. Domitius, who supported the interests of Antony in the disputes with Augustus, until a short period before the battle of Actium, and the grandson of L. Domitius, who fell in the flight from Pharsalia. Among the descendants of Antonia were some of the most illustrious personages in Rome. One of her daughters, Domitia Lepida, was the mother of Messalina, afterwards married to the Emperor Claudius; and her son, Cn. Domitius, marrying Agrippina, became the father of the Emperor Nero. We have called this Antonia the elder in agreement with Suetonius and Plutarch. Tacitus, on the contrary, speaks of her as the younger daughter. ('Ann.,' iv. 44; xii. 64.)

ANTONIA MINOR, the sister of the preceding, born B.C. 38 or 37. She married Drusus Nero, the brother of the Emperor Tiberius, by whom she became the mother, 1, of the celebrated Germanicus; 2, of Livia, who was first married to Caius Caesar, the grandson of Augustus, and after his death to her cousin Drusus, the son of Tiberius; and, 3, of the Emperor Claudius. Caligula, being the son of Germanicus, was her grandson.

Antonia was not fortunate in her domestic relations: she lost her husband B.C. 9, before she was thirty years of age, by a fall from his horse. Early in the reign of Tiberius (A.D. 19) she saw the widowed Agrippina return from the east with the ashes of her son Germanicus. In 23 her daughter Livia, corrupted by Sejanus, assisted in the murder of her own husband Drusus; but her guilt remained unknown to the world until eight years after, when Antonia herself became indirectly the cause of the discovery. Sejanus was then preparing to execute his final schemes for the destruction of Tiberius, when his intrigues became known to Antonia, who communicated her information through the freedman Pallas to the emperor. The ruin of the favourite brought many past crimes to light, among others the murder of Drusus; and Livia met the fate which she deserved, her own mother, if we may believe one of the accounts given by Dio, opposing herself to the pardon offered by the emperor. Under the reign of her grandson Caligula she was at first highly honoured, receiving every distinction which had formerly been conferred on the celebrated Livia; but respect soon changed to coldness and ill-treatment; and at last her death was supposed to be hastened by his neglect, if indeed it was not brought about by more direct means. If we place her death in the first year of Caligula, she was about seventy-five years of age. The Emperor Claudius had experienced from her when a child little of maternal affection, but he honoured her memory when he came to the throne in every way that the flattery of the age permitted. Pliny speaks of a temple dedicated to her. Of the private life of Antonia little is known. She was celebrated for her beauty, and still more for her chastity, in an age too when that virtue was not common amongst women of her rank. The beautiful head of Antonia is taken from a gold medal in the British Museum.

ANTONINUS LIBERALIS probably lived under the Antonines. He is the author of a work in Greek, entitled 'A Collection of Metamorphoses:' this collection is borrowed from a variety of authors, and is curious for containing many passages of poets whose works are now lost. The best edition is that of H. Verheyk, Leyden, 1774, 8vo.

ANTONINUS PIUS, or, with his full name, Titus Aurelius Fulvus Bojonius Antoninus Pius, was the son of Aurelius Fulvus and Arria Fadilla. He was born September 19, A.D. 86, in the reign of Domitian, at Lanuvium (now Lavinia), a town of Latium, a few miles south of the Alban Lake. His youthful years were spent at Lorium (a town on the north side of the Tiber, not far from its mouth), under the care of his paternal and maternal grandfathers, T. Aurelius Fulvus, who had twice been consul, and Arrius Antoninus, who also had twice attained the same honour.

Gold. British Museum. Diameter doubled.

Through his extensive family connexions he inherited great wealth, and was speedily raised to the successive dignities of quaestor, praetor, and consul. His taste however was for a country life. When Hadrian intrusted the administration of Italy to four men of consular rank, he gave to Antoninus the government of that part in which his possessions lay. During his consulship and his subsequent government of the province of Asia as pro-consul, there were, as his credulous biographer informs us, many strange presages of his future elevation. On his return to Rome he was often consulted by Hadrian on public matters; and finally he was adopted as the emperor's successor, on condition of adopting himself, Marcus Antoninus, the son of his wife's brother, and Lucius Verus, the son of Elius Verus, who had been adopted by Hadrian, but had died prematurely. He then became

associated with the emperor in the government of the Roman world. On Hadrian's death (A.D. 138) he became emperor, with the title of Antoninus Augustus, to which the name of Pius is added on his medals. He seems never to have left Italy after his elevation, but his officers maintained the security of the provinces, and protected the frontiers from aggression. In Britain, Lollius Urbicus confirmed the former conquests; the Moors of Africa were compelled to sue for peace; and the attempts at rebellion in Germany, Greece, Judæa, and Egypt, were checked by the vigour of his governors. One of the most curious events in the foreign affairs of the reign of Antoninus is his helping the Olbiopolites, or inhabitants of Olbia, a Greek colony on the Borysthænes, against a nation called the Tauro-Scythæ, probably a nomadic race of the Dnieper and the Don. The Tauro-Scythæ were compelled by the Roman emperor to give hostages to the people of Olbia. The emperor died at Lorium in the seventy-fifth year of his age (seventieth, according to Capitolinus, who has written an ill-digested biography of this emperor), B.C. 161, and was succeeded by Marcus Aurelius, commonly called Antoninus the Philosopher. Antoninus was buried in the tomb of Hadrian, one of the architectural monuments with which he adorned Rome.

Antoninus married Annia Faustina, the daughter of Annius Verus, by whom he had four children, one of whom, Faustina, became the wife of M. Aurelius. The conduct of Antoninus's wife gave occasion to scandal; but on her death, in the third year of the emperor's reign, the senate paid her the usual compliment of divine honours, and decreed the erection of a temple, with statues of gold and silver, to her memory. A temple erected to Antoninus and Faustina still exists in part in the Campo Vaccino at Rome. The general character of the policy of Antoninus was beneficent and just, and the Roman world perhaps never had a more indulgent and amiable master. He continued the governors of provinces for many years in office when their conduct was satisfactory; and the provinces themselves enjoyed under his reign freedom from all exorbitant taxation. He surrounded himself with a council of chosen friends, without whose advice he took no public measure of any kind. Their counsels directed him in drawing up the imperial decrees (*formæ*), which were to have the force of law. Judges who discharged their duty faithfully were never removed. In his elevated station the emperor maintained the simple character of his early life, mingling in the society of his friends like one of the same rank, and using his unlimited power more like a private citizen intrusted with it by his fellow-countrymen than as the undisputed master of the empire. Antoninus continued the then existing practice of bestowing pensions or allowances, and gave salaries and honorary distinctions to the professors of rhetoric and philosophy in all the provinces. Apollonius the Stoic was specially invited from Chalcois to superintend the education of M. Aurelius. But the idle and worthless who had obtained public allowances felt the effect of the prudent emperor's reforms, who remarked, "that nothing was more disgraceful, nothing more cruel, than for a man to feed on the public property who had done nothing to improve it."

found his uncle, Cardinal Enrique, who had been appointed regent by Sebastian, in possession of the throne. Antonio immediately claimed the crown; and, by the advice of the Pope's nuncio, appealed to the Archbishop of Lisbon, reserving the final decision to the Pope. The cardinal-king declared Antonio a traitor, degraded him from his rank, and exiled him from Portugal. Antonio fled to Spain, where he proposed to give up his claim to the crown in favour of the king of Spain, Philip II., for an annual pension of 300,000 ducats and the regency of Portugal during his life. This extravagant proposal was naturally rejected. In the mean time the cardinal-king assembled the Cortes of the realm at Lisbon, in April, 1579, to decide the question of the succession; but before the Cortes had pronounced their judgment the king died, on the 1st of January, 1580.

The Cortes was at this time at Almerin. Antonio, who had already returned from Spain, hastened to Lisbon, where he summoned the authorities to receive him as king. Not succeeding here he repaired to Santarem, where the deputies of the third estate had removed from Almerin; and here he succeeded in inducing the multitude to recognise him, and he was proclaimed king.

Antonio now proceeded to Lisbon, and was proclaimed king in that capital. The Duke of Alba, at the head of the Castilian army, in the mean time invaded the kingdom to take possession of it in the name of Philip, and reduced Elvas, Villavieiosa, Estremoz, Montemor, and other places; while several important towns opened their gates to the Spanish forces. The Marquis of Santa Cruz, with the Spanish fleet, had also taken possession of other places on the coast. Antonio, at the head of 12,000 men, courageously opposed the invaders; but he was defeated, and the duke entered Lisbon by capitulation. Antonio retreated, and proceeded to Oporto, where he knew he had some adherents. The success of the Castilian arms however had changed the dispositions of the inhabitants, and they refused to admit Antonio; but some of his partisans having opened one of the gates, he entered the town like an enemy, and his soldiers committed the most violent excesses. The Spaniards soon arrived before Oporto, and Antonio's diminished and undisciplined forces fled before the Spanish veterans. Antonio escaped to Viana do Minho, where he embarked; but the sea was so rough that he was forced back to land. He disguised himself in a sailor's dress, and by mixing only with the lower orders was able to remain for some months in Portugal, until at last he escaped to France.

At Paris he published a manifesto in Latin, French, and Dutch, and sent it to Holland and England, whence he expected assistance. This document bears the date of 1585. In 1588 he came to England, soon after the destruction of the Spanish armada. He was favourably received by Queen Elizabeth, who was at last persuaded to equip a fleet, in which she sent the exile back to his country. In 1589, the expedition, consisting of 120 vessels with about 20,000 volunteers, sailed from Plymouth under the command of Sir Francis Drake and Sir John Norris; but being repulsed in an attack upon Lisbon, and not receiving the adhesion of the inhabitants, as Antonio had led them to expect, they gave up the enterprise and returned home. Antonio retired to France, where he ended his days in obscurity and indigence, on the 26th of August, 1595.

(Lemos, *Historia General de Portugal*, vol. xvii.; Antonio de Herrera, *Historia de Portugal*; Mariana.)

ANTONIO, NICOLAO, or NICOLAO, a Spanish writer, born at Seville, in 1617. He received his early education at the Dominican school of that city, where he also studied divinity two years. In 1636 he went to the University of Salamanca, where he studied civil and canon law under the celebrated jurist Ramos del Manzano. In 1639 he was made a Bachelor of Arts. He returned afterwards to Seville, and devoted his time entirely to the collection of materials for his chief work, of which the best edition is entitled, '*Bibliotheca Hispana, vetus et nova, sive Hispanorum Scriptorum, qui ab Octaviano Augusti ævo ad Annum Christi MDCLXXXIV. floruerunt, Notitia, Curante Francisco Perezio Bayerio.*' Matriti, Joachimus Ibarra. 1788, 4 vols. folio. ('*Bibliotheca Hispana, Ancient and Modern, or an Account of the Spanish Writers who have flourished since the age of Octavianus Augustus to the year 1684.*') Of this book, Baillet says that he prefers it to all the works of the kind in existence. For Spanish literature, there is certainly neither a better nor a safer guide. He also wrote a work, when he was 23 years of age, on 'Banishment, and the Condition and Rights of the Exiled.' In 1646 he was created a Knight of Santiago, and in 1659 Philip IV. appointed him general agent for the court of Spain at Rome, which office he held with honour until he was recalled by Charles II. He was then made a canon of Seville, and created a counsellor of Castile. He resided afterwards for some time at Seville; subsequently he went to Madrid, where he died of epilepsy on the 13th of April, 1684.

Antonio was a man of a liberal and charitable disposition. Notwithstanding the lucrative offices he had held, he died so poor that he did not leave his heirs sufficient property to enable them to print part of the works which he left unpublished. Cardinal Aguirre, the author's friend, defrayed the expenses of the publication.

ANTONIUS, CAIUS, surnamed Hybrida, son of Marcus Antonius, the orator, was the colleague of Cicero in his consulship (B.C. 63). It became his duty, under the orders of the senate, to conduct the war

Gold. British Museum. Diameter doubled.

Under the reign of Antoninus, the lawyers Umidius Verus, Salvius Valens, Volusius Metianus, Ulpianus Marcellus, and Diabolenus, were employed by the emperor in improving the laws. One of the emperor's regulations of sanitary police is worth recording: he forbade the burying of dead bodies in cities. His policy towards the Christians was mild. He embellished the imperial city with various edifices, and extended his liberality also to remote cities of the empire. Antoninus was tall and handsome in person, and his habits were abstemious and regular. He was honoured with the name of *Deus* (God) at his death, and all the tokens of respect paid to the best emperors were given to his memory. He appears to have been one of the most amiable princes whom history has recorded.

(Julius Capitolinus, *Life of Antoninus*; and Schloesser, *Universal-Historische Uebersicht*, vol. iii. part 1.)

ANTONIO, one of the claimants to the throne of Portugal after the death of King Sebastian, was the natural son of the Infante Don Luiz, son of King Manuel. Antonio accompanied his cousin, King Sebastian, in his unfortunate expedition to Africa, and was there taken captive in 1578. Concealing his real name and rank, he succeeded in obtaining his deliverance; but on his return to Lisbon,

against Catiline; but on the day of the battle he was prevented, or pretended to be prevented, by illness from appearing on the field, and the command devolved upon his lieutenant, Petreius. On the termination of the war, he proceeded (B.C. 61) as proconsul to the province of Macedonia, which had originally fallen to Cicero's lot, but had been transferred by him to Antonius, from a patriotic desire to attach him to the cause of his country. Such at least is the assertion of Cicero. Antonius, on the contrary, gave out that it was a matter of mere bargain and sale, and that Cicero had stipulated for the payment in return of a large sum of money, a charge which Cicero's ambiguous language and conduct on the occasion seem not to discountenance. To raise this money, Antonius was guilty of great extortion, and his conduct gave such general dissatisfaction that, after holding the government of the province for two years, he was formally brought to trial, and, though defended by Cicero, was found guilty, and condemned to perpetual exile.

ANTONIUS, MARCUS, the orator, was born B.C. 142. In B.C. 99 he was the colleague of C. Postumius Albinus in the consulship; and in the following year he defended M. Aquilius on a charge of extortion during the servile war in Sicily. In B.C. 97 he was censor, and he fell a victim to the fury of Marius and Cinna, when they took forcible possession of Rome in B.C. 87. His eloquence is celebrated by Cicero in his 'Brutus,' chap. 37, 38. Two of his sons appear prominently in the history of Rome.

ANTONIUS, MARCUS, son of the orator, and father of the triumvir. After Mithridates had been subdued by Sulla, a general system of piracy arose in the Grecian seas and the adjoining coasts, and, in the year B.C. 75, Antonius was intrusted with the duty of protecting all the coasts of the Mediterranean. Crete was the chief scene of his operations, where, though his successes for a time gained him the honorary title of Creticus, the outrages and extortions of which he was guilty led at last to an insurrection in which he lost his life, about B.C. 69; and the credit of reducing the island was reserved for Metellus.

ANTONIUS, MARCUS, the Triumvir, was the son of M. Antonius, surnamed Creticus, and Julia, a member of the patrician house of the Cæsars, sister of L. Julius Cæsar, the consul of B.C. 64. The year of his birth is somewhat uncertain, being assigned by different authors to B.C. 86, 83, and 81. His father dying while he was yet young, he received the greater part of his education under the direction of his mother Julia, who was at that time married to Cornelius Lentulus.

Gold. British Museum. Diameter doubled.

Early in life Antony formed an acquaintance with young Curio, which led him into a course of extravagant dissipation, and he was soon deeply involved; but Curio, being surety for the debt, prevailed upon his father, by the intercession of Cicero, to discharge it. Among the Roman nobles who were put to death by Cicero as accomplices of Catiline, one of the most distinguished was Antony's step-father, Cornelius Lentulus, then prætor of Rome. Antony attached himself to Clodius when that powerful tribune was employed in bringing Cicero to punishment; but not approving of the violence to which Clodius resorted, he went over to Greece, where he diligently applied himself to the two pursuits most important to a Roman, oratory and military science. From thence he was invited to join Gabinius, who as proconsul of Syria was engaged in protecting his province from the ravages of Ariarobolus and his son Alexander (B.C. 57, 56). Antony in this war commanded the cavalry, and evinced great spirit and military talent. In the course of the following year Gabinius undertook to restore Ptolemy Auletes to the throne of Egypt, and again the credit of his success was chiefly due to Antony, who secured the only road from Syria into Egypt, and made himself master of Pelusium. Gabinius returned to Rome in the autumn of B.C. 54, but Antony, as soon as hostilities ceased in Egypt, hastened to Gallia, the theatre of a still more important war. In the year B.C. 52 we find Antony acting as one of Cæsar's lieutenants at the siege of Alesia. He now became a candidate for the quaestorship, and even aspired to a place in the College of Augurs. His election to the quaestorship being completed, he hastened back to Gallia, where at the close of the year he was left by Cæsar at the capital of the Ædui in the command of the troops there quartered. The following year he was employed under Cæsar in extinguishing the last embers of the Gallic war; and so fully had

he gained the support of the general, that through his interest and that of Curio he was elected early in B.C. 50 into the College of Augurs. Through the influence of the same powerful friends Antony was raised to the dignity of a tribune. The tribunes entered upon their office on the 10th of December, whereas the consular authority commenced upon the first day of the year. Antony employed this interval in advocating the just rights of Cæsar with the people. When the kalends came, however, the senatorian party put to the vote the fatal motion that Cæsar should disband all his troops by a given day, or be treated as a public enemy. Antony and his colleague Cassius interposed their tribunitian veto, but the senate was now prepared to break down all the popular barriers of the constitution; the two tribunes were allowed but six days to consider their veto, and on the 7th of January the decree was passed which at once suspended all the laws of the state, and gave to the senatorian party despotic and irresponsible power over all the citizens. The tribunes fled in disguise to Cæsar, whose army in a few weeks drove the authors of the late revolution from Italy.

On the first expedition of Cæsar into Spain, Antony was left in the military command of Italy, which was again intrusted to him in the winter of the same year, when Cæsar crossed into Epirus. In the performance of this duty he distinguished himself by his able defence of Brundisium and its port against a Pompeian fleet under Libo, and soon after he crossed the Adriatic with reinforcements for Cæsar, and on many occasions rendered the most efficient service. In the following year Cæsar, being appointed dictator, selected Antony as his Master of the Horse. During this period he showed his firmness in checking the violent proceedings of Dolabella. Plutarch indeed attributes his conduct to a feeling of revenge, in consequence of a supposed intrigue between Dolabella and his wife Antonia, for he had married his own cousin, the daughter of C. Antonius Hybrida. He accordingly divorced Antonia, and gave way to the most open licentiousness. At a subsequent period he married Fulvia, the widow of Clodius. During the second war in Spain (B.C. 45) against the sons of Pompey, when Cicero was induced by some exaggerated accounts of their successes to meditate an escape from Italy, he was checked by the interference of Antony, whose letter on the occasion still exists. The next year Antony was the colleague of Cæsar in the consulship, but the senatorian party again dreamed of recovering their power, and the idle affair of the Lupercalia was seized as a pretext for the conspiracy against Cæsar. Cicero has not scrupled to accuse Antony of joining Trebonius in a conspiracy to murder Cæsar, but we have the authority of Trebonius himself, as reported by Plutarch, for saying that Antony refused overtures on the subject made to him by Trebonius. As Antony was not likely to join in assassinating Cæsar, it was next proposed to make him also a victim, but this was prevented by M. Brutus; and it was finally determined to engage him in conversation outside of the senate-house while the assassination of Cæsar was committed within.

Antony saw that it was necessary to act guardedly with men who accomplished their ends by assassination; he therefore waited, knowing that the people would soon recover from their first alarm, and rise against the murderers of their benefactor. The real power of Antony indeed lay in the detestation in which the senatorian oligarchy was held. The self-styled patriots were soon afraid to appear in Rome, and Antony, supported by his two brothers, Caius and Lucius, who at this time held the offices of prætor and tribune respectively, had a prospect of establishing himself in a station scarcely inferior to that from which Cæsar had been thrown down. But he found his most powerful opponent in young Octavius (afterwards Augustus), the great-nephew and adopted son of the late dictator, who with a skill beyond his years managed to unite the support of the most opposite parties, the oligarchy and the veterans. After numerous intrigues on all sides, Antony left Rome in October to meet at Brundisium four of the veteran legions from Greece; but Octavius, or, as he now called himself, Cæsar, found other veterans in the colonies of Campania ready to support one who bore so auspicious a name; and two of the four legions from Greece suddenly passed over to him from Antony. Before the year was closed hostilities commenced in the north of Italy, where Antony besieged Decimus Brutus in Mutina. Three actions were fought, in the second and third of which Antony was worsted.

The senatorian party were already enjoying their triumph, when the scene unexpectedly changed. The two consuls had fallen in the late contest. Decimus Brutus, though relieved from the siege, was without cavalry or commissariat, and unable to pursue; and Cæsar, never sincere in the cause of the senate, at last threw off the mask. Antony was joined by Ventidius with three legions, by the troops of Lepidus, and by the legions under the command of Plancus and Pollio. Thus Antony, who had fled from Mutina, now retraced his steps across the Alps at the head of seventeen legions, the greater part veterans, leaving behind him six others to guard the important province of Gallia. Decimus Brutus, on the other hand, had only ten legions to oppose him. In the mean while, Cæsar had put an end to the equivocal conduct of the senate by marching upon Rome, and extorting the consular fasces.

In the autumn of this year the celebrated triumvirate was established between Antony, Lepidus, and Cæsar. In the proscription, which was one of the first acts of the triumvirate, Antony, whose conduct on so many occasions was distinguished for clemency and

generosity, must bear his share of the guilt, more particularly in relation to Lucius Cæsar and Cicero. The former of these, his maternal uncle, was saved indeed by the bold interference of his mother, Julia; but Cicero, who had escaped from Rome when Cæsar appeared there with his army, was overtaken by his pursuers on the coast, and his head and right hand were cut off and fixed on the rostra of the Roman forum.

In the division of the provinces between the triumvirs, Antony received the whole of Gallia Citerior and Ulterior, with the exception of Gallia Narbonensis. To him and Cæsar was assigned the conduct of the war against Brutus and Cassius; and in the following year this war was brought to a close by two battles in the neighbourhood of Philippi, in both of which the success was due almost exclusively to Antony. Antony remained some time in Greece, particularly at Athens, where he ingratiated himself with the citizens. He then crossed into Asia, and Ephesus became the scene of more than Asiatic luxury. At Tarsus he saw the fascinating Cleopatra, whose influence so fatally affected his fortunes. He had summoned her to answer some accusations brought against her of assisting Cassius in the late war; and the queen, in obedience to the command, appeared in her gorgeous barge upon the Cydnus attired as the goddess Venus. Antony was led captive to Alexandria, where he lost sight of all that was going on in the world around him. He was at last roused from his voluptuous revels. A Parthian army under the guidance of Labienus, a Roman of the senatorian party, had overrun all the provinces from Syria to Asia. Antony set out to oppose them, but had scarcely arrived in Phœnicia when he was induced by the urgent solicitations of Fulvia to proceed with a fleet of 200 sail towards Italy to oppose Cæsar. But the war in this quarter was at an end before his arrival. The death of Fulvia, who, with Antony's brother Lucius, had been the chief cause of the war, led to a speedy reconciliation between Antony and Cæsar, which was cemented by the union of Antony with Octavia, the half-sister of Cæsar, herself but recently a widow by the death of Marcellus. On this occasion a new division of the empire was made, in which Antony received as his portion all the provinces east of the Adriatic.

Leaving the management of affairs at home to Cæsar, Antony proceeded with Octavia to Greece. His lieutenant Ventidius, to whom he had left the conduct of the Parthian war, was highly successful in the years B.C. 39 and 38. As these successes had been obtained by a lieutenant under the auspices of Antony, the latter was entitled, by the established principles of Roman warfare, to the honour of the triumph; but Antony, guided by a more generous feeling, sent Ventidius to Rome to enjoy this honour. Another of his lieutenants, Sosius, was scarcely less successful in a Jewish war against Antigonus, for which he likewise triumphed a few years after (B.C. 34); and a third, Canidius, had recovered Armenia, and carried the arms of Rome to the foot of the Caucasus. On the other hand, the siege of Samosata, which was partly conducted by the general in person, rather detracted from than added to his military fame by the long and determined defence of the Commagenian prince Antiochus. But Antony was again called to Italy by the suspicious conduct of Cæsar. After his arrival a second reconciliation was effected by the mediation of Octavia, and Julia, the mother of Antony, who at the same time belonged to the house of Cæsar. This new arrangement took place at the end of B.C. 37, or in the following spring. The most important article was the renewal of the triumviral power for a second period of five years, commencing from the last day of the year 38, the day on which the first period of their triumvirate terminated. Cæsar now conducted the war against Pompey, while Antony directed his arms against the Parthians. His preparations for the invasion of the Parthian empire were on the largest scale, but the influence of the Egyptian queen, by causing delay, produced the most disastrous effects. After a campaign in which the soldiers showed the greatest spirit, and the general, on some occasions, no little military talent, a retreat was effected with great loss.

In the following year, Antony was anxiously looking out for an opportunity of revenging himself upon the king of Armenia, whose desertion in the Parthian invasion had greatly weakened his strength. A quarrel between the king of Media and the Parthians seemed to offer a favourable opportunity. The following year, the invasion of Armenia took place, and by treachery, Antony got the king into his power. In the mean time, Cæsar, by the overthrow of S. Pompeius and the usurpation of the provinces assigned to Lepidus, was at last prepared for a contest with Antony himself. In B.C. 33, Antony again commenced an invasion of Parthia, but as soon as he had reached the Araxes, he retraced his steps to prepare for the war that now threatened him from the west. Still a second year was passed in preparations; and in B.C. 31, the possession of the Roman world was decided by the victory off Actium. From that day the fate of Antony was fixed. In August, B.C. 30, Cæsar appeared with a fleet and army before Alexandria, to which Antony had retreated; and the desertion of his fleet and of his cavalry before his eyes left him only the poor hope of sustaining a siege. A false report of the death of Cleopatra completed his despair, and he killed himself with his own sword. Cleopatra likewise saved herself by suicide from adorning the triumph of the conqueror. Antony's age at his death was a little more than fifty; that of Cleopatra thirty-nine. He was four times married, or

indeed, five times, if we may admit his marriage with Fadia, on the authority of Cicero. Of his two children by Fulvia, Antyllus the elder was put to death; and the younger, Iulus Antonius, to whom Horace has addressed an ode, after long enjoying the favour of Augustus, suffered for his intimacy with Julia, the emperor's daughter. By Octavia, he had at least two daughters; and by Cleopatra, a daughter of the same name, and two sons, Alexander and Ptolemy Philadelphus. Of these, the daughter married the learned African prince Juba.

The heads of Antony and Cleopatra are taken from a silver coin in the British Museum, in which the expression of Cleopatra's face fully agrees with the assertion of Plutarch, that her fascinating powers depended not so much on her beauty, in which she was inferior to Octavia, as on the charms of her manner and conversation. Plutarch also mentions the remarkable aquiline nose of Antony.

(Cicero, *Letters and Orations*; Cæsar; Velleius; Livy, *Epitomes*; Plutarch, *Life of Antony*, *Dion*, *Appian*, &c.; and Clinton, *Fasts*.)

ANVILLE (JEAN BAPTISTE BOURGUIGNON D'), a distinguished geographer, was born at Paris in 1697. From his boyhood he showed a strong bias for geographical studies. At twelve years of age, while at college, a map which he happened to see determined his pursuits. He began alone and without assistance to draw maps of the countries mentioned in the Latin classics which he was then studying. For this exercise he sometimes neglected his regular tasks, and he was once caught in his favourite employment by the professor of his class, who perceiving on the rough sketch before him evident signs of the genius of his pupil, gave him encouragement to proceed. After leaving college, he became acquainted with several learned men, particularly with the Abbé de Longuerue, a laborious investigator of antiquities, at whose request he set about drawing several maps of France and its various provinces, for the Abbé's work; '*Description Géographique et Historique de la France Ancienne et Moderne*.' At the age of twenty-two, he was appointed one of the king's geographers. Soon after, his map of the kingdom of Aragon was published by desire of the duke of Orleans, regent of France, and against D'Anville's judgment, who did not consider it as sufficiently accurate. He was employed by the Jesuits to make an atlas of China for the edition of Duhalde's History of that empire. This Atlas ('*Nouvel Atlas de la Chine*, &c.') was also published at the Hague in 1737. But the work that established his reputation, was his map of Italy, which he published in 1743. In 1744, D'Anville published his '*Geographical Analysis of Italy*,' in illustration of his map. He drew several maps of sacred geography, namely, '*Ecclesia Africana*,' and the four Patriarchates of Constantinople, Antiochia, Jerusalem, and Alexandria, for the '*Oriens Christianus*' of Father Le Quien. A full catalogue of D'Anville's works and maps is given by Barbic de Bocage in his '*Notice des Ouvrages de M. D'Anville précédée de son Eloge par M. Dacier*,' Paris, 1802. He published one hundred and four maps on ancient, and one hundred and six on modern geography. He wrote about forty works, including several memoirs, which are inserted in the '*Recueil de l'Académie des Inscriptions et Belles Lettres*.' The following are the most important among his works, all published at Paris, '*Analyse Géographique de l'Italie*,' 1744, 4to., already mentioned; '*Dissertation sur l'Étendue de l'Ancienne Jérusalem*,' 1747, 8vo.; '*Mémoire sur la Carte des Côtes de la Grèce*,' 1751, 4to.; '*Notice de l'Ancienne Gaule, tirée des Monumens Romains*,' 4to., 1760; a work much and deservedly esteemed, in which the author however confines himself to Gaul as it was under the Roman empire. To this must be added, '*Eclaircissemens Géographiques sur l'Ancienne Gaule*,' 1748, 12mo.; '*Mémoire sur l'Égypte Ancienne et Moderne, suivi d'une Description du Golfe Arabique*,' 1766, 4to. Mr. Ripault, one of the scientific men who accompanied Bonaparte's expedition to Egypt, says that they were struck with the accuracy of D'Anville's positions. The navigator Bougainville, gave a similar testimony in favour of D'Anville's map of Asia, especially with regard to the Molucca Islands, and the coast of New Guinea. '*Géographie Ancienne Abrégée*,' 1768, 3 vols. 12mo., and 1769, fol., translated into English under the title of '*Compendium of Ancient Geography*,' London, 1791, 2 vols. 8vo.; '*Traité des Mesures Itinéraires Anciennes et Modernes*,' 1769, 8vo., a most valuable work, in which he estimates and compares the itinerary measures which have been in use in various ages, among the nations of Europe and Asia, and ascertains the variations which each had undergone in the course of time; '*États Formés en Europe après la Chute de l'Empire Romain en Occident*,' 1771, 4to.; a useful book for the history of what are termed 'the dark ages,' from the 5th to

the 12th centuries, and forming a link between ancient and modern geography; 'L'Empire de Russie Considéré dans son Origine et ses Accroissemens,' 1772, 12mo.; 'L'Empire Turc Considéré dans son Etablissement et ses Accroissemens,' 1772, 12mo. From the want of observations, he seems to have fallen into considerable errors in his map of Turkey, and also in his map of Asia Minor. To the neck or isthmus of Asia Minor he assigned a breadth from north to south which was less than the truth by one whole degree; this fundamental error necessarily deranged many of his positions, especially in the eastern part of that peninsula. Considering the want of full and accurate observations existing in his time, the geographical works of D'Anville are remarkable productions. For the many disadvantages under which he laboured he made up in a great measure by his indefatigable researches in the authors of antiquity, as well as of the middle ages, who could afford any information on geographical matters, and by a rare sagacity and judgment in eliciting truth out of conflicting statements and opinions. He was greatly assisted by his wonderful memory. Geography made under him rapid strides towards accuracy; he used himself to say, for he was somewhat of an egotist, that "he had found a geography made of bricks, and left one of gold." (See his 'Eloge,' by Dacier, already mentioned.)

But it was only on the subject of his favourite science that he showed any vanity; in all other matters he was simple and unassuming. It is remarked by the biographer of D'Anville ('Biog. Universelle') that his style is not good, and that owing to this and other causes there is often a want of method and clearness in his dissertations. In this opinion we entirely concur: his language sometimes is very inelegant and not very correct. In 1773 the French Academy of Sciences elected him, then 76 years of age, into their body, and the same year he succeeded to the vacant place of first geographer to the king. In 1777 he published his 'Considérations sur l'Étude et les Connoissances que demande la composition des Ouvrages Géographiques,' a sort of legacy for those who should follow him in the same career. In 1779 Louis XVI. purchased his valuable collection of maps, which he had collected in the course of sixty years devoted to science. D'Anville's constitution, naturally delicate, became now exhausted, his sight failed, and he at last fell into a state of physical and mental imbecility, from which death relieved him in 1782, at the age of 85. His wife, with whom he had passed fifty-one years of his life, died the year before, without his being sensible of her loss. He left only two daughters. There are two more works translated or compiled in English from D'Anville, besides the 'Compendium' already mentioned, namely, 'A Complete Body of Ancient Geography,' including the 'Orbis Romanus, Orbis Veteribus Notus,' of D'Anville, with additions, London, 1775, and the 'Geography of the Greeks and the Romans in the time of Alexander and Augustus,' London, 1816.

ANWARI, or ENWERI, properly AWHAD-ED-DIN ANWARI, a celebrated Persian poet, who flourished in the 12th century of our era. He was born at Bedna, a village in the district of Abjurd, in Khoraean, and received his education in the college of Mansur, at Tus. A visit of the Seljukide sultan Sanjar to Tus furnished him the first opportunity of making himself known by a poem in praise of the sultan, which is by oriental critics considered one of his best productions. Sanjar, who was fond of poetry, enlisted him among his suite, and bestowed honours and ample rewards upon him. Anwari followed the sultan to Merw, then the residence of the Selpikides. Here the poet devoted himself to astrology, but was not fortunate in his predictions, and at length retired from Merw to Balkh, where he died in the year 597 of the Hegira (A.D. 1200-1201). Manuscript copies of the 'Diwan,' or collection of poems of Anwari, are not unfrequently met with. It consists chiefly of 'kasidas,' or long poems, mostly panegyric; and of 'ghazels,' or shorter lyrical effusions. In the ghazels the style of Anwari is simple and comparatively easy, while his kasidas abound in metaphors and conceited historical allusions. It deserves to be remarked, that the language of Anwari, though he is one of the earlier Persian poets, is as full of Arabic expressions as that of almost any subsequent writer; whereas, in the 'Shahnameh' of Firdusi, who lived only a little more than 150 years before Anwari, we find the Persian in a state of unadulterated purity.

APELLES, one of the most celebrated Greek painters, is generally considered to have been a native of the little island of Cos in the Ægean sea. Nearly all that we know about him, with the exception of some few scattered notices, is contained in the 10th chapter and the 35th book of Pliny's 'Natural History.' The time of his birth is not fixed, but we are told that he was at the height of his reputation in O. exil., or about B.C. 332; and as he painted a great many portraits of Philip, the father of Alexander, he could not be a very young man in B.C. 336, the time of Philip's death. He also survived Alexander, who died B.C. 323.

His chief master was Pamphilus, a Macedonian, and a distinguished artist. Apelles received instruction from him at Sicyon, a city which for some time before and after this date had a high reputation as a school both of sculpture and painting. We are told that his diligence was unwearied, and that he never passed a day without doing something; "ut non lineam ducendo exerceret artem." Winkelmann interprets these words to mean, "that he never passed a day without trying to improve himself as a draughtsman," a sense which the

words will very well bear. Apelles is much praised for the frankness and plain-dealing of his character. A story is told of him as having given rise to the well-known saying, that a shoemaker should not go beyond his last. Apelles placed a picture which he had finished in a public place, and concealed himself behind it in order to hear the criticisms of the passers-by. A shoemaker observed a defect in the shoe, and the painter forthwith corrected it. The cobbler came again the next day, and being somewhat encouraged by the success of his first remark, began to extend his censure to the leg of the figure, when the angry painter thrust out his head from behind the picture and told the shoemaker to keep to his trade.

Apelles excelled in grace and beauty. The painter, who laboured incessantly, as we have seen, to improve his skill in drawing, probably trusted as much to that branch of his art as to his colouring: he only used four colours, as we are told (Pliny). His favourite subject was the representation of Venus, the goddess of love, the female blooming in eternal beauty; and the religious system of the age favoured the taste of the painter. Apelles painted many portraits of Alexander the Great, who often visited his painting-room, and would not sit to anybody else. But it is not very easy to reconcile Alexander's rambling life with this account, unless we suppose that Apelles followed him into Asia; a supposition not altogether improbable.

Apelles painted a portrait of King Antigonus (see his medal—ANTIGONUS), which he placed in profile to hide the defect of the want of one eye. We may form some idea of the state of art in that day from that medal, and by the fame of Apelles which has survived his works; it is not an unlikely hypothesis, that the figure of Antigonus on his coins would be in harmony with his portrait by Apelles. Antigonus was represented on horseback, and this picture was reckoned his masterpiece. The next most celebrated was the Venus rising from the sea, first placed in the temple of Esculapius at Cos, and taken thence by Augustus, in lieu of a tribute of 100 talents. It was damaged in its transition to Rome, but was placed in the temple of Julius Cæsar, and having decayed, was replaced by a copy about 350 years afterwards. It was thenceforward lost.

The great picture of Alexander by Apelles was in the temple of Diana at Ephesus; other pictures by Apelles were in Samos and Rhodes, and Rome contained several in the time of Pliny. A Hercules in the temple of Antonia was attributed to him. Apelles published a work on painting, which has been lost. He was accustomed to use a varnish for his pictures, which brought out the colours, and preserved them at the same time. The date of his death is unknown.

APEL'LICON, a personage principally memorable for his connection with the preservation of the works of Aristotle. According to Strabo (book xiii., p. 608, &c. Casaub.), he was a native of Teos, but went to Athens, and was admitted a citizen of that state. He was very rich, and his vanity seems to have led him to seek distinction by the assumption of the literary character. He spared no expense in amassing books; but Strabo says that he was rather Philobiblos (a lover of books), than Philosophos (a lover of wisdom). Among other libraries which he purchased was that which had been collected by Aristotle more than 200 years before; and which, enriched as it was by the manuscripts of that philosopher himself, and of his pupil Theophrastus, had, according to the improbable story, been long concealed by the persons into whose hands the collection had fallen. Having been deposited in a cellar under ground for about a century and a half, the books had suffered much from their long entombment, and the copyists whom Apellicon employed to transcribe them were not very well qualified to restore the passages which had been rendered illegible. When thus for the first time published, they consequently appeared in a very faulty state. When Sulla conquered Athens (B.C. 86) he carried to Rome, among other literary treasures, the library of Apellicon, who had just died; and this particular collection, Plutarch says, he retained as his own property. Several careless copyists made transcripts of some of the works for publishers (Bibliopoi) of that day, but it was not until Andronicus of Rhodes [ANDRONICUS], who was an acquaintance of Tyrannion, the grammarian, undertook the task of correcting the writings and putting them in order, that they were given to the world in anything like a correct form. Athenæus (v., p. 214, Casaub.), informs us that Apellicon was discovered to have got into his possession the originals of many of the ancient public decrees from the city archives, which so enraged the Athenians against him, that he was obliged to run away to save his life. The influence of his friends and his own wealth however soon obtained his return; and he was invested with the command of the island of Delos. During his government the Romans effected a descent upon the island, and, falling upon the garrison while they were asleep, put nearly all of them to the sword. Apellicon succeeded in making his escape; and, having returned to Athens, he died there a short time before the capture of the city by Sulla. Athenæus says that Apellicon embraced the opinions of the Peripatetics; and a work of his, in defence of Aristotle, is quoted in a passage of another ancient writer preserved by Eusebius. (Bayle, in articles 'Andronicus' and 'Tyrannion.' ARISTOTLE.)

APHTHONIUS, a Greek rhetorician of Antioch, whose epoch seems rather difficult to fix; some place him about the end of the 2nd century A.D.; others, as Fabricius, in the 3rd, and the other critics still later. We know with certainty, that he lived after Hermogenes

because he quotes this rhetorician, and in fact worked up the 'Progymnasmata' of Hermogenes into a new shape, also entitled 'Progymnasmata.' There is a curious passage in Aphthonius about Alexandria. (De Sacy, 'Abd-Allatif,' p. 182.) Aphthonius has also left forty Greek fables. The work of Aphthonius is an elementary treatise on rhetoric; in the 16th and 17th centuries it was much in use, and there were numerous editions of it. Aphthonius was first incorporated by the elder Aldus with the other rhetoricians: 'Rhetores Græci,' Venice, 1508, fol. The latest edition is by J. Scheffer, Upsal, 1670 and 1680, 8vo., with the 'Progymnasmata of Theon.'

APIAN, or APPIAN, PETER, an astronomer, and, we may add, astrologer, born at Leipzig, died at Ingolstadt, where he was professor of mathematics, in 1552, aged 57. His real name was Bienowitz, sometimes misspelt Binewilt. 'Biene' in German signifies a 'bee,' whence the Latin Apianus. He was in favour with Charles V., who gave him an order of knighthood and the title of Count, as well as more substantial rewards. He is principally remarkable for his observations of comets, and is said to have been the first who observed that their tails are generally turned from the sun. He also attempted the solution of astronomical problems by mechanism, as described in his 'Opus Cæsareum,' and is said moreover to have pointed out the use which might be made of lunar observations in navigation. His son Philip succeeded him at Ingolstadt, which place he was obliged to quit in 1558, on account of his embracing the Protestant religion. He enjoyed some celebrity as an astronomer and mathematician, and died professor at Tübingen in 1589. (*Biographie Universelle*, and the work of Teissier.)

APICIUS. There were three Romans of this name, all of them celebrated for their love of good eating. The first was contemporary with Sulla; the second with Augustus and Tiberius; the third with Trajan. Of these the second is the most famous, being celebrated by Seneca, Pliny, Juvenal, Martial, &c. Athenæus (p. 7, Casaub.) places him under Tiberius, and mentions that certain cakes were named after him, 'Apician.' Seneca says that he was alive in his time, and infected the age by establishing a regular school of professors and pupils in the science of good eating in Rome, from which, in the days of simplicity and severity, even philosophers had been expelled as the corruptors of youth. The inordinate expense of his culinary establishment reduced his fortune and involved him in debt; when, finding that, after clearing off his incumbrances, he should have left a pittance utterly inadequate to keep such a body and soul together, he took poison in preference to pining after unattainable luxuries. The third Apicius is to be honoured as the inventor of the art of pickling oysters (Athen. 7).

The name of Apicius became familiar as a household and culinary word; it was preserved by the spirit of party; and the cooks of ages after were divided into Apicians and anti-Apicians. A treatise, 'De re Culinaria,' is extant under the name of Cælius Apicius. It is considered by critics as ancient, although not written by any of the three whom we have mentioned. Martin Lister republished it in London in 1705, with the title 'De Obsoniis et Condimentis, sive de Arte Coquinaria.' The humorous Dr. King ridiculed it in a poem, entitled 'The Art of Cookery.'

(*Biographie Universelle*.)

APION, son of Poseidonius, was born in Oasis, a town in Libya, seven days' journey from Thebes, probably the modern Oasis, called El-Wah. Apion was educated at Alexandria, and wished to pass for a Greek native of that city, although he was of Egyptian extraction. Apion was a disciple of Apollonius, the son of Archibius, and of Didymus, from whom he imbibed his fondness for the poetry of Homer. Under the emperor Claudius, who reigned A.D. 41-54, he succeeded the Grammarian Theon at Rome. When the Greek inhabitants of Alexandria endeavoured to deprive the Jews who resided there of the privileges conferred upon them by Alexander the Great at the foundation of the city, and confirmed by the Ptolemies and the Cæsars, Apion was appointed to advocate their cause against the Jews. On this occasion he endeavoured to kindle the wrath of the emperor Caius Caligula, by pointing out that the Jews would neither erect statues to the emperor nor swear by his name, whilst they preferred to worship the head of an ass made of solid gold, which was of immense value, and was stated to have been first discovered when Antiochus Epiphanes entered the temple at Jerusalem. Apion also recounted some monstrous fables respecting alleged practices of the Jews in connection with this idol worship. He did not however fully succeed against Philo, who was sent to Rome by the Jews of Alexandria to plead their cause. Philo, who was at the head of the embassy of the Alexandrian Jews, commenced his reply to Apion's accusation, but the emperor Caius insultingly commanded him to leave the imperial presence. The emperor sent Petronius, the successor of Vitellius, as legate to Syria, with orders to place his statue in the temple at Jerusalem. Petronius marched an army into Judæa, but was so much touched with the intreaties of the Jews not to profane their sanctuary, and with their readiness rather to die than to admit the emperor's statue, that he delayed the commencement of the war, and requested the emperor to revoke his orders. Caius granted this revocation to his favourite Herodes Agrippa, but commanded Petronius to commit suicide for his disobedience. The news of Caligula's death arrived in Syria before the letter in which Petro-

nus was ordered to kill himself if he would avoid the tortures prepared for him. Thus Apion's plan to hurt the Jews was providentially foiled. (Joseph, 'Archæologia,' l. xviii. cap. 8.)

Apion was esteemed for his learning; but already, before his contest with Philo, he was known at Rome as a man of ostentatious character. Tiberius named him Cymbalum Mundi (Cymbal of the Universe), on account of his vain boastings; but Pliny, Apion's disciple, calls him rather Publicæ Famæ Tympanum, or the Kettle-Drum of Fame. Of his writings, there have only been preserved the story of 'Androclus and the Lion' (Gellius, v. 14), and the 'Dolphin at Dicæarchia' (Gellius, vii. 8), with fragments from the work against the Jews, preserved by Josephus in his reply. Josephus's refutation of the misrepresentations of Apion and his authorities is contained in the commencement of the second of his two books on the 'Antiquities of the Jews.'

(Seneca, ep. 88; Plin., *Prof. Hist. Nat.*, and lib. xxxvi. c. 12; Suidas, ed. Küster, i. p. 267.)

APOLLINARIS, or APOLLINARIUS, a native of Alexandria, taught grammar at Berytus, a town on the coast of Phœnicia, and afterwards in Laodicea of the same country. Apollinaris married and became presbyter of Laodicea. His son, likewise called Apollinaris, was one of the greatest orators, poets, and philosophers of his age. Apollinaris the younger became professor of eloquence at Laodicea before A.D. 335, and afterwards lecturer of the Christian congregation. Both father and son continued their intercourse with learned heathens after their ordination. They were friends of Libanius, and attended the lectures of Epiphanius the sophist, who taught at Laodicea, and afterwards in Athens. On this account, and especially because they were present when Epiphanius recited a poem in praise of Bacchus, they were excommunicated by Theodotus, bishop of Laodicea; but were again, on doing penance, admitted into church-fellowship. Georgios, the successor of Theodotus, A.D. 350, being an Arian, banished them, either on account of their continued intercourse with Epiphanius, or on account of their adherence to the Nicene Creed and the friendship of the younger Apollinaris for Athanasius. This friendship had commenced in 349, at the time that Athanasius passed through Laodicea. When Julian forbade the Christians to interpret the Greek classics, the Apollinaris, father and son, composed imitations for the use of schools. The father wrote a grammar for Christians. Socrates ('Hist. Eccles.,' iii. 16) attributes to the father some epic poems and tragedies founded on the history of the Old Testament; but Sozomenus ('Hist. Eccles.,' v. 18) ascribes these productions to the son, who transformed also the New Testament into the manner and style of Platonic dialogues. After the death of Julian the classics were read again, and the imitations of Apollinaris forgotten.

The younger Apollinaris is mentioned (in 'Athanas. Ep. ad Antiochenos,' tom. i.; 'Opp. ed. Montfaucon,' vol. ii., p. 776) as orthodox bishop of Laodicea in 362, whilst Pelagius was bishop of the Arians in that city. He was esteemed by, and had some epistolary correspondence with, Athanasius, Basilus Magnus, and other great men of that age. Apollinaris distinguished himself especially by polemical and exegetical writings; for instance, by his work on 'Truth,' against the Emperor Julian and the heathen philosophers. Apollinaris's thirty books against Porphyrius, against the Manichæans, Arians, Marcellus, and others, were highly esteemed. Hieronymus himself, during his residence at Antiochia in 373 and 374, enjoyed the exegetical instructions of Apollinaris, then bishop of the neighbouring Laodicea. The interpretations of Apollinaris, quoted in the commentaries of Hieronymus, were peculiarly valuable in those days on account of his knowledge of the Hebrew tongue.

In the latter part of his life, Apollinaris, who had strenuously defended the Athanasian doctrine of the Trinity, himself incurred the reproach of heresy, because he taught that the divine logos occupied in the person of Christ the place of the human soul. According to him, Christ was (*ἑναρκτος*) incarnate, but not (*ἑμφυτος*) insouled. His disciples, who were very numerous, were called Apollinariata. His heresy became generally known in 371. Apollinarism was first condemned at the synod held at Rome in 375, which induced Apollinaris to form a separate congregation, over which he ordained the presbyter Vitalis as bishop. Hence the Apollinariata are also called Vitaliana. They are also called Dimorites, because they were accused of dividing the nature of Christ into two parts. Before the death of Apollinaris, which happened between 382 and 392, the Apollinariata formed in Syria and the adjacent countries several separate congregations having their own bishop. By imperial command the public worship of the Apollinariata was impeded in 388 and 397, and in 428 in all towns entirely prohibited.

APOLLINARIS SIDONIVS, CAIUS SOLLIUS, ST. (some manuscripts add the name of Modestus, which they place before Apollinaris). He was born at Lyon on the 5th of November, 430, but his family seems to have been originally of Auvergne, and was one of the most distinguished in Gaul. His grandfather, Apollinaris, was the first of the family who embraced Christianity, and he was prefect of the Gauls in the reign of the tyrant Constantine. His father was tribune and secretary of state under the emperor Honorius, and prefect of the Gauls under Valentinian III. Apollinaris received an education suitable to his birth. He was taught philosophy by Eusebius ('Epist.,' iv. 1), from whom perhaps he also learned arithmetic,

astrology, and music, which Apollinaris says are essential parts of education ('Carmen,' 14). He acquired enough of Greek to translate it into Latin; but poetry was the favourite subject of Apollinaris. He was also ambitious, and he thought of rising to posts of honour. It is probable that he chose the profession of the bar. But before he obtained any office he married Papianilla, daughter of that Avitus who was afterwards emperor. She brought him as a dowry the domain of Avitac in Auvergne, which Apollinaris has described in one of his letters ('Epist.,' ii. 2). He was not twenty when he married, and he had at least four children.

His father-in-law, Avitus, was declared Augustus on the 10th of July, 455, and Apollinaris followed him to Rome, where he pronounced his panegyric in verse in the presence of the Roman senate and people on the first day of the next year, on which Avitus commenced his consulship. The only reward which he received for this poem, which he wrote at the age of twenty-five, was, as he complains, the erection of a bronze statue, which was placed near the statue of Trajan, under the portico which led to the Greek and Latin libraries. The reign of Avitus, by whom Apollinaris expected to be advanced, was of short duration. Before the end of the year 456 Avitus was dethroned by the intrigues of Count Ricimer, and Majorian succeeded him. A part of the Gauls took up arms to avenge Avitus, and Apollinaris went to Lyon, which declared for Avitus, and received within its walls a body of Visigoths, sent by the Visigoth king, Theodorid II. The city was besieged by the Romans, and compelled to surrender. When Majorian came to Lyon in 458 the poet pronounced a panegyric upon him in verse ('Carmen,' 5), upon which Majorian granted him his petition in behalf of Lyon. This emperor raised Apollinaris in 461 to the dignity of a count, and gave him some other offices about his court. In 461 Ricimer caused Majorian to be assassinated, and placed the diadem on the head of Severus. It appears that Apollinaris took this opportunity of quitting the Roman court, and that he passed the whole reign of Severus in his domain of Avitac, occupying himself with literature, his domestic affairs, and the society of his friends. ('Epist.,' ii. 9; 'Carm.,' 23, v. 439, 490-501.)

Upon Anthemius becoming emperor in 467, Apollinaris, who was then at Lyon came to Rome, and pronounced a panegyric in verse upon the emperor the 1st January, 468 ('Carmen,' 2). Anthemius made him chief of the senate, præfect of the city, and after some time patrician.

Apollinaris had now obtained every honour to which a private person could aspire, except the consulship, when he gave up all, and passed, as he says himself, from a secular life and the first offices of the court to the humility and sanctity of a bishop ('Epist.,' iii. 1). Towards the close of the year 471, he was elected bishop of Clermont, though not yet admitted among the clergy. He renounced profane literature, and even poetry; he wrote verses rarely, and such as he did write were generally in honour of the saints and martyrs ('Epist.,' ix. 16). He contented himself with composing letters in prose, and he sought to form a style more suitable to his profession, less studied and more approaching to common conversation than he had used before ('Epist.,' iv. 3). He became a man of prayer, of fasting, and charity. The greatest prelates of the church in those days, St. Lupus of Troyes, St. Remigius of Reims, St. Patiens of Lyon, corresponded with him and were his friends. In 474, the city of Clermont was besieged by Euric, king of the Visigoths. It suffered greatly. Winter forced Euric to raise the siege: but the city was distracted by two factions; one party wished to abandon the town, another to stay and defend it. Apollinaris brought from Lyon the priest Constantius, who, by his eloquence, restored concord amongst the inhabitants. The country through which the Visigoths had passed was entirely devastated; more than 4000 Burgundians came to Clermont, destitute of every thing. The bishop sold even his silver plate secretly to supply the necessities of his people. But Papianilla, when she heard of this, bought back the plate, and returned it to her husband. In order to implore divine mercy, Apollinaris now established in his diocese the ceremony of rogations, in imitation of St. Mamert, who had just instituted it at Vienne in Dauphiné ('Epist.,' vii. 1). But Julius Nepos, the emperor of the West, bought peace with Euric by the cession of Auvergne, and the Visigoths became masters of Clermont before the end of the reign of Nepos, that is, before the 28th of August, 475. Apollinaris demanded of Euric, who was an Arian, that the Catholics, who now passed under his dominion, should be allowed to elect their own bishops. Euric refused and sent him prisoner to the castle of Livia not far from Carcasone, where he remained for a year. When he was restored to his diocese, he endeavoured to assuage the sufferings of his people under the barbarian rule. Nothing is known of the last years of his life, except that he experienced much trouble from two priests who endeavoured to get possession of his bishopric, but did not succeed. Apollinaris died on a Saturday, which was the 21st of August. This is the day on which his memory is honoured by the church of Clermont, which has placed him among its saints. The year is uncertain, but it is probable that he died in the year 483, which was the fifty-eighth of his life and the eighteenth of his episcopate.

Apollinaris wrote several works which are lost. Those which are extant he published himself. They are:—1. 'Carmina XXIV.' These poems appeared before the letters at different periods, and

before Apollinaris became a bishop. Some other pieces of poetry, epitaphs, and inscriptions are inserted among his letters. The most remarkable of these poems are the panegyrics upon the three emperors, Avitus, Majorian, and Anthemius. They are not printed in chronological order. 2. 'Epistole.' There are nine books of letters, and two others are inserted among the verses. Apollinaris published these books separately and at different periods after he became a bishop. The last book was probably published in 483, as may be inferred from the twelfth letter of the ninth book; but Apollinaris in the publication of his letters observed no order either of subject or chronology. The literary merit of his works is not great. His style is tumid, obscure, and affected, too full of antithesis and points; yet there is considerable eloquence, fire, and conciseness in his diction. The real value of his works is this, that they contain historical facts which cannot be found elsewhere; and although Apollinaris mentions the events of his age very briefly, yet his writings throw considerable light on the political and literary history of the 5th century. Gibbon and the other historians who treat of that period refer continually to him.

The editions of his works are numerous. The best are—one published with notes by Savaron, Paris, 4to., 1609; and another by Sirmond, with valuable notes, 8vo., Paris, 1614. The works of Apollinaris form a part of the 'Bibliotheca Patrum' of Gallandus, tom. x. p. 463, &c., Venice, 1774. There is no English translation; but the French translation, with the Latin text on the opposite side, by Grégoire and Collombet, 8vo. Paris, 1836, three vols., contains a good life and introduction to the works of Apollinaris.

(*Histoire Littéraire de la France*, tom. ii. p. 550-573; Grégoire and Collombet, *Œuvres de C. Sollias Apollinaris Sidonius*, &c.)

APOLLODO'RUS, a celebrated grammarian of Athens, of whom an account is given by Suidas. He was a pupil of Aristarchus. Of his voluminous writings, only three books of his 'Bibliotheca,' a mythological work, have come down to us. He wrote a chronicle or history in Iambic verse, extending from the destruction of Troy (B.C. 1184) to his own times (about B.C. 144). ('Seymnus Chius,' v. 19-49.) The first edition of Apollodorus was by B. Ægius of Spoleto, 1555, 8vo, Roma. The best editions are by Heyne, 1782-1783, 4 volumes, and 1802, 2 volumes, 8vo; and that by Clavier, Paris, 1805, 2 volumes, 8vo, with a French translation.

APOLLODORUS, an eminent Athenian painter, who lived about four centuries B.C. (Pliny, *Natural History*, xxxv. 9.)

APOLLODORUS, a celebrated architect in the reigns of Trajan and Hadrian, was born at Damascus. The magnificent stone bridge built over the Danube, A.D. 104, by order of Trajan, was executed under his direction. The remains of this bridge still exist near the junction of the Aluta or Alt and the Danube. He is also said to have been the architect of the Forum Trajanum, in which the column of Trajan stands, and to have built a library, a music-hall (Odeum), baths, and aqueducts. It is said that Hadrian put him to death on some false and frivolous pretence. Apollodorus is the author of a work on besieging towns, printed in the collection of Thevenot.

APOLLO'NIUS, a celebrated sculptor of the island of Rhodes, who, along with his brother Tauriscus, executed a group in marble which represented Zethus and Amphion binding Dirce to the horns of a furious bull, to avenge their mother, Antiope, whom she had cruelly persecuted. This group, described by Pliny (xxxvi. 4), is supposed, with much probability, to be what is known to us under the name of the Toro Farnese, found during the reign of Paul III. in the ruins of the Baths of Caracalla. The lower half of the figure of Dirce, the two trunks, and a leg of Zethus and Amphion, were the only remnants of the ancient sculptures, but enough remained to prove that the art was then in its highest state of perfection. The group has been restored by a Milanese artist, Batista Bianchi. (Piranesi, *Statue*; Maffei; Winkelmann, vi. i. p. 128; Müller, *Handbuch der Archæologie*, &c., p. 137.)

APOLLO'NIUS, a celebrated statuary, the son of Nestor of Athens, only known to us from his name being inscribed on the fragments of a statue which was discovered in the 15th century, and is now called the Torso Belvedere. It has neither head, arms, nor legs, and yet it is considered one of the master-pieces of antiquity. Michel Angelo made it his grand object of study; and so enthusiastic was he in his admiration of it, that even after his sight failed him, he used to be led to it that he might enjoy the pleasure of feeling it with his hands. All agree as to its being one of the finest specimens of ancient sculpture, but there is some doubt as to the period when Apollonius lived. (Meyer, *History of Greek Sculpture*, p. 296; Visconti, *Pio Clementino*, t. i. plate x.; Winkelmann, x. iii. s. 15; Thiersch, *Kunst-Epochen*, p. 333.)

APOLLO'NIUS, the Sophist, supposed to have lived at Alexandria in the time of Augustus, is the author of a Lexicon of Homeric words. It was first published by Villoison at Paris, in 1773, in two vols. 4to, accompanied by a commentary and prolegomena. The work was reprinted at Leyden in 1788, 8vo, with notes by Tollius, but with the omission of Villoison's Latin translation and prolegomena.

APOLLO'NIUS, BERGÆUS, after Archimedes the most original and profound of all the Greek geometers, was born at Perga in Pamphylia, while Ptolemaeus III., commonly called Euergetes, was king of Egypt. Ptolemaeus began his reign B.C. 247. Apollonius was in the zenith of his fame about the end of the reign of Ptolemaeus (IV.)

Philopator, who died B.C. 205. Apollonius and Hannibal were nearly contemporary both as to birth and achievements in their different lines. Archimedes died B.C. 212, at which time Apollonius was living; it is not known when the latter died.

The life of Apollonius was passed at Alexandria, in the school of the successors of Euclid, under whom he studied. With respect to a charge of plagiarism from Archimedes, brought against Apollonius, it is said by Eutocius, his commentator (about A.D. 540), who cites the charge, that it was well known that neither Archimedes nor Apollonius pretended to be the first investigators of the conic sections.

Of the most interesting part of an eminent man,—his opinions on disputed subjects,—we know but little in the case of Apollonius. Gassendi, in his life of Copernicus, mentions an opinion attributed by the latter to the Grecian geometer, and which is said to have been also that of Philolaus, that the sun and moon only moved round the earth, but all the other planets round the sun. We cannot find any other authority for attributing this opinion to Apollonius, except Weidler in his 'Historia Astronomie,' who however cites Gassendi as his authority. Vieta conjectures with great probability that there is a confusion of words. That this system was called 'Apollonian' from its reference to the sun (Apollo.) But Apollonius certainly paid attention, at least, to the then received system, since known by the name of the Ptolemaic, for Ptolemy has preserved some theorems of his on the method of finding the stationary points of the planets, supposed to move in epicycles. Proclus, in his commentary on Euclid, mentions that Apollonius attempted to prove the axioms, and cites his investigation of the theorem, that things which are equal to the same are equal to one another, in which, as may be supposed, propositions are assumed not more obvious than the theorem itself. Vitruvius cites Apollonius as the inventor of a species of clock which he terms 'phætra.'

The great work of Apollonius which now remains is seven books of his treatise on conic sections, of which we shall presently speak. But besides this, he is known to have written treatises, according to Pappus, 'De Rationis Sectione,' 'De Spatii Sectione,' 'De Sectione determinatâ,' 'De Tactionibus,' 'De Inclinationibus,' 'De Planis Locis,' and according to Proclus, 'De Cochleâ,' and 'De perturbatis Rationibus.' Of these, the first only is known to us, having been found in Arabic, and published in Latin by Halley in 1708, with an attempt to restore the second. But Mersenne, cited by Vossius, says he read, in an Arabian author, Aben Eddin, an assertion that all the works of Apollonius, more in number than those mentioned by Pappus, were in Arabic at the beginning of the 11th century.

About the end of the 16th century, it was a very common exercise of mathematical ingenuity to endeavour to restore these and other lost treatises, that is, from the fullest notion which could be gathered, to guess at the propositions which they might have contained. Such attempts gave rise to the 'Apollonius Gallus' of Vieta, the 'Apollonius Batavus' of Snellius, and other works of Maurolico, Ghetaldi, Adrianus Romanus, Fermat, Schooten, Anderson, Halley, R. Simson, and others.

The conic sections of Apollonius are in seven books, the first four of which are extant in Greek, with the commentary of Eutocius of Ascalon, above-mentioned. The next three were supposed to be lost, till the middle of the 17th century, when James Golius, a celebrated oriental professor of Leyden, returned from the East, with the whole seven books in Arabic. Some delay took place in their translation and publication, during which, in 1658, Borelli accidentally discovered an Arabic manuscript in the Medici library at Florence, of the same seven books. It does not a little serve to illustrate the use made of public libraries, that while one author after another had for years expressed regret at the loss of the last four books, three of them should be lying in one of the most celebrated libraries in Europe, in the heart of a capital city, with an Italian title-page. Borelli, and Abraham Echellensis, an oriental professor at Rome, translated it from the Arabic, and published their version in 1661. At the time of the discovery, Viviani was engaged in restoring the lost books, and when it was made known, he prevailed on the Grand Duke of Tuscany to mark all his papers, and to order Borelli to keep the contents of the new books secret. The work of Viviani, well known as an acute and accomplished mathematician, was found (Montucla, l. 250) to fall short of that of Apollonius on several important points, though, as might be expected, the views of the Italian of the 17th century were more extensive in many cases than those of the Greek. The eighth book was still wanting, and a note to the version imported by Golius informed the reader that it had never been found, even by the Arabs, in the Greek. But when the Oxford press, at the commencement of the last century, was employed upon the magnificent versions of the Greek geometers, which are still the best in public use, Dr. Aldrich, observing that the preliminary Lemmas of Pappus to the seventh book were asserted to belong to the eighth, and also that the latter appeared, from the words of Apollonius himself in his introduction, to be a continuation of the former, proposed to Halley that he should endeavour with these lights to re-establish the missing book. Halley was then employed in completing the edition of the work, which the death of Dr. Gregory had interrupted, and he acceded to the suggestion. The whole appeared at Oxford, in 1710, with the commentary

of Eutocius, the Lemmas of Pappus, and in addition, the work of Serenus on the same subject. This is the only edition of the Greek text.

The contents of the work are thus briefly described by Apollonius, of whose words we give a free translation. "The first four books are elementary: the first contains the generation of the three sections of the cone, and of the sections which are styled opposite, and their principal distinctive properties, which have been treated by us more fully and generally than by any of our predecessors. The second book contains the properties of the diameters and axes, as well as of the asymptotes, and other matters of general utility: you will hence see what I have called diameters, and what axes. The third book contains many and wonderful theorems, which are useful in the composition of solid loci, of which the majority are both new and beautiful. The fourth book shows in what manner sections of a cone, or of opposite cones, may cut one another, and the circumference of a circle, on the whole of which nothing has been delivered by those who went before us. The remaining four books treat of the higher part of the science: the fifth, on maxima and minima: the sixth, on equal and similar sections: the seventh, on dioristic theorems, or theorems useful in the solution of problems: and the eighth, on the problems thus solved."

Apollonius was the first who used the words ellipse and hyperbola, of which Archimedes does not take notice, though he uses the term parabola. He also, as we see above, first distinguishes the diameters of the section from the axes. It was, moreover, in his time, and perhaps first by himself, that the general sections of the cone were considered; for previously it had been usual to treat only of those, the planes of which were at right angles to one of the sides of the cone; so that an ellipse could only come from an acute-angled cone, and so on.

The most remarkable book in the whole work is the fifth, which treats of maxima and minima. With a little licence it might be called a complete treatise on the curvature of the three sections, for in considering the number of maxima and minima which can be drawn to the section from any point in its plane, the space inside and outside of the evolute has different properties. There is only wanting the addition of a name for the curve which separates the spaces (which we now call the evolute). This book, and the quadrature of Archimedes, are the highest points of the Grecian geometry.

The work of Apollonius was lightly spoken of by Descartes, who is supposed to have seen the first four books only; but it was held in particular estimation by Newton, and Cardan places its author seventh among all the men who have ever lived: in his own age he was called the great geometer.

We now briefly mention some of the principal editions of the conics. The celebrated Hypatia, daughter of Theon, wrote a commentary upon them. We have already mentioned Pappus and Eutocius as commentators, Borelli and Halley as editors. Among the Arabs, it was first translated by Thebit-ben-Cora, under the Kalif Al-Maimun in the 9th century; by Abalpath in the 10th century; and two editions, of little celebrity, appeared in Persian in the 13th century. In Europe, it was first translated, but badly, by Memmius, a Venetian, in 1537; by Maccolyco about the same time, but we cannot learn that this edition was ever published; also by Commandine in 1566 (misprinted 1666, in Murhard), and by the Jesuit Claude Richard in 1655. Montucla is incorrect in saying that this edition was announced and never published. In 1679, Barrow published the first four books.

Apollonius appears to have improved the notation of arithmetic, if we may judge from the praise given to him by Eutocius, in his commentary upon the quadrature of Archimedes, for a work which he calls *Ἀριθμητικόν*. Pappus more explicitly states that the improvement consisted in a simplification of the method proposed by Archimedes for representing very large numbers, which brought the system nearer to that of the moderns. (Delambre, 'Hist. Ast. Anc.' ii. 9.) Eutocius also says, that Apollonius extended the quadrature of the circle given by Archimedes.

APOLLONIUS DYSCOLUS, or ALEXANDRINUS MINOR, a grammarian, who was born at Alexandria in the 2nd century of the Christian era. He was the son of Mnesitheus and Ariadne, and is said to have been so poor that he was unable to afford money sufficient even to purchase paper. It was probably this state of poverty which had an effect on his temper, and procured him the name of Dyscolus, or the morose. He was the author of many works; he was called by Priscian 'Princeps Grammaticorum,' and afforded to that grammarian many hints for his 'Latin Grammar.' Of his four remaining works the chief is a 'Treatise on Syntax,' in four books, the first edition of which is by Aldus, 1495, Venice. An improved edition was made by Sylburgius, with a Latin translation of Em. Portus, 1590; the last is by Bekker, Berlin, 1817. At the end of the 'Treatise on Greek Dialects,' by Maittaire, Hague, 1718, Lips. 1807, there are some extracts of the Grammar of Apollonius, which were procured by Vossius from a manuscript of the Royal Library of Paris.

APOLLONIUS RHODIUS, a Greek epic poet. It is not ascertained whether he was a native of Alexandria in Egypt, or of Naucratis, a small town on the Canopic branch of the Nile, but from his long residence in the island of Rhodes he obtained his surname. He was

the son of Silleus, and spent his early years at Alexandria under the direction of the poet Callimachus. He had afterwards a quarrel with his former teacher: it is said to have been respecting the 'Argonautica' of Apollonius, which was not sufficiently admired by Callimachus. In what way the disappointed poet took his revenge we are not told; but it produced a bitter retort from Callimachus. His poem entitled 'Ibis' was directed against Apollonius, and though no fragments of it remain, we can form some opinion of its character and leading features from the 'Ibis' of Ovid, which is said to be an imitation of this poem. Apollonius left Alexandria probably in consequence of this quarrel, and took up his residence at Rhodes, where he lived for many years, and was at last recalled, B.C. 194, to occupy the place of the learned Eratosthenes as keeper of the great library of the Ptolemies at Alexandria.

Of the works of Apollonius Rhodius, which do not appear to have been very numerous, the 'Argonautica,' in four books, is the only one that has come down to us. As regards the materials of the 'Argonautica,' Apollonius, like all the poets of that period, collected them by extensive reading. The legends they took for their subjects had ceased to live in the minds of the people, and had become the exclusive property of the learned, who gathered them from the early poets, logographers, historians, and geographers, and combined them into new forms. The Scholia on Apollonius seldom lose an opportunity of telling us from what source the particular statements are derived. The arrangement of the materials in the 'Argonautica' is of the simplest kind: there is no artificial contrivance for the purpose of making a plot; and at first sight it might even appear that the plan of the 'Argonautica' is simpler than that of the 'Odyssey.' The course of the narrative is seldom interrupted by episodes, and generally speaking they are not introduced except where they are essential, and they are scarcely ever mere ornaments. The interference of the gods in the events described is very rare, and occurs only incidentally. The interest of the whole poem therefore does not lie in its plot, but in the manner in which the whole subject and each part is treated, and in the peculiar interest which is attached to the story. But as this interest was no longer sufficiently fresh to secure popularity, Apollonius enlivened it with his descriptions of the tender passion of love, and of the emotions of the heart, which are rarely introduced in the earlier epics. The portions of the poem containing such descriptions are executed with great felicity, and the 'Argonautica' on the whole shows that the author was superior to most of his contemporary poets. But, notwithstanding these and other excellencies, the narrative is occasionally tedious; and notwithstanding all the variety of character and incident, the poem wants that freshness of conception and execution which in the best epic poem secures the interest and wins the sympathy of the reader. We cannot help feeling that it is the work of labour rather than of faith and inspiration: the poet proceeds throughout with the utmost caution. Even Quintilian and Longinus appear to have felt this, for Quintilian speaks of the mediocrity that pervades the whole poem; and Longinus speaks of his thoughtfulness, which indeed prevented him from rushing into errors and inconsistencies, but is at the same time one of the causes of his inferiority to the earlier epic poets. The style and language are imitations of Homer; but the language is cramped by the aim of the author to be brief and grammatically correct. Apollonius however is free from all studied obscurity and the learned pomp and ostentation of the poets of that period.

Many learned Greeks wrote commentaries on Apollonius: and the Latin poet Valerius Flaccus closely imitated him in his work entitled 'Argonautica.' Terentius Varro translated it into Latin: in still later times it was turned into Iambic verse by Marianus. The first edition of this work was published at Florence, 1496, and is of great value to book collectors. Editions were published at Leipzig in 1797 and 1828. It has been translated into English by Green, Fawkes (1797), and Preston (1803); into Italian by Flangini (Roma, 1791); into German by Bodmer (Zürich, 1779); and into French by Caussin (1797). (Schönemann, *Comment. de Geograph. Argon.*, Götting., 1788; Gerhard, *Lectiones Apollonianæ*, Lips., 1816; Weichert, *Über das Leben und das Gedicht des Apollonius von Rhodus*, Meissen, 8vo., 1821.)

APOLLONIUS of Tyana, a Pythagorean philosopher, who lived in the first century after Christ. He appears to have been a compound of the philosopher, the fanatic, and the impostor, respecting whom authentic accounts were sufficiently scanty to leave plenty of room for fiction to play in, while what was known of him was remarkable enough to give an air of credibility to the most extravagant fictions of a later and uncritical age. We have what professes to be an historical account of him in a circumstantial narrative of his life by Flavius Philostratus the elder. This work was undertaken at the desire of Julia Domna, the wife of the emperor Septimius Severus, who lent Philostratus an account of the travels and adventures of Apollonius, written by an Assyrian named Damis, who had accompanied him. His account seems to have been the groundwork of the narrative of Philostratus. His biographer has written down in his book many absurdities and impossibilities. On a rock of Mount Caucasus, Apollonius saw the chains of Prometheus. King Bardanes, his priests, and magi honoured him at Babylon. In Taxila, a town of India, he met with the king, Phraortes, a descendant of Porus. In India he saw also a woman consecrated to Venus, who was black from the head to the chest, and white from the chest to the feet. He joined a party who hunted dragons by

magic. The eyes and scales of these dragons shone like fire, and were talismans. He saw the animal 'martichoras' (mentioned four centuries before by Ctesias), with the head of a man and the body of a lion, fountains of golden water, men who dwelt below the ground, griffins, the phoenix, the precious stone pantarbas casting rays of fire, and attracting all other gems, which adhered to it like swarms of bees. So preposterous are most of these fictions, that some have even doubted the personal existence of Apollonius himself. That such a person however lived, and by his ascetic habits and pretended supernatural gifts attracted not merely the wonder but the adoration of the vulgar appears unquestionable. The assertion of Dion Cassius that he lived in the time of Domitian, and the religious reverence paid to him in many temples, are inconsistent with any other supposition. The following is a narrative of his career, as described by Philostratus:—

Apollonius was born, at the commencement of the Christian era, in Tyana, a town of Cappadocia. At the age of fourteen, his father, Apollonius, sent him to Tarsus to study grammar and rhetoric under Euthydemus, a Phœnician. Dissatisfied with the luxury and indolence of the citizens, Apollonius obtained his father's permission to retire to Ægæ (Ayas), a town near Tarsus, where he became acquainted with the doctrines of various philosophers, and observed the Pythagorean rules strictly, took up his abode in the temple of Æsculapius at Ægæ, famous for miraculous cures, abstained from animal food and wine, lived upon fruits and herbs, avoided in his dress every article made of animal substance, walked barefoot, and let his hair and beard grow. Apollonius recommended his moral and ascetic doctrines by example, and by an appeal to the heathen gods. He healed a young Assyrian afflicted by a disease which was a consequence of intemperance, by teaching him that the gods were willing to give health to all who were willing to receive this gift. Having finished his studies at Ægæ and other cities of Cilicia and Pamphylia, Apollonius travelled by land to India. At Nineveh he met with Damis, who became his interpreter and travelling companion.

Apollonius returned from India by sea, was much admired in the towns of Asia Minor, conversed at the grave of Achilles with the ghost of this hero, enchanted the demons, and uttered prophecies. The Greek priests at Athens, in the Peloponnesus, the oracles at Paphos, Pergamus, and Colophon, heaped their marks of honour upon Apollonius. He afterwards went to Crete, and finally arrived in the reign of Nero at Rome, where he and his followers being questioned by the magistrates concerning the object of their journey, overcame their mistrust by restoring to life the dead body of a noble lady, and predicting an eclipse of the sun. When Nero left Rome for Greece, he ordered all foreign philosophers to quit the city. Apollonius went to Spain, and stirred up a rebellion against Nero and the Romans. He then visited Africa, the south of Italy, and Sicily, where he heard of the death of Nero. Apollonius again visited Athens, and was initiated by the hierophant of Eleusis into the mysteries of that place. He next visited Egypt and Ethiopia, and sought for the sources of the Nile. In Egypt he joined Vespasian, who probably found it politic to gain a man whose sanctity and miracles had raised him to the rank of a deity; for during his lifetime, and still more after his death, Apollonius enjoyed this distinction. ('Life of Alexander Severus,' by Lampridius, cap. 29.) Afterwards he revisited Asia Minor and Rome, where he was accused of high treason against Domitian, and cast into prison. On his release he removed to Puteoli, where he met his followers, Damis and Demetrius. He again visited Sicily, Greece, and Asia Minor, performed miracles, and had many adventures, until he died, eighty, or ninety, or one hundred, or, as some accounts say, one hundred and seventeen years old, either at Ephesus, or at Liudus in the temple of Pallas.

A great deal of the celebrity of Apollonius has arisen from the circumstance that several attempts have been made to set him up as a rival to Our Saviour. Such an attempt was made by Hierocles of Nicomedia, in the time of Diocletian, a refutation of whose work by Eusebius, bishop of Casarea, we still possess. The attempt has been renewed by deistical writers of modern times: for example, Blount and Lord Herbert. Blount wrote a translation of the life of Apollonius by Philostratus, accompanied by a commentary. In consequence of the deistical tendency of the latter, the work was suppressed after the publication of the first two books. (Note I. in Bayle's 'Dict. Crit.,' art. 'Apollonius de Tyane.') The coincidence between many circumstances in the narrative of Philostratus and those recorded in the evangelical history, has led many to suppose that he wrote his account of Apollonius with a similar view. It contains however no sufficient traces of an intention on the part of the writer to institute any comparison at all between Apollonius and Christ. It is at all events clear that he did not write with any feeling of hostility towards Christianity. If he intended to draw any parallel at all, it was probably between Apollonius and Pythagoras. He seems to have borrowed from all sources any wonderful circumstances which promised to give interest to his narrative (as may be shown with regard to Ctesias, Agatharchides, and others), and amongst the rest he has taken several from the history of Jesus Christ recorded by the evangelists. The absurdities and incongruities of his story have been pointed out by several writers, as Bishop Lloyd (in a letter to Bentley), Bishop Parker, and Du Pin.

APPENDINI, FRANCESCO MARIA, born near Turin, in 1768,

studied at Rome, where he entered the order of the Scolopi, and was after a time sent to fill the chair of rhetoric at Ragusa, a town which then maintained a close connection with Italy. He became a great proficient in the Slavonian language, and published a grammar of the Illyric language, that is to say, of the Dalmatian dialect of the Slavonian. But his principal work concerns the history of his adopted country, Ragusa, and it gives a very interesting account of that now almost forgotten little state, which governed itself for centuries as a republic, and cultivated the arts and retained the manners of civilised Europe on a narrow nook of land on a barbarous coast, surrounded and yet respected by the Ottoman power. ('Notizie istorico-critiche sulle Antichità, Storia, e Letteratura dei Ragusci,' 2 vols., 4to, 1802-3.)

When Napoleon I. took military possession of Ragusa, and subverted that ancient republic, Appendini was retained as rector of the college of Ragusa. After the Austrians had superseded the French in 1814, Appendini was commissioned by the imperial government to establish a school for teachers at Zara, with the view of providing masters for the various schools of Dalmatia. Consequently he removed from Ragusa to Zara, where he died in 1837.

(Tipaldo, *Biografia degli Italiani Illustri del Secolo XVIII. e dei Contemporanei*.)

APPERLEY, CHARLES JAMES, a writer on sporting subjects of considerable reputation, better known by the pseudo-name of *Nimrod*, was the second son of Thomas Apperley, a Welsh country gentleman, and was born at his father's seat of Plasgronow, in Denbighshire, in the year 1777. At Rugby school he acquired some knowledge of the classical languages, and much more of the sports of the field. In 1801 he married the daughter of William Wynne, Esq., and in 1804 he took up his residence at Bilton Hall, once the country-seat of Addison, in Warwickshire. Here he devoted himself so entirely to the chase that for some years his only pursuit was that of a fox-hunter. He often rode thirty or forty miles to distant covers, and he contrived to defray the expenses of the sport by disposing of hunters, after he had ridden them for some time, to those of his friends whose knowledge of the horse was not so intimate as his, and who therefore could not trust their own judgment in the purchase of an untried animal. In 1821 he removed into Hampshire, and commenced farming on a large scale; and in the same year he began to write for the press. His contributions to the 'Sporting Magazine,' especially his Hunting Tours, attracted so much attention that the circulation of the work was doubled in two years; and Mr. Pittman, the proprietor of the magazine, not only remunerated him handsomely, but also paid the expenses of his tours, and kept for him a stud of hunters. On Mr. Pittman's death differences followed, which led to a suit by his representatives for money advanced, the result of which was that, to avoid a prison at home, Nimrod was compelled to take up his residence in France. In 1830 Mr. Apperley established himself at a château called St.-Pierre, near Calais, where he chiefly resided for the remainder of his life, supporting himself by his pen. He died in London on the 19th of May, 1843.

Nimrod's superiority consisted in his perfect knowledge of his subject, and in a certain air of good humour, which won upon the reader. His works are made up almost entirely of anecdote, and partake of a gossiping character. His knowledge of fox-hunting could not be disputed, for previous to his leaving England he had hunted with no less than eighty-two different packs, in every quarter of Great Britain.

Almost all Mr. Apperley's works were written for periodicals, but many afterwards appeared in a collected shape. 'The Chase, the Turf, and the Road,' may be classed as Nimrod's best productions. They were written for the 'Quarterly Review,' in 1827, and their appearance in so grave a periodical excited no small sensation. The liveliness with which they were written however carried them through triumphantly, and the result was a considerable addition to the number of Nimrod's admirers, as a consequence of his introduction to a new and wider circle of readers.

APPIANI, ANDREA, a fresco painter, was born at Milan in 1754. After visiting and studying in the principal cities of Italy, he chose Correggio for his model. From 1795 until 1813 he worked at Milan; but in the latter year he was compelled to desist from his labours by a stroke of apoplexy, a second attack of which, in 1817 or 1818, caused his death.

Appiani was Napoleon's principal painter in Italy, for which office he received an annual pension of 6000 francs. He was a knight of the Iron Crown, and a member of the Legion of Honour. He however died in poverty, having lost his pension in consequence of the Restoration in 1814.

His principal frescoes are in the church of Santa Maria Vergine, and in the royal palace of Milan; the latter have been engraved by Rosaspina. He was also an excellent painter in oils; there is a portrait of Napoleon I. by him, which has been engraved by Bartolozzi.

APPIANI, FRANCESCO, another distinguished fresco painter of the 13th century, was born at Ancona in 1702. He was employed by Benedict XIII. at Rome; but he lived chiefly at Perugia, where he continued to paint until his 90th year and his death, in 1792.

APPIANO, JACOPO the founder of an Italian family of the

middle ages, which rose to the rank of sovereign princes. Jacopo d'Appiano was, in the latter part of the 14th century, the confidential secretary and friend of Pietro Gambacorta, the then chief magistrate of Pisa, who appointed him chancellor of that republic. He conspired however against his benefactor, and had him killed, together with his sons, A.D. 1392. D'Appiano then assumed the title of Lord of Pisa, being supported in his usurpation by Gian Galeazzo Visconti, duke of Milan, who needed the assistance of Pisa against the Florentines. Jacopo d'Appiano died in 1398, and was succeeded by his son Gherardo, who sold Pisa to the Duke Visconti for 200,000 florins, reserving for himself the sovereignty of Piombino on the sea-coast and of the island of Elba opposite. He assumed the title of Prince of Piombino, which his descendants retained for two centuries after. When Cosmo I. became grand-duke of Tuscany, he coveted the possession of Piombino; but Jacopo V. d'Appiano, then prince of that state, placed himself under the protection of Charles V. as a feudatory of the empire. It afterwards came into subjection to the Spaniards, on the extinction of the family of Appiano. (Tronci, *Memorie Storiche di Pisa*; Botta, *Storia d'Italia*.)

APPIANUS, a native of Alexandria in Egypt, the author of an extensive history of the Roman empire in the Greek language. The time in which he lived may be fixed from several passages in his writings as extending from the time of Trajan (as he speaks of the vengeance of Trajan on the Jews, A.D. 116, 117, as occurring in his lifetime) to that of Antoninus Pius (A.D. 138-151). Appian practised as an advocate at Rome under more than one emperor; and he so far won the favour of the court that he was sent to his native country in the important office of procurator, or imperial treasurer. His history, instead of embracing the Roman empire as a whole, treats of the several provinces separately, taking them up in succession as they become connected with Roman history, and then giving a continuous account of their relations with Rome. But to make his work a complete whole, he found it necessary to give a preliminary view of Rome under the kings, and to devote a book to the wars of Hannibal, which, running over so many countries, would otherwise have been indelicately mutilated. The same motive led him to assign five books to the civil wars of Rome. This history is composed of twenty-two books, of which the sixth, seventh, eighth, the latter part of the ninth, the eleventh, twelfth, and those written on the civil wars, still exist, besides some fragments of the others. The work entitled 'Parthica,' which is usually published with his works as part of the eleventh book on Syria, consists merely of extracts from Plutarch's 'Lives of Crassus and Antony,' to which some impostor of the middle ages has prefixed a short prefatory introduction stolen from Appian's 'Syrian History.' Appian's long professional residence at Rome, as well as his Roman name, affords evidence that he had one advantage over Plutarch as an historian, in possessing a perfect knowledge of the Latin language; but his merits in other respects are not great. His views of history are in general very superficial; and as a geographer, his ignorance is startling, when compared with the means of information which his age and circumstances offered.

The best edition of Appian is that of Schweighæuser, Leipzig, 1785, 3 vols., 8vo. This edition contains a Latin translation, taken chiefly from that of Gelenius, and a large body of notes. An English translation of Appian's 'Ancient History,' &c., was printed by Rauf Newbery and Henrie Byniman, in 1579, 4to; and a translation by J. D. was published in Fynn, 1696.

APRAXIN, STEPAN THEODOROVICH, the son of a stolnik or seneschal, was born on the 30th of July (o.s.) 1702. In the seventeenth year of his age he entered the army. He served in the campaign of 1737 against the Turks, under field-marshal Count Münnich, and was present at the taking of Oczakow by storm. After the conclusion of the war, he was appointed commander of the forces in the government of Astrakhan; in 1741, he welcomed, in that capacity, the ambassadors of Nadir Shah of Persia, and in the following year he visited the court of Nadir, as the ambassador of Russia. In 1748 he took an active share, with the chancellor Bestuzhev, in occasioning the fall of Lestocq, the favourite of the Empress Elizabeth, and was president of the committee of inquiry into his alleged crimes. He advanced rapidly through the various stages of military rank to that of field-marshal in 1756; and in 1757 he was entrusted with the chief command of the Russian army intended to act against Frederick the Great. At this time he is described in the despatches of Mr. Williams, afterwards Sir Charles Hanbury Williams, the English ambassador at St. Petersburg, as "lazy, luxurious, and certainly not brave." Williams soon after opened a correspondence with the Grand Duchess Catharine, the wife of Peter, the heir to the reigning Empress Elizabeth, to bribe the field-marshal. Whatever means were employed to induce him to delay his march, were ineffectual, for Apraxin entered Prussia in May, 1757, at the head of a Russian army said to consist of 97,000 men. On the 5th of August he took Memel; on the 28th he passed the Pregel, drove back the Prussian field-marshal Lehwald, who was at the head of an army of 30,000 men, and encamped at Grossjägerndorf. Here the atrocities which from want of discipline his army committed against the peasantry drove Lehwald to hazard a battle. On the 30th of August, early in the morning, the Prussians in a body 20,000 strong attacked the Russian army which was three times that number, according to Prussian authorities; the Russians

state their own numbers at 50,000, and the number of the Prussians at 30,000. Success was at first with the Prussians, but they pursued it so warmly as to entangle themselves: a skilful movement of General Rumiantzov, who commanded the Russian reserve, decided the contest, which ended in the complete defeat of the Prussians, who lost twenty-nine pieces of cannon. There was now nothing to hinder the Russians from advancing to Königsberg, and even taking Berlin, but to the amazement of Europe, the army first remained immovable in its camp, then contented itself with a few insignificant incursions, and finally, on the 11th of September, withdrew to winter quarters in Courland, leaving nothing behind but a garrison of 10,000 men in Memel. The explanation of these events soon followed. At the time of the victory, the Empress Elizabeth was dangerously ill; her heir, the Grand Duke Peter, was well known to be an uncompromising admirer and supporter of Frederick the Great, and the chancellor Bestuzhev, anxious to pay his court to the rising sun, had sent secret orders to Apraxin to retire. The empress on her recovery, was indignant to find her anticipations of revenge on Frederick so unexpectedly disappointed. She banished Bestuzhev to a village, and ordered Apraxin to resign his command to Count Fermor, and repair to Narva to give an account of his proceedings. A commission of inquiry was nominated, and Apraxin, whose death occurred soon after, on the 26th of August (o.s.), 1758, is said to have died of apoplexy occasioned by the shock of their first questions. (Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

APRAXIN, THEDOR MATVAYEVICH, was one of the three sons of Matvay Vasilivich Apraxin, stolnik or seneschal at the court of the czar, whose daughter Maria Matvayevna was married to the Czar Theodor Alexeyevich, the eldest brother and predecessor of Peter the Great. The family of the Apraxins was descended from a Tartar prince of the Golden Horde, who in the year 1304 had been converted to Christianity and married the sister of the Russian prince of Riazan.

Theodor Matvayevich was born in the year 1671, and at the age of ten was appointed stolnik to the Czar Theodor, his brother-in-law, after whose death in 1682 he passed into the service of Peter the Great, whose inseparable companion and favourite he became. In 1692 he was appointed governor of Archangel, the only port in Russia which then carried on foreign commerce, and here he caused to be built a merchant vessel to the great delight of Peter, whom he accompanied on some sailing excursions on the White Sea. When Peter in 1697 left Russia to study foreign countries, Apraxin was appointed chief superintendent of ship-building at Vorenezh, and on the return of the czar, he took part in August, 1699, in the first manœuvres of the Russian fleet at Taganrog. In 1700 he was appointed governor of Azof, at the same time that he held many other important offices; and during the six years following, while the czar was carrying on his wars against the Swedes in the north, Apraxin held almost unlimited command of the south, and fully justified the confidence that his master reposed in him. During that time he added many new vessels to the Azof fleet, he rebuilt Azof, he built Taganrog with a haven for the reception of vessels of war, and a fortress towards the land-side, he provided the ship-building wharfs at Vorenezh with docks and sluices, and he acted in every respect as a worthy lieutenant of Peter the Great. In 1707, on the death of Count Alexeyevich, he was named in his place admiral and president of the Admiralty. In 1708, by his judicious measures, he saved the infant city of St. Petersburg from the sudden attack of the Swedish general Lübecker, a service for which Peter caused a medal to be struck in his honour. It was to him that in the following year Peter directed the news of the battle of Poltava. In 1710, after a hard siege, he captured in command of an army of 11,000 men, the important city of Wyborg, the capital of Carelia. In his subsequent operations on the coast of Finland, Apraxin had the honour of seeing Peter serve under him as vice-admiral. On the breaking out of the war between Russia and the Porte in 1711, he was recalled to the south. After the disastrous campaign which ended in the treaty of the Pruth, Apraxin was employed to destroy Taganrog and to give back Azof to the Turks, in pursuance of the conditions of that treaty. He had however secret instructions not to carry the latter provision into effect till the Turks had ejected Charles the Twelfth from their dominions, and he had thus the embarrassing task of contriving delays for a whole year in the face of the pressing remonstrances of the Turkish officers. On his return to the north in 1712, he was entrusted with the command of all the forces in the conquered Swedish provinces by land and sea, and in 1713, with a fleet of 200 vessels, he spread terror along the shores of Finland, taking Helsingfors and Borgo, and on the 6th of October (o.s.), defeating the Swedish fleet at the mouth of the river Pelkin. In the next year he gained another naval victory over the Swedes, at which the Czar Peter was present. Apraxin on his return to the capital, after a dreadful tempest in which many of his ships and men were lost, had the mortification, and unfortunately a deserved one, of being subjected to an examination on a charge of embezzlement. He was found guilty, and condemned to a fine, which was only a nominal punishment, as Peter withdrew none of his favour, and in 1716 presented him with the estates which had belonged to his sister, the Czaritza Maria, on the occasion of the czaritza's death.

In 1717, Apraxin rose to the dignity of president of the college of

the Admiralty, with the title of general, admiral, and senator, and in 1718 he was the second member of the commission of inquiry into the affair of the Czarevich Alexis, which condemned Alexis to death. His elder brother Peter, who had served in several wars against the Tartars and was governor of Kazan, was implicated in the affairs of Alexis, but after a strict investigation was pronounced innocent, released from prison, and restored to his employments. The trial of Alexis was succeeded by another demonstration against the "oppressors of the people," as Peter called the embezzlers, and Menshrikov and Apraxin, the two most conspicuous, were again condemned to fines, which they were well able to pay, while others were sent to Siberia, and some were put to death. Notwithstanding this second condemnation, Apraxin was appointed in 1719 governor-general of Esthonia. By his active measures as admiral, in 1720 and 1721, he greatly contributed to the triumph which Russia obtained at the conclusion of the peace of Nystad. In 1722 he accompanied Peter in his Persian war, and nearly lost his life by the dagger of a captive Lesgian at the siege of Derbend. In 1723 he returned to St. Petersburg, and took the command of the fleet, then consisting of 5 frigates and 24 ships of the line, in which Peter, who had raised the whole of this great force from nothing, now took his last excursion by sea.

After the death of Peter, Apraxin was present at the marriage of Anna Petrovna with the Duke of Holstein to give away the bride. His last marine expedition was in 1726, when he was ordered with the fleet to Revel, to protect that port from an apprehended attack by the English. In the February of the following year, Apraxin retired to Moscow, where on the 10th of November (o.s.), 1728, he died, in the fifty-seventh year of his age. He left his house at St. Petersburg to the reigning Emperor Peter the Second, the son of the prince whom he had condemned to death, and the rest of his property to his younger brother Andrey Matvayevich Apraxin. Theodor was never married and left no issue, his elder brother Peter left none but in the female line, and the present family of the Apraxins is descended from the youngest brother Andrey, the least known of the three. Though so great a favourite with Peter, Theodor Apraxin enjoyed, what is so rare in the case of favourites, an unbounded popularity among his contemporaries.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*; Halein, *Leben Peters des Grossen*, ii. 13, 136, 257, &c.)

A'PRIES, an Egyptian king, the son of Psammis (Herod., ii. 161), otherwise called Psammuthis: he was the eighth king of the twenty-sixth dynasty (Eusebius), or the seventh according to Africanus. His name is also written Ouaphres by the Greeks, and he appears in the Hebrew history under the name of Pharaoh Hophra (Jeremiah, xlv. 30). Apries succeeded his father B.C. 593, and reigned twenty-five years. Early in his reign (B.C. 586) Jerusalem was plundered by Nebuchadnezzar; after which a great number of the people of Judah took refuge in Egypt under the conduct of Johanan, who carried the prophet Jeremiah with him to Tahpanhes (Daphne), then the residence of the Egyptian king. Near the close of his reign he sent an army against the Greeks of Cyrene, which was defeated with great loss. This caused a revolt among the Egyptians, which ended in the dethronement and execution of Apries about B.C. 569 or 568. [AMASIS.] He was buried in the tombs near the great temple of Athenæa at Sais. (Herod. ii. 169.)

APULEIUS, LUCIUS, a Platonic philosopher. He lived in the 2nd century, and was born at Madaurus in Africa. He studied first at Carthage, then at Athens, and afterwards at Rome, where he acquired the Latin language without the aid of a master. He travelled extensively, and sought to obtain initiation in the various mysteries, as they were called, by which the peculiar tenets of many religious and philosophical sects were veiled. Having spent nearly his whole fortune on these journeys, he returned to Rome, and was admitted as a priest into the service of Osiris. He practised at Rome for some time as an advocate, and then returned to seek his fortune in his native country, Africa. Here he met with distinguished success; but he set himself more at ease by a prudent marriage than even by his professional gains. A widow, by name Pudentilla, neither young nor handsome, had wealth, and wanted a husband. She took a fancy to him; but the marriage involved him in a vexatious law-suit. The lady's relations set up a plea that he had attacked her heart and money with the weapons of sorcery; and they accused him of being a magician before Claudius Maximus, pro-consul of Africa. Apuleius made a spirited defence; and his 'Apology,' or 'Oratio de Magia,' still extant, is a curious and valuable specimen of the literature of the age. The 'Golden Ass,' otherwise called the 'Metamorphosis,' the best known work of Apuleius, is a running satire on the absurdities of magic, the crimes of the priesthood, the amorous intrigues of debauchees, and the systematic outrages of thieves and robbers. The episodes are the most valuable portions of the piece, especially that of Psyche. Many persons have taken all that is related in it for true history; St. Augustin himself had his doubts on this head, and did not feel satisfied that Apuleius had designed this book only as a romance. Apuleius was an unwearied student, and has touched many passages with a masterly hand. His works are enumerated in the dissertation 'De Vita et Scriptis Apuleii,' prefixed by Wower to his edition, and adopted into the Delphin. Besides his 'Golden Ass' and his 'Apology,' his work 'De Dogmate Platonis,' containing three treatises; his books, 'De Deo

Socrates, 'De Mundo,' which is a translation from Aristotle, and his 'Florida,' have survived. He took great pleasure in declaiming, and was heard with universal applause. The people of Carthage were so delighted with his eloquence that they perpetuated the remembrance of it by erecting his statue. The editions of his works are very numerous; that in most general use is the Delphin, in two volumes, quarto. The 'Golden Ass' has been frequently translated into Italian, Spanish, German, Flemish, and English. W. Adlington's English translation, first printed in 1566, was reprinted in 1571, 1582, 1596, 1639, and probably later also. The translation by Thomas Taylor, London, 1822, one volume 8vo., contains also the treatise on the 'God of Socrates,' and other treatises, with a life of Apuleius prefixed. The latest translation is by Sir George Head.

AQUIBA, or *Akibah-ben-Joseph*, called Barakiba by Epiphanius and Hieronymus, lived at the end of the 1st and at the beginning of the 2nd century, and was president of the academy of Lydda and Tabae, as disciple and successor of rabbi Gamaliel, and one of the most famous doctors of the Mishnah. He joined the pseudo-Messias, Bar Cocheba (*Coziba*), who raised disturbances in Judaea. The Emperor Hadrian, in whose time the insurrection took place, after taking Bethars, put many Jews to death, and ordered Akibah to be killed by iron combs, with which his skin was taken off. Akibah was buried in Tiberias, where his tomb was annually visited by his admirers between Easter and Pentecost. The book *Jezirah*, which some ascribe to Akibah, is the chief book of cabalistic doctrines. The last two editions of this famous work are by Rittangel, with a Latin translation and commentary, Amsterdam, 1642-44; and by Friderich von Meyer at Frankfurt-on-the-Maine, with a German translation, 1832, 4to.

AQUILA was, according to Epiphanius ('De Ponderibus et Mensuris,' cap. 15), a relative of the emperor Hadrian, and converted from idolatry to Christianity, but afterwards excommunicated on account of his idolatrous astrology. He embraced Judaism, was circumcised, and translated the Old Testament literally into Greek (*Iren.* iii. 24; *Euseb.* 'Demonst. Evang.' vii. 1; Hieronymus, 'Ep. ad Panmach'); and consequently the Jews preferred his translation to the Septuagint. It appears also from *Irenæus*, iii. 24, that the Ebionites used the translation of Aquila in order to support their Judaizing tenets. The remains of this translation have been edited by Montfaucon, Martianay, and others, in the 'Hexapla' of Origen.

AQUILA, JULIUS, a Roman jurist, whose period is uncertain. He is one of the jurists who were used for the compilation of the 'Digest,' but the 'Digest' contains only two excerpts from him, both of which belong to his 'Book of Answers'—'Liber Responsorum' ('Dig.' 26, tit. 7, s. 34; tit. 10, s. 12). He is called Gallus Aquila in the 'Florentine Index.'

AQUINAS, THOMAS, that is, Thomas of Aquino, in Naples. This famous theologian was of distinguished birth, being a younger son of Landulf, count of Aquino, and lord of Loretto and Belcastro, who was nephew of the Emperor Frederic I., the celebrated Barbarossa. He was born in 1227, some authorities state in the town of Aquino, others in the castle of Rocca Secca, the seat of his family, near the monastery of Monte Casino. Having been sent at five years of age to the neighbouring monastery to receive the rudiments of his education, he remained there till he was nearly thirteen, when he proceeded to the university of Naples, which had been founded in 1230 by his relation, the Emperor Frederic II., grandson of Barbarossa, and had already acquired great reputation. From his earliest years he had shown a love of study, and the circumstances of the times were in various respects such as naturally tended to encourage the preference which he was thus led to form for a literary, or at least a meditative, life. About 1217 the order of preaching friars, called after his name, had been founded by St. Dominic; and of this body, already in the enjoyment of vast popularity, the young nobleman proposed to become a member. On his earnest entreaties the superior of their convent at Naples was prevailed upon to admit him as a novice. He was at this time in his fifteenth year, and the important step upon which he had ventured was taken without the knowledge of his parents, who made extraordinary efforts to induce him to relinquish his object, but without success. In 1243 he made profession, and went to Cologne to attend the theological and philosophical lectures delivered by Albertus Magnus in the Dominican convent there. Here, from his silence, he is said to have been named by his fellow-students the Dumb Ox. His teacher however detected the genius that was wrapped up under this taciturnity, and remarked that if that ox should once begin to bellow the world would be filled with the noise. After remaining a few years at Cologne he accompanied Albert on a visit to Paris, from which they returned together in 1248. Aquinas was then ordained a priest. He returned to Paris in 1253. Soon after this he published the first work by which he distinguished himself as a writer, a treatise in defence of the monastic life, in answer to a doctor of the Sorbonne, who had attacked the privileges of the new mendicant orders. In 1255 Aquinas received from the university of Paris his degree of doctor in theology, and he afterwards spent several years in that city, lecturing publicly with immense applause. In 1272 however he returned to Italy, and for two years taught theology at Naples. Pope Gregory X. having then requested his presence at the general council which had been summoned to meet at Lyon, with the object of affecting a union between the eastern and western churches, he prepared to set out for

that city; but first paid a visit to his niece, Frances of Aquino, the wife of the Count Annibal de Ceccano. Having arrived at their residence, the castle of Magenza, he was there suddenly attacked by fever, on which he desired to be removed to the neighbouring Cistercian monastery of Fossi-Novî, in the diocese of Terracino; and here he expired on the 7th of March, 1274, in the forty-eighth year of his age.

The honours paid to Thomas Aquinas, both during his life and after his death, comprise nearly all the highest distinctions by which men have ever testified their admiration of intellectual greatness. Popes, kings, emperors, learned bodies, and great cities, contended for his presence during his life; and as soon as he had ceased to live, the order to which he belonged, the monks of the abbey in which he died, and the university of Paris, of which he had been an alumnus and a graduate, disputed the right to the possession of his body. It was not till nearly a century afterwards that this latter controversy was terminated by the removal of his remains, on the 23rd of January, 1369, to the Dominican convent of Toulouse, where a magnificent tomb erected over them still remains. Before this he had been canonised by Pope John XXII. by a bull dated the 18th of July, 1323. Pope Pius V. also declared him a doctor of the church in 1567.

The piety and moral virtues of St. Thomas Aquinas have received the warmest commendations from his contemporaries. His religious sincerity and fervour appear to have been accompanied by unaffected humility, and also by a mildness of temper that has not always been the grace of eminent theologians. The popularity of his writings was formerly so great, that there have been at least five or six editions of the complete collection. The best edition is considered to be that printed at Rome in 1570 in seventeen volumes, folio. Various of his treatises have also been repeatedly printed separately. Of the whole the most famous is his 'Summa Theologicæ,' which is still a favourite authority in the Catholic Church. A good many of the works that have been attributed to Aquinas are now admitted to be spurious, and doubts have even been entertained as to whether the 'Summa Theologicæ' be really his. Of the theological opinions which he maintained, the most memorable is his assertion of the supreme and irresistible efficacy of divine grace. This doctrine was afterwards opposed by Duns Scotus; and it formed for ages a matter of violent controversy between the Thomists and the Scotists, as the followers of the two doctors called themselves. His talents too appear to have been as various as they were powerful. He wrote in verse as well as in prose, and some of the Latin hymns still used in the service of the Romish Church are of his composition. He seems also to have been celebrated for his ready and pointed repartees. One which has been preserved is his reply to Pope Innocent IV. when that pontiff, on some money being brought in one day when they were together, remarked, "You see that the age of the Church is past when she could say, 'Silver or gold have I none.'" "Yes, holy father," answered Aquinas, "and the day is also past when she could say to the paralytic, 'Take up thy bed and walk.'" There are other stories of the absence of mind which he sometimes showed in company when absorbed in some of his profound speculations. One day, while dining with Louis IX., king of France (St. Louis), he suddenly, after a long silence, struck the table with violence, and called out, "A decisive argument! the Manicheans could never answer it!" Reminded of where he was by the prior of the Dominicans, who was also present, he asked pardon of the king; when his majesty expressed himself only anxious to get hold of the unanswerable argument against the Manicheans, and, calling in a secretary, had it taken down immediately. Rabelais alludes to another anecdote of this kind. The titles of Aquinas, in the list of the scholastic doctors, are—the Angelic Doctor, and the Angel of the Schools.

ARAGO, FRANÇOIS JEAN DOMINIQUE, was born in the commune of Estagel, near Perpignan, province of Roussillon (now the department of the Eastern Pyrenees), on the 26th of February, 1786. His father, a licentiate in law, supported a numerous family on the income derived from a small landed property. François, the son, acquired the rudiments of reading, writing, and vocal music at the primary school of his native place, and in private lessons at home. He became an eager reader, and at an early age conceived a taste for a military life, which was nourished by the continual passing of troops on the march to or from the frontiers of Spain. When but seven years old he attacked with a lance the leader of a few Spanish troopers who had ridden by mistake into the village after a battle, and was only saved from a sabre-stroke by the arrival of the neighbours armed with hay-forks. His father having been appointed Treasurer of the Mint in Perpignan, the family removed to that town, where the boy entered as out-door pupil at the municipal college, and pursuing his literary studies, made himself acquainted with the classic authors of his native country. But walking one day on the ramparts, a little incident occurred that confirmed his military inclinations. Seeing a youthful officer directing the repairs of the walls, and surprised at one so young wearing an epaulette, he inquired by what means it had been won, and was answered—By study at the Polytechnic School, which was open to those who had passed a preliminary examination. From that time Arago, then in his twelfth year, betook himself to the study of mathematics and geometry, not in elementary manuals, but in the original works of the best authors, and mastered their contents with characteristic energy. He soon outstripped the abbé who taught mathematics in the school; and assisted by the kind advice of a neighbouring

proprietor, who was a mathematician, he familiarised himself with the writings of Legendre, Lacroix, and Garnier. His real master, to quote a passage from his autobiography, "was a cover of Garnier's 'Treatise of Algebra.' This cover consisted of a printed sheet, on the outside of which blue paper was pasted. The reading of the uncovered side inspired me with a desire to know what the blue paper concealed. I damped it, and removing it with care, read underneath this advice given by D'Alembert to a young man who was telling him of the difficulties he met with in his studies: 'Keep on, sir, keep on, and conviction will come to you;' which was for me a ray of light. Instead of trying obstinately to comprehend at first sight the propositions that came before me, I kept on, and was astonished the next day at understanding perfectly that which, the evening before, had appeared to me wrapped in thick clouds."

In eighteen months Arago was ready for his examination, but the examiner having been detained by illness, a delay occurred, during which his friends sought to divert him from the pursuit he had chosen. He kept on, however, and studied the works of Euler and Laplace, and took lessons in fencing and dancing, having heard that these accomplishments were essential to an officer. In the summer of 1803 he was examined by Monge at the university of Toulouse, and passed with high commendations first of his class. He repaired forthwith to Paris, and entered the Polytechnic School, where, after a few months, he came off as triumphantly from an examination by Legendre as from that at Toulouse. In either case, his readiness and familiarity with the subjects required, overcame the prejudices of the examiners.

He was studying for the artillery branch of the service when, in 1804, the post of Secretary to the Observatory at Paris, then under Bouvard's direction, having fallen vacant, he was persuaded, but with great reluctance on his part, to undertake the duties. The temporary appointment, as he thought it, effected an entire change in his pursuits, for he remained attached to the Observatory for the rest of his life. At the instance of Laplace he worked with Biot, who was assistant-observer, at experimental researches for determining the refractive power of different gases—an inquiry commenced by Borda—the results of which formed the subject of a paper presented to the Academy of Sciences, and printed in their 'Memoirs' for 1806. In the same year the two young men were appointed by the government to extend and complete the measurement of the arc of the meridian, which, carried from Dunkirk to Barcelona by Delambre and Méchain, had been interrupted by the death of the latter. It was now to be extended from Barcelona to the Balearic Isles, and from thence to Formentera, by an immense triangle, the measurement of which had been thought impossible. The fatigues of this survey in a wild mountain region, exposed to heat, cold, and storm, were excessive. For six months Arago was stationed on an elevated peak in the Desierto de las Palmas, watching for the light set up on Ivica, which, owing to a defect in fixing the mirror, was seldom visible. A space of about seventy-five square yards was all the ground he had for exercise; and two Carthusian monks, who, forgetting their vow of silence, used to ascend the mountain to converse with him in the evenings, were his only society. The work involved frequent journeys, in which, apart from the fierce heats, much risk was incurred owing to the hostile feeling between France and Spain, and from parties of brigands. On two occasions a notorious robber-chief intruded himself as a nightly guest on the zealous surveyor.

The geodesical union from the mainland to Ivica, and thence to Formentera—an arc of parallel of one degree and a half in one triangle—was successfully accomplished. Biot had returned to Paris when, in the summer of 1805, the fire-signals on Mount Galazo in Majorca were suspected to be advices to the French army then invading the Peninsula, and Arago was denounced as a spy. To escape the threatened violence, he obtained permission from the governor to imprison himself in the citadel of Belver. Having a safety-pass from the English Admiralty, he escaped in a half-decked boat to Algiers in July. In August he sailed for France in an Algerine frigate, and was in sight of the coast of Provence when the vessel was captured by a Spanish privateer, and carried into Rosas. Here he was again exposed to great danger: the authorities, bitterly suspicious, subjected him to repeated examinations, and consigned him to the hulks at Palamos, where his sufferings from want of food were, as he tells us, aggravated by the sight of the Pyrenees, and the thought that his mother might then be looking up at their peaks, anxious for her son.

Being liberated on demand of the dey, he sailed once more for France on September 23, and was off the port of Marseille when the ship, caught by the mistral, was drifted all across the Mediterranean to the coast of Africa. Arago landed at Bougie, and having travelled to Algiers, found a new dey in power, who would have sent him to the galleys but for consular interference. Here he lingered, waiting for an opportunity to return home, until June, 1809, when he again sailed, and though chased by an English cruiser, landed at Marseille on the 2nd of July, with his manuscripts and instruments. For eleven months had he been tossed about amid hardships and privations, of all of which he has left a narrative, interesting as a romance, in his 'L'Histoire de ma Jeunesse.'

While yet in the lazaretto, he received a letter from Humboldt—the commencement of a lasting friendship with the illustrious Prussian.

Tenderly attached to his mother, his first visit was to her at Perpignan. She had mourned him as dead.

Arago hastened to Paris to communicate his observations to the Academy and the Bureau des Longitudes. Though but twenty-three years of age, he had already gained a reputation by his labours and misfortunes; and the death of Lalande having left a vacancy in the Academy, he was elected a member by 47 out of 50 votes on the 17th of September, and had the honour of the usual presentation to the emperor. Thereafter Arago's influence was felt in the learned body; and his opposition to unworthy candidates brought him at times into collision with some of the most eminent of his colleagues. Before the close of 1809 he was appointed assistant-astronomer to the Observatory, and to succeed Monge in the chair of analytical mathematics at the Polytechnic School.

In 1811, taking up the researches of Malus, he read a paper to the Academy in which knowledge of the laws of light was greatly extended, and the changes described that take place in polarised rays on passing through different kinds of crystalline plates. The phenomena of colour, of intensity, of rotation, and of reflection were examined, and in a way that laid the foundation of that branch of physical optics known as 'chromatic polarisation;' and the interesting fact was first announced, that "while the light from a clouded sky undergoes no modification, that reflected from the atmosphere when the sky is unclouded is polarised, the intensity of the polarisation varying with the hour of the day and the position of the point with respect to the sun."

In 1812, authorised by the Bureau des Longitudes, Arago commenced that course of lectures on astronomy and kindred subjects which he continued up to 1845 with the most brilliant success. The high and the low thronged to hear him; the learned to catch his animated manner and lucid style—the many to be charmed. As the present emperor said, when a captive at Ham, Arago "possessed in a high degree those two faculties so difficult to meet with in the same man—that of being the grand-priest of science, and of being able to initiate the vulgar into its mysteries." The effect was heightened by the tall commanding form of the lecturer, his full sonorous voice, his striking features, and dark piercing eyes, shaded by thick bushy brows.

Conjointly with Gay-Lussac, Arago established the 'Annales de Chimie et de Physique' in 1816—a serial still published, and much valued by scientific men. In the same year he announced what has been received as a crucial experiment, demonstrating the truth of the undulatory theory of light over the rival theory of emission. Young had shown in his experiments that the interposition of an opaque screen in the path of a ray under certain circumstances, prevents the formation of fringes. Arago found that the ray was only retarded, and that by a modification of the apparatus the fringes were still discernible.

In 1816, also, Arago for the first time visited England, where he made the acquaintance of Young and other eminent men of science. With a Frenchman's feeling, he had a painful dislike to hear any allusion to the battle of Waterloo; and while in London he positively refused an invitation to see Waterloo Bridge. His entertainers adopted the stratagem of proposing an excursion on the Thames, which, being accepted, the party descended the river admiring the prospect, and presently coming to the imposing structure of granite then stretching fresh and new from side to side, Arago was asked for his opinion of it. He perceived the trick, and replied—"Your bridge has at least an arch too many; and that one, to be in its place, should be transported to Berlin."

Another task commenced by Arago in 1818, again in conjunction with Biot, was the connection of the French arc with the English arc by a system of signals and measurements from one side of the channel to the other. The results, together with those of the Spanish triangulation, were published by order of the Bureau des Longitudes, in a volume entitled 'Recueil d'Observations Géodésiques, Astronomiques, et Physiques.' In 1819, jointly with Fresnel, Arago published a series of experiments on the action exercised by polarised rays on each other, singularly remarkable for the ingenuity of the methods employed. Space fails here to give the details; but it was by means of these experiments that Fresnel was enabled to give a complete explanation of the production of colours in crystalline plates, which had been referred by Young to the interference of transmitted rays. The co-operation of the two savants produced happy results; for Arago, though rich in inventive faculty, lacked the perseverance which works a thought out to its ultimate consequences. "We complete one another," he used to say; "I know how to point out the difficulty, and Fresnel how to conquer it."

In 1820 Arago took up a new line of inquiry. Having witnessed a demonstration of Oersted's discovery at Geneva, he repeated it before the Academy, and with further results. The Danish philosopher had shown that a voltaic current passing along a wire would deflect a magnetic needle: Arago found that non-magnetic substances were equally affected; that bars of iron and steel became temporary magnets, and lost their magnetism with the cessation of the current. He proved moreover the best magnet to be a steel bar inclosed by a helix of copper-wire, to which we owe the discovery of the electro-magnet, and all that has since been accomplished thereby. Four years later other facts were published. Arago showed that metals not magnetic

exert a powerful influence on the magnetic needle, particularly when in movement. Such metals appeared to become magnetic by mechanical motion—a phenomenon which has since been referred by Faraday to general laws of magnetic induction.

In 1829 Arago was chosen a member of the Bureau des Longitudes, and from 1824 till his death the 'Annuaire,' published by the board, contained a notice on some scientific subject from his pen as delightful as instructive. "They will always be reperused," says M. Combes, president of the academy, "with the same pleasure by men of science and by the ordinary reader. In them we find an admirable clearness, with an erudition as correct as it is extensive, and joined thereto the most rigorous accuracy in the statement of the phenomena, and the consequences which result from them." Arago won the position and honour he most prized in 1830, when on the death of Fourier he was elected Perpetual Secretary of the Academy. And now the duty devolved upon him of writing those 'eulogies' of deceased members which are among the most interesting of his literary productions—graceful in style, and abundant in anecdote and illustration. They appeared to be written with a fluent pen; but he was a slow composer, and only acquired his felicities of expression by real and repeated hard work of mind and hand. In the same year he was appointed Director of the Observatory.

In 1834 Arago visited England a second time, and attended the meeting of the British Association at Edinburgh. He continued his scientific researches, among which are—the discovery of a neutral point in the polarisation of the atmosphere—determination of the synchronous perturbations of the magnetic needle at places wide apart, by observations carried on simultaneously with Kupffer at Kasan—and the suggestion of a decisive proof of the truth of the undulatory theory, which has since been demonstrated by Foucault—besides other points of photometry and astronomy.

The later years of Arago's life were passed amid much bodily suffering, when, with failing sight and afflicted with diabetes, he set himself to finish his incomplete papers. In the summer of 1853 he went, attended by his niece, to his native place, seeking relief in change of air; but the hope was disappointed: he returned to Paris and died on the 2nd of October, aged 67. He was buried in the cemetery of Père-la-Chaise, followed by a concourse of 3000 persons to the grave, where Flourens pronounced the funeral oration.

Arago was elected a foreign member of the Royal Society in 1818. In 1825 their Copley medal was awarded to him for his "discovery of the magnetic properties of substances not containing iron;" and their Rumford medal in 1850, for his "experimental investigations of polarised light." The Royal Astronomical Society elected him one of their associates in 1822; he was also a member of some of the leading scientific societies on the continent. Arago was once married: his wife died in 1829, leaving two sons, who still survive. He had been accused of hoarding up wealth, but he left no other fortune to his relatives than a name and reputation of which they may be justly proud. His entire works are easily accessible, as they have been collected and published in a series of octavo volumes in French and English. It is said that he has left a narrative of his later years, not less interesting than that to which reference has been made above, for publication when the fitting time shall arrive.

National vanity and an impassioned nature at times involved Arago in bitter controversies with other savants, in which he too often lost sight of truth and justice. It is certain also that he was occasionally tempted to sacrifice accuracy to effect. In politics he was an ardent republican, to which he owed his election to the Chamber of Deputies after the 'Three Days' of July, 1830. By his eloquent advocacy the observatory at Paris was placed on its proper footing among the observatories of Europe, and the works of Laplace and Fermat were published at the national expense. His voice was always raised in favour of science. To him Melloni, the Italian philosopher, owed his return to Naples from a wearisome exile. In 1840 he became a member of the Council-General of the Seine; and in 1848 he was chosen into the Provisional Government, in which he discharged the functions of minister of war and marine. In bitterness of spirit he despaired of the republic on witnessing the popular caprice. He refused to take the oath of allegiance after the coup-d'état of 1852, and justified his refusal in a memorable letter to the government, which elicited a concession alike gratifying to his conscience as a politician and his dignity as a philosopher. "A special exception," so wrote the minister authorised by the Prince-President, "would be made in favour of a philosopher whose labours had rendered France illustrious, and whose existence the government would be loath to sadden."

ARAM, EUGENE, was born in 1704, at Ramsgill, in Yorkshire. He spent a very short time at school, but he early discovered a great thirst for learning, which he endeavoured to gratify even while acting as assistant to his father, a gardener. His attention was first directed to the mathematics, but was soon drawn away to poetry, history, and antiquities. On marrying, he settled as a schoolmaster in his native district of Netherdale; there he taught himself Latin and Greek, committing to memory the grammars which he used, and when he commenced to construe, making it a rule never to pass a word or sentence without thoroughly mastering its meaning, though his progress was so slow, that five lines often occupied him for the whole day. Thus he read through the Greek Testament, and the principal poets and histo-

rians. In 1734 he removed his school to Knaresborough, where he remained till 1745. In that year one Daniel Clark, a shoemaker, taking advantage of the credit he enjoyed in consequence of his marriage with a woman possessed of a small fortune, obtained from his fellow-townsmen a quantity of valuable goods, and then suddenly disappeared. Aram being known as an intimate friend, was suspected of having aided him, and, his garden being searched, part of the property was found concealed. He was apprehended, and although discharged for want of evidence, he thought proper to quit Knaresborough, leaving his wife behind him. Aram proceeded to London, and thence to various parts of England, earning his bread as a school-usher, and all the while prosecuting his laborious studies. He obtained a good knowledge of heraldry and botany, and of the Chaldee, Arabic, Welsh, and Irish languages. His researches in etymology led him to conceive the idea of compiling a 'Comparative Lexicon of the English, Latin, Greek, Hebrew, and Celtic Languages;' for which he made extensive collections, having compared above 3000 words, and detected a close similarity between them. In the midst of his studies, and when engaged as usher in an academy at Lynn, in Norfolk, he was suddenly arrested on the charge of murder.

A skeleton having been dug up in February, 1759, near Knaresborough, was suspected to be that of Daniel Clark, and Aram's wife having often darkly intimated that her husband and a man named Houseman were privy to the mystery of Clark's disappearance, Houseman was apprehended. On being taken before the coroner, he was desired to declare his innocence while holding a bone of the supposed murdered man. He took up one accordingly, and exclaimed, "This is no more Dan Clark's bone than it is mine!" in so peculiar a manner, that he was at once suspected of knowing at least where Clark's bones were. On being pressed, he acknowledged to have been present at the murder of Clark by Aram and a man named Terry, and affirmed that the body had been buried in a particular part of St. Robert's Cave, a well-known spot near Knaresborough. On digging there a skeleton was discovered in the exact place indicated. Aram being apprehended, was tried at York, August 3rd, 1759, Houseman being the principal witness against him. Aram called no witnesses, but delivered an elaborate defence, not referring so much to the case in hand, as to the general fallibility of circumstantial evidence, especially that relating to the discovery of human bones, of which he brought together a great number of instances. He was notwithstanding found guilty, and ordered for execution on the Monday following, August 6th. After condemnation he acknowledged his guilt to two clergymen who attended him, but intimated, as all believed, that Houseman's share in the murder was larger than he acknowledged. His motive he stated to have been the discovery of a guilty commerce between Clark and his own wife. On the night before his execution, Aram attempted to commit suicide, by opening two veins in his arm, but he was discovered before he had bled to death, and his sentence was carried into effect. Before the attempt he had written a defence of suicide. He left three sons and three daughters.

The defence on his trial proves Aram to have been possessed of considerable literary attainments. The style in which it is written, though deformed by the stiffness of the period, is exceedingly good; and a sketch of his life, which, at the request of some friends, he composed in the interval between condemnation and execution, is distinguished by the same excellence. The 'Comparative Lexicon' has not been preserved, but passages from the preface, which are extant, show that part at least to have been both well considered and well written. His poetry, from the few specimens known, does not appear to have had much merit. The interest attached to the history of Aram has been revived and increased in our own day by Thomas Hood's powerful ballad of 'The Dream of Eugene Aram the Murderer,' and Sir E. Bulwer Lytton's romance of 'Eugene Aram.' Such is the effect they have produced, that St. Robert's Cave is always eagerly inquired for by visitors to Knaresborough.

(*Biographia Britannica*, edit. Kippis, i. 230; *Genuine Account of the Trial of Eugene Aram*, &c., London, 1759.)

ARANDA, DON PEDRO PABLO ABARCA DE BOLEA, COUNT OF, descended from a very ancient and noble family in Aragon, was born about the year 1718, had embraced the profession of arms, had been severely wounded in 1743 in an action against the Austrians near Bologna, and had fallen into disgrace under Ferdinand VI. After the accession of Charles III. to the crown of Spain in 1759, Aranda was appointed ambassador to Frederic Augustus II., elector of Saxony and king of Poland, the father-in-law of Charles III., where he remained some years. On his return to Spain, he was sent to Portugal to supersede the Marquis Sarria in the command of the Spanish army then invading Portugal. In August, 1762, he reduced Almeida and other places; and soon after peace was made. In 1765 Aranda was appointed captain-general of Valencia, and in the following year he was called to Madrid, that capital being then in a state of violent commotion against the minister Squillace. He was made president of the council of Castile, and not only succeeded in restoring tranquillity in the capital, but by making a new municipal division of the city, by the establishment of a permanent garrison, and by other prudent regulations, the count prevented the recurrence of similar riots. During his travels in Europe, Aranda had improved his natural talents and knowledge. With a courage,

firmness, and perseverance which no obstacle could daunt, he undertook the reform of abuses in every branch of the administration, and the adoption of those improvements of which his country stood so much in need. He diminished the asylums, confining their number to two churches in the capital of every province, and he reformed the municipal system by the establishment of the 'diputados del comun,' or deputies of the commons. Among other important reforms may be mentioned the abolition of the order of the Jesuits, and the establishment of new houses of education. The thickets of the Sierra Morena, until then the abode of wolves and desperate banditti, were colonised with an industrious population of Germans, Swiss, and French, through the efforts of the philanthropic Olavide. Aranda also endeavoured to check the papal power in Spain by reforming the tribunal called the 'nunciatura,' which he composed of six native ecclesiastics proposed by the king, and confirmed by the pope, instead of a body of Roman jurists appointed by the pope alone, of which it formerly consisted; and by establishing a law that no papal decree should be valid in Spain without having first received the sanction of the council of Castile. The 'pasos de semana santa,' or holy week dramatic processions, the 'rosarios,' and other pious or rather impious exhibitions, were also abolished by him, and the power of the inquisition was greatly diminished by the establishment of a political censorship. These measures and an imprudent publication of a confidential communication to Voltaire, D'Alembert, and others as to his intentions with regard to the Inquisition, raised such a ferment against Aranda, that foreseeing his ruin unavoidable, he obtained the appointment of ambassador to France, and retired from the administration in 1773.

During his ministry Aranda had been the constant antagonist of England, with which he regarded Spain as able to cope on terms of equality; and he was in favour of the war on account of the Falkland Islands in 1770, when the dismissal of Choiseul, and the declaration of Louis XV. for peace, finally compelled the Spanish cabinet to give way. As ambassador to Paris during the American war, he had ample opportunities of evincing his opposition to England, and, among other things, said to Mr. Fitzherbert, afterwards Lord St. Helen's, when at Paris to negotiate for peace, "The king, my master, from personal as well as political motives, is determined never to put a period to the present war till he shall have acquired Gibraltar either by treaty or by arms." This demand was not altogether rejected by the British government, but after a series of negotiations, which threatened to end in a fresh rupture, De Vergennes, the French minister, summoned Aranda to an interview, in which he informed him that the British ultimatum was received, and that they offered him the choice of Gibraltar or the two Floridas. Aranda, in profound meditation, stood for half an hour without speaking, his head resting on his hands and his elbows on the chimney-piece, and at last he exclaimed, "There are moments in which a man must offer his head to his country. I accept the two Floridas in place of Gibraltar, though it is contrary to my instructions; and I sign the peace." This anecdote is related by Flassan. The count, though always a bitter enemy to England, had nevertheless been throughout opposed to the part which Spain took in this war, on account of the dangerous example which it set to her own colonies. Immediately after signing the peace he addressed a secret memoir to the king, in which he declared it impossible that Spain could much longer hold America on the existing terms, and proposed the establishment of three independent monarchies of Mexico, Peru, and Tierra Firme, the kings to be selected from the royal family of Spain.

Aranda returned from Paris in November, 1787, but still remained in disgrace, with the honorary title of counsellor of state. After the accession of Charles IV. in 1788, Aranda superseded count Florida Blanca in the office of prime minister (1792); but he was not long after dismissed through the intrigues of Godoy. He died, according to some authorities, in 1794; according to others, which appear more to be depended on, in 1799, leaving behind him a widow, without any children.

ARANTIUS, JULIUS CÆSAR, ARANZIO, or ARANZI DEI MAGGI, was born at Bologna about the year 1530. He studied anatomy from an early age under his uncle Bartolomeus Maggius, and afterwards under Vesalius. He received the degree of Doctor of Philosophy and Surgery in the university of Bologna, in which, in 1556, he was appointed professor of anatomy and medicine. He held the office till near the time of his death in 1589. Arantius, who is said to have been a man of remarkable energy in the study of anatomy, was among the most successful and eminent of the pupils of Vesalius; and his works, though small, possess considerable interest. A minute professional account of them is given in the 'Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.'

ARATUS, son of Cleinias, was born at Sicyon B.C. 271. His native city, distinguished in the history of Greece as a school of art more than for its political importance, had long been harassed by the conflicting pretensions of various persons, who in succession became, to use the language of Greece, its tyrants or princes. Cleinias held that precarious dignity for a short time; but he was killed by Abantidas, who assumed his power, and, suffering a like fate, gave way to Pasas, who was succeeded by Nicocles. Aratus was but seven years

old at his father's death. He fled in the tumult, and, falling into humane and honourable keeping, was concealed for a time and then conveyed to Argos. There he grew up to manhood, distinguished for his bodily powers, a frequenter of the 'palaestra,' or place of exercises, and a frequent victor in the rough games which the youth of Greece loved to practise and were proud to excel in. Meditating the bold enterprise of restoring himself to his native country, he endeavoured to associate in his views the numerous exiles who had been banished from Sicyon in its successive changes of masters. When his plans were ripe, he made a night march from Argos to Sicyon, with a small number of followers, whom his own resources and those of his friends enabled him to arm and retain. In this spirited enterprise he scaled the walls, forced his way to the tyrant's residence, and mastered his guard. Nicocles escaped by secret passages. Aratus immediately sent round the city to summon his friends, and at break of day the population assembled in the theatre, where proclamation was made that Aratus, son of Cleinias, invited the citizens to resume their liberties. This striking revolution was effected (B.C. 251) without the loss of a single life, either in the heat of contest or as a measure of policy or revenge.

To secure the continuance of the new order of affairs, Aratus procured the enrolment of Sicyon as a member of the Achæan confederacy. Aratus had cultivated the friendship of Ptolemæus Euergetes, king of Egypt, by sending presents of the most valuable productions of Grecian art; and he now undertook a voyage to Egypt, and gained so much upon the king's esteem that he presented him with a large sum of money (150 talents), part of which Aratus employed on his return to Greece in satisfying the indigent exiles and re-establishing concord. The restored exiles erected a brazen statue of him, with a laudatory inscription, in testimony of their gratitude.

Aratus was soon appointed captain-general ('strategus') of the Achæan league, which under his prudent counsels grew up from a confederacy of a few insignificant cities for mutual defence into a formidable body exercising a powerful influence in Greece. He held this office for the first time B.C. 245, in which year he invaded Locris and Calydonia, on the northern side of the Corinthian Gulf. Being re-elected in B.C. 243, after the necessary interval of a year, he conceived the project of wresting Corinth from Antigonus. The bold attempt proved successful, though not without much difficulty, and the advantage gained was secured by the arrival of a larger body of Achæan troops, to whom the Corinthians gladly gave admittance. Early in the morning the citizens assembled in the theatre, and Aratus, appearing on the stage in his armour, was received with the warmest demonstrations of joy and gratitude. He restored to them the keys of the city, which since the reign of Philip of Macedon they had not had in keeping, and invited them to join the Achæan league. They acceded to the proposal; and the Acrocorinth was thenceforward occupied by an Achæan garrison. Aratus also gained possession of Lechæum, one of the ports of Corinth, and before the end of his year of office prevailed on the state of Megaris to join the league. Troezen and Epidaurus soon followed the example, and the confederacy was further strengthened by the friendship and support of the king of Egypt.

The powerful city of Argos had long been held by a succession of tyrants. In the year B.C. 227, Aristomachus, being tyrant for the time, was induced by the counsels of Aratus to resign his power, and bring over Argos to the Achæan league. Cleonæ, an ancient city of the Argian territory, had become a member of it some time before. Pilius was admitted to it at the same time. The resignation of Aristomachus was probably prompted by the example of Lysidas, tyrant of Megalopolis, who, emulating the virtues and the reputation of Aratus (if Plutarch rightly represents his motives), had retired into private life, and induced his city to join the league, B.C. 232. Lysidas was rewarded by the popular favour, and was three times chosen strategus, alternately with Aratus. In prosecution of his favourite policy, Aratus made several attempts to drive the Macedonians from Athens. That which he could not obtain by arms he effected by money, soon after Antigonus, surnamed Dason, began to reign (B.C. 237), when Diogenes, the Macedonian governor, delivered up the fortresses which he held, together with the isle of Salamis, for a bribe of 150 talents, of which Aratus contributed 20 from his private fortune. At the same time Ægina, Hermione, and a considerable part of Arcadia joined the Achæan league.

Thus during a period of about twenty years, in which the affairs of the Achæan league had been chiefly managed by Aratus, that body had grown up from the union of a few weak cities for mutual defence into a powerful confederation, including the whole northern coast of Peloponnesus from the promontory of Araxus to Scyllæum, with the lands of Corinth and Megara, and the greater part of Arcadia. This change was wrought in a great measure by the probity and high personal character of Aratus, who, as we are told by Plutarch, even during those years when the forms of the constitution prevented his having the name of strategus, still had the authority of the office, "because the people saw that he set neither glory, nor wealth, nor the friendship of kings, nor the good of his own country, nor any other thing, before the general advantage of the Achæan league." Accordingly, he was elected general officer, it should seem, than the law strictly allowed; for in a period of thirty years from his first

elevation (B.C. 245) to his death (B.C. 213) he held the office seventeen times. The leading feature of his policy was to exclude the Macedonians from Peloponnesus, and to give vigour to the Greek nation by uniting them in one confederacy of well-organised commonwealths. He succeeded to a great extent in this virtuous, judicious, and truly patriotic design; but he was constantly opposed by the Macedonian kings, Antigonus and his son Demetrius, and very frequently by the Ætolians, a warlike and turbulent people, who derived much of their wealth from plunder, and were ever opposed to peace and to good order. Hence, though sometimes led to alliance with the Achæans by a common jealousy of the power of Macedon, they were much more frequently arrayed against them; and in one of their predatory incursions into Peloponnesus they were defeated by Aratus at Pellene with considerable slaughter. By this victory Aratus acquired considerable renown; for the most part however he was unsuccessful in the open field, and cautious to excess in his movements, although on many occasions bold and sagacious in emergencies. According to Polybius, qualities totally opposite were united in him, and in different circumstances he was no longer the same man.

Shortly after the accession of Argos to the Achæan league, war broke out (B.C. 226) between the Lacedæmonians and Achæans; a war to which neither party seems to have been averse. In the first campaign the Achæans declined giving battle, although four times the number of the Lacedæmonians. In the following campaigns Cleomenes was generally successful. He defeated Aratus at Mount Lyceum in Arcadia; but the Achæan general retrieved this mishap by gaining possession of Mantinea in his retreat. Soon after, another battle was won by Cleomenes under the walls of Megalopolis, in which Lysidas was killed; and on this occasion Aratus was loudly, and it would seem justly, censured for his slackness and want of enterprise. The war languished while Cleomenes was occupied by the revolution in Sparta; but when that was completed, he resumed his successful career. He regained Mantinea, invaded Achæa, and won a great victory at Dyme; he took Pellene and some other towns; Argos, Phlius, Epidaurus, Træzen, Hermione, went over to him; and Corinth passed into his hands, with the exception of the Acrocorinthus, which still remained in custody of the Achæans. Aratus refused to accept the office of strategus, to which he had been again elected, but though ostensibly in a private station, he continued to exercise his usual controlling influence. To extricate himself from the difficulties in which he was involved, he adopted the disgraceful expedient of inviting back the Macedonians, whom he had been at so much pains to expel from the Peloponnesus. He advised the Achæans to make application to Antigonus for assistance. Antigonus however required that the Acrocorinthus should be placed in his hands as the price of his services. This condition, though on other grounds not to be accepted, was agreed to in consequence of the voluntary revolt of the Corinthians. Antigonus entered Peloponnesus unopposed (B.C. 224), took several cities in Arcadia, and going to Ægium to confer with the Achæan congress, was appointed commander-in-chief of the confederate army. In the following year he took Tegea, Orchomenus, and Mantinea; but this success was counterbalanced by the loss of Megalopolis, which Cleomenes plundered, and almost destroyed. In the following year, B.C. 222, Antigonus defeated Cleomenes in the decisive battle of Sellasia, which put an end to the war. The Macedonian king entered unopposed into Sparta, but he contented himself with undoing the changes which Cleomenes had made. Cleomenes fled to Egypt, where he died, and Antigonus died shortly after in Macedonia, enjoining Philip, his nephew and successor, to regulate his policy in Greece strictly by the counsels of Aratus.

Peace followed the battle of Sellasia, and for a time Peloponnesus was quiet. This however was of short duration. The character and habits of the Ætolian tribes were not favourable to tranquillity. A series of gross provocations induced the Achæans to declare war against these turbulent mountaineers. Aratus took an active part in urging this measure, and being elected strategus for the ensuing year, he hastened his march against the Ætolians, who were already engaged in ravaging Messina. He failed signally in the conduct of this campaign. Great complaints were made at the next congress; and Aratus himself seems to have been sensible that his conduct was open to exception, since, in defending himself, he urged his former services as a plea for passing lightly over his error, if it should be judged that any fault had been committed by him. The appeal was probably successful; and he continued to retain his wonted influence.

In the course of this war, Philip II., the young king of Macedonia, acted as general of the Macedonian and Achæan army. For some time he observed his uncle's dying commands, and regulated his own conduct strictly after the counsels of Aratus; but his enemies at court at length induced Philip to procure the election of Eperatus as strategus, an avowed opponent of Aratus, to the exclusion of Aratus himself. The successful candidate was a person of little estimation, and humble ability, and affairs went on so ill in his hands, that Philip was forced to seek a reconciliation with Aratus. The war was then prosecuted with success both in Ætolia and Peloponnesus. All parties however became desirous of repose. Peace was concluded B.C. 217, each party retaining what they then possessed:

The extensive prospects of ambition opened to the Macedonian king wrought a change in his policy towards his Grecian allies; henceforth

his desire was to reduce all Greece under his power, and he scrupled at few things which promised to forward his views. The counsels of Aratus became distasteful to him, and Aratus withdrew entirely from his court and society, fearing to incur the odium of the crimes which he was constantly committing. Still the recollection of Aratus checked, and rendered him uneasy; and to rid himself of this restraint (if Plutarch's tale be true, and it is confirmed by Polybius), he procured the death of his old friend and guide by a slow poison. Aratus felt the blow, and knew the author; but feeling that complaint was useless, he endured it in silence, with the single exception that he once observed to a friend who was shocked at seeing him spit blood, "Such, Cephalon, are the rewards of the friendship of kings." (Polyb. viii. 14.) He died B.C. 213. The honour of being his burial-place was disputed between Sicyon and Ægium in Achæa, where he died, and adjudged by the Delphian oracle to the former. He was splendidly interred there, and a monument erected to him. He was honoured by the Sicyonians as the father, founder, and saviour of their city; and twice a year, on the anniversary of his birth, and of the restoration of liberty to the city, a religious festival was celebrated in his honour.

He wrote a history of his own times, entitled 'Commentaries' (ending with the year B.C. 220), which has not come down to us. It has received high praise from Polybius, as containing "very faithful and clear memorials of his own times;" and from the close of this work Polybius chose to commence his own history. Particulars of the life of Aratus will be found in Polybius, lib. ii. to ix. inclusive; and in Plutarch, 'Lives of Aratus, and Cleomenes.'

In reference to the dates in this notice, we have followed Clinton, in his '*Fasti Hellenici*, from the 124th Olymp. to the death of Augustus; see also Schlosser's '*Universalthistorische Uebersicht* (ii. 1.).

ARATUS, the author of an astronomical poem in Greek, which has come down to us. It is supposed that he lived about the time of the first Punic war, and must be placed, as to the time of his notoriety, between Euclid and Apollonius of Perga, with both of whom, in the most extended sense, he may have been contemporary. There are three anonymous lives of Aratus, besides notices in Suidas and Eudocia. He was born in Cilicia, some say at Tarsus, others at Soli (afterwards called Pompeiopolis); his calling was medicine; and he spent the latter part of his days at the court of Antigonus Gonatas, king of Macedon, son of Demetrius Poliorcetes. It is stated that he was educated by a Stoic named Dionysius Heraclotes in the principles of that sect.

By the desire of Antigonus, Aratus turned the 'Phænomena' of Eudoxus into verse. It does not appear whether he had any remarkable astronomical qualification for the task. It is a question whether he made any original observations or not; but it is certain, from the commentary of the celebrated Hipparchus, which is yet extant, that he made many alterations: for this commentator frequently cites the prose of Eudoxus and the poetry of Aratus together. The work of the former has not come down to us; in fact, Aratus is the second Greek writer on astronomy extant, Autolycus being the first. We are inclined to think that Aratus was neither an observer nor a mathematician, and for this reason, that, in his description of celestial phenomena, he uses no higher degree of precision than might have been attained by a mere spectator of the heavens.

The poem of Aratus is divided into two parts; the 'Phænomena,' and the 'Prognostics'; the first contains 782 lines, the second 417 lines. It opens with a declaration of the dependence of all things upon Jupiter, "whose children all men are," and who has given the stars as the guides of agriculture. This passage (*τῷ γὰρ καὶ γένος ἰστέον*) is remarkable as having been, at a much later period, quoted by St. Paul in his address to an Athenian audience (Acts of the Apostles, chap. xvii. v. 28), "For in him we live, and move, and have our being: as certain also of your own poets have said, For we are also his offspring." If these words represent the correct text, they remarkably serve to show the notoriety of the poem, if it be recollected that Paul was a countryman of Aratus; but some manuscripts of the New Testament (see Griesbach's edition) support the reading *καθ' ἑμᾶς* (our own poets).

Aratus then proceeds to lay down the doctrine of the immovability of the earth and the motion of the heavens round a fixed axis. He describes the names and configurations of all the constellations then in use, their relative times of rising and setting, the march of the sun through the zodiac, and the milky way, which is described as one of the great circles of the heavens. The planets are simply mentioned as bodies having a motion of their own, but no idea is given of the length of periods. There is nothing on the orbit of the moon, or on the unequal motion of the sun in longitude. There are many mistakes as to the placing of the stars; for example, it is said that Lyra has none but small, and Cygnus none but moderate, stars, though there is one of the first magnitude in both. The book of 'Prognostics' consists of predictions of the weather from observation of astronomical phenomena; except that the celebrated cycle of 19 years is mentioned in it, it adds nothing to our knowledge of the existing state of astronomy. There is not a word of astrology either in the 'Phænomena' or the 'Prognostics.'

Aratus is also said to have written poems on Homer, on the 'Iliad,' on osteology, on medicine, a hymn to Pan, a funeral ode on his brother Myris, and a poem called 'Scythian.' More than thirty epistles of his were extant at the time of his anonymous biographer, whose account of Aratus is printed by Petavius in his '*Uranologion*.'

The number of commentators upon Aratus is very great. The elegance of the verse caused his work to be for a long time in circulation among the Greeks. Petavius gives a list of thirty-six commentaries in Greek; among the authors of which are Aristarchus, Geminus, Eratosthenes, and Hipparchus. The last has come down to us, and owes its origin to the difference which Hipparchus had observed between the descriptions of Aratus and his own observations.

A full account as well of Aratus as of his commentators will be found in Delambre's 'Histoire de l'Astronomie Ancienne.'

The 'Phænomena' was translated into Latin by Cicero when a very young man. Several fragments of this translation still exist, and are given by Grotius in his edition of Aratus. It was also translated by Germanicus Cæsar and by Festus Avienus, both of which versions are to be found in the same edition, which was published at Leyden in 1600, and contains also the original Greek with notes.

There are numerous editions of Aratus. J. H. Voss published a critical edition of the Greek text of Aratus, at Heidelberg, 1824, 8vo., and accompanied it with an excellent German poetical version.

ARAUJO D'AZEVEDO, ANTONIO, afterwards *Count da Barca*, was born at Ponte de Lima, according to Mendo Trigozo, on the 14th of May, 1754. He belonged to a family which was of noble origin, but not in good circumstances. At the age of eleven he was sent to Oporto, and placed under the care of his uncle Brigadier Antonio Luis Pereira Pinto, under whose able instruction he became a proficient in the French, Italian, and English languages, while at the same time he studied Latin, and also, under Professor Lany, the language and literature of Greece. He attended the lectures on philosophy at Coimbra for one year, but without matriculating. Returning to Oporto he pursued his studies in history, mathematics, and his favourite science, natural history. In 1779, about the same time that the Royal Academy of Sciences was founded by the duke de Lafoens, at Lisbon, Araujo assisted the Archbishop of Braga in founding at Ponte de Lima an 'Economical Society of Friends of the Public Good.' Araujo took an active share in a project to render the river Lima navigable, and another for the planting of mulberry trees on a large scale, with a view of introducing the culture and manufacture of silk; and his correspondence on these subjects with Correa de Serra was the means of introducing him to the notice of the founders of the academy, who placed him early on the list of members. This circumstance encouraged Araujo, who was now beginning to think seriously what course of life he should adopt, to seek his fortune in Lisbon, where the Duke de Lafoens, who was delighted with his talents, introduced him to the queen Donna Maria, and in 1787 he was named ambassador of Portugal to the Hague.

His presence at his post does not seem to have been considered of urgent necessity, for he spent two years after his appointment at Lisbon, in the study of diplomacy; and when in 1789 he left Portugal, his first visit was to England, to make himself acquainted with arts and manufactures. "In England," says his Portuguese biographer Mendo Trigozo, "nine months passed away with the rapidity of nine days." He spent every Sunday afternoon alternately in the houses of Sir Joseph Banks and Lord North, and improved his knowledge of politics by listening to Pitt, Fox, and Dr. Price. He kept a minute journal of what he heard and saw, particularly of what related to manufactures and commerce. From London he went to Paris, where the constituent assembly was at that time in the midst of its momentous proceedings, and became acquainted with Necker and Bailly, Lavoisier, and Fourcroy, Delille, and Marmontel. After this he repaired to his post at the Hague, which he felt dull after London and Paris, and he set himself to collect a library, execute a Portuguese translation of the odes of Horace, and to assemble around him a select society of literary men, of French emigrants and of his countrymen.

Araujo was now summoned from literature to politics. The Spaniards, who under the management of Godoy had rashly engaged in a contest with the French republic, in which Portugal had assisted them, insisted, when, after the conclusion of the treaty of Basel with France, in 1795, they declared war on Great Britain, that Portugal should follow them in their change of politics. To avoid the dangers with which it was menaced, Portugal submitted, and Araujo was sent to Paris to negotiate a peace with France. He arrived there in the summer of 1797, and in the month of August he signed a treaty with Charles Lacroix, the foreign minister of the French Directory, by which peace was granted to Portugal, on what were, on the whole, advantageous terms. The revolution of the 18th Fructidor put out of the way Barbé-Marbois, who was opposed to the negotiations, and the French legislative body ratified the treaty on the 12th of September; but the court of Lisbon delayed its consent, the English ministry having declared that it would consider its ratification as an act of hostility, and an English squadron having entered the Tagus and taken possession of Fort St. Julien. The success of the French at length determined the Portuguese to risk the displeasure of the British government, and the ratification was signed on the 1st of December, at Lisbon, more than a month previous to which the directory, indignant at the delay, had cancelled the treaty, and ordered Araujo to quit the territory of the republic. He had still however remained without molestation in Paris; and on receiving the ratification, and with it a large sum in diamonds, he was imprudent enough

to allow it to be said in public that the French ratification was certain, as the director Barras and two of his colleagues had agreed to procure it for a stipulated sum. So many reports of the same kind had recently been in circulation, that the directors thought proper to affirm their innocence by an act of severity; and under the pretence that Araujo had forfeited his diplomatic character by remaining in Paris after being ordered to depart, he was sent on the 31st of December, 1797, to prison in the temple. After remaining there some months he was set at liberty, and returned unmolested to the Hague. It appears that he had only been empowered to act by the prince regent of Portugal and two of his cabinet, Seabra de Silva and the Duke de Lafoens, without the consent or knowledge of the foreign minister Pinto; and it was proposed in the cabinet of Lisbon to bring him to trial for illegal conduct. The prince regent did not venture openly to avow that Araujo had acted by his command, but he bestowed on him a 'commenda,' or benefice conferred on knights of the military orders which much improved his fortune.

Araujo now obtained permission to leave the Hague and travel in Germany, where he visited Hamburg, Weimar, Dresden, Freiburg, and Berlin; studied mineralogy, botany, chemistry, and the German language; and made the acquaintance of Klopstock, Wieland, Göthe, Herder, Schiller, Kotzebue, Werner the mineralogist, Klaproth the chemist, and Willdenow. He is mentioned at the time in Zach's 'Astronomical Correspondence,' with admiration for his extensive knowledge of English, French, and German literature. On his return to Portugal, after more than ten years' absence, he was entrusted with a mission to effect a peace with Bonaparte, then first consul; but on arriving for that purpose at L'Orient, on board a Portuguese frigate, he was refused even permission to land. Bonaparte had previously declared that the Portuguese should pay with tears of blood for the insults they had offered the French republic. When he returned to Portugal, Araujo found that his old antagonist Pinto had, by the use of the same means as himself, sheer bribery, obtained a treaty of peace, but a most disgraceful one, from Spain, which was signed on the 6th of June, 1801, at Badajoz, and was followed by another between France and Portugal, signed at Madrid on the 29th of September. After the peace of Amiens, Araujo was named Portuguese minister at St. Petersburg, from which he was recalled in 1803 to the cabinet of Lisbon as secretary of state; and on the death of the Count de Villaverde in 1806, he was appointed his provisional successor in two departments of the ministry which he had held, so that in fact Araujo was at the head of the Portuguese cabinet.

In this situation he occupied himself in promoting the internal improvements of the country, in improving the navigation of the Tagus and Lima, patronising the introduction of the glass, paper, cotton, and wool manufactures, and various other measures of the same character, which, in more peaceful times, might have attached honour to his name. He procured a decree for the formation of a collection of books, models of machines, &c., for the royal chamber of commerce, and became director of the school of engraving, which Bartolozzi, at his recommendation, was invited over from London to superintend. He patronised Brotero, the Portuguese botanist, in the publication of his 'Phytographia Lusitana;' in return for which Brotero bestowed on a new genus of Plants the name Araujia. He appeared, in the meanwhile, to have totally lost sight of the dangers which impended over Portugal from the ambition of Spain and the still more dangerous and reckless ambition of France. In 1806, Talleyrand threatened Lord Lauderdale, in the negotiations then carrying on, that if peace was not agreed upon, the French army, then at Bayonne, should immediately march for the conquest of Portugal. The news had no sooner reached Mr. Fox, who was then on his death-bed, than orders were dispatched to Lord St. Vincent to sail for the Tagus; an English army of 10,000 men intended for Sicily was countermanded, with the view of changing its destination for Portugal, and the English embassy at Lisbon had orders to make offers to the Portuguese government of unlimited pecuniary aid. Araujo insisted that the apprehensions of the English government were merely the effect of a panic terror, and positively rejected both its military and pecuniary assistance, on the ground that it would compromise the neutrality of Portugal. Souza, count de Funchal, the Portuguese ambassador at London, states that he did not dare to ask anything from the British government for fear of being disavowed by the ministry at home. A mere accident led to Funchal's obtaining permission from Canning for the Portuguese to close their ports against the English if it should be necessary; and this permission, which he at once sent off to Lisbon, arrived there about two days before, on the 12th of August, Araujo was shocked by the sudden and imperious demand of Rayneval, the French, and Campo-Alange, the Spanish, ambassador, to close his ports against the English, seize all of that nation then in Portugal, and declare war against it in twenty days. He delayed the order to close the ports till four English convoys had sailed with all the British subjects who chose to leave the kingdom, and then availed himself of the permission the English cabinet had given. It is said that Araujo, one of whose offices was that of minister of war, was unaware that a French invading army had entered Portugal till the 26th of November, when it was close upon Lisbon. It was to Lord Strangford, the English ambassador, that the Portuguese court was then indebted for the news of Bonaparte's declaration, that the house of Braganza had

ceased to reign, on which, the resolution was taken to sail for Brazil. The public indignation was so strong against Araujo, that he was obliged to embark under cover of night on board of the squadron, which a favourable change of wind enabled to leave the Tagus on the 29th, just in time to escape the advanced guard of the French, which entered Lisbon at nine o'clock on the following morning.

Araujo took with him to Brazil his mineralogical collection, which had been arranged by Werner, and a printing apparatus, which he had recently imported from London. At the time of his arrival there was no other printing apparatus in Rio Janeiro. He had now ample time to occupy himself in the quiet pursuits of science, as the prince regent was compelled to dismiss him from his offices, though he was still retained as a member of the council of state. His favourite study was chemistry, which he pursued with such success as to be able to establish a new manufactory of porcelain, and found a school of chemistry and pharmacy, which had been much needed in Brazil. He introduced the cultivation of tea into the royal botanic garden of Alagoas de Freitas, and cultivated in his own between 1200 and 1400 plants. He introduced a machine for sawing wood, and imported from England a Scotch alembic, which, with his improvements, was in general use in the sugar-works of Brazil. The whole of this time however he felt deeply that he was under disgrace, and, in the year 1810, he addressed to the prince regent a paper in which he defended himself against the count de Linhares and other calumniators. In reply he received from the regent a letter of approbation, concluding with his promotion to the grand cross of the order of Christ. Four years after, in 1814, he was named to the vacant ministry of Marine and the colonies, and in 1815, created Count da Barca. On the death of the Marquis de Aguiar, in January, 1817, he was entrusted with all the three secretariats of state, or, in other words, became sole minister. He died at Rio Janeiro on the 21st of June, 1817, and was buried at the church of St. Francisco de Paula in that city.

As a minister in Brazil, Araujo repaired in some small degree the errors he had committed in Portugal, and he became popular from the affability of his manners; but it is evident from the whole course of his history, that he was eminently unqualified to direct the affairs of a nation in times of difficulty. Even as a diplomatist, the reputation which he acquired for procuring from the revolutionary government of France, a treaty favourable for Portugal, was lost by his imprudence in allowing the means of success to become known, and so destroying it.

Araujo had a taste for poetry, and aspired to the honours of a poet. During his residence at the Hague, he had commenced two tragedies, which he completed at Brazil. He translated Dryden's 'Ode on St. Cecilia's Day,' into Portuguese, as well as several poems of Gray, including his 'Elegy.'

ARBLAY, MADAME D'. [BURNET.]

ARBOGAST, LOUIS FRANÇOIS ANTOINE, was born at Mutzig in Alsace, in 1759. He was successively professor of mathematics at the school of artillery at Strasburg, and rector of the university of the same town. He afterwards represented the department of the Lower Rhine in the National Convention, where however he took no prominent part in politics, and his name only appears to some reports on scientific subjects. After the dissolution of the convention, he became professor of mathematics in the central school of his department at Strasburg, where he died April 8, 1803.

Arbogast's first work was presented to the Academy of Sciences, under the title of 'Essai sur de Nouveaux Principes de Calcul Différentiel et Intégral, indépendants de la Théorie des infiniment Petits, et de celle de Limites.' This essay is not printed, but from his own account of it in the preface to the 'Calcul des Dérivations,' it appears that he had, partially at least, anticipated the leading points of the 'Théorie des Fonctions' of LAGRANGE.

In 1790 (Lacroix, 'Calc. Diff.', 1792; 'Biog. Univ.')

he gained the prize proposed by the Academy of St. Petersburg for an essay on the nature of the arbitrary functions contained in the integrals of partial differential equations. In this paper he takes, and in the opinion of Lacroix finally establishes, the view maintained by LAGRANGE and EULER against D'ALEMBERT, in favour of the discontinuity (Lacroix, 'Calc. Diff.', vol. ii., p. 686).

But his great work is the 'Calcul des Dérivations,' published at Strasburg in 1800. Its main object is the law of derivation of the successive co-efficients of a development from one another, when the expression is more complicated than a function of a binomial. Therefore Taylor's theorem and common differentiation are particular cases of Arbogast's method. It is an embarrassing work to read, on account of the number of new notations, and the complexity of the algebraical part; but it contains much that is elegant, and which may eventually become useful.

The 'Calcul des Dérivations' contains the first use of the separation of symbols of operation and of quantity, which has since thrown so much light on the connection of various parts of analysis.

ARBORIO, MERCURINO, better known as *Count di Gattinara*, exercised an important influence upon public affairs in Germany at the epoch of the Protestant Reformation. He was born at Vercelli in Piedmont in 1465. He was a son, and became by inheritance the

head, of the noble family of Arborio. Mercurino studied law professionally; but from an early age he was immersed in the business of the state; and his reputation as a juriconsult was soon eclipsed by that which he gained as a statesman and diplomatist. His first public employment was in the council of the Duke of Savoy; and while thus engaged he became known, both in his official character and through professional services, to Margaret of Austria, Duke Philibert's wife. That princess, after her husband's death, on receiving from her father, the emperor Maximilian, possession of her mother's heritage, the duchy of Burgundy, appointed Arborio, in 1507, to be president of the parliament of the duchy. In the course of the next year he was employed by the emperor as a negotiator with foreign powers. Thenceforth he continued to be closely connected with the imperial court; and the connection became more intimate after the year 1518, when, partly in consequence of discontents among the Burgundian nobles, ending in an insurrection, he was removed from his place in the administration of that province. When Charles V., in 1520, came to Aix-la-Chapelle to be crowned, he appointed the Count di Gattinara to be his chancellor and a member of his privy council; and he also commissioned him to compose and deliver the formal address of thanks to the electors. The chancellor soon acquired Charles's unlimited confidence, which he enjoyed without interruption during the whole remainder of his life. He was consulted and employed in all the most difficult and important emergencies of the emperor's active reign. In 1529 he was the principal agent of Charles in negotiating the treaty of Cambray, and in effecting arrangements with the pope and the other powers of Italy. Indeed it is said that there was only one important transaction of his time in which he had no share; and the nature of this solitary exception was such as to show strikingly the independence and firmness of his character. He declined taking part in negotiating the treaty of Madrid, settling the terms of the liberation of Francis I. Guicciardini asserts further that he peremptorily refused to affix his official signature to it, alleging that his office did not authorise him to do acts injurious or dishonourable to his master.

Gattinara was always the advocate of lenient and conciliatory measures towards the Protestant Reformers. The rigorous proceedings against Luther at the diet of Worms took place before he had time to acquire much of Charles's confidence, and in the subsequent progress of the struggle we see him again and again referring to the consequences of the edict of Worms, as proving how little good could be done by severity. In direct communications with the papal see likewise, he insisted on the necessity of summoning a free council of the church, and of using other means for a reform in ecclesiastical constitution and discipline. He ought probably to be ranked among those numerous spectators of the contest, who saw that the time had arrived for sweeping changes, but who conceived that nothing was required beyond a compromise, leaving the foundations of the church unremoved. As might be expected of such a man, he was a friend and correspondent of Erasmus. The German leaders of the Reformation however were extremely reluctant to regard the eloquent and powerful chancellor as thus indifferent to the great principles which they held. Luther, in one of his letters, goes so far as to say, that perhaps God, to help them, had raised up this man to be like Naaman the Syrian, who believed in the Lord of Hosts, although he went in with his master to bow himself in the house of Rimmon.

Whatever may have been the chancellor's tendencies, he never gave way to them so far as either to diminish his favour with his master, or to place himself in hostility to the court of Rome. The emperor continued to heap honours and rewards on him to the last, conferring on him several lordships in addition to his hereditary possessions. Shortly before his death Pope Clement VII. sought to attach him to his interests by the strongest ties which were at his command. Gattinara was no ecclesiastic, and had married in early youth. His wife however must have been dead in 1529, for he then accepted a cardinal's hat. What effect the scarlet might have had upon his mind, there was not time to determine. He had been in bad health for some time, being afflicted severely with gout, and being carried in a litter to his reception in the college of cardinals. He exerted himself to the utmost in his public duties notwithstanding his bodily sufferings, and set out to accompany the emperor to the diet of Augsberg. The fatigues of the journey brought his disease to a crisis; and he died at Innsbruck in June 1530, aged sixty-five years.

The reputation of Gattinara as an orator must be received upon the report of his contemporaries. We possess hardly any of his writings. His address of thanks to the electors of the Holy Roman Empire for the election of Charles has been preserved in what seems to be a genuine form. It will be found in the memoirs of him by HANS and GERDES, being taken from Sabinus's account of the emperor's coronation, in Schard's 'Rerum Germanicarum Scriptores' (ii. 14). In the memoirs there are likewise two letters of Gattinara to ERASMUS. Adelung gives the titles of two treatises of his still existing in manuscript.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARBUTHNOT, JOHN. It is rarely that a man attains eminence in a professional pursuit, and yet reaches a greater distinction among his contemporaries as an elegant writer and a wit. Arbuthnot was one of these exceptions to an ordinary rule. He was the son of a

clergyman of the Episcopal Church of Scotland, and is said to have been born at Arbuthnot, near Montrose, in 1675. He was educated at Aberdeen, and there took his degree as Doctor of Medicine. His father lost his church preferment through the changes of the revolution; and the young doctor had to push his way in the great world of London. His common scholastic acquirements, in the first instance, gave him bread. The future companion and correspondent of Swift and Pope, of Harley and Bolingbroke, was for some time an obscure teacher of mathematics. In that day the science of geology was built rather upon bold speculation than systematic and patient observation. It was an age of theories of the earth; and the universal deluge was one of the great points of disputation. In 1697 Dr. Arbuthnot took the field against Dr. Woodward, by the publication of 'An Examination of Dr. Woodward's Account of the Deluge,' &c. The tract brought him into notice. He gradually obtained some professional practice; and the circumstance of his being called in to attend Prince George of Denmark in a sudden illness, he happening to be at Epsom at the same time with the prince, led the way to court honours and rewards. He was appointed physician in ordinary to Queen Anne in 1709; and about the same time was elected a member of the London College of Physicians. His attendance upon the queen probably led to his intimate association with the Tory party at court. Never did a government more actively employ the weapons of wit and sarcasm in the direction of public opinion. The great party war of the last days of Queen Anne was fought not more with parliamentary thunder than with squibs and pamphlets—

"The light artillery of the lower sky."

The ephemeral politics of the day have attained a permanent interest through the talent displayed in these wit-combats. On the 10th of March 1712, Swift writes to Stella, "You may buy a small two-penny pamphlet called 'Law is a Bottomless Pit.' It is very prettily written." This two-penny pamphlet is now better known by its second title, 'The History of John Bull.' A second, third, and fourth parts were published in the same year. Swift again says, "I hope you read 'John Bull.' It was a Scotch gentleman, a friend of mine, that wrote it; but they have put it upon me." The Scotch gentleman was Arbuthnot. It is impossible to read this political jeu d'esprit even now without a lively interest. There have been many subsequent attempts to make the quarrels of nations intelligible, and at the same time ridiculous, by assimilating them to the litigations of individuals. Never was the humour of such a design more admirably preserved than in Arbuthnot's delineations of John Bull the Clothier, and Nick Frog the Linen-draper, and Philip Baboon the successor of Lord Strutt, and Louis Baboon, who "had acquired immense riches which he used to squander away at back-sword, quarter-staff, and cudgel-play, in which he took great pleasure, and challenged all the country." The summer of 1714 saw Arbuthnot living in the sunshine of court influence, soliciting the Lord Treasurer for a place for one, persuading Bolingbroke to bestow a benefice on another, and enlightening Lady Masham upon the claims of his friend Swift to be historiographer to the queen. In a few months the death of Anne put an end to all these prospects of ambition. The party was ruined; some impeached, some driven into exile, all crest-fallen. Arbuthnot, of course, lost his appointment. For some time his natural cheerfulness forsook him; but he soon found content in a little house in Dover-street, in exchange for his residence at St. James'. There is bitterness in the mode in which Arbuthnot first writes to Swift, under the great change produced by the death of the queen: "I have an opportunity calmly and philosophically to consider that treasure of vileness and baseness that I always believed to be in the heart of man." But shortly after he wrote to Pope, "This blow has so roused Scriblerus that he has recovered his senses, and thinks and talks like other men." Arbuthnot appears to have taken to the project of the Scriblerus Club with abundant heartiness; and thus in his misfortunes he looks around for opportunities to make merry with the ignorance of the learned and the follies of the wise: "It is with some pleasure that he contemplates the world still busy and all mankind at work for him." The great project in which he engaged with Swift and Pope, to write a satire on all the abuses of human learning, would probably, under the most favourable circumstances, have been an abortive scheme. Warburton thus speaks of its failure: "Polite letters never lost more than by the defeat of this scheme, in which each of this illustrious triumvirate would have found exercise for their own peculiar talent, besides constant employment for that they all held in common. For Arbuthnot was skilled in everything which related to science; Pope was a master in the fine arts; and Swift excelled in a knowledge of the world. Wit they had all in equal measure; and this so large, that no age perhaps ever produced three men to whom nature had more bountifully bestowed it, or art had brought it to higher perfection." Arbuthnot contributed towards this project the first book of the 'Memoirs of Martinus Scriblerus'; and it is from this contribution that we may principally estimate the correctness of the praise which Warburton has bestowed upon him. Nothing can be more perfect than this fragment. Its very extravagance is the result of profound skill, contrasting and heightening the pungency of the more subtle wit with which the merely ludicrous is clothed. And yet a continuity of such irony and burlesque would probably have been a failure, as far as regarded the success of a satire upon the abuses of

human learning. 'Gulliver's Travels' was intended as a portion of this satire; yet who enters into the companionship of Mr. Lemuel Gulliver with any desire to find out that beneath the surface of his inimitable narratives is concealed an attack upon some book-man or society of book-men? Arbuthnot wrote to Swift: "Gulliver is in every body's hands. Lord Scarborough, who is no inventor of stories, told me that he fell in company with a master of a ship who told him that he was very well acquainted with Gulliver; but that the printer had mistaken, that he lived in Wapping, and not in Rotherhithe. I lent the book to an old gentleman, who went immediately to his map to search for Lilliput." This, after all, is higher praise than if Arbuthnot had written to his friend that the Royal Society was raving against his description of Laputa.

The reputation of Arbuthnot as a wit is in a great measure traditional. What he has left us is admirable in its kind; but it can challenge no comparison with the more systematic labours of Swift and Pope. We scarcely indeed know with certainty what Arbuthnot did write. There is a collection entitled 'The Miscellaneous Works of the late Dr. Arbuthnot,' which was published at Glasgow, in two volumes, in 1751, but the genuineness of some of these pieces was expressly denied by Arbuthnot's son. It is probable, from the manner in which he speaks of himself as Scriblerus, that he had a larger share in the planning, if not in the execution, of the several parts of the memoirs and pieces connected with them, than has usually been assigned to him. Dr. Warton gives certain portions to Arbuthnot, "as they contain allusions to many remote and uncommon parts of learning and science with which we cannot imagine Pope to have been much acquainted, and which lay out of the reach and course of his reading." Arbuthnot continued his medical practice almost to the last; and he published in 1731 'An Essay on the Nature and Choice of Aliments,' and in 1733 'An Essay on the Effects of Air on Human Bodies.' He died in February 1735, leaving a son, George, who held an office in the Exchequer, and two daughters. His son John died two years before himself. Arbuthnot had many and warm friends, whom he had won not more by his talents and acquirements than by his benevolent and generous nature. His integrity was as universally recognised as his wit. The fortitude displayed in his letters to Pope, written almost on his death-bed, could have been inspired only by a conscience void of offence, and the calm retrospect of a well-spent life. Among the other works of Arbuthnot are the following:—1. 'Tables of the Grecian, Roman, and Jewish Measures, Weights, and Coins,' &c. London, 1705, 8vo., which is still a useful work.' It was republished in 1727, in 4to. It was also translated into Latin by Daniel König, and published at Utrecht in 1756, with a preface by Reitz. 2. 'An Argument for Divine Providence, drawn from the equal Number of Births of both Sexes,' in the 'Philosophical Transactions.' There is a list of Arbuthnot's works in Watt's 'Bibliotheca.'

(Miscellanies, by Pope, Swift and Arbuthnot; Swift, Letters; Pope, Letters.)

ARC, JOAN or JEANNE OF, surnamed the 'Maid of Orleans,' from her heroic defence of that city, was born about the year 1410 or 1411, in the little hamlet of Domremy, near the Meuse, and about three leagues south from Vaucouleurs, on the borders of Champagne. Her parents were humble and honest peasants. The district was remarkable for the devout simplicity of its inhabitants, as well as for those romantic superstitions which in a rude age are so often allied with religion. It appears from the copious depositions of witnesses from the neighbourhood of Domremy, examined at Joan's trial, that she was unremitting in her prayers, and other religious exercises, and was strongly imbued, at a very early age, with the prevailing superstitions of her native place.

During that period of anarchy in France, when the supreme power which had fallen from the hands of a monarch deprived of his reason was disputed for by the rival houses of Orleans and Burgundy, the popular feeling was at first undecided; but when, on the death of Charles VI., the crown fell to a young prince who adopted the Armagnac side, whilst the house of Burgundy had sworn allegiance to a foreigner (Henry V.) as king of France, then, indeed, the wishes

and interests of the French were in favour of the Armagnacs, or the truly patriotic party. The remote village of Domremy was decidedly Armagnac. Political and party interests were thus forced upon the enthusiastic mind of Joan, and mingled with the pious legends which she had caught from the traditions of the Virgin. A prophecy was current, that a virgin should rid France of its enemies; and this prophecy seems to have been realised by its effect upon the mind of Joan. The girl, by her own account, was about thirteen when a supernatural vision first appeared to her. She describes it as a great light, accompanied by a voice telling her to be devout and good, and promising her the protection of heaven. Joan responded by a vow of eternal chastity. In this there appears nothing beyond the effect of imagination. From that time the voice or voices continued to haunt Joan, and to echo the enthusiastic and restless wishes of her own heart. Her own simple and early account was, that 'voices' were her visitors and advisers; and that they prompted her to quit her native place, take up arms, drive the foe before her, and procure for the young king his coronation at Rheims. A band of Burgundians, traversing and plundering the country, compelled Joan, together with her parents, to take refuge in a neighbouring town; when they returned to their village, after the departure of the marauders, they found the church of Domremy in ashes. Such incidents were well calculated to arouse the indignation and excite the enthusiasm of Joan. Her voices incessantly directed her to set out for France; but to commence by making applications to De Baudricourt, commander at Vaucouleurs. Her parents attempted to force her into a marriage; but she contrived to avoid this by paying a visit to an uncle, in whose company she made her appearance before the governor of Vaucouleurs, in May, 1428. De Baudricourt at first refused to see her, and, upon granting an interview, treated her pretensions with contempt. She then returned to her uncle's abode, where she continued to announce her project, and to insist that the prophecy, that "France, lost by a woman (Isabel of Bavaria), should be saved by a virgin from the frontiers of Lorraine," alluded to her.

The fortunes of the dauphin Charles at this time had sunk to the lowest ebb; Orleans, almost his last bulwark, was besieged and closely pressed, and the loss of the 'battle of Herrings' seemed to take away all hope of saving the city from the English. In this crisis Baudricourt no longer despised the supernatural aid promised by the damsel of Domremy, and gave permission to John of Metz and Bertram of Poulengy, two gentlemen who had become converts to the truth of her divine mission, to conduct Joan of Arc to the dauphin, and Joan set out from Vaucouleurs on the 13th of February, 1429. Her progress, through regions attached to the Burgundian interest, was perilous, but on the eleventh day after her departure from Vaucouleurs, she reached Chinon, where the dauphin then held his court.

Charles, though he desired, still feared to accept the proffered aid, because he knew that the instant cry of his enemies would be, that he had put his faith in sorcery, and had leagued himself with the infernal powers. He caused her to be examined by ecclesiastical and legal commissioners to ascertain whether her mission was from heaven or from the devil; for none believed it to be merely human. Joan was frequently asked to do miracles, but her only reply was, "Bring me to Orleans, and you shall see. The siege shall be raised, and the dauphin crowned king at Rheims."

They at length granted her request, and she received the rank of a military commander. A suit of armour was made for her, and she sent to Fierbois for a sword, which she said would be found buried in a certain spot within the church. It was found there, and conveyed to her. The circumstance became afterwards one of the alleged proofs of her sorcery or imposture. It was Joan's desire to enter Orleans from the north, and through all the fortifications of the English, but Dunois and the other leaders at length overruled her, and induced her to enter the beleaguered city by water. She succeeded in carrying with her a convoy of provisions to the besieged. The entry of Joan of Arc into Orleans, at the end of April, was itself a triumph. Joan announced her arrival to the foe by a herald, bearing a summons to the English generals to be gone from the laud, or she, the Pucelle, would slay them. The indignation of the English was increased by their terror; they detained the herald, and threatened to burn him, as a specimen of the treatment which they reserved for his mistress. In the meantime the English allowed the armed force raised and left behind by Joan, to reach Orleans unmolested, traversing their intrenchments. Under her banner, and cheered by her presence, the besieged marched to the attack of the English forts one after another. That of St.-Loup was first taken. On the following day, the 6th of May, Joan, after another summons to the English, signed 'Jhesus Maria and Jehanne La Pucelle,' renewed the attack upon the other forts. The French being compelled to make a momentary retreat, the English took courage, and pursued their enemies: whereupon Joan, throwing herself into a boat, crossed the river, and her appearance was sufficient to frighten the English from the open field. Behind their ramparts they were still however formidable; and the attack led by Joan against the works to the south of the city is the most memorable achievement of the siege. After cheering on her people for some time, she had seized a scaling-ladder, when an English arrow struck her between the breast and shoulder, and threw her into the

fosse. When her followers took her aside, she showed at first some feminine weakness, and wept; but seeing that her standard was in danger, she forgot her wound, and ran back to seize it. The French at the same time pressed hard upon the enemy, whose stronghold was carried by assault. The English commander, Glaciedall, or Glacidas, as Joan called him, perished with his bravest soldiers in the Loire. The English now determined to raise the siege, and Sunday being the day of their departure, Joan forbade her soldiers to molest their retreat. Thus in one week from her arrival at Orleans was the beleaguered city relieved of its dreaded foe, and the Pucelle, henceforth called the Maid of Orleans, had redeemed the most incredible and important of her promises.

In compliance with the earnest entreaties of Joan, although against the opinion of the ministers and warriors of the court, she was placed at the head of a body of troops, with which, early in June, she attacked the English at Jargeau. They made a desperate resistance, and drove the French before them, till the appearance of Joan chilled the stout hearts of the English soldiers. This success was followed by a victory at Patay, in which the English were beaten by a charge of Joan, and the gallant Talbot himself taken prisoner. The strong town of Troyes, which might have repulsed the weak and starving army of the French, was terrified into surrender by the sight of her banner; and Rheims itself followed the example. In the middle of July, only three months after Joan had come to the relief of the sinking party of Charles, this prince was crowned in the cathedral consecrated to this ceremony, in the midst of the dominions of his enemies. Well might an age even more advanced than the 15th century believe, that superhuman interference manifested itself in the deeds of Joan.

In September of the same year, we find her holding a command in the royal army, which had taken possession of St. Denis, where she hung up her arms in the cathedral. Soon after, the French generals compelled her to join in an attack upon Paris, in which they were repulsed with great loss, and Joan herself was pierced through the thigh with an arrow. It was the first time that a force in which she had served had suffered defeat. About this time a royal edict was issued, ennobling her family, and the district of Domremy was declared free from all tax or tribute. In the ensuing spring, the English and Burgundians formed the siege of Compiègne; and Joan threw herself into the town to preserve it, as she had before saved Orleans, from their assaults. She had not been many hours in it when she headed a sally against the Burgundian quarters, in which she was taken by some officers, who gave her up to the Burgundian commander, John of Luxemburg, who placed her in his fortress of Beaufort, near Cambrai. Her capture appears, from the records of the Parisian parliament, to have taken place on the 23rd of May, 1430. Joan, after having made a vain attempt to escape, was at length handed over to the English partisans, and conducted to Rouen. The University of Paris called loudly for the trial of Joan, and several letters are extant, in which that body reproaches the Bishop of Beauvais and the English with their tardiness in delivering up the Pucelle to justice.

The zeal of the University was at length satisfied by letters patent from the king of England and France, authorising the trial of the Pucelle, but stating in plain terms that it was at the demand of public opinion, and at the especial request of the Bishop of Beauvais and of the University of Paris—expressions which, taken in connection with the delay in issuing the letters, sufficiently prove the reluctance of the English council to sanction the extreme measure of vengeance. After several months' interrogatories, the judges who conducted the trial drew from her confessions the articles of accusation, which were founded chiefly on her alleged visions and revelations. Upon these charges her accusers wished to convict her of sorcery. Moreover, they drew from her answers, that she declined to submit to the ordinances of the church whenever her voices told her the contrary. This was declared to be heresy and schism, and to merit the punishment of fire.

The articles were dispatched to the University of Paris, and all the faculties agreed in pronouncing them impious, diabolical, and heretical. This judgment came back to Rouen; but it appears that many of the assessors were unwilling that Joan should be condemned; and even the English in authority seemed to think imprisonment a sufficient punishment. At length she was brought forth on a public scaffold at Rouen, and the bishop of Beauvais proceeded to read the sentence of condemnation, which was to be followed by burning at the stake. Whilst it was reading every exhortation was used, and Joan's courage for once failing, she gave utterance to words of contrition, and expressed her willingness to submit, and save herself from the flames. Her sentence was commuted to perpetual imprisonment. After two days' confinement her religious enthusiasm returned in all its force, and filled with remorse and shame, she avowed her resolve no longer to belie the powerful impulses under which she had acted. "What I resolved," said she, "I resolved against truth. Let me suffer my sentence at once, rather than endure what I suffer in prison."

The Bishop of Beauvais lost no time in exercising his power while Joan was within his jurisdiction. The crime of relapse was considered sufficient to warrant her execution. A pile of wood was prepared in the old market at Rouen, and scaffolds placed round it for the judges

and ecclesiastics. Joan was brought out on the last day of May, 1431; she wept piteously, but no mercy was shown. They placed on her head the cap used to mark the victims of the Inquisition, and the fire soon consumed her body. Her ashes were gathered and thrown into the Seine.

It is difficult to say to what party most disgrace attaches on account of this barbarous murder: whether the Burgundians, who sold the Maid of Orleans; the English, who permitted her execution; the French, of that party who brought it about and perpetrated it; or the French, of the opposite side, who made so few efforts to rescue her to whom they owed their liberation and their national existence. An essay however has recently appeared ('Doute Historique,' by O. Delepierre, 1855, privately printed), in which some curious, though certainly not conclusive, facts are urged against the belief of Joan having been actually burned. M. Delepierre's statement is that, in 1645, the Père Vignier, while examining some of the archives of Metz, chanced upon a document which related how, in the year 1436, on the 20th of May (five years after the date assigned for the burning), there came to Metz "the maid Jeanne;" and on the same day came her two brothers, Pierre, a knight, and Petit Jehan, an esquire, "who thought she had been burned." They were all well received, "and she was known by many signs to be the maid Jeanne de France, who had conducted King Charles to Rheims to be crowned." The document at some length details her movements to Cologne, to Erlon (Luxembourg), and other places; but at length, at Erlon, she was married to the Sieur Hermoise. Not much importance was attached to this document, nor even to another discovery of the Père Vignier, made subsequently, in the muniment chest of a certain M. des Armoises of Lorraine, of a marriage contract between "Robert des Armoises, knight, with Jeanne d'Aroy, surnamed the Maid of Orleans." But in 1740, in the archives of the Hôtel-de-Ville at Orleans, were found two entries; the first, under the dates of 1435 and 1436, of two sums paid, one to a messenger, "who had brought letters from Jeanne the Maid;" the other to John de Lils (or Lys, the name by which the family of Darc, or D'Arc, was ennobled), "to help him on his way back to his sister;" the second entry is in 1439, of a gift of 210 livres to Jeanne Darvoises, "for services rendered by her at the siege of the said city." The authenticity of these documents is of course open to doubt, and M. Langlet du Fresnoy has decided against them. M. Delepierre however has yet some collateral evidence not open to the same objection. In 1444, Pierre, the brother of the Maid, petitioned for the restitution of some property; and he urges, in support of his claim, that "he had left his native place to enter into the service of the king and the duke [of Orleans], in company with his sister, Jeanne the Maid, with whom, up to the time of her absence, and from that time to the present, he had risked his life," &c. The application succeeded, and the document was found by Pasquier among the accounts of the domain of Orleans. As negative evidence, M. Delepierre also mentions that a belief certainly existed at the time that a criminal was substituted; and there were several pretenders to her name, some of whom were punished as impostors, while Jeanne des Armoises was certainly not meddled with; and in 1455, when the papal condemnation of the sentence was published, no reference whatever was made to the execution. Whether executed or not, however, the discredit to all the parties concerned is lessened but slightly; and in spite of this circumstantial relation, which is given by M. Delepierre with singular candour and absence of partisanship, it will be difficult to establish a belief contrary to the popular one, which is founded upon what appears the best historical evidence.

It is asserted ('Biog. Univ.,' art 'Jeanne d'Arc'), and probably correctly, that there is no genuine likeness of Joan of Arc extant. Our medal is taken from a French work, 'Les Familles de la France illustrées par les monumens, &c.; Tirées des plus rares et curieux cabinetz du Royaume,' &c. Par J. de Bie, Calcographe, Paris, 1634. There is a monument of the Maid at Rouen, and the graceful statue by the daughter of Louis Philippe, multiplied in many popular shapes, keeps up the memory of the heroine.

The works on the subject of Joan of Arc are very numerous; M. Chaussard enumerates upwards of four hundred, either expressly devoted to her life or including her history. Voltaire's poem of 'La Pucelle' is an attempt to degrade by ribaldry and profaneness the heroic enthusiasm which he could not understand; Schiller's tragedy more worthily goes to the other extreme; and Southey's early poem is a respectable mediocrity, which is neither history nor poetry. In Shakspeare's 'Henry VI.' we find the proper English view of her character, mingled with a higher estimate than belongs to the chronicles of the period.

Of her numerous biographies, that of M. Lebrun des Charmettes is the fullest, 1815. The publication by M. Laverdy of extracts from manuscripts in the Bibliothèque du Roi contains everything relating to the trials of the Pucelle, and is a source at once ample and respectable. The story is told by Baranté (in his 'Histoire des Ducs de Bourgogne,' vol. iv. pp. 328-344) with great spirit; and in that valuable work will be found much documentary proof relating to the examinations that preceded the abominable execution of the sentence of the Church.

ARCADIUS, emperor of Constantinople, son of Theodosius the Great, whom he succeeded A.D. 395. The genius of Rome expired with Theodosius; he was the last of the successors of Augustus and

Constantine who was acknowledged by the whole Roman empire, and who appeared at the head of its armies. By his will he divided this mighty empire between his two young sons, Arcadius and Honorius. Arcadius became emperor of the East, reigning over the provinces of Thrace, Asia Minor, Syria, and Egypt, from the Lower Danube to the confines of Persia; Honorius became at least nominal emperor of the West. The accession of Arcadius marked the final establishment of the empire of the East, which subsisted, till the taking of Constantinople by the Turks, during a period of 1058 years, in a state of continual decay.

The history of the reign of Arcadius is nothing else than that of the men to whom he entrusted the affairs of his empire. He was at first the submissive tool of Rufinus, who had raised himself by his talents to the notice of Theodosius, and was employed by him to direct the studies of the young prince Arcadius. Rufinus employed all his influence to inveigle Arcadius into a marriage with his daughter; but failing in this object, he was accused of inviting the Huns and the Goths into Asia and Greece, and was at last murdered in the presence of the emperor by the soldiers of the celebrated Stilicho. His place was supplied by an eunuch, Eutropius, who exceeded even Rufinus in oppression and cruelty. Arcadius saw everything with equal indifference, and cared neither for his own honour nor the security of his subjects, provided he was allowed to enjoy the pompous luxury in which he delighted, and which is forcibly described in the eloquent sermons of St. Chrysostom, an eye-witness of the scenes which he narrates. In the later years of his life Arcadius was entirely under the control of his wife, Eudoxia, whose character is best shown by the fact that she persecuted the virtuous St. Chrysostom. Arcadius died May 1, 408, leaving his empire to his infant son, Theodosius. The facts of his life are given by Claudius Suidas, and Theodoretus.

ARCA'NO, MAURO D', usually called IL MAURO, was one of the most famous among the burlesque poets of Italy in the 16th century. He is supposed to have been born about the year 1490. His first Christian name is disputed, some calling him Giovanni, and others, seemingly by mistake, Francesco. He was descended from a noble family in Friuli, from whose castle he derives his name of Arcaano; but his life appears to have been spent in dependence. After having been educated in his native province, he emigrated to Bologna, and thence to Rome. There he lived almost constantly afterwards, being successively in the service of the Duke of Amalfi, Cardinals Grimani and Cesarina, and other powerful and wealthy persons of his time. In the celebrated academy of the Vignaiuoli or Vinedressers, of which Berni was the ruling spirit, Mauro was a distinguished member; and he lived in intimate friendship with that witty poet, and with those other men of letters who, in the first half of the century, formed the characteristic style of burlesque poetry called *Bernesque*, from its inventor and most successful cultivator. [BERNI.]

Il Mauro died at Rome, in 1536, in consequence of a fall from his horse while hunting. His works, besides a burlesque letter printed in two collections of the time, consist of twenty-one 'capitoli,' or burlesque poems in Italian terza rima, which will be found in the common editions of the poems of Berni and the writers of his school.

ARCESILA'US was born at Pitana, a city of Æolis in Asia Minor. Of his personal history we are able to collect a few facts from Suidas and his life by Diogenes Laërtius. He was born B.C. 316, and began, according to Apollodorus, to attract the attention of the learned by the acuteness of his remarks before he had reached the age of 17. He died B.C. 241, at the age of 75. He was the pupil of the mathematician Autolycus, and afterwards proceeded to Athens to study rhetoric, but preferring philosophic studies, he became the pupil of Theophrastus the peripatetic, and then of Crantor. He attached himself more particularly to the Academic sect, and became one of their leading philosophers, though he introduced so many changes, that he was considered the founder of what has been called the Middle Academy. The Academic sect was instituted by Plato, and continued through Speusippus, Xenocrates, Crantor, Polemo, and Crates, to Arcesilaüs. We think that Mr. Clinton ('Fasti Hellenici,' vol. i. p. 367) satisfactorily proves that Arcesilaüs established his school at the death of Crantor, who died before Polemo and Crates; that from this period he was the rival of Zeno and Epicurus; that Polemo and Crates, strictly speaking, had no successors; that the old academy expired with them, and was superseded by the school of Arcesilaüs, which had been founded in their lifetime.

Arcesilaüs revived the Socratic mode of teaching, which had fallen into disuse; he propounded no dogmatic principles of his own, but discussed with much eloquence and art the points proposed to him by his pupils. He brought forward all the arguments that could be suggested on both sides of a question, and endeavoured to prove that there was no certainty in philosophical knowledge, and that in all purely speculative subjects we must refrain from coming to a decision, because the mind of man cannot sufficiently distinguish truth from falsehood. In the every-day affairs of life however he appears to have admitted that we must act as others do. The saying of the philosopher Cleanthes respecting him, clearly proves that his doctrines were not carried beyond his closet, and that in the world he was strictly attentive to all the duties of life. "Leave him to himself," says Cleanthes to some who lamented the tendency of his doctrines, "for if Arcesilaüs loosens the ties of morality by his words, he knits them

again by his actions." He was succeeded in his school by Lacydes, B.C. 241. The reader may consult the fourth book of Cicero's 'Academic Questions' for an eloquent and masterly exposition of the arguments for and against the philosophical doctrines of Arcesilaus and the sect which he founded.

ARCET, JEAN D', was born at Douazit, in the present department of Landes in France, on the 7th of September, 1725. He received his early education at the college of Ains, where he was distinguished for the ardour with which he pursued his various studies. His father, who was a magistrate, wished, as he was his eldest son, to educate him in such a manner that he might fill his own position, and for this purpose he was sent to study at Bordeaux. Here a taste for natural science was developed in young D'Arcet, the indulgence of which his father forbade to him on pain of being disinherited. But he chose to run the risk of being forever driven from his home, rather than give up his favourite pursuits. His father kept his word, and without friends or money, D'Arcet taught a few pupils Latin, to enable himself to pursue his studies. He however soon made friends, and became acquainted with Roux, who was then a young man. Roux subsequently introduced him to Montesquieu, who appointed him tutor to his son. In 1742 he came to Paris with Montesquieu, and from the position of tutor in his family became his intimate friend. Montesquieu died in the arms of D'Arcet, and confided to him the care of his manuscripts.

After the death of Montesquieu, D'Arcet devoted himself to the study of the medical sciences, more particularly chemistry, and took his degree of doctor in the faculty of medicine in Paris in 1762. Most of his time was given up to chemistry. After spending some time with the army in Germany he returned to his laboratory; devoted himself to study the manufacture of porcelain; and having made analyses of the best specimens from China, Japan, and other parts of the world, succeeded in producing a porcelain equal to that from other countries. These analyses led him into a long course of experiments on the properties of minerals, and the result of his labours was published in two Memoirs in 1766 and 1768. In a subsequent work he first announced the perfect combustibility of the diamond. Newton had inferred from the refractive power of the diamond that it was combustible; Boyle and others had partially succeeded in burning it, but D'Arcet seems to have been the first who perfectly performed this interesting experiment.

Besides the works referred to, he was the author of several others, and was the inventor of a metallic alloy which sometimes bears his name; it melts in boiling water, and has been employed in making stereotype plates. On the death of Macquer, D'Arcet was appointed director of the Sèvres manufacture of porcelain at Sèvres, and elected a member of the Academy of Sciences. He also succeeded Gillet as inspector of the public mint, and was inspector of the tapestry manufacture of the Gobelins. Both in the porcelain and the tapestry manufacture he suggested several improvements.

D'Arcet narrowly escaped the guillotine during the reign of terror. The Duke of Orleans had been his patron, and this was sufficient to render him "suspect." The order was signed for his arrest, but through the bold defence set up for him by Fourcroy, the chemist, who was then a member of the convention, he was saved. He died on the 12th of February, 1801. He left behind him two daughters and a son, who died in 1844. The son's writings on chemistry, and on subjects of public utility, such as the amelioration of the food of hospitals, &c., gave him a deserved celebrity.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARCHELA'US, commonly called of Miletus, though he may have been a native of Athens, was the son of Apollodorus or, according to others, of Mydon. He was the first man who introduced the physical philosophy from Ionia to Athens, from which circumstance probably he was called Physicus. He was a pupil of Anaxagoras, and a teacher of Socrates. The physical philosophy terminated in him, and the Ethical was introduced by Socrates. These few facts about his life rest on the authority of Diogenes Laertius. There is the testimony of Porphyry to the fact of Socrates having become the pupil of Archelaus when Socrates was seventeen years of age, and of having continued to be his pupil for several years, which will fix B.C. 451 (the seventeenth year of Socrates), as one of the years in which Archelaus was at Athens. Diogenes also says that when Socrates was young he visited Samos in company with Archelaus. Though various authorities speak of Archelaus as a master of Socrates, neither Xenophon, nor Plato, nor Aristotle mentions him.

Archelaus is said to have left writings, but no fragments have been preserved, and it is impossible to form a true judgment of his system from the scanty notices contained in Diogenes and other writers. Of his particular opinions a few are recorded: he considered the sun to be the largest of the heavenly bodies; the sea was formed by coozing through the earth; voice was formed by the impulse of the air, an opinion which is also attributed to Anaxagoras.

His general principles show that his system resembled that of Anaxagoras and Anaximander. He admitted two principles of generation or production, cold and heat; these two principles separate from one another; heat moves and cold remains at rest. The mode in which he supposes the earth and the air to be formed is unintelligible as stated by Diogenes; but the text may be corrupt. Animals

were first formed from the earth acted on by heat, and afterwards were continued by generation. In some way men were separated from other animals and formed political communities. *Nous* is in all animals. Plutarch states one of the general doctrines of Archelaus thus: air is infinite, and its properties are condensation and rarefaction, from which respectively result fire and water.

Archelaus is also said to have taught the ethical part of philosophy, but we know nothing of his opinions. There is attributed to him the doctrine that the just and the bad are not by nature but by institution (*οὐ φύσει: ἀλλὰ νόμῳ*). As we do not know in what sense he used these two words (*φύσις* and *νόμος*), we cannot determine the meaning of this dogma. A conjecture is given by Ritter as to the sense in which Archelaus used these terms.

Ritter in his 'History of Philosophy,' vol. i., has collected most of the passages relating to Archelaus, and his remarks show how little is known about him.

(*Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARCHELA'US, son of Perdiccas, king of Macedon, who succeeded his father B.C. 413 (Clinton), early in the year. The chronology of his reign has been a subject of controversy; and some writers have erroneously supposed that he was succeeded by a son of the same name. Thucydides says that "Archelaus, son of Perdiccas, having become king, built the fortifications now in the land, and cut straight roads, and set the military affairs of the nation on a better footing, as to the provision of arms, horses, and other equipments, than all the eight kings who had preceded him." (lib. ii. 100.) He besieged the town of Pydna, a valuable sea-port of Macedonia, which had revolted, and took it, B.C. 410; and to diminish the chance of future insurrections, by rendering it harder to call in foreign aid, he removed the city farther inland by a distance of twenty stadia, about two miles. The tragic poet Euripides resided for some time at his court, and died there. Plato is said to have been "very dear" to him; and he sent a pressing invitation to Socrates, who declined to accept it. Zeuxis visited and executed many pictures for his palace, which became a place of great resort for strangers. He established games at Dium in honour of Jupiter and the nine Muses, which are described by Diodorus (xvii. 16) as "magnificent religious festivals and dramatic contests."

From a silver coin in the British Museum.

The character of this prince has been drawn in dark colours by Plato, who says, that Archelaus was of illegitimate birth, the son of Perdiccas by a slave, and that he gained the kingdom by a series of murders. ('Gorg.' 471, vol. iii. p. 208, ed. Priestly.) Archelaus died B.C. 399, after a reign of fourteen years. (Mitford, chap. xxxiv. sect. 1; Clinton, 'Appendix' 4; and the authorities above quoted.)

ARCHELA'US, an eminent general in the service of Mithridates, king of Pontus, and the opponent of Sulla when the Mithridatic war was carried on in Greece. In the celebrated siege of Athens, when that city was taken by Sulla, he threw himself into the Peiræus, and defended it obstinately. Compelled at last to evacuate his stronghold, he retreated into Thessaly. He was twice defeated by Sulla, after which he received instructions from his master to make peace on the best terms which could be obtained. Being apprehensive of danger from the jealous temper of Mithridates, he went over to the Romans, by whom he was well received. (See Appian, *Mithridatica*; Strabo, l. xii. and xvii.)

ARCHELA'US, son of the preceding, obtained the dignity of high-priest of the temple of Comana in Pontus, where there was a temple sacred to Enuo. He served in the expedition to Egypt of Gabinus, to reinstate Ptolemaeus Auletes on the throne then occupied by his daughter Berenice; but having gained the affections and the hand of Berenice under the false pretence that he was the son of Mithridates, he went over to her party, and after a six months' reign was slain in battle against the Romans.

ARCHELA'US, son of the above, succeeded him as high priest of Comana, and was expelled by Cæsar, B.C. 47, to make room for Nicomedes the Bithynian. Between his wife, Glaphyra, and Mark Antony an intrigue is said to have subsisted.

ARCHELA'US, son of Archelaus and Glaphyra, received from Mark Antony the kingdom of Cappadocia, B.C. 36. He fought on Antony's side at the battle of Actium, and yet retained his kingdom under Augustus, and even enlarged it by the acquisition of the lesser Armenia and part of Cilicia. Incurring the displeasure of Tiberius, he was summoned to Rome, where he died A.D. 16. (Tacitus, *Ann.* ii. 42 Dion, lvi.; Bayle, *An. Un. Hist.*)

ARCHELA'US, the second son of the fifth wife of Herod the Great; his mother, Malthaka, was a Samaritan. His father's last

will declared him heir to the throne. Immediately after the death of Herod, A.D. 3, he exercised the regal power, but did not assume the title till his nomination should be confirmed by the Roman emperor, in the meantime conciliating the Jewish people by fair promises, which his cruel and tyrannical proceedings soon belied. On the feast of the Passover a number of factious Jews stationed themselves in the temple, and instigated the populace to demand that Archelaus should avenge the death of two favourite teachers who were executed during Herod's reign for having destroyed a golden eagle. Archelaus sent a party of his guards to seize the ringleaders, but the rabble killed most of the soldiers. Upon this he employed the whole force of his arms against the rioters, and 3000 of them were massacred. The rest escaped to the neighbouring mountains.

Archelaus presented himself in person before Augustus at Rome, and solicited the ratification of his power on the grounds of being the successor appointed by his father, and of his attachment to the Roman customs and government. His claim was disputed by many members of his family, and the Jewish nation presented petitions, deprecating his appointment, and requesting an alteration in the form of government. The emperor declined to accede to the demands of the Jews, but he placed only the districts of Judæa Proper, Idumæa, and Samaria, forming about half of the dominions of Herod, under the government of Archelaus. The rest, with some small exceptions, was divided between Herod Antipas and Philip. These three princes were not called kings but ethnarchs, and their territories were not called kingdoms but ethnarchies. Irritated by the conduct of Archelaus, and weary of the oppressive tyranny of his administration, in the tenth year of the reign of Archelaus the Jews again appealed to Augustus, and the emperor dispossessed Archelaus of his authority, banished him to Vienna in Gaul, and confiscated his property. It is supposed that he ended his days in the place of his exile, leaving no posterity.

To understand the history of Archelaus in connection with preceding and subsequent events, the reader must refer to Josephus, 'On the Jewish War,' from book i. chapter 28, to book ii. chapter 8; and the 'Antiquit.' book xvi.

ARCHELA'US, bishop of Carrhæ in Mesopotamia, is remarkable only for his dispute with the heretic, Manes, about A.D. 278. He published the controversy in two books, entitled 'Acta Disputationis,' &c., in Syriac, which were translated into Greek by Hegemonius. A fragment of this work is extant, edited by Valesius, in the notes to his Socrates (pp. 197, 203, lib. i. c. 22); and again in a more complete form by Zaccagnius, in his 'Collectanea Monumentorum veterum Ecclesiæ Græcæ,' Rom. 1698. (Fabricius, *Bibl. Gr.*)

ARCHENHOLZ, JOHANN WILHELM VON, was born at Danzig in 1745. He entered the Prussian army, in which he served during the whole of the seven years' war, and was made a captain. He afterwards retired from the service, and travelled over a considerable part of Europe, and at last settled at Hamburg, where he published several works, which became very popular in Germany. The first work that established his literary reputation was his 'England und Italien,' published in 1785, in which he gave, not the journal of a tour, but a methodical description of the two countries, especially with regard to their social and moral features, and their political institutions. Archenholz had visited England repeatedly and stayed there nearly six years between 1769 to 1779. He had been likewise several times in Italy, and had resided there about three years. The work went through several editions, and was translated into French. In the preface to the second German edition, 1787, Archenholz replied to the charges of injustice and asperity towards Italy with which he had been reproached. Archenholz's admiration of England, on the other side, displeased many persons on the continent, although he points out many faults in the English institutions at that period, and exposes with no sparing hand the vices and follies of London. His 'History of the Seven Years' War' was published at Hamburg in 1788. Archenholz also wrote a history of Gustavus Vasa, preceded by a summary of the history of Sweden from the oldest records to the end of the 16th century. It was published at Hamburg in 1801. About the time of the French revolution he became editor of the 'Minerva,' a German literary journal, published at Hamburg, which enjoyed considerable reputation for many years. During this period he wrote other works, chiefly historical. He possessed a lively and entertaining style, and his works were very popular in Germany; and several of them were translated into English and French. Archenholz died in 1812.

ARCHIAS, A. LICINIUS, a Greek poet of Antioch in Syria. Archias came to Rome in the consulship of Marius and Lutatius Catulus, B.C. 102, and lost no time in recommending himself to these leading persons by a poem celebrating their victories over the Cimbri. He was the intimate friend of Lucullus, and we find him chanting the praises of that luxurious Roman in a poem on the Mithridatic war. He was admitted to the freedom of Heraclea, one of the most powerful Greek cities in the south of Italy, and one whose citizens were entitled to all the privileges of Romans. It was thus that Archias became a naturalised citizen of Rome. Why a certain Grattius should have contested this right, we have no means of discovering; but as the public archives of Heraclea had been destroyed by fire, Archias was unable to produce any legal document in proof of his

claim. It was in this case that Cicero's beautiful oration was pronounced. The epigrams published under the name of Archias in the 'Anthologia Græca,' are in general below mediocrity, but as there were several of the same name as the poet, we cannot decide to whom they really belong. These epigrams have been published separately by Ilgen, 'Animadvers. Histor. et Critic. in Cic. Orat. pro Archia,' Erfurt, 1797; and by Hülsemann, in his edition of 'Cicero's Oration for Archias,' Lemgo, 1800, 8vo. The discovery by Angelo Mai, in the Ambrosian library of Milan, of a commentary on Cicero's oration on behalf of Archias by Asconius Pedianus, who flourished A.D. 30, seems to establish the genuineness of the oration, of which some doubts have been raised.

ARCHIDA'MUS. Five kings of Sparta, of the royal line of the Proclidæ, are known to us by this name. The first lived before the historical age of Sparta, and his name, mentioned by Herodotus (viii. 131), is the only memorial left of his existence.

ARCHIDA'MUS II., son of Zeuxidamus, succeeded to the throne when his grandfather, Leotycheides, was banished from Sparta for allowing his military proceedings in Thessaly to be influenced by a bribe from his opponents. Archidamus reigned from B.C. 469 to 427. Prudence and foresight, steadiness of purpose, and gravity of deportment, are the more prominent qualities which he displayed. In the fourth year of his reign (B.C. 464) Sparta was nearly annihilated by the violence of an earthquake, an opportunity which the Messenians seized in the hope of regaining their independence. The presence of mind displayed by Archidamus on this occasion saved what remained of the city from the hands of an exasperated foe; but it was not till ten years had elapsed, that this Third Messenian War, as it is called, was brought to a close, when the Messenians evacuated their citadel, Ithome. (Diod. Sic. xi. 64, Thucyd. i. 103.) Archidamus spoke for peace in the important council held by the Lacedæmonians before they resolved on the Peloponnesian war (B.C. 431), but so much confidence had they in Archidamus, that they placed him at the head of the troops to be led against the Athenians. He was their general also in their second (B.C. 430) and third expeditions (B.C. 428). He was succeeded by his son Agis II., probably in B.C. 427. (Thucyd. i. 79, ii. 10-20, 71, iii. 1.)

ARCHIDA'MUS III., the son of the celebrated Agesilaus, succeeded his father B.C. 361, and died B.C. 338. In B.C. 367, during his father's lifetime, we find him in command of the Spartan troops, and gaining a battle against the Arcadians and Argelians, which is known in history as 'the tearless victory.' Not one of the Spartans fell, but of the enemy a large number were killed. (Xenoph., 'Hell,' vii. 1, 28-32.) In B.C. 338, he was sent to Italy to assist the inhabitants of Tarentum, then engaged in war with their neighbours the Lucanians. He fell fighting bravely at the head of his troops; and a statue was erected to his honour, at Olympia, by his countrymen. He was succeeded by his son Agis III. (Diod. Sic. xvi. 24, 63; Strabo, vi. 280; Paus. iii. 10.)

ARCHIDA'MUS IV., the son of Eudamidas, is mentioned by Plutarch, who states that he was defeated (B.C. 296) by Demetrius Poliorcetes; and ARCHIDAMUS V., son of another Eudamidas, was put to death by his royal colleague, Cleomenes III., somewhere between B.C. 236-220. In him ended the line of the Proclidæ, for though he left five sons, they were passed over, and Lycurgus, not of the royal family, was raised to the throne. (Polyb. iv. 2, v. 37.)

ARCHI'GENES of Apamea, a medical author and practitioner, who enjoyed a great reputation at Rome during the reign of the emperor Trajan. He must have held a very distinguished rank among his contemporaries, as appears from several passages in the 'Satires of Juvenal' (vi. 236, xiii. 98, xiv. 259), in which his name is employed to denote a great physician generally. Archigenes followed the principles of the Pneumatic sect, founded by Athenæus of Attalia, and is known to have written a considerable number of treatises on pathology, the practice of medicine and surgery. The only remains of his works which we now possess are fragments contained in the works of Galen, Ætius, and Oribasius. Some of the surgical fragments have been collected by Cocchi, 'Græcorum Chir. libr.'

ARCHI'LOCHUS, one of the most celebrated lyric poets of Greece. He was son of Telesicles by Enipo, a slave, and he was born in Paros, an island of the Ægean Sea. By Herodotus (i. 12) and Tatian he is made contemporary with Gyges, king of Lydia, Olympiad 23, or about B.C. 688. Between B.C. 710 and B.C. 700, he settled in Thasos, and described with much feeling the sufferings caused by the ambition of the Thasians in their attacks on their neighbours. He was, indeed, more formidable with his pen than his sword; like Alcæus and Horace, he thought life preferable to honour, and did not hesitate to turn his back on an enemy. This event in the life of Archilochus took place, according to the old scholiast on Aristophanes, in an expedition against a people called Sai, in Thrace. Archilochus, it would appear, defended himself by boldly declaring that it was better to lose one's shield than life, and Plutarch, in his account of the Spartan republic, states that Archilochus was banished from Sparta for such a remarkable opinion. His poetry was full of energy, terse in its language, and vivid in its images. Of his satirical powers no doubt can be entertained, if we credit the story of Lycambes. He had promised his daughter in marriage to Archilochus, but having changed his intention, the poet directed such a severe satire against the offenders, that

the daughters hung themselves. It was after this that Archilochus went to Thasos. He then went to Sparta, to Siris in Lower Italy, and at length returned to Paros, where he fell in an action between the Parians and Naxians. (Plut. 'de Serâ Num. Vind.' c. 17.) It was in Iambic verse that the poet chiefly excelled; he is said, indeed, to have been the inventor of it, and was one of the three poets whom Aristarchus esteemed most highly in this species of poetry (Vell. Patere. i. 5; Quintil. x. 1). Some specimens of Archilochus, translated with much spirit, may be seen in Merivale's 'Anthology,' London, 1832. Some fragments are found in the 'Analecta Vet. Poet. Græc.' of Brunck, Arrent, 1785, and they are published separately by Liebel, 'Reliquiæ Archilochi,' Vienna, 1819, 8vo.; also in Gaisford's 'Minor Greek Poets,' vol. i.; and in Boissonnade's 'Collection,' vol. xv.

ARCHIMEDES, the most celebrated of the Greek geometers, and one of the few men whose writings form a standard epoch in the history of the progress of knowledge, was born in Sicily, in the Corinthian colony of Syracuse, in the year B.C. 287; he was killed when that town was taken by the Romans under Marcellus, B.C. 212, aged seventy-five years. Euclid died about the time of the birth of Archimedes, and Apollonius of Perga was about forty years his junior. Eratosthenes was born about ten years before him.

The life of Archimedes was written, according to Eutocius, his commentator, by Heraclides, but the work has not come down to us, and all that is known of him has been collected from various authors, of whom the principal are Polybius his contemporary, Livy, Plutarch, and Cicero. We acknowledge our obligations to the life of Archimedes in Rivault's edition of his works, Paris, 1615; and also to that in M. Peyrard's translation, Paris, 1809.

Archimedes was related to Hieron, the second prince of that name, who came to the throne of Syracuse when Archimedes was a very young man. The reign of this prince, including the time that his son Gelon also bore the royal title, lasted about fifty-five years, during the greater part of which Archimedes remained at Syracuse under their patronage. All that we know of his life during this period, independently of the results of his studies, of which we shall presently speak, is contained in the following incidents. The well-known story of Hieron's crown (or Gelon's crown, according to some), is as follows: Hieron, or Gelon, had delivered a certain weight of gold to a workman, to be made into a votive crown. The latter brought back a crown of the proper weight, which was afterwards suspected to have been alloyed with silver. The king asked Archimedes how he might detect the cheat; the difficulty being to measure the bulk of the crown without melting it into a regular figure; for silver being, weight for weight, of greater bulk than gold, any alloy of the former, in place of an equal weight of the latter, would necessarily increase the bulk of the crown. While thinking on this matter, Archimedes went to bathe, and on stepping into the bath, which was full, observed the very simple fact, that a quantity of water of the same bulk as his body must flow over before he could immerse himself. It immediately struck him that by immersing a weight of real gold, equal to that which the crown ought to have contained, in a vessel full of water, and observing how much water was left when the weight was taken out again, and by afterwards doing the same thing with the crown itself, he could ascertain whether the latter exceeded the former in bulk. In the words of Vitruvius, "As soon as he had hit upon this method of detection, he did not wait a moment, but jumped joyfully out of the bath, and running naked towards his own house, called out with a loud voice that he had found what he sought; for as he ran he called out in Greek, *Eureka, Eureka* ('I have found it, I have found it')." According to Proclus, Hieron declared that from that moment he could never refuse to believe anything that Archimedes told him.

The apophthegm attributed to him, that if he had a point to stand upon, he could move the world, arose from his knowledge of the possible effects of machinery, and however it might astonish a Greek of his day, would now be readily admitted to be as theoretically possible as it is practically impossible.

He is said to have travelled into Egypt, and while there, observing the necessity of raising the water of the Nile to points which the river did not reach, to have invented the screw which bears his name. He also invented a screw, according to Proclus, which enabled Hieron himself to move a ship which all the Syracusans were unable to stir. The screw now applied to steam-vessels, and which has been connected with the name of Archimedes, has only this in common with the great geometer, that he is said to have been the first who moved a ship with a screw.

After the death of Hieron, the misconduct of his successor Hieronymus, the son of Gelon, provoked a rebellion, in which he was killed. The successful party sided with the Carthaginians, and the Romans accordingly dispatched a land and naval armament against Syracuse under Appian and Marcellus. Among all the extraordinary stories which have been told of the siege, so much seems clear:—that it lasted three years in spite of the utmost efforts of the besiegers; that this successful resistance was principally owing to the machines constructed by Archimedes; and that the city, after the siege had been some time converted into a blockade, was finally taken by surprise, owing to the carelessness of the besieged during the festival of Diana. Polybius states that catapults and balistæ of various sizes were successfully used against the enemy; that in their nearer approach they

were galled by arrows shot not only from the top of the walls, but through port-holes constructed in numerous places; that machines, which threw masses of stone or lead of a weight not less than ten talents, discharged their contents upon the Roman engines, which had been previously caught by ropes; that iron hands (or hooks) attached to chains, were thrown so as to catch the prows of the vessels, which were then overturned by the besieged; and that the same machines were used to catch the assailants on the land side, and throw them to the ground. Livy and Plutarch give much the same account; but the curious story of setting the Roman ships on fire by mirrors, is first mentioned by John Tzetzes and Zonaras, writers of the 12th century, who cite Diodorus and others for the fact. But Galen, in the 2nd century, though he mentions that Archimedes set the enemy's ships on fire, says it was done with *πύρα*, which may refer to any machine or contrivance throwing lighted materials. Lucian also, who lived in the 2nd century, mentions the burning of the ships, but without saying how it was effected.

After the storming of Syracuse, Archimedes was killed by a Roman soldier, who did not know who he was; Marcellus, it is said, had given strict orders to preserve him alive. According to Valerius Maximus, when the soldier asked who he was, Archimedes, being intent upon a problem, begged that his diagram might not be disturbed; upon which the soldier put him to death. According to another account, he was in the act of carrying his instruments to Marcellus, when he was killed by some soldiers who suspected he was concealing treasure. At his own request, expressed during his life, a sphere inscribed in a cylinder was engraved on his tomb, in memory of his discovery that the solid content of a sphere is exactly two-thirds of that of the circumscribing cylinder. By this mark it was afterwards found, covered with weeds, by Cicero, when he was residing in Sicily as quaestor.

The fame of Archimedes rests upon the extraordinary advances which he made, considering the time in which he lived, in pure geometry, in the theory of equilibrium, and in numerical approximation. In pure geometry he made as near an approach to the fluxional or differential calculus as can possibly be done without the aid of algebraic transformations. In the theory of mechanics he was the only one among the ancients who reduced anything to demonstration from evident first principles; indeed, up to the time of Stevinus and Galileo, no further advance was made. The works of Archimedes which have come down to us, of which the first seven are in Greek, are:—

1. Two books 'On the Sphere and Cylinder.'
2. 'On the Measurement of the Circle.'
3. 'On Conoids and Spheroids.'
4. 'On Spirals.'
5. Two books 'On the Equilibrium and Centre of Gravity of Plane Surfaces.'
6. 'Psammites,' better known by its Latin name 'Arenarius.'
7. 'On the Quadrature of the Parabola.'
8. Two books 'On Bodies Floating in a Fluid.'

There is also a book of 'Lemmas' attributed to Archimedes, translated from the Arabic in 1659, and republished by Borelli in 1661. The works of Archimedes are written in Doric Greek, the prevailing dialect in Sicily. The text is for the most part in tolerably good preservation; the style is clear, and has been considered better than that of any of the other Greek geometers. M. Peyrard, in calling Archimedes the Homer of Geometry, has made a simile which is perfectly admissible as to the strength of praise it conveys, if in no other point. The commentaries of Eutocius which have come down to us are those on the 'Sphere and Cylinder,' the 'Measurement of the Circle,' and the 'Equilibrium of Planes.'

We can only briefly touch upon several remaining points. It is known from Ptolemy that Archimedes observed or calculated several solstices, for the determination of the length of the year. He is said to have been the first who constructed a machine for representing the motions of the sun, moon, stars, and perhaps of the planets. A large number of works which have not come down to us is attributed to him, a list of which may be found in Fabricius; particularly a treatise on 'Burning Mirrors,' and a treatise on the 'Parabola,' published at Louvain in 1548. There is no great evidence in favour of the genuineness of either. The ancients attributed to him more than forty mechanical inventions, among which are—the endless screw; the combination of pulleys; an hydraulic organ, according to Tertullian; a machine called the helix, or screw, for launching ships, according to Athenæus; and a machine called loculus, which appears to have consisted of forty pieces, by the putting together of which various objects could be framed, and which was used by boys as a sort of artificial memory. It is impossible to understand what is meant by such a description. This constant tendency to attribute inventions to Archimedes sufficiently shows the impression which his name left on posterity.

Among the principal editions of the works of Archimedes we must notice the partial edition of Tartaglia, Venice, 1543; the first complete edition, reviewed by Regiomontanus, accompanied by the commentary of Eutocius; the whole Greek and Latin, Basle, 1544. There are editions by Commandine, Venice, 1558 (containing only part of his works); by Rivault, Paris, 1615 (containing the Greek of Archimedes in the preliminary addresses and enunciations only, the demonstrations being the Latin of Rivault, except in the 'Arenarius,' which

is complete); by Torelli, Oxford, 1732, the best perhaps of all. The last-mentioned edition was purchased by the University of Oxford after the death of the editor, and is the only one which contains the various readings. We have also the Latin translation of Borelli, 1661; and the French translation of Peyrard, Paris, 1809, undertaken at the request of the Institute, and revised by Delambre, being for public use by much the most convenient version which has yet appeared. A German translation of all the works of Archimedes, by Ernst, appeared at Stralsund in 1824, in 4to.

(Montucla cites the following lives of Archimedes:—Mazuchelli, *Notizie Storiche alla Vita, &c., d'Archimede*, 4to., 1735; and an unfinished work of M. Melot, *Mém. de l'Acad. des Belles Lettres*, vol. xv.)

ARCHYTAS, a native of the Greek city Tarentum in Italy. All ancient accounts concur in regarding him as uniting the merits of a philosopher, mathematician, statesman, and general. He appears to have been contemporary with the younger Dionysius and with Plato. Archytas belonged to the Pythagorean school, and was himself probably the founder of a sect. He is distinguished more particularly for his knowledge of mathematics, and for his discoveries in practical mechanics. Among the mathematical problems he attempted to solve was the duplication of the cube, but in too complicated a manner to be explained here: the wooden pigeon that could fly was the most celebrated of his mechanical inventions. Many works are ascribed to him, and we have still several small pieces under his name, but there seems good reason to doubt whether they are the genuine productions of Archytas. A list of the works of Archytas is given by Fabricius in his *Bibliotheca Græca*, l. 831. There is a *Treatise on the Ten Categories*, or on the Nature of the All, published in Greek by Camerarius (Lips., 1564, Venet., 1571); and a fragment on Mathematics, edited, with some other Opuscula, by Stephens (Paris, 1557), reprinted at Copenhagen, 1707. A complete collection of the fragments ascribed to Archytas was published by J. Cu. Orelli, Leipzig, 1821, 8vo. 'The Political Fragments of Archytas,' &c., translated from the Greek by Thomas Taylor, was published at London, 1822, in 8vo.

ARCON, JEAN CLAUDE D', a native of Pontarlier in Franche-Comté, born in 1733, showed an early inclination for the military profession. He became an expert engineer, and wrote several treatises, among which may be enumerated, 'Correspondance sur l'Art de la Guerre,' and 'Réflexions d'un Ingénieur en Réponse à un Tacticien,' 12mo, Amsterdam, 1773. In 1780, when the Spaniards were besieging Gibraltar, D'Arçon devised a plan of attack, by means of floating batteries, which were to be incombustible and not liable to sink. His scheme being approved by the Spanish government, the batteries were commenced at Algairas about the 12th of May, 1782, by striking the topmasts and cutting down the poops of ten ships of war, from 600 to 1400 tons burden: the larboard side of each was entirely covered with green timber to a thickness of six or seven feet, the pieces being fastened with iron bolts, and the whole was covered with layers of junk and raw hides. Over the deck also was built a shell-proof blindage, or roof, of strong timbers, forming two inclined planes with a ridge along the middle; and above the lower deck, the starboard side, or that which was to be turned from the fortress, was left open. Port-holes were formed for guns, the number of which in the different batteries varied from nine to twenty-one; and a large reservoir was formed in each, whence by pumps water could be thrown over the roof and sides so as to keep the timber constantly wet. It was imagined that the thick masses of wood forming the sides, which were exposed to the fire from the fortress, would prevent the vessels from being sunk, and that the pumps would secure them against being set on fire. The ten battering ships were to have been moored within half gun-shot of the walls by iron chains, and to have been supported by ten Spanish ships of the line, besides bomb-vessels and gun-boats. Large boats filled with troops, protected by mantelets, were to be in readiness; and the mantelets being provided with hinges, were to be let down when the boats approached the shore, in order to facilitate the landing of the men.

The combined fleets of France and Spain, consisting of forty-seven sail of the line, besides frigates, gun-boats, and the ten battering ships, came before the fortress on the 12th of September; and on the following morning the latter got under weigh in order to proceed to their stations, D'Arçon himself keeping ahead in a small boat, and taking the soundings. The garrison of the fortress, which during the siege was commanded by General Elliot, in the meantime lighted the furnaces which had been prepared for heating shot. The two greatest ships anchored about nine hundred yards from the ramparts; but from insufficiency of sail or want of skill in the commanders, the eight others remained at a greater distance. As soon as the ships were moored the firing commenced on both sides, the garrison discharging red-hot shot, carcasses, and shells. For several hours however very little effect seemed to be produced on the floating batteries, the heaviest shells often rebounding from the roofs; and thirty-two-pounder shot made no visible impression on the hulls of the vessels; but in the afternoon a red-hot ball lodged in the side of the Talla Piedra, and could not be extinguished. An order was then precipitately given to wet the powder in the magazine, and the guns in consequence ceasing their fire, the ship was no longer covered with smoke, so that it became completely exposed to the artillery of the garrison. D'Arçon, who was in the

ship, proposed to send out an anchor for the purpose of warping her beyond the range of the English guns, but a sufficient number of men could not be obtained to perform the duty; he then, about midnight, went to the admiral's ship to solicit assistance, but he could obtain none; and during the night, or in the following morning, all the ten ships either blew up or were burned to the water's edge. In his 'Mémoires pour servir à l'Histoire du Siège de Gibraltar,' which he published at Cadix in the following year, General D'Arçon ascribes the disaster to the jealousy of the Spaniards; and the fact that the battering ships were not supported by the rest of the fleet affords some ground for the charge.

D'Arçon afterwards served in the French army at the time of the Revolution, and assisted in the conquest of Holland. In 1795 he published 'Considérations Militaires et Politiques sur les Fortifications,' in which he condensed all that he had previously written on the subject. He was made a senator in 1799, and died the following year at his estate near Auteuil.

ARDEN, EDWARD, descended from a very ancient and honourable family seated at Parkhall in Warwickshire, was born in 1531. He succeeded his grandfather, Thomas Arden, in the family estate in 1563. Thomas Arden, his grandfather, was squire for the body to Henry VII.; and he was the son of Walter Arden, who married Eleanor, daughter of John Hampden of Buckinghamshire. The younger brother of Walter Arden was the great-grandfather of Mary Arden, the mother of William Shakspeare; and thus there was a family connection between the great poet of the days of Elizabeth and the staunch opposer of the claims of Charles I. to tax the people without consent of parliament. Edward Arden married Mary, the daughter of Sir George Throckmorton. At the Reformation he held to the old forms of religion, but this did not prevent him filling the office of Sheriff of Warwickshire in the year 1563. The Earl of Leicester was Arden's neighbour. He was an enemy of the Throckmortons (Sir John and Sir Nicholas), and Arden, who appears to have been a man of high spirit, not only partook of the general dislike of his wife's family to that nobleman, but openly quarrelled with Leicester, called him an upstart, and, as it would appear, publicly reflected upon his connection with the Countess of Essex. One of Edward Arden's daughters was married to John Somerville, a young gentleman of family and fortune in Warwickshire, a Roman Catholic, of violent temper. In Whitsuntide 1583 Somerville and his wife were at Mr. Arden's, and Hugh Hall, Arden's priest, appears to have persuaded Somerville to attempt the death of Queen Elizabeth, as an incorrigible heretic, as one who was daily growing worse, and whom it would be a service to the cause of true religion to destroy. Somerville appears to have brooded upon this after his return home till he became so melancholy, that his wife wrote to Hall to come and converse with him. Hall did not come, but he wrote to Somerville a long letter to incite him to prosecute his plan for the destruction of Elizabeth; and this letter seems to have produced the effect intended, for Somerville immediately set out for London; but when he got to Warwick he attacked some Protestants with his sword, and was seized. Somerville's wife after his departure had found Hall's letter, and took it to her father Arden, who threw it into the fire. On the 30th of October 1583 Somerville was committed to the Tower on a charge of high treason, and having on his apprehension said something of his father-in-law and mother-in-law, orders were sent into Warwickshire for their apprehension. On the 4th of November Hall was committed to the Tower, and on the 7th Arden. On the 16th Mary, Arden's wife, Margaret, Somerville's wife, and Elizabeth, Somerville's sister, were committed. On the 23rd Somerville was tortured in the Tower, and on the following day Hugh Hall also. On the 18th of December Edward Arden, Mary his wife, John Somerville, and Hugh Hall, were tried for high treason in Guildhall; they were all found guilty on the confession extorted from Hall, and were all sentenced to death. On the 19th of December Arden and Somerville were removed from the Tower to Newgate. Here Somerville was strangled, by his own hands, as it was given out, but by others who were afraid of what he might say, as was suspected. On the 20th of December, 1583, Arden was executed in Smithfield. He asserted that Somerville was murdered, that he himself was innocent, and that he was to be executed, not for conspiring against the queen, but for his firmness in maintaining and asserting his religion as a Roman Catholic. He excited general commiseration. His head was set on London bridge, his quarters on the city gates. Somerville's head was also set on London bridge, but his body was interred in Moorfields. Mrs. Arden was pardoned, but the queen gave away her husband's estate to Edward Darcy. Hall, the priest, was also pardoned; and it was said that Leicester tried to induce Chancellor Hatton to banish him, but without success.

Hollinshed, Stow, and others speak of Arden as a traitor justly convicted, but Camden says:—"The woful end of this gentleman, who was drawn in by the cunning of the priest, and cast by his evidence, was generally imputed to Leicester's malice. Certain it is that he had incurred Leicester's heavy displeasure, and not without cause, for he had rashly opposed him in all he could, reproached him as an adulterer, and defamed him as a new upstart." The account which Dugdale gives of him is as follows:—"Which Edward, though a gentleman not inferior to the rest of his ancestors in those virtues wherewith they were adorned, had the hard hap to come to an untimely death in 27 Eliz.,

the charge laid against him being no less than high treason against the queen, as privy to some foul intentions that Master Somerville, his son-in-law (a Roman Catholic), had towards her person: for which he was prosecuted with so great rigour and violence, by the Earl of Leicester's means, whom he had irritated in some particulars (as I have credibly heard), partly in disdaining to wear his livery, which many in this country of his rank thought, in these days, no small honour; but chiefly for galling him by certain harsh expressions, touching his private accesses to the Countess of Essex before she was his wife; that through the testimony of one Hall, a priest, he was found guilty of the fact, and lost his life in Smithfield.

(Camden, *History of Elizabeth, Queen of England*; *Biographia Britannica*; Dugdale, *Antiquities of Warwickshire*.)

ARDEN, ROBERT, the son of Edward Arden, was a lawyer, and is said to have succeeded in recovering from Darcy by law-suits the greater part of his father's estates.

ARDEN, RICHARD PEPPER, LORD ALVANLEY, was the second son of John Arden, Esq., and was born in 1745 at Bredbury, near Stockport. He received his early education at the grammar school in Manchester, and in 1763 was admitted as gentleman-commoner of Trinity College, Cambridge. He was admitted a member of the Society of the Middle Temple in the year 1762, and was called to the bar in 1769. At the commencement of his professional life he became the associate and friend of Mr. Pitt, and his intimacy with that statesman was undoubtedly the efficient cause of his success. In 1776 he was appointed a judge on the South Wales circuit in conjunction with Mr. Justice Barrington, and in 1780 he became king's counsel and a bencher of the Middle Temple. When Mr. Fox and Mr. Burke, with other members of the Whig party, seceded from the administration in 1782, upon the death of the Marquis of Rockingham, Mr. Arden was appointed solicitor-general; and in the same year he first came into parliament as member for Newtown in the Isle of Wight. In April, 1783, when the coalition between Lord North and Mr. Fox was formed, he resigned his office of solicitor-general, and became one of the most constant and strenuous supporters of Mr. Pitt in his opposition to that ministry. Upon Mr. Pitt being again placed at the head of the government, Mr. Arden was re-appointed solicitor-general. This occurred in December, 1783; and in March of the following year he became attorney-general, and chief justice of Chester upon the removal of Mr. Kenyon to the Rolls. At the new parliament, which was called in May, 1784, he sat for Aldborough in Yorkshire. He retained the office of attorney-general for four years, and when Lord Kenyon was appointed lord chief justice of the King's Bench, in the summer of 1788, Mr. Arden, after considerable opposition on the part of Lord Thurlow, then Lord Chancellor, became Master of the Rolls. On receiving this promotion Mr. Arden was knighted, and was again returned to parliament for Aldborough. In the new House of Commons, which assembled in November, 1790, he sat as one of the members for Hastings.

Shortly after the close of Easter term, 1801, Lord Eldon having relinquished the office of Lord Chief Justice of the Court of Common Pleas, Sir Richard Pepper Arden succeeded him, and was created a peer by the title of Baron Alvanley of Alvanley in the county palatine of Chester. He presided in the Court of Common Pleas less than three years. He was suddenly seized with an inflammation of the bowels, and died on the 19th of March, 1804, after an illness of a few days.

Lord Alvanley married in 1784 a daughter of Richard Wilbraham Bootle, Esq., and sister of Lord Skelmersdale. By this lady he had two sons and three daughters, who all survived him.

ARETÆUS, surnamed *Cappadox*, or the *Cappadocian*, one of the most valuable medical writers of antiquity, is supposed to have lived in the latter part of the 1st and the beginning of the 2nd century after Christ. It seems to be a peculiar merit of this physician to have remained free from the predominant influence of any one of the prevailing theoretical schools, and to have preserved a praiseworthy independence in the observation and treatment of diseases. Aretæus was an original observer; his writings bear no traces of compilation; and if some of the information which he affords belongs to the age in which he lived, a great part of it seems to be the result of his own personal experience.

Aretæus regarded a knowledge of the structure and functions of the body as a necessary step towards the study of disease; his anatomical remarks however betray sufficiently the imperfect state of this science in his time. He concurred with the Pneumatic physicians and the Stoic philosophers, in believing the heart to be "the principle of life and strength," and the seat of the soul. He gave a full account of the distribution of the vena portarum, and regarded all veins as having their origin in the liver; he also was aware of the numerous communications which exist in various parts of the venous system, which led him to refute the notion that particular veins in the arm are connected with particular internal organs, and the consequences which were drawn from this notion as to bloodletting. Aretæus looked upon the liver as the organ destined to prepare the blood, and the spleen as fitted to purify that fluid. He regarded both the stomach and colon as organs of digestion, and bestowed much attention on the morbid affections of the latter organ. He knew that the kidneys had a glandular structure. He stated the nerves to be the organs of sensation and motion. The fact that injuries of the head are apt to produce

paralytic affections on the opposite side did not escape his observation, and, in order to account for it, he stated that the nervous fibres in the brain form a decussation in the shape of the Greek letter X, whilst the nerves arising from the spinal marrow proceed directly to the organ for which they are designed. Notwithstanding these curious remarks on the functions of the nervous system, Aretæus evidently did not make any clear distinction between the nervous and tendinous parts; the latter are undoubtedly alluded to, when he says that, besides the nerves proceeding from the brain, there are others which pass from one bone to another, and are the principal sources of motion.

The descriptions which Aretæus has given of the diseases to which the human economy is subject are accurate delineations, evidently taken from nature, and distinguished by a peculiar liveliness, elegance, and conciseness of diction. He is thought to have excelled all ancient authors, not even excepting Hippocrates, in the art of describing diseases, and may still be regarded as a model in this species of literature. His account of epilepsy, tetanus, acute and chronic headaches, hæmoptysis and causus, or burning fever, are peculiarly happy specimens of his manner of writing.

In the treatment of diseases, Aretæus regarded experience as the best guide, and he repeatedly refers to the necessity of following the hints which nature gives to the physician. His methods of treatment seem to have been energetic where it appeared necessary, but always simple; and he was averse to that farrago of medicines to the use of which some of his contemporaries were addicted.

He frequently employed emetics, purgatives, and clysters; and he was aware that emetics not only evacuate the contents of the stomach and intestines, but derive a great part of their efficacy from the shock which the act of vomiting produces in those parts. He was fond of bloodletting in chronic as well as acute diseases, but cautious with regard to the quantity of blood which he took away; he advises the blood to be stopped before fainting supervenes, and recommends in apoplexy not to take away too much blood at one bleeding. He also mentions the practice of opening a vein on the back of the hand, and he practised the operation of arteriotomy. He employed cupping-glasses and leeches, and he is the first author who mentions blistering with cantharides.

Scarcely any internal medicines were employed by Aretæus in the treatment of acute diseases; but he paid strict attention to diet and regimen: among his dietetical prescriptions, those on the use of the different kinds of milk deserve to be mentioned. In treating chronic diseases he more frequently had recourse to the aid of medicines; we find him prescribing diuretics, sudorifics, and several of the compound stimulating preparations which were in vogue in his time.

Of the writings of Aretæus, only four books on the causes and symptoms, and as many on the treatment, of acute and chronic diseases are extant; nor have they been preserved in a perfect form:—chap. i.—iv., and part of chap. v. of the first book on the causes, and several passages in the books on the treatment, of diseases are lost. In this work the author alludes to his treatises on surgery, on pharmacy, on fevers, and on the diseases of women, of all which works not a single fragment now remains. Had they been handed down to our times, they would have formed most important additions to medical literature.

Aretæus wrote in the Ionic dialect of the Greek language.

The eight books of Aretæus were first edited from the Parisian manuscripts by J. Goupyl, and published at Paris, 1554, 8vo. The standard edition is that of Mr. John Wigan, student of Christ Church, Oxford: it was undertaken by the advice and with the assistance of Dr. Freind, and printed at the Clarendon Press, 1723, folio. Wigan gave a very good Latin translation, notes, and a valuable dissertation 'de Aretæi ætate, secta, in rebus anatomicis scientia, et curandi ratione.' Aretæus also forms the 24th volume of Kühn's edition of the Greek medical authors, Lipsæ, 1828, 8vo. An English translation of Aretæus, by John Moffat, was published at London, 1785, 8vo.

ARETINO, PIETRO, was one of the most notorious men of letters who lived in the 16th century. The admirers of his literary talents called him 'the Divine.' The political position he was supposed to hold was indicated by his other title, 'the Scourge of Princes.' Both titles were, like the life of the man, thoroughly deceptive. He was a person of much natural genius, of very little learning, of no industry, and almost utterly destitute of moral principle. The favourable circumstances in his history are chiefly to be gathered from his own correspondence, the unfavourable ones from bitter libels on him written by his enemies.

Pietro was born at Arezzo in 1492, and is believed to have been the natural son of a gentleman named Luigi Bacci. Till his twentieth year he lived poor and neglected, working for some time as a book-binder in Perugia, picking up such fragments of education as he could, and distinguishing himself by one or two acts of audacious disrespect for the religion of his country. For about fifteen years after this period he was a wanderer through Italy, serving the great in capacities of a very subordinate kind, and repeatedly involving himself in disgrace by misconduct, but still contriving to impress on all who knew him a very high opinion of his natural endowments. After having acquired the patronage of the papal court, he lost it in 1523 by writing obscene sonnets, to accompany the equally obscene engravings made by Marcantonio from drawings of Giulio Romano. An attempt to recover the favour of his Roman patrons was defeated by

a low amour, in the course of which he was dangerously wounded by a rival; and the same incident was indirectly the cause of embroiling him with Berni, Il Mauro (Arcano), and some other poets of the Bernesque school, who were thenceforth through life his determined enemies and unscrupulous maligners. Through all these mishaps however Pietro was able to acquire and retain the patronage, not only of some of the Medici, but of Francis I. of France.

In March 1527 he took up his abode at Venice. There, with no interval of absence exceeding a few weeks, he resided till his death, which took place in that city in 1557, when he had completed his sixty-fifth year. These last thirty years of his life were spent in what he himself desired to describe as literary labour, but of which the greater part was quite unworthy of so honourable an appellation. He did indeed compose and publish a few works properly literary, but the composition of these was one of his least important employments; and so idle and debauched a person can hardly be supposed to have been influenced in writing them by any higher motive than this, that the acquisition of a certain amount of literary reputation was necessary for effecting the great end which he kept steadily in view. He did indeed likewise associate with literary men and artists: in fact, intellectual society had real charms for him; and it is plain that in such society he was eminently qualified to shine. He acquired and retained the friendship, or seeming friendship, of most of those men of genius who adorned Italy in his time; his list of literary friends including such names as that of Bernardo Tasso, while Titian was his constant companion, and Michel Angelo his frequent correspondent. But all these pursuits and companionships, although embraced perhaps in some degree from genuine liking, were most assiduously cultivated for their bearing on other objects, and to these they were skilfully made subservient.

The great aim of Pietro's life at Venice was the acquisition of wealth: wealth he desired ardently, not that he might hoard it, but because without it he could not purchase sensual gratifications. His method of earning money was one which the vocabulary of modern times might enable us to describe by a very plain and undignified term. He was a writer of begging letters. This was exactly the fact: there was nothing to elevate it except the rank of the parties to whom the mendicant addressed himself, and the singular success with which his applications were crowned. Among Pietro's benefactors were many nobles and statesmen: but his favourite correspondents were persons higher still. He established a correspondence, not only with every reigning prince in Italy, but with the emperor of Germany, the king of France, the kings or royal families of Poland, Portugal, Spain, and England. He received gifts or pensions from most of these illustrious persons, as well as from Sultan Solymán and Barbarossa the pirate. From the gains thus procured he supported himself during the thirty years of his residence in Venice, not merely in comfort, but in the profuse luxury of a debauchee.

His letters, which he published in six successive volumes, explain distinctly how this improbable result was brought about. The machinery was so cumbrous, that it is here quite impossible to expose all its internal mysteries; but the principal parts of the moving power may be easily exhibited. We mistake Pietro's position entirely if we accept, as in any sense literally true, his favourite title of 'Scourge of Princes.' He wished to be considered capable of becoming their scourge, but in addressing them he was their abject flatterer. He never went farther in his endeavours to extort favours, than insinuating that his praise of other princes would imply dispraise of those whom he addressed; and that his praise must be earned by liberality, the first of kingly virtues. The point most difficult to be understood is, how he was able to make his royal patrons believe that it was worth while to purchase either his praise or his silence. Even this point could be in no small degree elucidated by an exposition of the relation in which Pietro stood to the literary world of his time; but that relation was so complicated that its details cannot be entered into. The principle however upon which he acted was abundantly plain; and it is not unfairly described, when it is called a system of deliberate imposture. It consisted in diffusing, in all accessible quarters, and by every conceivable artifice, an exaggerated opinion of his literary powers, both as a panegyrist and a satirist. He did contrive to make himself estimated, in both capacities, infinitely beyond the worth of anything which he ever really performed. The means by which this effect was produced are interesting and curious in the extreme, as illustrations of human character, whether we regard the actor in the plot, or those upon whom he worked.

Very seldom did any unpleasant collision mar the animal repose of his life in Venice. He was too cautious, or rather too timid, to risk anything of the sort. He attempted again and again, and in some cases successfully, to conciliate even his literary foes; but after all these men could only vilify his moral character, and he understood his own position too well to feel any serious uneasiness on that score. With persons of higher rank and greater power he never took liberties unless when he believed he might do so with impunity; and if he found that this expectation was groundless, he lost no time in making submissions. When he libelled Pope Clement VII., the pope was besieged in the Castel Sant' Angelo; and he was able to be on terms of such favour with Julius III. that he was admitted to an interview, and had, soon afterwards, the impudence to ask for a cardinal's hat;

on the refusal of which he pasquinaded the pope and his family. He slandered the exiled Pietro Strozzi; but he lay hid in his house for weeks on learning that Pietro had threatened to cut his throat. His most unlucky encounter was with Harvell, the English ambassador at Venice, who, on learning that Pietro had charged him with misappropriating a gift sent by Henry VIII., waylaid the libeller, and made his servants beat him soundly.

The best and most systematic account of Pietro's life and writings is the elaborate and accurate memoir by Mazzuchelli, 'La Vita di Pietro Aretino,' first published in 1741, and again with great additions and improvements, at Brescia, in 1763, 8vo.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ARETINO, SPINELLO, one of the most distinguished of the early Italian painters, was born at Arezzo in 1316. He was the pupil of Jacopo del Casentino, whom however he surpassed even as a boy. He obtained a reputation very early by some frescoes illustrating the life of San Niccolo, which he executed in a new church of that saint, built at Arezzo by Dardano Acciajuoli, and which procured him an invitation from Baroni Capelli, a citizen of Florence, to paint the principal chapel of Santa Maria Maggiore, with subjects from the life of the Virgin, and of Sant' Antonio Abate. He executed some frescoes in the monastery of San Miniato, near Florence, which still remain; others in the monastery of San Bernardo, at Arezzo; and others in distemper, in the monastery of Monte Oliveto near Florence. He executed also six of the series of frescoes illustrating the life of San Ranieri, in the Campo Santo at Pisa, which Vasari reckons among his best works; scarcely anything of them now remains, but there are prints of them in Lasinio's 'Pittura a Fresco del Campo Santo di Pisa.' The principal works of Spinello are not mentioned by Vasari; they are in the town-hall of Siena, and are from the life of Pope Alexander III. Rumohr describes them in his 'Italian Researches.' Aretino was still painting them in 1408, which probably was the year of his death. Vasari says he died about 1400, aged 92; and assuming, upon this authority, that he died aged 92, in 1408, he was born, as mentioned above, in 1316. Aretino excelled in expression, and, in the opinion of Vasari, was a better painter than Giotto, and equal to him in design. (Vasari, *Vite de' Pittori*, &c., and the Notes to Schorn's German translation; Rumohr, *Italiensche Forschungen.*)

ARFE, the name of two very distinguished Spanish silversmiths, and the designers and constructors of several of the most costly tabernacles which do or did adorn the cathedrals of Spain.

Henrique de Arfe, the elder, and the grandfather of the other, Juan de Arfe, made, between 1506 and 1524, the silver tabernacles of the cathedrals of Leon, Cordova, and Toledo. The last, which is a gothic design, and hexagonal, is ornamented with 260 small statues, besides bas-reliefs and other embellishments; it weighs rather more than 5292 ounces. It was gilded by Francisco Merino in 1599.

Juan de Arfe y Villafane, the grandson, was born at Leon in 1535; his father Antonio, likewise a silversmith of ability, was his instructor. He is the artist of three of the finest tabernacles in Spain—those of Avila, Seville, and Osmas. That of Seville is the largest and most costly in Spain; it is 12 feet high, and its whole weight in 1668 was rather more than 17,397 ounces. It was completed in 1587, and Arfe himself published an account of it. He made also tabernacles for the cathedrals of Burgos and Valladolid, and one for the church of St. Martin at Madrid. Arfe was much employed by Philip II. and Philip III.; the former appointed him assayer of the Mint of Segovia. About 1590 he made the tabernacle of Osmas, in which he was assisted by his son-in-law Lesmes Fernandez del Moral. He also wrote two works connected with the theory of his profession—'Quilator de Oro, Plata, y Piedras,' Valladolid, 1572; and 'Varia Comensuracion para la Escultura y Arquitectura,' Seville, 1585. The date of his death is not known.

(Ponz, *Viage de España*, &c.; Cean Bermudez, *Diccionario Historico*, &c.)

ARGAND, AIMÉ, was the inventor of the kind of lamp which commonly bears his name, although for some time he was partially deprived of the credit due to him by the substitution of another. He was a native of Geneva, but is said to have been in England when, about the year 1782, he produced the first lamp on his improved principle, the main feature of which is that the wick, and consequently the flame also, is in the form of a hollow cylinder, and that a current of air is allowed to pass up the centre of the cylinder, so as to admit a free supply of oxygen to the interior as well as the exterior of the flame. This arrangement obviates the difficulties attending the production of a large flame either by the use of a single large wick or a series of small ones arranged in a straight line, neither of which will produce equally perfect combustion or equal brilliancy of light; and also, by occasioning the complete combustion of the oil by which the flame is fed, it prevents the emission of smoke. From a paper on the Argand lamp in the 'Penny Magazine,' it appears that the lamp did not satisfy the expectations of its ingenious inventor until the accidental discovery, by his younger brother, of the glass chimney, which, by confining the air immediately surrounding the burner, occasions an upward current outside as well as inside the cylindrical flame, and thereby causes the flame to rise high above the wick, and to yield the greatest possible amount of light. Shortly after Argand contrived his

lamp, his invention appears to have become known to Ambrose Bonaventura Langé, of Paris, distiller to the king, who claimed the perfecting of the discovery by the use of the glass chimney for himself, and obtained a very favourable report upon the improved lamp from the Academy of Sciences, in which he was stated to be the inventor. Hearing this, Argand went to Paris to contest his claim; but after much contention, finding his opponent very determined in his pretensions, he consented to share the profits of the invention with him, and, accordingly, on the 5th of January, 1787, letters patent were granted to Argand and Langé, giving them the exclusive right to make and sell the new lamps in France for fifteen years. The statement made on obtaining this joint patent gave the credit of the invention to Argand, stating that he communicated his first trials to the chemist Macquer in August, 1783, and that he subsequently perfected the lamp by the addition of the glass chimney while in England. The superiority of the new lamps soon brought them into such general use, that in 1789 the timmen of Paris endeavoured to overthrow the patent, and for this purpose published an abusive memoir, in which it was contended that as Argand and Langé had so long disputed the credit of the invention, it could not belong to either of them; a course of reasoning which led Argand, in a printed reply, to allude to the long-pending dispute between Newton and Leibnitz respecting the differential calculus, in which case he pleads that no such conclusion was drawn. Argand was however soon deprived of advantage from his patent by the abolition of all exclusive privileges which took place during the Revolution, and he also lost for a time the honour of his invention, the lamps being called after a person of the name of Quinquet, who introduced some modifications of form. Argand retired to England, where chagrin so preyed upon him that he at length returned to his native country with broken health, and died there on the 24th of October, 1803. In the brief memoir in the 'Biographie Universelle,' Argand is styled a physician and chemist, and is said to have invented some useful processes for the improvement of wines. It is also related there that he became melancholy and visionary towards the close of his life, devoting himself to the occult sciences, and seeking to obtain from the bones and dust of the sepulchre the means of prolonging life. (*Biographie Universelle, Supplément, vol. I.; Penny Magazine, iii. 120.*)

ARGENS, JEAN-BAPTISTE DE BOYER, MARQUIS D', was born at Aix in Provence, on the 24th of June, 1704. His father was procureur-général to the parliament of Aix. The parents of D'Argens wished him to follow the profession of the law, but he refused, and entered the army at the age of fifteen. After various adventures he for a time quitted the military profession; but resuming it in 1733, was at the siege of Kehl in 1734, and was slightly wounded; but some time after at the siege of Philipsburg on the Rhine, he was so seriously disabled by a fall from a horse that he was obliged to leave the service. Disinherited by his father, he went to Holland, and gained his livelihood by his pen. Here he wrote his 'Lettres Juives,' and his 'Lettres Chinoises,' and the 'Lettres Cabalistiques.' In December, 1741, he arrived at Berlin, with a recommendation to Frederick II., king of Prussia, whose offers induced him to fix his abode in the Prussian capital. Frederick made him chamberlain, and co-director of the academy, and gave him a salary of six thousand livres. D'Argens soon became one of the most intimate of Frederick's associates; his conversation was remarkable for a certain *bonhomme* and vivacity which rendered it very agreeable. But Frederick was fond of playing him practical jokes, and he used to rally D'Argens most unmercifully on the hypochondriac humours to which he gave way. At the age of nearly sixty D'Argens married an actress named Mademoiselle Cochois, without Frederick's knowledge, a step which the king never entirely forgave. Though he had agreed with the king, on entering his service, that he should be at liberty to retire at a certain age, and he had passed the stipulated period, still he could not venture to apply for his dismissal, but solicited leave of absence, and with great difficulty obtained it, for six months (1769). Towards the end of the appointed time he was returning, when he was taken very ill at Bourg en Bresse. His wife was so occupied in attendance upon him, that she forgot to write to Frederick to explain the cause of his prolonged absence, and Frederick, concluding that the marquis had given him the slip, struck out his name from the pension list. D'Argens, irritated at this return for his long services, went back immediately to Provence, and lived about two years at Eguilles on a small estate which his brother, the President of Eguilles, had given him, although he had been disinherited by his father. D'Argens died at Toulon January 11, 1771, of indigestion. When Frederick heard of his death, he ordered a marble monument to be erected to his memory at Eguilles. It is said that D'Argens asked for the sacrament in his last sickness; that he often read the Gospel, and was admitted as a penitent by a certain brotherhood. He left an adopted daughter.

D'Argens was master of several languages, had some knowledge of chemistry and anatomy, and painted pretty well. His works are very numerous, and are enumerated by Quirard in 'La France Littéraire.' His 'Memoirs' and 'Lettres' contain notices of the lives, acts, and peculiarities of numerous writers that can only be found elsewhere by consulting a variety of authors.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ARGENSOLA, BARTOLOMÉ LEONARDO DE, was a native of

Barbastro in Aragon, and descended from a noble family, originally from Ravenna in Italy. He was born in 1566. He studied at the university of Huesca, and entered the ecclesiastical profession. Through the influence of his brother he was made a chaplain to the Princess Maria of Austria, and rector of Villahermosa. He followed his brother to Naples, and remained in Italy three years after his death. In 1616 he returned to Spain, and was made a canon of Zaragoza, in which town he died, according to some authorities in 1633, and according to others in 1631.

Argensola left behind him a continuation of the 'Annals of Aragon,' by Zurita, a 'History of the Conquest of the Molucca Islands,' some letters, satires, and other poetical effusions. The continuation of the history of Zurita, in point of style exceeds the original, and the events are related with no less accuracy than freedom. As poets, himself and his brother are among the first that Spain has produced. Their poetry is marked by singular correctness of taste, on which account they have been styled the Horaces of Spain.

ARGENSOLA, LUPERCIO LEONARDO DE, brother of Bartolomé, was born in 1565, and began his studies at the university of Huesca. He afterwards went to Zaragoza, where he studied Greek, history, and rhetoric. Before he had attained his twenty-fifth year he went to Madrid, where he became secretary to the Princess Maria of Austria. The archduke Albert of Austria made him his chamberlain, and Philip III. appointed him historiographer of Aragon. The count of Lemos having been appointed viceroy of Naples, took Argensola with him, and made him his secretary of state, and also secretary for war. In 1613 he died at Naples. He left behind him three tragedies, some poems, and other works.

ARGYLL, CAMPBELLS, LORDS OF. This family traces its lineage to an individual of their name who in the 12th century married the daughter of a Gaelic chieftain, and got with her the lordship of Lochow in the shire of Argyll. From that period the heads of the family and many of its members have taken an active part in public affairs. The more distinguished of them, however, are the following:—

ARCHIBALD CAMPBELL, eighth Earl of Argyll, was born in the year 1598, and from his earliest years was noted for his piety and devotion. In 1623, when bearing the title of Lord Lorn, his father Archibald, the seventh earl, having left the kingdom, he resigned into the king's hands his father's hereditary office of lord justiciar, or, as it came to be styled, justice-general of Scotland.

In 1633, the Earl of Argyll having declared himself a convert to the Roman Catholic faith, was obliged to make over his estates to his son, reserving only a suitable maintenance to himself; and the following year Lord Lorn was appointed by the king one of the extraordinary lords of session. In the month of April, 1638, when the national covenant was framed and sworn to by nearly the entire population of Scotland, he was called up with others to London to give advice to the king under the existing circumstances of the kingdom; when Lorn alone spoke freely and honestly, and recommended the utter abolition of those innovations which his majesty had made on the constitution of the Scottish church. He returned to Scotland on the 20th of May; and on his father's death, the same year, succeeded to all his honours and possessions. He attended the meeting of the general assembly at Glasgow that year, and there openly joined the church against the court. It was at this assembly that the oppressive policy of two reigns was subverted, episcopacy abolished, and presbyterianism established. To repress the rising of the M'Donalds and the Earl of Antrim in aid of the invasion of Scotland by the royalists, which afterwards followed, Argyll proceeded to his own country, where he raised a force of 900 of his vassals, part of which he stationed in Kintyre, part in Lorn, and with the remainder he passed over to Arran, which he secured by seizing upon the castle of Brodick. He subsequently traversed with a force of about 5000 men and a small train of artillery, the districts of Badenoch, Athol, and Mar, levying the taxes imposed by the estates of Scotland, and enforcing submission to their authority.

When the king came to Scotland in 1641, with a view to the settlement of the kingdom, Argyll was qualified by his learning and talents, no less than by his services, for the post of lord-chancellor, then vacant, but the king was afraid to aggrandise one already so powerful, and the place was bestowed on Lord Loudoun. Argyll however was created a marquis, by the title of Marquis of Argyll. In the disturbances and civil war which soon afterwards followed, Argyll in 1644 took part against the king, and commanded the army sent against Montrose, whom he proclaimed a traitor, and offered a reward of 20,000*l.* for his head. Montrose, whose forces were inferior, retreated northwards, and Argyll showed no disposition to risk an action until, having been joined by additional troops under the Earl of Lothian, he attacked Montrose near Castle Tyvis in Aberdeenshire, but was defeated, left the army, and returned to Edinburgh. He however resumed the command shortly afterwards, and on February 2nd, 1645, was again routed, fled, and carried the intelligence of his own defeat to the parliament at Edinburgh. They expressed their dissatisfaction so loudly that Argyll resigned the commission which he held from the Estates as general of the army; and in February, 1646, was sent over to Ireland to bring home the Scotch troops which had been directed thither to assist in repressing the turbulence of the Catholics. He returned in May following; and in the month of July in the same year, when the king had surrendered himself to the Scottish army, Argyll went to

Newcastle to pay his respects to him, and he was afterwards employed in the conference with the parliament of England on the articles presented by the Estates to the king. He took also a leading part in the installation of Charles II., on whose head he placed the crown at Scone on January 1, 1651. He submitted however to the subsequent usurpation of Cromwell, and under Richard sat in parliament for the county of Aberdeen. For these compliances he was at the Restoration indicted for high treason, and, being convicted, he was beheaded on Monday, May 27, 1661.

ARCHIBALD CAMPBELL, ninth Earl of Argyll, was the eldest son of the marquis. During his father's life he had served in the army with the king's friends; Cromwell had exempted him from his act of grace, and Monk required him to give sureties for his peaceable conduct. His father had not been attainted, and he was restored to the estate and title of Earl of Argyll in 1663. He shared also largely in the profits and preferments which followed on the king's restoration. He was also appointed one of the lords of council, but took no prominent part in public affairs until 1681, when he gave much offence to the covenanters by voting in the council for the execution of Donald Cargill, one of their most valued preachers. In the same year the Duke of York arrived in Scotland, shortly after which the Test Act was introduced to the parliament of Scotland, and though Argyll opposed it strenuously, it was carried and passed in one day—August 31st, the time for taking it being limited to January 1st, 1682. All the privy councillors took it in September except Argyll, who waited on the Duke of York to explain his scruples, and represented that the limited time had not nearly expired. On November 3 however he took it with the reservation of 'as far as consistent with the Protestant faith,' and thereupon resumed his seat as a privy councillor. On November 8 he was indicted for treason and leasing-making, tried, and condemned to death on December 12. He made his escape from confinement however in the train of his step-daughter, Lady Sophia Lindsay, disguised as her page, and escaped to Holland. He afterwards returned, in April, 1685, and, at the head of a considerable force, made a descent into Argyshire; but being made prisoner, he was executed, on the 30th of June, on a single day's notice, on his former sentence. His own son had offered to serve in the royal army against his father, when he invaded Scotland previous to his execution. This son was ARCHIBALD, tenth Earl of Argyll, so acknowledged by parliament before the reversal of his father's attainder. He also sat in the Convention of 1689 as such; and was one of the commissioners deputed by the estates to offer the crown of Scotland to the Prince of Orange, and to tender the coronation oath. The next year he was made a lord of the treasury, and in 1694 an extraordinary lord of session. In 1696 he was appointed colonel of the Scots Horse Guards; and afterwards raised a regiment of his own clan, which greatly distinguished itself in Flanders. On the 23rd June, 1701, he was created Duke of Argyll; and died in September, 1703.

JOHN CAMPBELL, second Duke of Argyll, was born October 10th, 1678, and succeeded his father in 1703, was sworn of the king's privy council, appointed captain of the Scots Horse Guards, and, though scarce twenty-five years old, raised to the seat occupied by his father as an extraordinary lord of session. This last place however he not long afterwards resigned in favour of his brother, Archibald Campbell, then lord high treasurer of Scotland, who, in the end of 1706, was created Viscount and Earl of Ilay, for his services in furthering the Union with England. For the like services Argyll had, in 1705, been created an English peer, by the titles of Baron Chatham and Earl of Greenwich. His grace after this served four campaigns under the Duke of Marlborough in Flanders, where he rose to the rank of lieutenant-general, and honourably distinguished himself in the battles of Ramillies, Oudenard, and Malplaquet, and at the sieges of Ostend, Meenen, Lisle, Ghent, and Tournay. On the change of ministry in 1710 he joined the court, and was appointed ambassador and generalissimo in Spain; and on the same occasion his brother, the Earl of Ilay, was made lord justice-general of Scotland for life. On his return from Spain, where he effected very little, he changed his political party again, and was in consequence deprived of his government offices. When the Hanover family attained the throne, he was appointed commander-in-chief of all the king's forces in Scotland; and in repressing the rebellion of 1715 behaved with great energy and decision, defeating the Earl of Mar, at Dumblane on November 13th of that year. On the 13th April, 1719, he was advanced to the dignity of Duke of Greenwich. After several changes in the political world he retired in a great degree from public life, though after the affair of the Porteous mob he earnestly advocated the cause of the city of Edinburgh, which it was proposed by the ministry to punish severely. He died on September 3rd, 1743, when, leaving no male issue, his English titles of Duke and Earl of Greenwich and Baron Chatham became extinct. His other titles passed to his brother already noticed, Archibald, Earl of Ilay, and third Duke of Argyll. By these two brothers, as has been well remarked, the views of a certain party in Scotland at the Union to perpetuate their authority over their countrymen were actually realised, the whole kingdom having become subject to them through the servility of the few members which Scotland long returned to parliament. The latter, indeed, had the affairs of Scotland so entirely at his disposal, that he obtained

the appellation of King of Scotland. He died on the 15th April, 1761, and, leaving no issue, his own immediate honours became extinct, while those of his family descended to his cousin.

* GEORGE JOHN DOUGLAS CAMPBELL, eighth Duke of Argyll, was born in 1823. He was the second son of John Douglas Edward Henry, the seventh duke, who succeeded his brother in 1839, and the elder brother of the present duke died young. Early in life, as Marquis of Lorne, he took a decided part in the controversies of the Presbyterian Church of Scotland relating to patronage, and was looked upon by Dr. Chalmers as an important and valuable adherent. On January 15, 1842, he published 'A Letter to the Peers, from a Peer's Son, on the duty and necessity of immediate Legislative Interposition in behalf of the Church of Scotland, as determined by Considerations of Constitutional Law.' This pamphlet is an historical view of the church, particularly in reference to lay patronage; in it he strongly condemns the Earl of Aberdeen's proposed measure for "removing doubts" on the subject, and recommends the abolition of lay patronage by legislative acts. But though thus decided in his opinion, he was by no means disposed to accompany Dr. Chalmers in his separation from the church. Accordingly, after it had taken place, in the same year (1842), he published 'A Letter to the Rev. Thomas Chalmers, D.D., on the present Position of Church Affairs in Scotland, and the Causes which have led to it. By the Marquis of Lorne.' In this pamphlet he continues strongly in favour of the anti-patronage principle, but declines to designate "the absolutely arbitrary location of ministers" by the term 'intrusion,' as being unfair: he also contends for the right of the church to legislate for itself, but condemns the Free Church movement, which had just taken place at the General Assembly. Dr. Chalmers had said "lay patronage and the integrity of the spiritual independence of the church had been proved to be—like oil and water—immiscible." From this extreme view he dissents, and declines to leave the church. In 1848 he published 'An Essay on the Ecclesiastical History of Scotland since the Reformation;' a careful and clever expansion of his first pamphlet.

In 1847 the Marquis of Lorne succeeded his father in the dukedom, as also in the sheriffdom of Argyshire, and as master of the queen's household in Scotland, both hereditary offices. After taking his seat in the House of Peers, he frequently took part in the debates, and distinguished himself as an effective speaker. On the accession of Lord Aberdeen to office in 1852, he was appointed Lord Privy Seal. On the breaking-up of that ministry in February 1855, by the secession of Lord John Russell, and the appointment of Mr. Roebuck's Committee, in consequence of dissatisfaction with the ministers for their conduct of the war against Russia, the duke retained his office under the prime-ministry of Lord Palmerston, which he continued to hold till November 1855, when he exchanged it for that of Postmaster-General.

The Duke of Argyll married in 1844 Elizabeth Georgiana, the eldest daughter of the Duke of Sutherland, by whom he has issue. His grace has always shown a marked attention to literary and scientific pursuits. He usually attends and takes a part in the business at the meetings of the British Association for the Advancement of Science, of which he was president in 1855, when it met at Glasgow; and he was elected Chancellor of the University of St. Andrews in 1851, and Rector of the University of Glasgow in 1854. The present duke has maintained and added to the improvements in planting and agriculture, which were largely carried on in Argyshire by his uncle, Duke William, who died in 1839.

ARI or ARA or ARE HIN FRODI, or the Learned, the earliest historian of Iceland whose writings have come down to us, was born in Iceland in the year 1068. In the time of Gissur, the second bishop of Iceland, Ari took priest's orders, and afterwards married and had a family. He died on the 9th of November, in the year 1148, at the age of 80 years. Only some of the writings of Ari are preserved. The 'Landnamabok' and the 'Islandinga-Bok,' which are still extant, are sufficient to attest the value of the labours of Ari. The 'Landnamabok' is a history of the colonisation of Iceland. It was commenced by Ari, continued by Kolskeg, Brand, Styrmir hin Frodi, and Sturle Thorðsson, and completed by Haco Erlendsson. The 'Islandinga-Bok' or 'Book of the Icelanders' is a small treatise of ten chapters and a preface only, in which Ari speaks of the first occupation of Iceland, the names of the earliest colonists, the laws they established, their expeditions to Greenland, the first introduction of Christianity into Iceland, and the names of the earliest bishops. (Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARIALDUS was a deacon of the church of Milan, said to have been of the family of Alciati. He made himself conspicuous in the schism concerning discipline which broke out in that church in the latter half of the 11th century. It was the practice in the province of Lombardy, which was spiritually subject to the Archbishop of Milan, to grant priests' orders to married men who had married only one wife, she being a spinster and not a widow. If a priest became a widower, he was not allowed to marry again, under pain of being interdicted the exercise of his clerical functions. Such was likewise the practice of the eastern church long before its separation from Rome, and such it has continued to this day. In the west celibacy was strenuously enforced upon the clergy, but its obligation was not universally acknowledged until the latter part of the 11th century, when the

determined will of Gregory VII. surmounted all obstacles, established it as a canon of the church, and enforced its observance by means both of the spiritual and temporal powers.

Wido de Velate was made Archbishop of Milan after the death of the famous Heribert in 1045. Wido was a worldly man, fond of ease, and not very strict in matters of discipline. The church of Milan, like most other churches of that age, was very corrupt. Simony was openly and commonly practised. Independently of the priests who were legally married, many others kept concubines, and some zealous men, indignant at the abuse, thought that the strict enforcement of universal celibacy among the clergy was the only cure for the evil, whilst other considerations of ecclesiastical polity contributed to make clerical celibacy appear desirable. But in their declamations against the licentiousness of the clergy, they and the historians and canonists who came after them, have often confounded the married priests with those who kept concubines, and have thus disfigured the historical facts. Among those who first raised their voice against the corruptions of the clergy was Anselmo da Baggio, a canon of the church of Milan, and a man of learning and piety. Archbishop Wido, anxious to avoid popular tumults, contrived to remove Anselmo from Milan by having him appointed Bishop of Lucca. But the deacon Arialdus took up the question concerning the clergy, and soon became a principal in it. He found an associate in Landulfus, a man of noble birth and a ready speaker. A third person is mentioned, named Nazarius, a wealthy banker who supplied the two others with money to carry on their agitation. It was in the year 1058 that Arialdus and Landulfus began publicly to harangue the people of Milan, and to descant on the licentious lives of the clergy. Arialdus, on a day of festival, entered a church at the head of a mob, while the priests were officiating, chased them about, and seized those who could not escape. He then published a resolution binding all priests and deacons to separate from their wives and live in celibacy, and he compelled all whom he caught to sign the paper. The archbishop convoked a provincial synod at Fontaneto in the district of Novara, before which Arialdus and Landulfus were summoned to appear and state their charges against the clergy, and as they did not obey the summons, they were both excommunicated by the synod in 1057. Upon this Arialdus repaired to Rome, where Pope Stephen X. was then holding a council. Both Arialdus and a deputation from the clergy of Milan appeared before the council. The spokesman of the deputation acknowledged that there was much reason and soundness in the doctrine supported by Arialdus, but he complained of his manner, and of his intemperate and factious zeal, which was exciting a schism in the church. Arialdus having replied, the pope imposed silence, and, saying little about the grounds of the quarrel, he pronounced the sentence of excommunication against Arialdus and Landulfus to be null. He then appointed Anselmo, bishop of Lucca, and Cardinal Hildebrand (afterwards Gregory VII.) as legates to Milan, to investigate the matter in dispute, and he ordered Arialdus to go with them. The legates were not well received at Milan. Having investigated the conduct of the clergy, they returned to Rome to make their report, leaving at Milan Arialdus and Landulfus, whom they encouraged to persevere in their work. It seems that the two reformers succeeded in making converts even among the clergy, and that several priests who had purchased livings, resigned them, and that others separated themselves from their wives or dismissed their concubines.

In 1059, Nicholas II., then pope, sent as legates to Milan the learned Petrus Damianus and Bishop Anselmo. A tumult broke out soon after their arrival. Damianus in his work 'Contra Clericorum Intemperantiam' exhibits the difficulties of his position. "The fat bulls of the church of Lodi beset me, bellowing out, 'We have the sanction of the council of Tribur, which allows clergymen to have wives; ' to which I replied 'that the authority of the alleged council was of no avail, if it disagreed from the decretals of the Roman pontiffs.'" A new difficulty presented itself. Damianus having claimed precedence of the Archbishop of Milan on public occasions, had given offence, not only to the whole clergy, but to the people also, who did not like to see the humiliation of their ancient see. It was one of the objects of the mission of Damianus to enforce the supremacy of Rome, and he has reported in his works the principal arguments of which he made use for that object. It seems that the clergy remained silent, if not convinced, and Damianus proceeded to expedite the affairs of discipline. As the whole clergy, including the archbishop, were guilty of simony, it being an old received custom at Milan to give and receive fees for ordinations and preferments, Damianus obtained from the heads of the clergy their written promise to desist from the practice in future, and contented himself with awarding them certain canonical penances for past transgressions. Much was said on this occasion against simony, but little about the married priests; only the archbishop in his declaration promised to endeavour, as much as in him lay, to make all priests and deacons give up the company of their wives and concubines. Soon after, the Archbishop Wido repaired to the council held at Rome in April, 1059; and although Arialdus, who was also there, complained of the continuance of the irregularities of the clergy, Wido was well received by Pope Nicholas, who invested him with the pallium and the pastoral ring. By a canon of that council, priests and deacons keeping concubines were declared to be suspended from their functions.

In 1061, after the death of Nicholas, Anselmo, bishop of Lucca, was made pope by the name of Alexander II. One of his first acts was to write a pastoral letter to his townsmen, the clergy and people of Milan, full of kind sentiments, but expressing his confident hope that clerical chastity would be permanently honoured, and the opposite vice be cast off among other heresies. Previous to this the agitation against the clergy had somewhat subsided, as Arialdus was deprived of the active support of Landulfus, who became afflicted with a disorder of the chest, by which he lost his voice. At this juncture a brother of Landulfus, named Erlembaldus, happening to return home from a pilgrimage to Palestine, Arialdus fixed upon him as a fit champion, and urged him to gird on his sword "like a new Matathias to fight for the good cause." After some hesitation Erlembaldus resolved to go to Rome and abide by the decision of the pope. Arialdus went with him. Alexander II. received them affectionately, and having assembled a consistory, in which Cardinal Hildebrand took the lead, he appointed Erlembaldus gonfaloniere or standard-bearer of the Roman and universal church, and delivered to him the standard of St. Peter, commanding him to unfurl it against the enemies of the church whenever it should be necessary to resort to force.

On arriving at Milan, Arialdus and Erlembaldus began to exercise their mission, being supported by a large party among the people. They separated by force the priests and deacons from their wives and concubines, and they scourged many with whips studded with nails, according to Arnulfus. The priests had also their partisans, and frequent encounters took place, and confusion raged in the city. In the following year (1063) Pope Alexander wrote two more letters, one to the clergy and the other to the people of Milan, forbidding the faithful to attend the service of mass when performed by concubiniarian or simoniacal priests, declaring the latter to have lost their benefices if they persisted in their guilty course, and enjoining the heads of the clergy to enforce these decisions. The clergy however, being ill-disposed to obey, Arialdus proposed a conference. The archdeacon Guibert, a canon, and another clergyman, came forward to argue with Arialdus and Landulfus, who appears again on the stage on this occasion. Nothing came of the conference. Arialdus complained that there was hardly a clerical man who would join him, and that he was only supported by laymen. Both he and Erlembaldus were in frequent correspondence with Rome, and especially with Cardinal Hildebrand, and also with Peter Damianus.

In 1066 Arialdus wrote to the pope complaining that the clergy of Milan and the archbishop himself persisted in their old simoniacal practices, and that many of the priests did not observe celibacy. Erlembaldus went himself to Rome with the letter, and returned with a papal bull of excommunication against Archbishop Wido. The prelate communicated the fact to the astounded congregation from his place in the cathedral on Whit-Sunday morning, holding the bull in his hand, and telling the assembled multitude that this sentence of their common degradation and ruin was the result of the intrigues of those men who stood before them, pointing to Arialdus and Erlembaldus, who had taken a conspicuous place opposite the archbishop; that out of respect for Ambrose, the church of Milan had never before been subject to Rome; and that those who conspired to strip that ancient see of its independence, deserved to be cast out of the land of the living. Cries of "Death to them!" resounded from various parts of the church. The scene that followed is variously related, but it would appear that both the archbishop and Arialdus were roughly used. A day or two after, the archbishop laid an interdict upon the whole diocese of Milan as long as Arialdus remained in it; church-service was discontinued everywhere. The people, horror-struck, took the part of their archbishop. Arialdus and Erlembaldus thought it prudent to leave in the night, and they repaired to Legnano, which was a domain of Erlembaldus. But as they were surrounded by enemies, Arialdus asked a country priest of his acquaintance to conceal him in his church. The priest betrayed him to the emissaries of the archbishop. Arialdus was arrested, tied on a horse, and carried to the castle of Arona on the Lake Maggiore, and brought before a niece of the archbishop, called Oliva, who ordered him to be taken to a desert island on the lake, one of the now beautiful Borromeo islands, and gave secret instructions to the guards to kill him. It is said that he was offered his life if he would retract what he had said against the archbishop, to which Arialdus replied that he would not save his life by a lie. It is added that the guards hesitated to murder him, when two priests or deacons of his enemies were sent in a boat by Oliva to see that he was put to death, and they killed him after cruelly mutilating him. His body was thrown into the lake. This happened on the eve of St. Peter's day, June 28th, 1066. Unusual signs and prodigies, it is said, caused the body to be found uncorrupted ten months after, when Erlembaldus, at the head of an armed multitude, carried the body to Milan, where it was solemnly interred. Erlembaldus continued to agitate Milan for years after. The Archbishop Wido, worn out with age and anxiety, resigned; and a new schism broke out concerning the election of his successor. At last Erlembaldus was killed in an affray in 1076. Arialdus was inserted in the catalogue of martyrs by Pope Alexander II., and he is registered by the Bollandists among the saints of the month of June. The result of the contest was that the see of Milan became subject to that of Rome, like the other sees of Italy, and its discipline was made uniform with that of the

rest. Nothing further is said about the married priests, a class which became gradually extinct, as no more married men were ordained.

ARIAS, MONTANUS, BENEDICTUS, in Spanish *Benito Arias Montano*, was a celebrated Catholic divine and orientalist, who possessed vast erudition in Jewish antiquities, and chiefly distinguished himself as editor and interpreter of the sacred Scriptures. He was born, in 1527, of noble but poor parents, in a village called Frexenal de la Sierra, in Estremadura, near the Andalusian border, in a mountainous district; and hence his surname Montano. He studied for some time at Sevilla, and subsequently he took up his residence at Alcalá de Henares (Complutum), where he obtained the degree of Doctor of Divinity. He acquired a knowledge of Arabic, Syriac, and Chaldaic; at a later period, while journeying through France, England, Italy, Germany, and the Netherlands, he acquired several modern tongues. On account of his great scholarship, the bishop of Segovia, Martín Pérez Ayala, took him for his companion to the council of Trent. After his return to his own country he determined to live in seclusion and devote his time to literature, but at the request of Philip II. he proceeded to Antwerp to superintend the splendid and expensive edition of the 'Polyglott Bible,' which, at the suggestion of a most diligent and enlightened printer, Christopher Plantin, was to be executed in that city. Arias devoted four years to this undertaking, and presented the finished work to Pope Gregory XIII. in 1572. During his sojourn in the Netherlands, he was also president of the committee, which, by the order of the Duke of Alba, governor of the Netherlands, prepared the 'Index Expurgatorius.' The edition of the 'Polyglott Bible' which Arias gave to the world, in every respect justified the high expectation which had been formed of it; but in a voyage from the Netherlands to Spain nearly all the copies were lost. The king remunerated Arias's labours by giving him a yearly pension of 2000 ducats, besides other honorary rewards and lucrative offices. Arias was an upright, sincerely orthodox Catholic, but he was a declared enemy of the Jesuits, and that ambitious order omitted no opportunity to take revenge on so dangerous a foe—the more powerful, because his orthodoxy had never been questioned, and was supported by uncommon erudition. He died at Sevilla, in the year 1598, as prior of the convent of St. Iago, being then seventy-one years of age. His library, which was extensive, was incorporated in that of Escorial.

Arias's numerous and extensive literary works chiefly belong to theological, but partly also to classical literature, but his Polyglott certainly holds the principal place; it is generally called the 'Antwerp Polyglott,' or, from the patronage bestowed on it by Philip II., 'Biblia Regia,' and sometimes also after the printer, 'Biblia Plantiniana.'

ARI'ON, a native of Lesbos, the inventor of the dithyrambus, and a great musician, was contemporary with Periander of Corinth, and with Alyattes, king of Lydia (B.C. 628-571). He travelled as far as Taras (Taranto) in Southern Italy, and acquired considerable wealth by his professional skill. (Herod. i. 23; *Elian., Hist. Anim.* xii. 45.)

ARIOSTI, ATTILIO, a dramatic composer of some celebrity, was a native of Bologna. He was intended by his family for the priesthood, and in compliance with their wishes became a Dominican friar. But his heart was devoted to music, his time was spent in its cultivation, and at length he was freed by a papal dispensation from the rules of his order, and left to follow his favourite pursuit as he chose. His bent was towards dramatic composition, and in 1696 he set to music Apostolo Zeno's 'Dafne,' which was performed in his native city. Two years afterwards he entered the service of the electress of Brandenburg, and his ballet 'La Festa d'Imeneo,' and his opera of 'Atis' were produced at Berlin during the short period that he remained there. "To a portion of the latter," says Hawkins, "Ariosti adapted a composition called 'Sinfonia Infernale,' the modulation of which was so singular, and withal so masterly, that the audience were alternately affected with terror and pity in exact correspondence with the sentiments of the part and the design of the representation." During his residence at Berlin, Ariosti became acquainted with Handel, then a youth, and the friendship thus early formed was unimpaired in after life when they met as rivals. On his return to Italy he composed 'Nebuchadonassar,' an oratorio, for Venice; and his opera, 'La più gloriosa Fatica d'Ercole,' for Bologna. He quitted Italy again for Vienna, when, in 1708, he brought out the opera of 'Amor tra Nemici.' On the 12th July, 1716, the 'London Courant' announced his performance of a solo on the viol d'amour at the Italian opera house, on the sixth representation of Handel's 'Amadigi.' During this, his first visit to England, Ariosti appears only to have attracted attention as a skilful performer on an instrument little known there. In 1720 a plan was formed in London for patronising Italian operas, and enlisting in their composition and performance the choicest musical talent of Europe. For this purpose the sum of 50,000*l.* was raised by subscription, George I. contributing 1000*l.*; and the associated subscribers gave the establishment the title of the Royal Academy of Music. A lyric poet was engaged, the best singers that Europe could supply were brought to London, and three eminent composers were enlisted in the service of the academy. Bononcini, as he himself states, was invited from Rome, Ariosti from Germany, and Handel, who at this time resided with the Duke of Chandos at

Cannons, was not only included in the arrangement, but was commissioned to engage the principal singers. The following year, Handel having returned from his mission, the libretto of 'Muzio Scevola' was divided between these three composers; the first act having been assigned to Ariosti, the second to Bononcini, and the third to Handel. Ariosti's 'Ciro' was the first new opera after the run of 'Muzio Scevola,' and its songs were printed by Walsh. To this succeeded the 'Floridante' of Handel, and then the 'Crispo' of Bononcini. In 1723 Handel's 'Otho' was followed by the 'Coriolano' of Ariosti; then came Bononcini's 'Erminia,' the 'Flavio' of Handel, and, in 1724, the 'Vespasiano' of Ariosti. This successive occupation of the Italian opera stage by the three rivals continued till 1727, when Bononcini having produced his 'Astyanax' and Ariosti his 'Lucio Vero,' they relinquished their engagements, and left Handel in undisputed possession of the field.

Of the various operas which Ariosti wrote, 'Coriolano' was the most popular. "The prison scene," says Hawkins, "is wrought up to the highest degree of perfection that music is capable of, and is said to have drawn tears from the audience at every representation." This was supposed to have been parodied by Gay in the 'Beggars' Opera,' and to have been alluded to in this sentence from his introduction: "I have introduced the similes that are in all your celebrated operas; and besides I have a prison scene, which the ladies always reckon charmingly pathetic."

Bononcini, after ceasing to write for the stage, found, for a time, patronage and support among his titled admirers, especially from the Marlborough family. Ariosti was less fortunate. He issued proposals for publishing a collection of cantatas, and a set of lessons for the viol d'amour, but with little success. No reputation is more transient than that of a composer for the Italian opera, and the three rivals, whose contending claims for supremacy for several years agitated the fashionable world, were in turn destined to encounter its neglect. Ariosti, soon after this disappointment to his hopes, quitted England, and of his future fate nothing is recorded.

"Ariosti," says Dr. Burney, "seems to have been a perfectly good harmonist, who had treasured up much excellent music in his head, but had little invention. I can sometimes trace Corelli in his works, but, as for his immediate contemporaries, there appear, on a general reading, so many claimants for the favourite passages of the day, that it is difficult to assign them to the right owners: Handel, Bononcini, and Ariosti all adopted the same divisions in songs of execution." In proof of this assertion, Burney has subjoined the 'Aria d'agilità,' sung by Senesino in 'Vespasiano,' in which the alleged community of style and passage is sufficiently conspicuous.

That Bononcini and Ariosti should have been invited to England as joint composers with Handel to the Italian opera at a time when the latter was residing in London, and had given some evidence of his power as a dramatic writer, may seem to argue a needless prodigality of expenditure on the part of its noble directors; and that there should have been enlisted on the side of Handel's competitors a formidable array of partisans may also appear to indicate a strange want of ability to estimate the real capacity and merit of the three rivals. But it must be remembered that the works which have immortalised Handel had not, at this period, been called into existence. He is now known, pre-eminently, as a choral writer; his name is associated with whatever is grand and majestic in his art. He was then known and estimated solely as a composer of operas for the Italian stage, forming his style upon Italian models, governed and restricted by the rules which then regulated the lyric drama of that country, and venturing upon no demonstration of that power which he afterwards so copiously displayed. It is true that in Handel's operas his genius occasionally blazes out, that the vigour of his mind and the extent of his resources are disclosed, that we feel the spirit and strength of the 'giant Handel;' but these indications of power are, nevertheless, rare, and a comparison of his operas with those of his rivals will show a pervading sameness of style and of phrase sufficient to account for their having shared with him, for a time, the favour of the London public. The operas of Handel, Ariosti, and Bononcini are now almost equally unknown, and are found only in the libraries of collectors.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARIOSTO, LUDOVICO, was born at Reggio, near Modena, Sept. 8, 1474. He was the son of Niccolò Ariosto of Ferrara, a military officer in the service of Duke Hercules I. d'Este, and governor of the citadel of Reggio; his mother, Daria Malaguzzi, was of a noble family of Reggio. Ludovico was the eldest born of a family of five brothers and five sisters. He early showed a disposition for poetry, and wrote in his boyhood a drama on the subject of Pyramus and Thisbe, which he and his brothers rehearsed before their parents. Ludovico was designed for the profession of the law, but after spending five years in preparatory legal studies at Padua he was allowed to follow his own inclination. Being then past twenty, and but little acquainted with the ancient writers, he put himself under the tuition of Gregorio da Spoleti, by whose assistance he made great progress in Latin. Greek he acquired

later in life. On the death of his father, about the year 1500, he found himself charged with the guardianship of his younger brothers and sisters, and the management of a very moderate patrimony—a task which he entered on with brotherly affection, and which he fulfilled with integrity. Some lyric compositions, written at this time, attracted the notice of Cardinal Ippolito d'Este, younger son of Hercules I, and brother to Alfonso, the heir to the ducal crown of Ferrara. The cardinal in 1503 appointed Ariosto one of the gentlemen of his retinue, and employed him in important affairs and missions both for himself and for his brother Alfonso, whose father had died in 1505. Alfonso having joined in 1509 the famous league of Cambray against the Venetian republic, Cardinal Ippolito took the command of his brother's troops, and Ariosto was present at the campaign of that year on the banks of the Lower Po, the atrocities of which, perpetrated chiefly by the Slavonian mercenaries in the service of Venice, he feelingly describes at the beginning of the thirty-sixth canto of his great poem. In December of the same year he was sent on a mission to Rome to request the assistance of Julius II. against the Venetians, but the Pope had already changed his mind, and become jealous of his French and German allies. Cardinal Ippolito however in the meantime defeated the Venetians, and destroyed their flotilla on the Po, and the object of Ariosto's mission of course ceased.

From a bronze Italian medal in the British Museum.

The following year, 1510, Pope Julius, having openly joined the Venetians against his former allies, excommunicated the Duke of Ferrara for refusing to follow his example, and assembled an army in the Romagna to attack Alfonso's territories. Ariosto was now sent again to deprecate the wrath of the pontiff, but the reception he met with induced him to make a hasty escape from Rome. The war continued till the death of Julius, in the beginning of 1513, delivered Alfonso from his bitterest enemy. Cardinal Giovanni de' Medici being raised to the pontifical throne by the name of Leo X., Ariosto went to Rome to congratulate the new pope, whom he had known at Florence and at Urbino. He was received most graciously by the pope; but becoming tired of waiting for some more substantial mark of friendship, Ariosto left Rome, and returned to Ferrara to resume his studies. He had long before this begun a poem, in ottava rima, on the fabulous adventures of the knights and paladins, Moors and Christians, of Charlemagne's age—an inexhaustible theme, which had occupied the pens of many Spanish, French, and Italian ballad and romance writers.

In Italy, Pulci, Bojardo, and Bello had each written a poem on the wars between Charlemagne and the Saracens, which tradition had confounded with the previous wars of Charles Martel and Pepin, and in which Orlando, or Roland, appeared as a prominent character, and the champion of the Christians. Bojardo took Orlando for the hero of his poem, and made him fall in love with Angelica, an infidel princess, of exquisite beauty and of consummate coquetry, who had come all the way from Asia for the purpose of sowing dissension among the Christian knights. Bojardo introduced numerous episodes into his narrative, in the midst of which he broke off the story of Angelica, in the fiftieth canto of his 'Orlando Innamorato,' and never resumed it, although he had carried his poem to the sixty-ninth canto at the time of his death. Ariosto took up the thread of Angelica's story where Bojardo had left it, and making the jilt fall in love herself with Medoro, an obscure youthful squire, he represents Orlando as driven mad by jealousy and indignation: he continues in this state during the greater part of the poem, committing a thousand absurdities, until he is restored to reason by Astolfo, who brings back his wits in a phial from the moon. Orlando's madness however is rather terrific and lamentable than ludicrous; for the poet, often jovial and humorous in his episodes, never loses sight of the dignity of his narrative, nor descends to the low burlesque. But the madness of Orlando is not the principal subject of the poem, although it has furnished the name for it; the war between Charlemagne and the Saracens is continued throughout the narrative, of which it forms a most important and consecutive action, ending with the expulsion of the Moors from France, and the subsequent death of their king Agramante and their other chiefs. The poet has interwoven with these a third subject, which some critics, who are determined to find a unity of action in a poem which is not an epic, have assumed to be the principal one, namely, the loves

of Ruggiero, a young Saracen knight born of Christian parents, and Bradamante, a Christian Amazon, and Rinaldo's sister. After numerous adventures, crosses, and narrow escapes, he makes them marry in the last or forty-sixth canto of the poem; and from their union he derives the genealogy of the house of Este.

Intermixed with these three subjects, or tales, are numerous and some long episodes of knights and damsels, of their fights and loves, of their strange adventures, some heroic, some ludicrous, and others pathetic; there are magicians and giants, enchanted palaces and gardens, flying horses and harpies, and other monsters; and the reader finds himself in the midst of a new world, created as it were by the wand of an enchanter. The poet has the art of sketching and particularising every creature of his fancy with features and attributes so apparently appropriate and consistent with their supposed nature, as to remove the feeling of their improbability. He appears himself deeply interested in his fantastic creation, and at times so entangled in his own labyrinth, that he loses himself, as he ingeniously confesses, and is obliged to break off in the midst of a most interesting story, to run after some other personages, whom he left in a desert island, or on a dangerous voyage, or on the eve of a mortal combat, and to bring them again to the view of his readers. Yet he contrives to wind off all his threads at last with admirable skill. It is not always an easy thing to follow such a guide; but we wander along from tale to tale, from description to description, delighted with the present and unconscious of the ultimate object of our journey. Such is the 'Orlando Furioso' (as far as an idea of it can be given in a few words), the first of all the poems of chivalry and romance. A knowledge of Bojardo's 'Innamorato' is however required for the proper understanding of the 'Furioso.'

Ariosto, after spending ten years in writing his poem, published it in one volume quarto, at Ferrara, in April, 1516, in forty cantos, which he afterwards increased to forty-six. He sold a hundred copies of it to the bookseller Gigli of Ferrara for twenty-eight scudi, about fifteen pence per copy. He dedicated it to Cardinal Ippolito, who however had no taste for poetry; he was a busy man of the world, and he told Ariosto that "he would have felt better satisfied if, instead of praising him in idle verse, he had been more assiduous in his service." (Ariosto, 'Satira,' ii.)

In 1517 the cardinal, being about to set off for Gran in Hungary, of which he was archbishop, asked Ariosto to follow him there; but the poet excused himself on the plea of his health, which was very delicate. His brother Alessandro however accompanied the cardinal. Ariosto's refusal offended his patron, and some time after his departure a small pension which he had allowed him was stopped. Cardinal Ippolito had however proved himself a friend to Ariosto by many substantial benefits. After the cardinal's death his brother the duke called Ariosto to his own service, and through his munificence the poet was enabled to build himself a house, surrounded by a pleasant garden, opposite the church of San Benedetto, at Ferrara. In other respects also the duke behaved to him with great kindness and liberality. In February 1521 Ariosto published a second edition of his poems with many corrections, but still in forty cantos only; this edition is now extremely rare, and even more so than the first.

In 1522 Ariosto was appointed governor of the mountain district of Garfagnana, a dependency of Modena, situated on the western slope of the Apennines, and bordering upon Lucca. Here he remained nearly three years, during which he seems to have conciliated the minds of the rude population, and to have restored order among them. Being once stopped in the mountains by a band of robbers, his name and reputation proved his protection; the outlaws, on learning who he was, showed him much respect, and offered to escort him wherever he chose. In 1524 he returned from his government to Ferrara, where it appears he remained ever after, nominally in the duke's service, but enjoying leisure for his studies. He now wrote his comedies, which were performed with great splendour before the court, in a theatre which the duke built for the purpose. In October 1532 Ariosto, after correcting and revising his poem for sixteen years, published the third edition in forty-six cantos, which, in spite of some misprints of which Ariosto bitterly complains, remains the legitimate text of the 'Orlando Furioso.' The apparent ease of Ariosto's verse is the result of much labour. Scarcely had Ariosto completed his third edition, when he found himself grievously ill with a painful internal complaint; and after lingering several months he died on the 6th of June, 1533, in his fifty-ninth year. He was buried in the old church of San Benedetto, attended by the monks. Forty years later, after the church had been rebuilt, Agostino Mosti of Ferrara, who had studied under Ariosto, raised a handsome monument to him in the chapel, which is to the right of the great altar, to which spot the poet's bones were transferred with great solemnity. In 1612 Lodovico Ariosto, grand-nephew of the poet, raised another monument to his memory more magnificent than the first, in the chapel to the left of the great altar, to which place Ariosto's remains were finally removed.

Besides the three Ferrara editions above-mentioned, printed under Ariosto's superintendence, several reprints of his poem were published in various parts of Italy in his lifetime. Numerous editions followed after his death; all however more or less incorrect, and some of them purposely altered and mutilated. The Aldine edition, of 1545, is one of the best of that age. The best modern edition of the 'Orlando

Furioso' is that of Milan, in 1818, in quarto, in which the learned editor Morali has faithfully restored the original text of 1532. The 'Orlando Furioso' has been translated into most European languages, though seldom successfully. Of the English translations, that by Harrington is spirited and much superior to Hoole's, but the translation by Mr. S. Rose is considered the best, and is generally faithful.

Ariosto is considered one of the best Italian satirists. The tone of his satires resembles that of Horace rather than that of Juvenal. He introduces several of the principal occurrences of his life, and exhibits the manners and vices of his time and country. He speaks of popes, princes, and cardinals, with great freedom, but in language generally, though not always, decorous. His satires, seven in number, and addressed to his brothers and other friends, were first published in 1584, after his death, and have often been reprinted, both separately and with the rest of his works. He wrote five comedies in blank verse, 'La Cassaria,' 'I Suppositi,' 'La Lena,' 'Il Negromante,' and 'La Scolaistica.' Cardinal Bibbiena, Ariosto, and Machiavelli, all three contemporaries, were the first writers of regular comedy in Italy. They adopted the manner of Plautus and Terence; and they preserved the unities. The language is often grossly indecent, and yet these plays were performed before the court and chivalry of those times. There are some other minor works of Ariosto, which are all found in the Venice editions of Ariosto's works of 1741 and 1766, edited by Barotti.

Ariosto left two natural sons, Virginio, whom he had legitimated by public act in 1530, and who afterwards became a canon of the cathedral of Ferrara; and Giovanbattista, who was made a captain in the Duke's service. The number of commentators, critics, and biographers of Ariosto, is very great; some of the best have been mentioned in the course of this article. Baruffaldi junior has also written a life of Ariosto; Ferrara, 1807.

ARIOVISTUS, a German chief, whom Cæsar encountered and defeated in Gaul in the first year of his proconsulship, B.C. 58. It is not known to which of the Germanic nations Ariovistus belonged. He was invited or rather hired to enter Gaul by the Sequani (the ancient inhabitants of Franche-Comté), who, in alliance with the Arverni (the ancient inhabitants of Auvergne), were struggling with the Ædui (who inhabited Burgundy) for the supremacy of Gaul. The first band of Germans who were induced by the promises and gifts of the Sequani to cross the Rhine amounted to 15,000, but subsequent reinforcements in the course of years swelled the number to 120,000 of various nations—Triboces or Tribocci, Vangiones, Nemetes, Sedusii, Harudes, Marcomenes, and Suevi. Three of these nations, the Tribocci, Vangiones, and Nemetes, we find at a subsequent period settled on the Gallic side of the Rhine.

The aid of Ariovistus and his forces gave a decided superiority to the Sequani. The Ædui were defeated in several engagements, with the loss of all their nobility and cavalry, and were obliged to submit to the demands of their victorious enemies. The Sequani were however in no wise benefited by their victory. Ariovistus seized a third part of their territory, in which he settled with his army, and eventually reduced to his sway all that part of Gaul which was near his settlement. The chief of these events occurred probably some years before Cæsar's arrival in Gaul, since Ariovistus, "from long practice," was accustomed to speak the Celtic language (Cæsar, 'De Bell. Gall.' i. 47), and had married his second wife, a Noric woman, sister of Voctio or Voccio, the king of the Norici, who inhabited Upper Bavaria and the Tyrol. After his settlement in Gaul, in a message to Cæsar, Ariovistus boasts that his unconquered Germans had not for fourteen years dwelt in a fixed abode: but this will only imply that his army had been embodied for so many years, not that they had been so long in Gaul. He had anxiously sought, and in Cæsar's consulship had obtained the alliance of the Roman senate and people, by whom he had been acknowledged as king, which seems to imply an admission of his title to the sovereignty of that part of Gaul of which he had taken possession. Probably the Gallic princes, whose statements Cæsar has recorded, exaggerated both the power and the cruelty of Ariovistus. When Cæsar had, in the first year of his proconsulship in Gaul, broken the power of the Helvetii, he determined to pick a quarrel with Ariovistus and attempt to drive him out of Gaul. Dion Cassius plainly intimates that the quarrel was of Cæsar's seeking; but Cæsar himself says that he was induced to attack him by an application from the Gallic princes, who came to congratulate him on his victory over the Helvetii. The application has however every appearance of having been got up for the purpose of furnishing an excuse for the war, and was sustained by evidently exaggerated representations. Cæsar's first step was to demand an interview with Ariovistus, that they might confer on matters of importance to both. Ariovistus replied, that if Cæsar wished for an interview he might come to him; but that he (Ariovistus) could not come into the Roman territory. He also rejected the terms on which Cæsar proposed to renew the alliance of Rome with the German prince. Cæsar upon this determined on immediate hostilities, being urged by the Ædui to protect them from the Harudes, 24,000 of whom had just arrived in Gaul, for whom Ariovistus had demanded another third of the Sequanian territory, and who were meanwhile ravaging the country of the Ædui. He had also received intelligence that a hundred clans ('pagi') of the Suevi had reached the bank of the Rhine near the country of the Treviri (the electorate of Treves), and

were attempting to cross that river. By a rapid march he anticipated Ariovistus in occupying Vesontio (the modern Besançon), an important military post; and, by a well-timed address, dispelled a panic which had seized his men, especially some of the young officers, who had seen little service. Having converted the fear of his troops into warlike ardour, he continued his march; and Ariovistus, alarmed at his approach, consented to an interview, which was broken off by a report that the Germans were attacking the escort of the Roman general. The German matrons, who were regarded by their countrymen as prophetesses, had foretold that an engagement could not be successful if fought before the new moon, Ariovistus consequently wished to decline fighting before that time; but Cæsar, aware of the superstition of his opponents, forced them to an engagement; and after a severe, and for a time doubtful struggle, gave them an entire defeat. The pursuit was continued with great slaughter on the banks of the Rhine, distant several miles. Ariovistus escaped in a little boat across the river; but his two wives and one of his daughters perished in the flight, and a second daughter was taken prisoner. Neither the force of the Germans nor their loss is stated by Cæsar; but Plutarch and Appian give the loss at 80,000 and Orosius says that the number and loss of the enemy and fierceness of the fight were inconceivable. The subsequent history of Ariovistus is unknown. His death was mentioned by Titurius Sabinus, about four years after, as one cause of the hostility of the Germans towards Rome (Cæsar, 'De Bell. Gall.' v. 29.).

Cæsar does not state any facts in confirmation of the character of arrogance and cruelty which he has assigned to Ariovistus. Tried by the maxims of his age and country, the German prince does not appear to be chargeable with any peculiar guilt, except in the seizure of Cæsar's envoys, C. Valerius Proculus and M. Mettius, and in the design which he is charged with entertaining of putting the former of the two to death. But the only account we have of this transaction is from Cæsar himself.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ARISTÆNETUS, a Greek writer, a native of Nicæa, whose epoch is not capable of being accurately determined. It has been conjectured that the Aristænetus to whom are attributed the 'Erotic' or 'Love Letters' is the person to whom several of the letters of Libanius are addressed, and who lost his life in the earthquake of Nicomedia, A.D. 358: some are inclined to place him at a later epoch. These Letters, of which there are two books, are a species of rhetorical exercise, and not real letters; they often exhibit bad taste, but are of some value as presenting a picture of the manners, or at least of the literature, of the age.

ARISTARCHUS of Samos, an astronomer, lived in the 3rd century B.C., and was probably, during the latter period of his life, contemporaneous with Archimedes. In his work entitled 'Arenarius,' Archimedes attributes to Aristarchus the opinion that the earth moves round the sun, which is supposed to have been previously held by Pythagoras and Philolaus. His words are—"He (Aristarchus) says, that the fixed stars and sun remain without motion, but that the earth is carried round the sun in the circumference of a circle, the sun being in the centre; and that the sphere of the fixed stars, which has the same centre as the sun, is so great that the circle described by the earth bears no more proportion to the distance of the fixed stars, than the centre of a sphere does to its surface." Archimedes then proceeds to combat the singular notion contained in the last words. A passage in Plutarch's treatise on the moon, states that Aristarchus supposed the heavens to be fixed, and that the earth moved in an oblique circle, at the same time revolving round her own axis. We learn also from Archimedes that Aristarchus supposed the apparent diameter of the sun to be the 720th part of the zodiac, that is, half a degree. This is about two minutes too little.

One small work of Aristarchus has come down to us, 'On the Magnitudes and Distances of the Sun and Moon,' which makes no mention of the preceding hypothesis with regard to the earth's motion. The scope of it will be shown in the following translation of the introduction (from Wallis's edition). The brackets contain remarks, mostly from Delambre. "1. The moon receives light from the sun. [This was asserted before Aristarchus.] 2. The earth is a mere point or centre when compared with the sphere of the moon. [This is wrong, since the moon would then appear at the same point of the heavens from different parts of the earth, which is not the case.] 3. When the moon appears halved, the great circle separating the light and dark part of the moon passes through the eye of the spectator. [A very simple truth, but a great step in astronomy, as giving rise to the first determination of the relative distances of the sun and moon, the principle of which was correct.] 4. In the preceding case the angle between the sun and moon is less than a quadrant by its thirtieth part. [That is, the angle is 87°; whereas 89° 50' is nearer the truth.] 5. The apparent diameter of the earth's shadow [that is, the section through which the moon passes in an eclipse] is twice that of the moon. [This would give it 64'; it is nearer to 82'.] 6. The moon subtends the fifteenth part of a sign. [This would make the apparent diameter 2°, which is four times too great.] Hence the distance of the sun from the earth is more than eighteen times the distance of the moon, and less than twenty times; that is, when the moon appears

halved. And the [real] diameter of the sun bears the same proportion to the [real] diameter of the moon. The diameter of the sun bears to that of the moon a greater proportion than 10 to 3, but a less proportion than 43 to 6, as appears from what has been found of the ratio of the distances, the shadow of the earth, and the moon's subtending the 15th part of a sign."

The preceding deductions follow correctly from the principles laid down, and of course partake of their numerical inaccuracy. The manner in which they are proved shows that the Greeks of this period had no trigonometry whatever; not even a table of chords, and the limits given are not so close as those which might have been obtained from the same data by a ruler and compasses. There are several propositions on the relative bulks of the three bodies, deduced by common methods.

There is a commentary of Pappus upon the work of Aristarchus, which has been given (in part at least) by Wallis in his edition.

From an obscure passage in Plutarch ('Platonic Questions,' 8), in which the report of Archimedes is corroborated, Delambre infers that Aristarchus attributed day and night to the rotation of the earth. It is hard to see how he could do otherwise, if he supposed the sun fixed.

There is another work attributed to Aristarchus, published by Roberval at Paris in 1543, on the 'System of the World.' But this is generally believed to have been written by Roberval himself.

Vitruvius speaks highly of Aristarchus, as the inventor of many useful machines, and in particular of a dial which he terms 'scaphe.' This dial is described by Martianus Capella (cited by Weidler), from which, and partly from the name, we should infer that it was a part of a concave hemisphere, with a style ending in the centre, so that by drawing the equator, &c., inside the hemisphere, the sun's position might be found by marking the extremity of the shadow. Montucla describes one, dug out at Tusculum in 1741, which, since Cicero describes such an instrument, is conjectured to have belonged to him. (Mont., 'Hist. Math.,' i. 721; a drawing is given.)

ARISTARCHUS, the critic, the son of Aristarchus, was born in the island of Samothrace; but he abandoned the narrow limits of his own country, in order to settle in the wealthy and populous city of Alexandria. The time of his birth is not exactly known; but he is stated to have flourished about B.C. 158. He was preceptor to the son of Ptolemæus Philometor, king of Egypt, who reigned from B.C. 181 to 145. Ptolemæus Evergetes II., who succeeded, put his nephew, the pupil of Aristarchus, to death. Aristarchus was the disciple of Aristophanes of Byzantium, the celebrated grammarian, who flourished about B.C. 200, and was the first Grecian who laid the principles of philological criticism upon a sound and accurate basis. Aristarchus succeeded his master Aristophanes (for whose opinions he is stated to have entertained great respect), as head of the grammatical and critical school of Alexandria; and obtained in that capacity, by his eminence as a teacher and by his various writings, a reputation greater than any other critic of antiquity. Forty grammarians are stated to have proceeded from his school, who doubtless contributed to spread his fame over Greece and the neighbouring countries. His name was also highly celebrated among his contemporaries; and after his death his authority was so much esteemed, that Horace and Cicero used Aristarchus as a general name for a great critic, and Sextus Empiricus mentions him with Plato and other such eminent names; one of the scholiasts to Homer likewise expresses an opinion (which a modern critic has applied to other persons), that it is better to err with Aristarchus than to be right with Hermias, a grammarian of little note ('Ad Il.,' 235.)

The critical works of Aristarchus appear to have been very voluminous, but they are now all lost, and are only known from extracts and citations preserved in other writers. His chief work was his edition of the 'Iliad' and 'Odyssey,' in which, 1, he revised the text, partly by means of the comparison of manuscripts, and partly by conjecture; 2, he divided the two poems into twenty-four parts or books, each distinguished by a letter of the Greek alphabet, which in the Alexandrine age contained twenty-four letters ('Incertus de Hom. Poesi,' in Ernesti's 'Homer,' vol. v. p. 152); and 3, he placed certain critical marks before certain lines, some denoting that the verses so marked contained something worthy of notice, and others that they were spurious; the last were merely straight lines thus —, in the form of a spit or ὀβελοί, whence ὀβελίζω in Greek, and 'obelo notare' in Latin, "to mark with an obelus," meant to mark as spurious. The reasons for the changes which he made in the text, and for the marks which he prefixed to the verses, and his explanations of doubtful passages, he appears to have given separately in some of his commentaries, of which he is stated to have written more than 800 books. (Suidas in v.) Probably these books were very short divisions, but the commentaries included not only his labours on Homer, but also illustrations of Hesiod, Archilochus, Alceus, Anacreon, Æschylus, Sophocles, Pindar, Aristophanes, Aratus, and other poets. Of these latter productions of Aristarchus few remnants have been preserved; of his Homeric criticisms however a large part is extant in the Scholia to Homer, from which a tolerably complete notion of his mode of treating ancient Greek poets may be formed. One of the most remarkable features of his criticism is the boldness with which he condemned numerous verses as unworthy of Homer, and as manifest interpolations

of a later age. Various opinions have been formed on these judgments of Aristarchus; some moderns have thought that his method was in the highest degree arbitrary and uncritical, while others have thought that he exercised a sound and modest discretion. There can be no doubt that Aristarchus trusted chiefly to his own sagacity in discovering the traces of interpolation. Interpolations of the constituent parts of Homer's poems, if any such existed, were doubtless made before the age when the 'Iliad' and 'Odyssey' were first reduced to writing; and therefore they could not be detected by the mere comparison of manuscripts. Consequently Aristarchus ought not to be taxed with rashness for condemning verses of Homer which might be found in all the manuscripts: he rejected them because he thought them unworthy of Homer, and inconsistent with the general character of his poetry and language. If the existence of any additions to the Homeric poems, of considerably later date than the body of the poem (as the last book of the 'Odyssey'), is ever susceptible of proof, it can only be established by such probable and indirect arguments as those employed by Aristarchus in justification of his obel.

The division of Homer into books was doubtless made by Aristarchus for the purposes of reference, which were important to critics such as himself; and it has been retained on that account ever since his time. Aristarchus did not confine his criticism to grammatical and metrical questions, but he also gave historical and geographical illustrations of the author's text. His notes on the mythology and geography of Homer, preserved in the Scholia, are very numerous. (Lehrs., 'De Aristarchi Studiis Homericis,' pp. 167-256.) Aristarchus published two editions of his recension of Homer, as appears from numerous passages in the Scholia to Homer, where the differences between the readings of the first and second editions are noticed. (Lehrs., 'De Aristarchi Studiis Homericis,' p. 27.) His recension became the established text of the 'Iliad' and 'Odyssey,' not only among the grammarians of Alexandria, and their disciples; but among the copyists from whose transcripts the modern versions of Homer have been derived since the invention of printing. In the scholia to the 'Iliad,' moreover, a constant reference is made to the explanations and obel of Aristarchus, whose opinion is often stated without the addition of his name, as if he was pre-eminently the commentator of Homer. (Wolf, 'Prol. ad Hom.,' a. 47.)

Besides his edition of Homer and his Commentaries, he wrote some short works addressed to individuals, with other productions, which were considered less accurate and elaborate than his Commentaries (Schol., 'Il.,' ii. 111; Lehrs., 'De Aristarchi Studiis Homericis,' pp. 20-6). He wrote also in defence of analogy in matters of criticism, against Crates the grammarian, who defended the principle of anomaly. (Wolf, 'Prol. ad Hom.,' p. 230.) He is likewise stated to have contended at Bergamus with Crates, who was a native of that town. Late in his life he appears to have retired from Alexandria to Cyprus, where, being afflicted with a dropsy, he died of voluntary starvation at the age of seventy-two; leaving as his successor in the Alexandrine school his disciple Ammonius. He had two sons, named Aristarchus and Aristagoras, who were both idiots; the former was sold as a slave, but having been brought by his master to Athens, he was redeemed by the Athenians, apparently out of respect for his illustrious father. (Suidas in v.)

ARISTEAS. Josephus, Epiphanius, and others call him *Aristeus*, but in the work which bears his name he is called *Aristeas*. He seems to have been a Cyprian by birth, and to have held a high place at the court of Ptolemæus Philadelphus, king of Egypt. There is extant a work which is generally entitled 'the History of the Seventy Interpreters.' It is a letter in Greek which professes to be written by Aristeas to his brother Philocrates. This letter contains an account of a translation which was made of the 'Jewish law,' that is the Pentateuch, and not, as is commonly stated, of all the Old Testament, by the command of Ptolemæus Philadelphus. The following account of Aristeas is extracted from the letter:—"Ptolemæus Philadelphus was forming a vast library at Alexandria (B.C. 273), and he entrusted the formation of this library to Demetrius Phalereus. Demetrius in a conversation which he held with Ptolemæus in the presence of Aristeas, told the king that he had heard that a copy of the Jewish laws deserved a place in his library, but that it would be requisite to translate them, as they were written in the peculiar language of the Jews, 'which,' said Demetrius, 'is generally considered to be Syriac, but this is a mistake.' The king determined to write to the Jewish high-priest on the subject. But at the suggestion of Aristeas, as a preliminary step, he purchased the freedom of all the Jews in his dominions who had been taken captive by his father or himself. They amounted to more than 100,000, and the king paid six hundred and sixty talents altogether. He gave twenty drachms for each slave to their several masters. He then sent Aristeas and Andreas the commander of the royal body-guard, with magnificent presents, and a letter to Eleazar the Jewish high-priest, in which he requested Eleazar to send to Alexandria seventy-two interpreters, six elders from each tribe, that their number might give authority to the work. The seventy-two elders were sent. Their names are given in the letter. They were well versed in both the Hebrew and Greek languages. They brought a copy of the law consisting of 'different parchments, in which the law was written in gold in the Jewish letters' (p. 790 D. ed. Gallandius). The king when he saw the work bent down in

reverence before it about seven times, and wept from joy; and as about this time he had gained a naval victory over Antigonos, he said that the day of their arrival should be observed during his life as a holy day, and he invited them to a rich banquet the same day. During seven days, he entertained them at similar banquets, proposing to them questions which they answered with great wisdom. Three days after these banquets, Demetrius took them to an island, which from the description was Pharos, in the harbour of Alexandria, but the name is not stated in the letter. Here they were lodged all together in a magnificent house, near the shore, far from all noise and tumult. They laboured every day at the translation till the ninth hour, that is, till three o'clock in the afternoon, and they finished their work in seventy-two days. The translation was made in this manner. The elders consulted together as to the meaning of a passage, and when they had fixed upon the translation, Demetrius wrote it down. When the work was ended, Demetrius summoned the Jews and their heads to the house where the interpreters had lodged, and read to them the translation. They approved of it. Curses were pronounced upon all who should venture to add to or take anything from it. The Jews requested permission of Demetrius to take a copy of the translation. The king received it with reverence, and ordered it to be carefully preserved, and after inviting the interpreters to come and visit him frequently, he sent them home with ample gifts both for themselves and Eleazar." This is the sum of the story of Aristæas. The letter of Aristæas was first published in the original Greek, with a Latin translation, by Simon Schardius, 8vo., Basle, 1561. The best edition is given by Gallandius, in his 'Bibliotheca Veterum Patrum,' tom. ii. pp. 771-824. It is founded chiefly on the Oxford edition of 1692, 8vo.; but Gallandius has also made use of the edition by Fabricius, which is appended to Havercamp's edition of Josephus, and of those by Hody and Van Dale.

Although the ancient writers derive their account from the letters of Aristæas, they not only differ from him more or less, but they also disagree among themselves. The antiquity of the letter is shown by its being quoted by Philo and Josephus. Josephus professes to derive his account from Aristæas, and he has inserted in his 'Jewish Antiquities,' the various letters which were written on the subject; but his edition of these documents differs materially from the copy which is found in the work of Aristæas, as it is now extant. There is no reason to doubt that we have now the original letter ascribed to Aristæas.

The genuineness and authenticity of this letter were unanimously believed by the ancient Church, nor were they called in question till the 17th century. From this date the general opinion has been that the letter attributed to Aristæas is a forgery, and that it is the work of an Alexandrine Jew, who lived before the time of Christ, and whose object in forging the letter was to give authority to the Greek version, which was in use among the Hellenistic Jews. An examination of the Septuagint version is sufficient to show that it was made by different persons, and probably at different times. Even if the story of Aristæas is true, it appears from the letter itself that the Pentateuch alone was translated by order of Ptolemæus Philadelphus. Josephus expressly declares that 'only the law' was translated in the time of Philadelphus, and such was the opinion of the learned in the time of Jerome. (Jerome, 'In Ezech.' v. 12, xvi. 13.) There seems to be no improbability in the story of the letter, if adopted up to a certain point, that the Pentateuch was translated into Greek by order of Ptolemæus Philadelphus for his library, and that he invited Jews from Judæa who were learned in Hebrew to assist the Alexandrine Jews, who knew Greek well, but Hebrew imperfectly. But the common opinion seems now to be that the version of the Pentateuch was made by the Alexandrine Jews for their own use about B.C. 285, during the reign of Ptolemæus Soter. Under any supposition it is probable that this version was called 'the Septuagint,' because it was approved by the Sanhedrim, or council of seventy, of the Alexandrine Jews. The other books of the Old Testament were extant in Greek two centuries before the birth of Christ. The letter of Aristæas has given rise to a great number of works.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARISTIDES, son of Lysimachus, a great Athenian statesman and general, who took a leading part in the delivery of Greece from the Persian invasion. He was of the tribe Antiochia, and was born in Alopee, a demos of Attica. Plutarch has given us little information as to the steps by which Aristides rose to eminence in the state. Several anecdotes illustrative of his probity are told by that amusing, but not very accurate author, which, according to this arrangement of his life, ought to have occurred before the Persian war; but the date of their occurrence is not fixed, and they contain no distinct mention of Aristides's public employments, except that he was twice chosen treasurer of the public revenue of Athens. Plutarch further states, that Themistocles and others, whose malpractices he had exposed, had influence enough to procure his condemnation on a charge of malversation; but that, by the exertions of the more virtuous citizens, the fine imposed on him was remitted, and he was again elected to the office of chief treasurer. The first distinct notice which we possess of his public life is, that he was one of the ten commanders who directed the Athenian army, B.C. 490, upon the occasion of the

Persian invasion under Datis and Artaphernes. This rests on the authority of Plutarch, who ascribes to Aristides the honour of having first yielded his turn of command to Miltiades, and by his example and authority having carried the dissentients with him. Plutarch adds, that when the Athenians marched back to their capital in haste, to prevent the flying Persians from making any attempt on it by sea, Aristides was left with the men of his own tribe to guard the valuable spoil of the Persian camp; being selected for that duty on account of his incorruptible honesty. It is singular that Herodotus, in his account of the battle (vi. 109), never even mentions Aristides's name, although he elsewhere (viii. 79) bears testimony to him as the "justest and best man in Athens." This silence would lead us to doubt whether Aristides did really act so important a part in the action as his biographer would have us believe. That he did distinguish himself is however rendered probable by his having been elected archon 'epónymos' in the following year. (Plut. Arist. c. 5.)

Of the transactions of his magistracy we have no account. In the sixth year after it (B.C. 483), he was banished by the process called 'ostracism.' A person less deserving of such treatment could hardly have been found; but the practices of Themistocles prevailed with the suspicious temper of the Athenians, although, according to a story told by Plutarch, the acknowledged probity of Aristides had already acquired for him the appellation of "the Just." In the third year afterwards (B.C. 480), the eventful transactions of the Persian invasion under Xerxes took place. At the battle of Artemisium, Aristides was still in exile; but before the battle of Salamis he was recalled, with other exiles. In the night preceding that memorable battle, he passed from the island of Ægina through the Persian fleet, bearing intelligence to his countrymen that they were surrounded, and that fight, which they were then meditating, was no longer possible. (Herod. viii. 79.) Aristides, at the head of a body of Athenians, landed on the small island of Psyttaleia, near Salamis, and put to the sword the Persian troops stationed on that island. (Herod. viii. 95; Plut. c. 9.)

Before the battle of Plataea, fought in September, B.C. 479, he regained more than his former favour with his countrymen. The answer returned to Mardonius's offer of peace and alliance with the Athenians is said by Plutarch to have been dictated by him: "Tell Mardonius that the Athenians say, while the sun goes in the same course as he is now going, we will never make peace with Xerxes; but we will fight him, trusting in the gods, who fight with us, and the heroes, whose temples and statues he, making no account of them, has burnt." (Herod. viii. 143.) Aristides was one of the ambassadors sent to remonstrate with the Spartans for their tardiness in sending succours to resist the threatened second invasion of Attica by Mardonius; and at the battle of Plataea, contrary to the general usage, he was appointed sole general of the Athenian troops, and signalled his moderation in a dispute with the Tegeatæ concerning the right of occupying the left wing of the allied army, the second post in point of honour, the right wing being always held by the Lacedæmonians. After stating the claims of the Athenians to the place of honour, he referred the point to the decision of the Lacedæmonians. The Lacedæmonians answered by acclamation, that the Athenians were more worthy than the Tegeatæ to lead the left wing. (Herod. ix. 27.) It is to be observed here (as of the answer returned to Mardonius), that what Plutarch says of Aristides, Herodotus says of the Athenians generally. It may be presumed however that on both occasions the people acted under the guidance of their leader; and that the words so full of wisdom, spirit, and moderation, agreeing so well with the character of Aristides, were really prompted or delivered by him.

Not long after the restoration of Athens, which had been destroyed by Xerxes and Mardonius, an important change took place in the constitution: though opposed to the principles of those with whom Aristides generally acted, it was supported at least, if not brought forward, by him. By Solon's laws, noble descent and a definite amount of property were required as qualifications in candidates for the higher offices. The alteration proposed by Aristides was to the effect that all classes of the citizens should be eligible to the archonship, without regard either to birth or wealth.

Aristides was the colleague of Thucydides in an embassy to Sparta, when the Spartan government interfered to prevent the rebuilding of the walls of Athens, destroyed by the Persians. (Thucyd., i. 91.) Cicero relates a story ('Off.' iii. 11), told in a slightly different manner by Plutarch and by Diodorus, that Themistocles, after the end of the war, announced to the assembly of the people that he had a scheme to propose greatly advantageous to the state, but of such a nature that it could not safely be made public. Upon this he was desired to communicate it to Aristides, who reported that nothing could be more advantageous, or less honourable; and the proposal was dropped without further inquiry. The measure proposed, according to Cicero and Valerius Maximus (vi.), was to burn the Lacedæmonian fleet at Gythium; according to Plutarch, to burn the dockyard of the Grecians, by which we suppose the confederate fleet was meant. It is difficult to conceive how either measure could be reconciled with sound policy, any more than with justice.

In B.C. 477 the unpopularity of the Lacedæmonians, especially of the commander-in-chief Pausanias, induced the Ionian Greeks to decline serving under him. They offered the command of the confederacy to

Athens, whose ships at that time were under the command of Aristides: and to his moderation and probity, and to the favourable opinion entertained of the Athenian character mainly through his virtues, that transfer of the command is chiefly to be ascribed, and the consequent establishment of what is called by historians the Athenian rule in Greece, which was overthrown seventy-two years afterwards, at the end of the Peloponnesian war. Under this new arrangement the Greeks of the west coast of Asia Minor, the islands, and Thrace, in conjunction with the Athenians, engaged to maintain a fleet sufficient to prosecute the war with Persia. Each state was assessed to furnish a certain sum of money, amounting in the aggregate to 460 talents; and the difficult task of making the assessment was executed by Aristides with such fairness, that, according to Diodorus (xi. 47), he obtained the highest praise for justice.

This is the last public office in which we know Aristides to have been engaged. His death is stated by Nepos to have occurred in the fourth year after the ostracism of Themistocles, which fixes it to B.C. 467. Plutarch says that the tomb of Aristides was in his own time to be seen at Phalerum, erected at the charge of the state, because the patriot died so poor that nothing was found in his house to pay for his burial. He left children—a son, Lyaimachus, who is one of the speakers in Plato's dialogue of 'Laches,' and two daughters (Plut., 27); all of whom were provided for by the state. Aristides lived and died in poverty, after having borne the highest offices of Athens, and possessed the most tempting opportunities for peculation of any man in Greece; a voluntary poverty, for he is said to have refused large sums offered to him by private liberality, saying that "he could better boast of his poverty than others of their riches, which many did use ill, and few well; and that it was a hard thing to find one man of a noble mind that could away with poverty, and that such only might be ashamed of poverty as were poor against their wills." (North's 'Plutarch'.)

The character of Aristides (so far as we can trust our chief authority, Plutarch, who is supported by the more scanty testimony of Herodotus and Thucydides) is one of the finest in antiquity. To him belongs the rarest of all praises, that of observing justice, not only between man and man, but between nation and nation. He was truly a patriot, for he preferred the good of his country to the gratification of his own ambition. A candid enemy, an impartial friend, a just administrator of other men's money, an observer of national faith, it seems hardly worth while to add to this catalogue of virtues the more common merit of being a brave and successful general, except that this latter quality completed his character, and fitted it to the stormy times in which he lived, giving to it a lustre and importance in the eyes of the many which his peaceful virtues unassisted might have failed to command.

(Herodotus; Plutarch; Cornelius Nepos, *Lives of Aristides*; Mitford, &c.)

ARISTIDES, a native of Thebes, and one of the great Greek painters, is said by Pliny (xxxv. 10) to have been the contemporary of Apelles. His excellence consisted in giving character and expression to his figures, and in the strong delineation of the passions: his colouring was hard. One of his great pictures represented the capture of a city. Among the most striking figures was that of a mother just expiring from a wound; her infant still clings to her breast, and the dying mother seems only anxious that her child should not suck the blood that is streaming from her body. Alexander the Great had this picture removed to Pella in Macedonia. He also painted an engagement with the Persians: this picture contained one hundred figures, and was liberally paid for by Mnason, tyrant of Elatea. The works of Aristides were numerous, and many of them were transferred to Rome with the rest of the plunder of Greece. At the capture of Corinth by L. Mummius, Polybius, the Greek historian, who was present on the occasion, saw with indignation the barbarians of Italy playing at games of chance on the most costly pictures, which they had spread on the ground. (Strabo, p. 381.) Among these were two fine pictures by Aristides. (Athenæus, xiii. 567.)

ARISTIDES, ÆLIUS, a distinguished rhetorician of the 2nd century, was born at Hadriani in Bithynia, probably about A.D. 117; but, according to other opinions, A.D. 129. He studied at Smyrna under Polemo, and at Athens under Herodes Atticus, after which he travelled extensively in Asia and in Egypt; finally, he settled at Smyrna, where he obtained the priesthood of Æsculapius. He also opened a lecture-room, and gained such reputation by his rhetorical prelections, that by his contemporaries he was placed on a level with Demosthenes, the great Athenian orator. In A.D. 178 Smyrna was destroyed by an earthquake, and Aristides, by addressing a letter on the subject, which is still extant, to M. Aurelius, induced the emperor to restore the city. Owing to his services on this occasion, and the high reputation which he enjoyed as a rhetorician, statues were erected to his honour; one, now in the Vatican (Winckelmann, ii. 475, French ed.) bears his name.

Of his fifty-five declamations, one entitled "Against Leptines," is an imitation of the great oration of Demosthenes, which bears the same name; and another, the 'Panathenæica,' was intended to show that he could write in the style of Isocrates, and rival one of the most famous specimens of that master. Aristides also wrote panegyrics on many distinguished cities, such as Smyrna, Rome, &c. The latest

edition of the 'Declamations of Aristides,' together with his two books 'On Rhetoric,' is by W. Dindorf, Leipzig, 1829, 3 vols. 8vo.

The statue which we have here assigned to Ælius Aristides was found in the ruins of Herculaneum, and is now in the Museo Borbonico at Naples. The height is about 6 feet 6 inches. It is called the statue of Aristides the Just by G. Finati, in the work entitled 'Museo Borbonico;' but from comparing the head with that of Ælius Aristides in the Vatican, and from the somewhat affected attitude, and the general character of the figure, we are convinced it is not the old Aristides.

ARISTIDES QUINTILIA'NUS, a Greek writer on music, whose age is uncertain. Some critics are of opinion that he was contemporary with Plutarch. His work on Music in three books, is printed in the collection of Meibomius, and is considered one of the most valuable musical works of antiquity.

ARISTIPPUS, the son of Aritades, was born at Cyrene, a Greek colony on the north coast of Africa, and came to Athens when a young man in order to profit by the lessons of Socrates. Aristippus was a hearer of Socrates for some time; and as he could not have been very young when he went from Cyrene to the Olympic festival, and was attracted from thence to Athens by a philosopher's fame, we may suppose that he was at least twenty-five years old at the death of Socrates, B.C. 399; which would make his birth as early as B.C. 424 or 425.

Although Aristippus was a disciple of Socrates, his mode of life and his opinions were very different from those of his master. Instead of imitating the chaste, frugal, and temperate habits which distinguished Socrates, he was a lover of sensual pleasure; and we learn from a conversation between Aristippus and his master, reported in Xenophon's 'Memorabilia,' that the former deliberately maintained in argument the superiority of his own habits of life and principles of conduct. In this discussion, being pressed by the interrogations of Socrates, he asserts that he does not wish to take any share in public affairs, that his object is to be neither a governor nor a slave, but a private citizen; and that he lives out of his own country in order to escape from all political duties. (Xen. 'Mem.' ii. 1, 1-18.) He appears to have prided himself on his knowledge of the world, on the popularity and versatility of his manners, and the ease with which he could adapt himself to the company of all persons, and to all varieties of fortune: hence Plato is reported to have said of him, that he was the only man who could wear with equal grace both fine clothes and rags. His principles and conduct made him obnoxious to Xenophon, with whom he is stated to have been on bad terms, and to Antisthenes, the head of the Cynic school, whom he is reported to have constantly ridiculed for the austerity of his manners. But Aristippus, although on bad terms with Xenophon, Antisthenes, and Plato, entertained friendly relations with Æschines, another disciple of Socrates and recommended him as a teacher of philosophy to Dionysius, the tyrant of Syracuse. (Diog. Laert. ii. 60, 82; Plutarch, 'De cohibenda Ira,' i. p. 462.) He passed much time at the court of Dionysius of Syracuse, and he is stated to have been taken prisoner by a satrap of the Persian king in Asia Minor. (Diog. Laert. ii. 79.) He probably retired late in his life to Cyrene, where we find his family and his school after his death. (Diog. Laert. ii. 86.)

Aristippus differed from Socrates and the genuine Socratic philosophers, not only in his mode of life, but also in taking money for his instructions. Aristippus when blamed for teaching for money, defended himself by saying that Socrates was provided for by the

richest and greatest of the Athenians, whereas he had to provide for himself.

There can be no doubt that Aristippus was the founder of a philosophical school; but it is doubtful whether he inculcated his opinions in writing, or whether, like Socrates, he only imparted them orally to his disciples. A list of his works, chiefly dialogues, is given by Diogenes Laertius (ii. 85), on the authority of Panætius and Sotion; but Sosicrates of Rhodes, who lived somewhat later than Sotion, and wrote on the same subject, stated that Aristippus left nothing in writing. (Diog. Laert. ii. 84; Clinton, 'Fast. Hellen.' part iii.) The doctrines of Aristippus were perpetuated after his death by his daughter Arete, and by another disciple named Antipater of Cyrene. Arete instructed her son Aristippus, who, to distinguish him from his grandfather, was called 'metrodidactos' (taught by his mother).

As no precise or detailed account of the doctrines of Aristippus has been preserved, it is difficult to avoid confounding his opinions with those of his successors in the Cyrenaic school. The latter Cyrenaics appear to have approached nearly to the doctrines of Epicurus: Aristippus however though agreeing in substance with the moral system of Epicurus, yet differed from it in many important particulars. Aristippus is stated to have considered ethics as the only subject which deserved the attention of a philosopher; and to have especially despised mathematical and physical science, as not being concerned about the happiness of mankind. (Aristot., 'Metaph.' ii. 2; Diog. Laert. ii. 92.) The ancient Cyrenaics, however, though they confined themselves to ethical philosophy, yet adhered to it only in name; for they divided ethics into five parts, namely, 1, on those things which ought to be pursued or avoided; 2, on the affections of the mind; 3, on moral actions; 4, on causes; and 5, on proofs; of which heads the first three alone belong to moral philosophy, while the fourth refers to physical, and the last to logical inquiries. Aristippus held that the happiness of man consists in pleasure, and his misery in pain: happiness being merely an aggregate of pleasures, and misery an aggregate of pains. He held, that all pleasures, whether sensual or intellectual, are equally good: one account even states that he considered the pleasures of the body as superior to those of the mind. Hence he taught, that however immoral an action might be, still the pleasure which it causes is a good, and desirable for its own sake. He did not however recommend an unrestrained pursuit of pleasure: true wisdom (he thought) consisted, not in abstaining from pleasure, but in seeking it without being carried away by the love of it. He condemned all care for the past or the future, all regret and all forethought, as equally useless; and said that a person ought to think only of the passing day, and, if possible, only of the passing minute. He recommended calmness of mind and moderation of desires; and he particularly cautioned his daughter Arete against covetousness and love of money. He also thought that the wise man should be free from the passions of envy and love, from superstition, and from the fear of death. The doctrines of Aristippus do not appear to have attracted very much attention in his own time.

(Diogenes Laertius, *Life of Aristippus*, ii. 65-104, with Menæges's notes; Suidas; Ritter, *Geschichte der Philosophie*, vol. ii. pp. 87-103.)

ARISTOBULUS accompanied Alexander the Great in his campaigns, of which he wrote an account after the king's death. This work, now lost, is one of the chief authorities for Arrian's history of Alexander. (Arrian, *Preface to his Anabasis*.)

ARISTOGITON, an Athenian closely connected with an important event in Athenian history. Having conceived a mortal hatred against Hipparchus, son of Pisistratus and brother of Hippias, who held the tyranny of Athens (Thucyd. i. 20), he plotted, in conjunction with another Athenian named Harmodius, the death of the brothers, and succeeded in effecting the murder of Hipparchus at the Panathenaic festival, B.C. 514. Harmodius was slain on the spot; Aristogiton fled, but was subsequently taken and put to death by Hippias. After the expulsion of Hippias, when the constitution of Athens was brought nearer to a democracy, the memory of Harmodius and Aristogiton was honoured as that of martyrs in the cause of liberty. Bronze statues were erected to them in different part of Athens; among others, by the celebrated Praxiteles. (Plin. xxxiv. 8.) In the time of Arrian the statues of Harmodius and Aristogiton stood in the Ceramicus at Athens. (Arrian, iii. 16.) Various privileges and immunities were conferred on their descendants; and their exploit was regularly celebrated in song at the Panathenaic festival (Philostratus, 'De Vit. Apollonii' vii. 2; ap. Meursius, *Pisist.* c. xiv.), and became a very favourite subject for the songs, called 'scolia,' with which the Athenians enlivened their festive parties. One of these, composed by Callistratus, is commonly printed among the fragments of various authors at the end of the editions of Anacreon (see also Athenæus, xv. 695); and will be found translated in Bland and Merivale's 'Anthology,' beginning

"I'll wreath my sword in myrtle bough."

The first stanza of this is ascribed by Meursius, 'Pisist.' c. xiv., to Carcinus. We have however the testimony of Thucydides, that the act of Harmodius and Aristogiton arose entirely out of a private quarrel; and that, far from effecting the immediate delivery of Athens, it made the sway of Hippias jealous and severe, instead of mild and beneficent; and Herodotus speaks to the same effect (vi. 123). This

mistake, as to the motives and merit of their action, was perhaps as Mitford supposes, fostered by the party of the Alcæonidae, the true expellers of Hippias, with a view to the firmer establishment of their own power. (Thucyd. vi. 54, 9; Mitford, ch. v. 5, ch. vii. 5.)

ARISTOMENES, the hero of the second Messenian war, was of the royal house of Ægyptus. The first war between the Lacedæmonians and Messenians was commenced by the Lacedæmonians attacking by night, without having made any declaration of war, Ampeia, a Messenian town on the borders of Laconia. The Lacedæmonian commander was Alcæmenes, the son of Teleclus, who had been killed by the Messenians. The war, thus commenced, was carried on for twenty years. It was terminated by the capture of Ithome, in Messenia, in the first year of the 14th Olympiad, or B.C. 723. The Messenians endured a galling servitude for thirty-nine years. The new generation were eager to rescue their country from slavery, and having obtained the assistance of Argos and of the Arcadians, they revolted in the fourth year of the 23rd Olympiad, or B.C. 635. The first battle was fought at Deræ, a place in Laconia, when Aristomenes performed surprising feats of valour. His countrymen wished to make him king, but he declined this dignity, and was chosen general with full powers. To strike terror into the Lacedæmonians, he entered the city of Sparta alone by night, and suspended a shield on the temple of Athene Chalceicus (Athene of the Brazen House), with an inscription purporting that it was an offering to the goddess from the spoils of the Spartans. In the following year another great battle was fought at the Boar's Tomb, in the district of Stenyclerus in Messenia. The Messenians gained a complete victory, which was chiefly due to Aristomenes and his chosen band of eighty Messenians, who led the way to success by putting to flight king Anaxander and his bravest Spartans. On returning to Messenia after this victory, Aristomenes was received with great enthusiasm, particularly at the town of Andania, where he had been brought up.

In the third year of the war, B.C. 633, the Messenians under Aristomenes sustained a total defeat at the Great Ditch, owing to the treachery of their ally Aristocrates, whom Pausanias calls king of the Arcadians. Aristomenes collected the Messenians who survived the battle, and led them to the mountain fortress of Eira. The Lacedæmonians commenced the siege of Eira, which occupied them to the close of the second Messenian war. In a predatory incursion Aristomenes and his chosen band surprised and plundered Amyclæ. In another expedition he was taken prisoner by the Lacedæmonians, and thrown with fifty of his companions into a deep hole called Cæadas, which was the punishment inflicted by the Spartans on great malefactors. The rest of the prisoners were killed by the fall; and Aristomenes, who escaped unhurt, lay at the bottom of the chasm, awaiting his death by famine. On the third day he saw through the dim light a fox preying on the dead bodies. He caught the fox, and following in its track, discovered a small hole through which it had entered. With his hands he made the hole large enough for himself, and escaping from the place, he joined his friends at Eira. The Lacedæmonians heard the rumour of his escape, but they did not credit it, till they were informed of the surprise and slaughter of a body of Corinthians who were coming to aid them in the blockade of Eira. To commemorate this exploit, Aristomenes offered to Jupiter of Ithome for the second time the Hecatombonia, a sacrifice which he alone was entitled to make who had slain a hundred enemies.

One stormy night, in the eleventh year of the siege, a Spartan herdsmen, who had gone over to the Messenians, learned that the Messenian guards were obliged to leave their posts by the fury of the tempest. He communicated this fact to the Lacedæmonians, who made an attempt on the walls, and got into the place. The Messenians however made a desperate struggle, in which they were aided by their own women. On the third day, being exhausted by hunger and fatigue, they resolved to leave the place. Aristomenes collected a part of the Messenians, and, placing the women and children in the centre, put himself at their head, and by his attitude signified to the enemy that he wished for a free passage, and was ready to go. The Lacedæmonians, fearing to resist a desperate body of men, allowed them to depart. Eira was taken, and the second Messenian war terminated in the first year of the 23th Olympiad, or B.C. 635.

When the Arcadians heard of the fall of Eira they urged Aristocrates to lead them to the aid of the Messenians, but he had already sold himself to the Lacedæmonians, and he refused. The Messenians were hospitably received by their Arcadian friends. Aristomenes, who did not yet despair, selected five hundred of his countrymen, and asked them, in the hearing of Aristocrates and the Arcadians, if they would join him in an attempt on Sparta, which was left unguarded. Three hundred Arcadians volunteered to go with him; but the scheme was frustrated by the treachery of Aristocrates, who gave the Lacedæmonians notice of it. His treachery was detected by means of an intercepted letter, and he was stoned to death by the Arcadians.

The Messenians assembled at Cylene to deliberate on their future plans, and there they spent the winter in the hospitable territory of the Eleians. Receiving an invitation from Anaxilas, tyrant of Rhegium, to come to Italy, they agreed to do so; and Anaxilas, together with the Messenians, took the town of Zancle, which was thenceforward inhabited jointly by the Messenians and Zancleans, but received the new name of Messene (Messina), which it retains to the present day.

Aristomenes had declined to put himself at the head of the exiles who went to Italy. He went to Delphi to consult the oracle, and there met Damagetus, king of Ialysus in Rhodes, who had also come to Delphi to consult the oracle about the choice of a wife. Damagetus, being told to marry the daughter of the bravest of the Greeks, married a daughter of Aristomenes. Aristomenes accompanied his son-in-law to Rhodes, where he soon after died. Damagetus and the Rhodians erected a splendid tomb to his memory, and paid him the honours due to a hero. Pausanias saw his monument in the city of Messene. In the battle of Leuctra (B.C. 370), in which the Thebans under Epaminondas defeated the Lacedæmonians, we are told that Aristomenes again made his appearance, and mainly contributed to the defeat of his old enemies. Although the exploits of Aristomenes are evidently mingled with fable, there seems no reason to doubt his existence, and that he was the hero of the second Messenian war.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARISTOPHANES, a celebrated comic poet of Athens, son of Philippus or Philippides. His first play was exhibited on the Athenian stage B.C. 427, and his last B.C. 388. There seems every reason to believe that he was a native of Athens. He had three sons, whose names are recorded. His life was entirely devoted to literature, and he produced numerous plays. He is the only writer of the old comedy of whom we have any considerable remains, and it is chiefly through his works that we are able to form an opinion respecting this particular species of dramatic composition.

Aristophanes was the author of fifty-four comedies (Suidas), of which eleven have been preserved. Suidas enumerates the same plays that we now possess, and mentions no others as being extant. In the fourth year of the Peloponnesian war, B.C. 427, the poet brought out his first play, entitled *Δαριανός*, holding up to public contempt the character of the spendthrift; and next year he produced the 'Babylonians,' in which he attacked in no measured terms the demagogue Cleon and the constituted authorities of Athens. Of these plays we possess only a few fragments.

In B.C. 425, during the sixth year of the Peloponnesian war, he gained the first prize in a contest with Eupolis and Cratinus. His play was entitled the 'Acharnians,' in which he recommended to the Athenians the cause of peace as openly and as strongly as the nature of the people whom he addressed would permit. The scene lay chiefly in Acharnæ, one of the 'demi,' or small towns of Attica; and the object he had in view was pointed out by introducing on the stage the rustic Diogenes, who, disapproving of the obstinacy of his fellow-citizens, had concluded with the Spartans a separate peace, and is exhibited in the full enjoyment of its fruits. The result of the opposite line of conduct is shown in the sufferings of Lamachus, who is exposed to the want of the first necessities of life, and writhing under severe wounds received in the field of battle.

Aristophanes had already made the demagogue Cleon writhe under his satire; but it was not till B.C. 424 that he poured forth upon him the full measure of his wrath. It was in that year that he produced the 'Knights,' or, as Wieland more aptly designates it, the 'Demagogues,' the most valuable perhaps of all his extant plays. He held up before the Athenian people a faithful picture of their own character with a boldness which we cannot but admire, knowing, as we do, that they allowed any one to be brought upon the stage except themselves. Athens is represented as a house, and its master is a stupid old gentleman, Demos (people); Nicias and Demosthenes are his slaves, and Cleon his confidential servant, or slave-driver; Agoracritus, a sausage seller, is the person whose destiny it is to subvert the demagogue. Thus the dramatic persons are few, and the plot is perhaps still more meagre; it consists of humiliating pictures of Cleon, and a succession of proofs to Demos that this favourite servant is wholly unworthy of the trust and confidence reposed in him. As an historical document however this play cannot be too highly valued, as furnishing a strong and faithful, though by no means favourable, picture of one of the most singular nations of antiquity. It is said that no one was found with sufficient nerve to act the part of Cleon, or to make a mask to represent him, and that Aristophanes was himself obliged to appear on the stage in that character with his face merely painted.

Next year, B.C. 423, he produced another play, the 'Clouds,' which only gained the third prize. It contains a powerful and severe attack on the schools of the sophists, a race of philosophers who "could make the worse appear the better reason;" but nothing, in our judgment, can justify the personal attack which the poet makes on Socrates, whose character, as far as we can form an opinion of it, was very different from that which is represented in the play. The plot is simple and clear; it is wrought up in a masterly style by a variety of comic incidents, and the characters are full of humour. Strepsiades is the most prominent; his rusticity strangely contrasts with the pedantry of the sophists. His son has ruined him by his extravagance, and he is willing to have recourse to any plan, however unprincipled, which he thinks likely to extricate himself from his embarrassments. He imagines that he has discovered a resource in the school of Socrates, by the sophistry and chicanery of whose doctrines, he expects to be relieved from the dunning of his creditors. He presents himself before the philosopher whom he finds suspended aloft in a

basket; and the whole dialogue which follows between two characters so forcibly contrasted is conceived in the very best style of the author. At last however Strepsiades is convinced that his genius does not lie in that direction, and he determines to send his son Pheidippides to benefit by the philosopher's instructions. The youth makes great proficiency, which he shows in his dealings with his creditors and by beating his father, and then trying to convince the old gentleman that it is all right. The play closes with Strepsiades setting fire to the school-house of Socrates and burning out all his disciples—a significant hint which, coupled with the concluding verses of the play, was well calculated to raise a religious persecution against Socrates. (Wieland, 'Att. Mus.,' ii. 2; Hermann, *Præf.* xix.; see also the 'Clouds' of Aristophanes, by F. G. Welcker.)

In B.C. 422 appeared the 'Wasps,' an attack upon the jurisprudence of Athens, levelled chiefly at that numerous class of citizens who gained a livelihood by executing the office of 'dicast,' an office somewhat resembling that of our Westminster special jurymen; but the parallel to be complete would require that the same special jurymen should be almost daily in attendance, and should be eager to discharge the duty. Philocleon is described as absolutely phrensied with that passion of which all his countrymen partook—a taste for litigation and frequenting the courts of law. His son Bdelycleon endeavours to reclaim him; but force, persuasion, and argument, are all tried in vain. At last the son proposes to convert his house into a court of justice, and to supply it with all suitable pomp. The old gentleman is pleased with the scheme, and the theft of a Sicilian cheese by a house-dog enables him to put it into immediate execution. To understand this play requires a minute acquaintance with the manners of the Athenians, and also with their judicial system. This play furnished Racine with the idea of his 'Plauteurs.'

The play of the 'Birds' was exhibited (B.C. 414) in the seventeenth year of the Peloponnesian war, and during the absence of the Salaminia, an official ship which was dispatched to bring back Alcibiades from Sicily. (Thucyd. vi. 53.) In the 'Transactions of the Royal Academy of Sciences at Berlin' (1827), there is an essay by Süvern on the 'Birds' of Aristophanes, the object of which is to demonstrate that the key to the true interpretation of the play is only to be found by referring to the date of the exhibition and the mission of the Salaminia. [ALCIBIADES.]

In B.C. 406 appeared the 'Frogs,' in which Aristophanes attacks, with little generosity, the poet Euripides, who had lately died. Bacchus descends to the infernal regions in search of a good tragic writer, and, after listening to a trial of skill between Æschylus and Euripides, decides that the merits of the former are far superior to those of the latter.

The best of his other extant works is the 'Plutus,' which appeared first in B.C. 408, and again twenty years afterwards B.C. 388. It does not belong to the old comedy, not does it appear to have any reference to political subjects, being intended probably to vindicate the conduct of Providence in its ordinary distributions of wealth, and to show the great tendency of riches to corrupt the morals of those who possess them. The other plays which have been preserved are the 'Peace' (B.C. 419); 'Thesmophoriazuse' (B.C. 411), an attack on Euripides, in which the plot is better managed than in most of the other plays; 'Lysistrata' (B.C. 411); 'Ecclesiazuse' (B.C. 392).

Aristophanes is distinguished by the exuberance of his wit, his inexhaustible fund of comic humour, and the Attic purity and great simplicity of his language. His allusions are sometimes necessarily obscure, and in many cases they are grossly obscene. The exact rank which he ought to hold among ancient comic writers it is difficult to assign, as none of their entire works have been preserved; but if we are inclined to trust the judgment of Plutarch, he was in every respect inferior to Menander (vol. ix. p. 387, ed. Reisk). Plato however is said to have had a high admiration of Aristophanes, and recommended the perusal of his plays to Dionysius the younger as the best mode of acquiring the purity of the Attic dialect.

The plays of Aristophanes, especially in the choral parts, often contain passages of great poetical beauty, but his subject did not allow such efforts to be either frequent or of any great length. Where Aristophanes appears to be speaking in his own person, he is the advocate of morality, and the unsparring censurer of the gross and degrading habits of many of his countrymen. He was a friend to peace, and, to his credit, the enemy of Cleon. The real test of his character must be the 'Clouds.' We do not see how it is possible to esteem the character of Socrates, and at the same time to believe that Aristophanes was an honest man. All the explanations and apologies with respect to this exhibition of Socrates appear to us unsatisfactory. Probably Aristophanes may have turned the philosopher into ridicule without knowing or caring what his doctrines were. Aristophanes often introduces the gods in the most degrading situations, and he makes an undisguised mockery of all the deities of Olympus. How this was tolerated, even in his age, it is difficult to understand.

There are numerous editions of the plays of Aristophanes. The first edition was printed at the Aldine press in Venice, 1498, folio, containing only nine plays. One of the most complete, containing a Latin version, an index, and a large collection of notes, is that of Bekker, in 5 vols. 8vo., Lond., 1829. The latest English edition of all the plays is by Wheelwright into blank verse 2 vols. 8vo., 1837

There are several prose translations of single plays. Aristophanes is translated into French and German.

(Rötcher, *Aristophanes und sein Zeitalter*; eine *Philologisch-Philos. Abhandlung zur Alterthumsforschung*. Berlin, 1827.)

ARISTOPHANES of Byzantium, the pupil of Callimachus and Zenodotus, the master of Aristarchus, and the founder of the Alexandrine school of criticism; was perhaps born about B.C. 240, or somewhat later. It is not known at what time he removed to Alexandria, but probably he went there young. (Suidas). The invention of the Greek accents, and the introduction of a system of punctuation are attributed to Aristophanes. He was the first who attempted to arrange the Greek writers into classes, according to the branches on which they wrote, separating those of the highest authority from writers of inferior merit. This canon of classical writers was afterwards corrected and confirmed by his pupil Aristarchus. Perhaps we are indebted to Aristophanes and his more distinguished pupil not only for the purer text, but also for the preservation of many of the best writers, which, if they had not been stamped with their approbation, might have been neglected for those of inferior merit. [ARISTARCHUS.]

Nothing of Aristophanes remains except what may form a part of the large commentary of Eustathius, the Venice Scholia, &c. (Villoison, 'Scholia,' II. i. 298, 424, &c., where Aristophanes' edition of the 'Iliad' is referred to.) Aristophanes wrote a work on *Συγγενητά*, or 'terms implying relationship' (Eustath. 'II.' z. p. 648). A mere fragment of Aristophanes is printed in Boissonade's *Ἐπιγραμματολόγιον* of Herodian, 1819, 8vo.

ARISTOTLE, or, in the Greek form of the name, ARISTÓTELES, was born at Stageira (the name, before Aristotle's time, appears to have been Stageirus), a town on the west side of the Strymonic Gulf in Chalcidice, in the first year of the 99th Olympiad, or B.C. 384. Nicomachus, the friend and physician of Amyntas II., king of Macedonia, and the author of some medical treatises now lost, was his father; his mother was named Phaestis; and they both belonged to the race or clan of the Asclepiads, who were supposed to derive their origin from Asclepius, or Æsculapius, the god of healing, and of whose members many practised the medical art. Aristotle lost both his parents at an early period of his life, and after their death he was brought up under the care of Proxenus, a citizen of Atarneus, a city of Mysia in Asia Minor, but who was then settled at Stageira. Aristotle testified his gratitude to Proxenus and his wife by directing in his will that statues of them, as of his parents, should be set up at his expense: he likewise educated their son Nicanor, he to whom he gave his daughter Pythias in marriage.

Bust of Aristotle, from a statue of the natural size in the Spada Palace at Rome.

In his eighteenth year (Olymp. ciii. 2, B.C. 367) Aristotle left Stageira and went to Athens, attracted thither doubtless in great part by the fame of the philosopher Plato. It appears however that during the first three years of his residence at Athens, Plato was absent on a visit to Sicily. Although Aristotle paid a particular attention to anatomy and medicine, and may in his youth have practised the healing art, he must from an early age have devoted his whole time to the study of philosophy and the investigation of nature. We are told that his master called him 'the intellect of the school,' and his house 'the house of the reader;' that he said that Aristotle required the curb, while Xenocrates (a fellow-disciple) required the spur. We are likewise informed that, when reading, he used to hold a brazen ball in his hand over a basin, in order that, if he fell asleep, he might be awakened by the noise which it made in falling. Although Aristotle did not, during Plato's life, set up any school in opposition to his master (as some writers have falsely stated), he taught publicly in the art of

rhetoric, and by this means became the rival of the celebrated Isocrates, whom he appears (although then at a very advanced age) to have attacked with considerable violence, and to have treated with much contempt.

Aristotle remained at Athens till Plato's death in B.C. 347, having at that time reached his 37th year. Many stories are related respecting an alleged enmity between Plato and Aristotle, but these rumours appear to us to have no other foundation than the known variance between the opinions and mental habits of the two philosophers; and particularly the opposition which Aristotle made to Plato's characteristic doctrine of ideas: whence probably it was inferred that there must have been an interruption of their friendly relations. In his Nicomachean Ethics, which was probably one of his latest works, Aristotle says that "it is painful to him to refute the doctrine of ideas, as it had been introduced by persons who were his friends: nevertheless, that it is his duty to disregard such private feelings; for both philosophers and truth being dear to him, it is right to give the preference to truth." (I. 6.) He is said to have erected an altar to his master, inscribing on it that he was a man "whom the wicked ought not even to praise."

It appears that during Aristotle's first residence at Athens he was employed on an embassy to Philip, to whom he was attached by a double tie, as being both a Macedonian subject and the son of his friend and physician. It is also stated that he was the means of obtaining from Philip some favours for the Athenians. He left Athens about the time of Plato's death, and remained some time at the court of Hermeias, the prince of Atarneus, who had received instruction from him in rhetoric at Athens. When Aristotle had been about three years with this prince, Hermeias was betrayed to Artaxerxes Ochus by Mentor, a Greek general in the Persian service. Artaxerxes put Hermeias to death. In these circumstances Aristotle married Pythias, the sister of Hermeias, and making a rapid flight they took refuge in Mytilene, the chief city of the island of Lesbos (Olymp. cviii. 4, B.C. 345). For the patriotic and philosophic prince, Aristotle had a fervent and sincere affection, and he dedicated to his memory a beautiful poem, still extant, which, on account of the admiration which he expresses in it for the virtues of his lost friend, gave rise at a late period of his life to the absurd charge that he had deified a mortal, and was thus guilty of impiety. His wife Pythias died a few years afterwards in Macedonia, leaving him a daughter of the same name: he then took to his bed a domestic slave named Herpyllis, and by her he had a son, Nicomachus, to whom he addressed his great work on Ethics.

After two years' stay at Mytilene, Aristotle was (in Olymp. cix. 2, B.C. 342) invited by Philip to Macedonia to superintend the education of his son Alexander, then fourteen years old. There can be no doubt that much of what was admirable in the character of Alexander the Great is attributable to the influence of Aristotle. His love of literature, his veneration of great poets (instanced in his sparing the house of Pindar in the destruction of Thebes, and his destination of the precious casket in the Persian spoils to the works of Homer), his fondness for physical and even medical pursuits, and his intimacy with philosophers, were all doubtless the fruits of Aristotle's instruction, and distinguish him most advantageously from those illiterate and brutal conquerors who have been the scourge of the human race. Lord Bacon, in his 'Advancement of Learning,' after citing some of Alexander's wise sayings, adds, that he considers him "not as Alexander the Great, but as Aristotle's scholar." Two letters between Alexander and Aristotle are preserved by Plutarch ('Vit. Alex.' c. vii.), and Aulus Gellius (xx. 5), in the first of which Alexander reproaches his master with having made public the treatises which had served for his education, as he wished to surpass other men not less in knowledge than in power. To this Aristotle replies, that "they have been published and not published: for that they are only intelligible to those who have heard him explain them." Some writers have suspected that these letters are spurious. It is stated that Aristotle advised Alexander to consider all the Greeks as his friends, and all barbarians (or foreigners) as his enemies: a maxim of policy which Alexander unquestionably followed, so far as the direction of his conquests was concerned, and which agrees remarkably with Aristotle's views as developed in the first part of his 'Politics.' It was during his residence with Alexander that Philip re-established his native town, Stageira, which had been demolished in war; in memory of which benefit the Stagirites consecrated a festival, 'Aristotelia,' to their great fellow-citizen, and called a month after his name.

Alexander probably did not enjoy Aristotle's instruction for more than three or four years: as from his 17th or 18th year his time was almost entirely occupied with public affairs and war. In B.C. 336, when Philip was assassinated, he succeeded to the throne of Macedonia, and two years afterwards he began his expedition into Asia, when he parted for the last time from his master, who went to Athens, having previously recommended to him as a companion in his campaigns a near relation of his own, the philosopher Callisthenes, who had received his instruction with Alexander. Xenocrates had two years before succeeded Speusippus, Plato's nephew, in the academy; Aristotle however, on his arrival at Athens, resolved to open a school, and chose a house which from its proximity to the temple of Apollo Lyceus was called the 'Lyceum.' Attached to this building was a

garden with walks (in Greek 'peripatoi'), where Aristotle used to deliver his instruction to his disciples; whence his school obtained the name of the 'Peripatetic.' It appears that his habit was to give one lecture in the early part of the day on the abstruser parts of his philosophy to his more advanced scholars, which was called the 'morning walk,' and lasted till the hour when people dress and anointed themselves; and another lecture, called the 'evening walk,' on more popular subjects, to a larger and less select class. It was probably during the thirteen years of his second residence at Athens that Aristotle composed or completed the greater part of his works which have descended to our days. Among the works which especially belong to this period of his life are his treatises on natural history; which, as has been correctly observed by a writer on this subject (Dr. Kidd, 'Bridgewater Treatise,' &c., p. 299), are not to be considered as containing the result of his own observations only, but as a collection of all that had been observed by others as well as by himself. It is stated by Pliny ('Nat. Hist.,' viii. 7) that "Alexander the Great, being smitten with the desire of knowing the natures of animals, ordered several thousand persons, over the whole of Asia and Greece, who lived by hunting, bird-catching, and fishing, or who had the care of parks, herds, hives, stews, and aviaries, to furnish Aristotle with materials for a work on animals." We are likewise informed that Aristotle received from Alexander the enormous sum of 800 talents to prosecute his researches in natural history. Callisthenes, who, as we have already seen, attended Alexander in his expedition to Asia, sent from Babylon to Aristotle, in compliance with his previous injunctions, the astronomical observations which were preserved in that ancient city, and which, according to the statement of Porphyrius, reached back as far as 1903 years before the time of Alexander the Great; that is, 2234 years before the Christian era. (Simplicius in 'Aristot. de Cælo,' fol. 123, A. l. 18, ed. Ald. 1527.) The transmission of the observations to Aristotle is stated by Simplicius as a known fact: the length of time he gives on the authority of Porphyrius. We know however from Cicero ('De Rep.,' i. 16) that astronomical observations were sometimes calculated back by the ancient priests; and consequently that observations stated to be of remote antiquity may not be less fabulous than the adventures of early kings and heroes.

Aristotle had at this time reached the most prosperous period of his life. The founder and leader of the principal school of Greece, and the undisputed head of Grecian philosophy, surrounded by his numerous disciples and admirers, protected by the great conqueror of Asia, and by him furnished with the means of following his favourite pursuits and of gratifying his universal spirit of inquiry, he had probably little left to fill up the measure of a philosopher's ambition. But he did not continue to enjoy the favour of Alexander till the end. Callisthenes had offended Alexander, and had been executed on a charge of having conspired with some Macedonian nobles to take away his life (ALEXANDER; CALLISTHENES); and the king's wrath appears to have extended to his kinsman Aristotle, as being the person who had originally recommended him. (Letter of Alexander to Antipater in Plutarch's 'Alex.,' c. 55.) It is not however probable that this circumstance caused any active enmity between the royal pupil and his master; indeed, Aristotle appears to have been considered to the last as a partisan of Alexander, and an opponent of the democratic interest. When the anti-Macedonian party obtained the superiority at Athens in consequence of Alexander's death, an accusation against Aristotle was prepared, the pretext being, as in the case of Socrates, 'impiety' or 'blasphemy.' He was charged with having paid divine honours to Hermeias, the prince of Atarneus; and perhaps with teaching some irreligious doctrines. In order to escape the danger which threatened him, and to prevent the Athenians (as he is reported to have said) from "twice sinning against philosophy," in the beginning of B.C. 322 he quitted Athens, and took refuge at Chalcis, in Eubœa, an island then under the Macedonian influence, leaving Theophrastus his successor in the Lyceum. Aristotle died at Chalcis of a disease of the stomach, in the autumn of B.C. 322, being in the sixty-third year of his age. His frame is said to have been slender and weak, and his health had given way in the latter part of his life, having probably been impaired by his unwearied studies and the intense application of his mind. The story of his having drowned himself in the Euripus of Eubœa is fabulous.

The characteristic of Aristotle's philosophy, as compared with that of Plato, is that, whereas the latter gave a free scope to his imagination, and by his doctrine of ideas independent of the objects which they represent opened a wide door to the dreams of mysticism, the former was a close and strict observer of both mental and physical phenomena, avoiding all the seductions of the fancy, and following a severe, methodical, and strictly scientific course of inquiry, founded on data ascertained by experience. The truly philosophical character of his mind, and his calm and singularly dispassionate manner of writing, are not more remarkable than the vast extent both of his reading and of his original researches. His writings appear to have embraced the whole circle of the theoretical and practical knowledge of his time, comprising treatises on logical, metaphysical, rhetorical, poetical, ethical, political, economical, physical, mechanical, and medical science: he likewise wrote on some parts of the mathematics; and, besides a collection of the constitutions of all the states known in his age, both Grecian and barbarian, he made chronological compi-

lations relating to the political and dramatical history of Greece. His works however though embracing so large an extent of subjects, were not a mere encyclopædia or digest of existing knowledge; some of the sciences which he treated of were created by himself, and the others were enriched by fresh inquiries, and methodised by his systematic diligence. To the former belong his works on analytics and dialectics, or, as it is now called, logic; to the invention of which science he distinctly lays claim, stating that "before his time nothing whatever had been done in it." ('Soph. Elench.' c. 34, § 6.) Nearly the same remark applies to his metaphysical treatise. "But of all the sciences" (we use the words of Cuvier) "there is none which owes more to Aristotle than the natural history of animals. Not only was he acquainted with a great number of species, but he has studied and described them on a luminous and comprehensive plan, to which, perhaps, none of his successors has approached; classing the facts, not according to the species, but according to the organs and functions, the sole method of establishing comparative results: thus it may be said that he is not only the most ancient author of comparative anatomy whose works have come down to us, but that he is one of those who have treated this branch of natural history with the most genius, and that he best deserves to be taken for a model." (Kidd, 'Bridgewater Treatise,' c. 10, § 3, and 'Appendix.' This author has given a comparison of Aristotle's account of animals with the discoveries of modern science.) Among the sciences which Aristotle found partly cultivated, but which he greatly advanced, the more prominent are those of rhetoric, ethics, and politics. Of rhetoric he defined the province and analysed all the parts with admirable skill and sagacity; his treatise on the passions, in this short but comprehensive work, has never been surpassed, if it has ever been equalled, by writers on (what may be termed) descriptive moral philosophy. His ethical writings contain an excellent practical code of morality; his remarks on friendship are also deserving of especial notice; a subject much discussed by the ancients, but which has less occupied the attention of philosophers since love has played a more prominent part in consequence of the influence of the Germans and the introduction of the manners of chivalry in western Europe. His treatise on 'Politics' is not, like Plato's 'Republic' and the works of many later speculators on government, a mere inquiry after a perfect state; but contains an account of the nature of government, of the various forms of which it is susceptible, and the institutions best adapted to the societies in which those forms are established; with an essay, though unhappily an imperfect one, on education. This treatise is valuable not only for its theoretical results, but also for the large amount of information which it contains on the governments of Greece and other neighbouring countries.

In these philosophical treatises Aristotle occasionally mentions others of his writings, which he calls 'exoteric.' From the manner in which he sometimes speaks of them, referring to them on points of no great obscurity or difficulty with a sort of contemptuous or condescending tone it would seem as if they were not of a strictly scientific character. ('Eth. Nic.' i. 13; vi. 4; 'Polit.' iii. 4; vii. 1.) In another place he says, that he has often considered the Platonic doctrine of ideas both in his exoteric and his strictly philosophical works ('Eth. Eud.' i. 8). Plutarch and Cicero mention this class of Aristotle's works, some of which appear to have been in the form of dialogues. His systematic treatises, which formed a connected body of philosophy, were called 'acroamatic,' that is, destined for lectures (though he never himself uses that name in his extant writings); and were thus, as Galen says, confined to his scholars and friends. This distinction between the acroamatic and exoteric writings is mentioned by Gellius ('N. A.' xx. 5), who states that the former included subjects of a refined and abstruse philosophy, and physical and dialectical questions; the latter rhetorical and sophistical exercises and political knowledge. The distinction of these two kinds of treatises is referred to by several ancient writers. It appears to have consisted chiefly in the form of the work (most of the exoteric writings being dialogues), in the selection of the arguments, and in the nature of the style. Cicero particularly speaks of the copiousness and sweetness of Aristotle's diction ('Topica,' c. 1); and Quintilian doubts whether Aristotle is the more remarkable for the multiplicity of his knowledge, the quantity of his writings, the sweetness of his style, the acuteness of his discoveries, or the variety of his works (x. l. 83): in his extant works, however (all of which belong to the acroamatic class), his style is in most parts singularly dry and unattractive, and not unfrequently obscure, from the extreme conciseness of the expression and the abruptness of the transitions. It seems, indeed, as if he was sometimes intentionally negligent, and even ungrammatical, from his contempt for all ornament or polish of style. These peculiarities of style are doubtless attributable to the destination of his philosophical writings, which often appear to be rather note-books for his lectures, requiring further expansion and illustration, than finished treatises prepared for publication. The obscurity of Aristotle, which has been so much complained of, is in most parts like the obscurity of a mathematical treatise, which appears so great to a beginner; as in both cases the difficulty of comprehension arises not from the defect of the expression, but from the closeness and subtlety of the reasoning. The works which were thus used as lecture-books probably never obtained much circulation during Aristotle's lifetime, except among his disciples

and friends; and they received from time to time additions and corrections; a circumstance alluded to by Cicero, and confirmed by allusions contained in them, which indicate different times of composition. (Cicero, 'De Fin.' v. 5; Niebuhr, 'Hist. of Rome,' vol. i. note 30.)

None of Aristotle's exoteric writings have come down to us. This would be the more singular, if the story told by some ancient authors with regard to the preservation of his writings were true. [APELLECON.] The researches of recent scholars have shown that nearly all Aristotle's scientific works were known to the followers of Theophrastus in the Peripatetic school, and that there were numerous copies of them in the Alexandrine library. Such facts are inconsistent with the supposition that Aristotle's philosophical works were concealed from the world till the time of Apellecon, more than two hundred years after his death.

Aristotle's genuine extant works may be divided into three classes: 1, those relating to the philosophy of the mind; 2, those relating to the physical sciences; 3, those relating to moral and political philosophy. To the first class belong the *Metaphysics*, the *Categories*, the treatise on Interpretation, or the Meaning of Propositions, the first and second *Analytics*, the *Topics*, and the work on the Refutation of Sophistical Arguments, which, with the exception of the first, obtained the name of his 'Organon,' or instrument for the analysis of reasoning. Under the second class come the *Physics*, the *Treatises on the Heavens*, on Generation and Destruction, on the Soul, on Sensation and the Objects of Sense, on Memory and Recollection, on Sleeping and Awakening, on Dreams and Prophecy in Sleep, on Length and Shortness of Life, on Youth and Old Age, on Life and Death, on Breathing. The title of his great work on Natural History means, literally translated, 'Inquiries concerning Animals.' To the third class belong the three ethical treatises, the *Great*, the *Eudemian*, and the *Nicomachean Ethics*, which seem to have been written at different periods of his life, the first being the most meagre, and the last, addressed to his son Nicomachus (in which three books of the *Eudemian Ethics* are embodied), the most complete and matured.

The most valuable of Aristotle's lost works, and indeed the most valuable of all the lost works of Greek prose, is his collection of 158 Constitutions, both of Grecian and Barbarian States, the Democratic, Oligarchical, Aristocratical, and Tyrannical being treated separately, containing an account of the manners, customs, and institutions of each country. (Cicero, 'De Fin.' v. 4.) The loss of his works on Colonies, on Nobility, and on Royal Government; of his Chronological Collections, and of his *Epistles* to Philip, Alexander, Antipater, and others, is also much to be regretted. He likewise revised a copy of the 'Iliad,' which Alexander carried with him during his campaigns in a precious casket: hence this recension (called the 'casket-copy') passed into the Alexandrine Library, and was used by the Alexandrine critics. (Wolf, 'Proleg. ad Homer,' s. 45.) His entire works, according to Diogenes Laertius, occupied in the Greek manuscripts 445,270 lines.

Writings contained in the collection of Aristotle's works falsely attributed to him are—the treatise on the 'Universe,' the author of which (Mr. Payne Knight remarks) has "retailed the common opinions of his age in the common language of a common declaimer, and by a strange inconsistency attributed them to the condensed, refined, and abstruse Stagirite" (see also Lord Aberdeen on 'Grecian Architecture,' p. 207); the 'Rhetoric to Alexander,' the second book of the 'Economics,' and a treatise on Marvellous Reports, written between the time of Agathocles and the first Punic war, probably about the 130th Olympiad, or B.C. 260. (Niebuhr, 'Hist. of Rome,' vol. i., p. 16, and note 342.) An extract about Winds, from Aristotle on the 'Signs of Bad Weather,' vol. ii., p. 973, ed. Bekker, is considered by Niebuhr as spurious. ('Hist. of Rome,' vol. i., p. 15.) The genuineness of part of the 'Physiognomics' has likewise been doubted. (Müller, 'Archäologie der Kunst,' s. 331, n. 1.) A set of 'Epistles' is also attributed to Aristotle, which, like those of Phalaris, Socrates, Euripides, and others, are all spurious.

Aristotle's philosophical works many centuries after his death obtained a prodigious influence, not only in Europe, but even in Asia: they were translated into Arabic, and thence an abstract of his logical system passed into the language of Persia. (Balfour in the 'Asiatic Researches,' vol. viii., pp. 89-135, ed. 8vo., London.) In Europe they acquired an immense ascendancy in the middle ages, and were considered as an authority without appeal, and only second to that of Scripture: we are even informed that in a part of Germany his 'Ethics' were read in the churches on Sunday in the place of the Gospel. Parts of his philosophy, which are the most worthless, as his 'Physics,' were much cultivated; and his logical writings were in many cases abused so as to lead to vain subtleties and captious contests about words. The connection between some of his philosophical tenets and the Roman Catholic theology tended much to uphold his authority, which the Reformation lowered in a corresponding degree. His doctrines were in general strongly opposed by the early reformers: in 1518 Luther sustained a thesis at Heidelberg, 'Qui in Aristotele vult philosophari prius oportet in Christo stultificari.' 'He who wishes to philosophise in Aristotle must be first stultified in Christ.' (Bayle, 'Aristotle,' n. Y. See also a curious passage of Luther's, containing a most scurrilous attack on Aristotle, cited in Bayle, 'Luther,' n. II.) Luther gave way afterwards, and did not oppose Aristotle as to human learning. Melancthon, who was however one of the mildest of the reformers, was a great supporter of Aristotle. ('Moralis Philosoph.

Epitome,' Argentor., 1539; with the introductory address, and the commentary on the fifth book of Aristotle's 'Ethics.') Many of his doctrines were in the same century zealously attacked by Pierre de la Ramée [RAMUS], a French philosopher; and Bacon afterwards, with others of his followers, added the weight of their arguments and authority. Aristotle's philosophy accordingly fell into undeserved neglect during the latter part of the 17th and the whole of the 18th century; of late years however the true worth of his writings has been more fully appreciated, and the study of his best treatises has much revived.

The best edition of Aristotle's entire works is that by Bekker, 1831, Berlin, 3 vols., 4to., in which the text is established on the authority of more than a hundred manuscripts of Italy, France, and England.

The English translations of Aristotle are for the most part of little value, on account of their unfaithfulness and inaccuracy. That of the 'Poetic,' by Twining, should however be excepted. A translation of all Aristotle's works, by Mr. T. Taylor, was published in 9 vols., 4to., London, 1810.

ARISTOXENUS of Tarentum, the earliest of the extant Greek writers on music. He was a disciple first of his father Mnesias, who was acquainted with music, and subsequently of Aristotle; but, according to Suidas, he never spoke well of his great master after the latter had appointed Theophrastus as his successor. On the same authority it is stated that he wrote 453 treatises on music, philosophy, history, &c. He was the author of a work on the 'Elements of Harmony,' and the founder of a musical sect, usually called Aristoxenian, in opposition to the Pythagorean. The disciples of Aristoxenus were called Musicians by Ear, in opposition to the Pythagoreans, who were termed Musicians by Rule.

The Pythagoreans had discovered the simplicity of the ratios which exist between the notes of the diatonic scale. Founding their notions entirely upon arithmetic, they laid down intervals, as concordant or discordant, by theory alone, even to the extent of rejecting the interval of an eleventh from among the consonances, though of course they retained the fourth. They had also discovered the unequal intervals which exist between the tones of the scale, and, had they considered different keys, would have been obliged to invent a method of temperament. In the entire rejection of the ear they were undoubtedly wrong, and Aristoxenus was equally so in taking the other extreme. He asserts that the octave consists of six whole tones, each of them equal to the interval between the fourth and fifth to the tonic; that the fourth consists of two such tones and a half, the fifth of three and a half. It is now sufficiently known that this system is erroneous even in the judgment of the ear, and that the only mark of musical tact displayed in it is the determination of the tone, not from the unassisted ear, though on its principles that would be admissible, but from the previous determination of a fourth and fifth. Six whole tones are more than an octave, and three different tones would be derived from the octave, fourth, and fifth, as defined by Aristoxenus. To put it in the power of any one to try his system, we subjoin the number of parts out of a thousand which each note requires; that is, calling the length of the string which sounds C, 1000; the length (tension being the same) corresponding to the several notes appears underneath them:—

	C	D	E	F	G	A	B	C
System of Aristoxenus	1000	891	794	749	667	595	530	500
Perfect Intervals	1000	889	800	750	667	600	533	500

Of course the system of Aristoxenus is, so far as it goes, that now known by the name of 'equal temperament,' which Dr. Smith (a stern theorist) prefers to all others, but of which the first principle is the abolition of all distinction between the characters of the different keys. The above is not on the exact principle of Aristoxenus, which cannot be represented, because it disagrees with itself; but the practical truth of the fourth and fifth of its scale (a mere accident) brings the preceding representation very close to it. The system of Aristoxenus had its followers till the time of Ptolemaeus, who wrote against it in his 'Harmonica.' There is an opinion attributed to Aristoxenus, that the soul bears to the body some such relation as the sound of a string to the string itself: this is perspicuous poetry, but rather cloudy philosophy.

(Tenneman, *Manuel*, &c., Cousin's translation, who cites G. L. Mahne, *Diatri. de Aristoxeno Philos. Peripatetico*, 8vo., Amsterdam, 1793.)

ARIUS was a native of Cyrenaica, in Africa: the date of his birth seems to be unknown. He was distinguished for personal beauty, graceful manners, extensive learning, logical eloquence, and ascetic abstinence. He has been accused, but without sufficient ground, of restless ambition, and a predilection for innovations. The doctrine taught by Arius was not in his time a novelty, but had been propagated in the Alexandrine school of divinity. Arius obtained the favour of three successive patriarchs of Alexandria. The patriarch Peter ordained him deacon, but prohibited him from the exercise of ecclesiastical functions when in A.D. 306, he joined the party of Meletius. The patriarch Achilles, moved by the repentance of Arius, made him in 313 presbyter and pastor of the church Baucalis, at Alexandria; and the patriarch Alexander gave him the first rank among his clergy.

The patriarch Alexander, in 318, having asserted, in a conference

with his clergy, the unity of substance in the three persons in the Deity, Arius, in reply, accused the patriarch of having fallen into the error of Sabellius, who had confounded the three divine persons. Arius maintained that the Son was created out of nothing before the creation of the universe, and that he could be called God only on account of his participation in extraordinary powers. This doctrine Arius propagated in private, and after he had obtained many followers, he preached it publicly in the church. In order to introduce his opinions among the lower classes, he composed songs for sailors, millers, and travellers, in the measure of popular melodies. The work of Arius, called 'Thaleia,' contained his doctrine in prose and verse. Alexander endeavoured to reclaim Arius by private admonitions in letters and by conferences, but failing in his attempts, he cited him in 321 before a synod of nearly one hundred Egyptian and Libyan bishops, convened at Alexandria, where his doctrine, his person, and his followers, were anathematized. Among the followers of Arius were two bishops, and several priests, deacons, and virgins.

Arius now began to travel through the neighbouring countries, where he excited sympathy for his misfortunes, and propagated his doctrine. Eusebius, bishop of Nicomedia, to whom Arius wrote a letter, still extant (Epiph., 'Hæres.' 69, 6; Theodoret, 'Hist. Eccles.' i. 4), absolved him from the Alexandrine excommunication; he also convened in 323 a synod in Bithynia, probably at Nicomedia, in his behalf; wrote in his favour to all the oriental bishops, and to the emperor Constantine the Great, who, being at that time yet unbaptised, considered the dispute as trifling in itself, and recommended peace in 324, in a letter addressed to Alexander and Arius jointly.

Constantine commissioned Hosius, bishop of Corduba, to examine this dispute at Alexandria. Hosius having made a report unfavourable to Arius, Constantine convened the bishops of his empire in 325 in order to settle the points in dispute between Arius and Alexander. In this council at Nicæa 318 bishops were assembled. Before this body Arius still persisted in rejecting all confessions of faith which maintained the divinity of Christ and the consubstantiality of the divine Word, and he opposed the expression which attributed to the Son the same essence with the Father. Consequently he was again anathematized by the synod, and exiled by the emperor to Illyricum, together with two bishops, who continued to adhere to him. Capital punishment was denounced against all who would not deliver up the writings of Arius. After three years Constantine became reconciled to Arius through the instrumentality of an Arian priest, who was secretly sent to the emperor by Eusebius, bishop of Nicomedia, and by his sister Constantia. A confession of faith, which seemed to be in unison with the Nicene Creed, was drawn up and presented by Arius in 330 to the emperor, by whom he was reinstated in his church at Alexandria; but Athanasius, then bishop of Alexandria, would not admit him. The synods of Tyre and of Jerusalem in 335, through the influence of Eusebius, re-admitted Arius into church communion, and recommended him to Athanasius; but Arius was sent by his opposers from Alexandria to Constantinople, in order to exculpate himself on account of the troubles excited by his presence at Alexandria. Arius presented to the emperor in 336 a third confession of his faith, and professed by oath to submit to the synod of Nicæa. It was accordingly resolved that Arius should be received into church communion in a solemn manner; but, according to Athanasius, he died on the evening preceding the Sunday on which he was to be received into church communion.

Eusebius, who became Bishop of Constantinople in 339, obtained permission for the Arians to celebrate public worship at Alexandria and other places of the eastern empire. After the death of Constantine in 350, and the fall of the pretender Magnentius in 353, Constantius became ruler of the whole empire, and used his power to support the Arians in the councils of Arles (354) and Milan (355), the decrees of which he maintained by arms against the Athanasians. Many persons, unable to understand the distinction between the doctrines of Athanasius and Arius, were influenced in the choice of their party by unworthy motives. Most bishops, moved by the court, signed Arian creeds, although some continued to teach Athanasian doctrine. The people, except in occasional tumults, gave themselves little trouble about debates which they did not comprehend. The strict Arians rejected the doctrine of Christ being *ὁμοούσιος* ('of similar essence'), as well as that doctrine which made him *ὁμοούσιος* ('consubstantiate,' or 'of equal essence'); but the Semi-Arians maintained the opinion of his being 'homoiousios.' The strict Arians, called also Ariomanites, insisted upon the Son being *ἕτεροούσιος* ('of another substance'). The Goths, Vandals, Suevi, Burgundians, and Lombards embraced Arianism, but exchanged it afterwards for orthodoxy.

The history of Arianism may be divided into three periods: the first commenced a considerable time before the life of Arius, having originated in the Alexandrine schools of divinity of which Origen was the most splendid luminary. It terminated in the synod of Nicæa, in 325. The second period began with the opposition of the Eusebians to the council of Nicæa, and terminated in the second synod of Sirmium, in 357. During this period the following synods were held: one at Tyre in 335, in which Athanasius was deposed and exiled to Gaul by Constantine; and immediately afterwards one at Jerusalem, in which Arius was received into church communion.

Another synod was held at Antioch in 341, in which the bishops

declared that they could not be followers of Arius, because, "how could we, being bishops, be followers of a presbyter?" In this synod four creeds were approved, in which an endeavour was made to steer a middle course between the Nicæan Homocousios, or Semi-Arian view, and the definitions of Arius himself, as between the two extremes of divergence from the views then generally received in the Eastern Church. These four creeds are extant in Athanasius, 'De Synodis,' § 22-25. A general council was again assembled at Sardica in Thrace, in which the emperors Constantius and Constans endeavoured in vain to reconcile the combatants for oriental and occidental orthodoxy. The orientals retired to the neighbouring city of Philippopolis, leaving their occidental opponents alone at Sardica.

Eusebianism was, under Constantius, as victorious in the east as the Nicæan creed was under Constans in the west. After the death of Constans in 350, and the victory over Magnentius in 353, Constantius endeavoured to establish Eusebianism by violent means in the west. In the synods of Arles (354) and of Milan (355) he compelled the assembled bishops to sign the condemnation of Athanasius.

The third period terminated with the suppression of Arianism by Theodosius I. The last vestiges of Arianism in the Roman empire are found in a law of Theodosius II. in 428.

ARJONA, MANUEL DE, born June 12, 1761, commenced his studies at the university of Osuna, his native town, and afterwards completed them at that of Seville, where he took his degrees in civil and canon law. Subsequently he entered the church, and was made canon penitentiary in the cathedral of Cordova, and one of the chapter of the chapel royal of San Ferdinand at Seville. In this last capacity he accompanied the Archbishop of Seville to Rome in 1797, when he received from Pius VII. the honorary appointment of one of his private chaplains. To scholastic erudition and classical learning Arjona joined an acquaintance with general literature, and distinguished himself by his efforts to promote a taste for such studies among his countrymen. He was one of the most active and influential members of the Academia de Letras Humanas at Seville, which institution could boast of many of the most intelligent individuals of that period. He is chiefly known by his poetical productions. His death took place July 25th, 1820. (Quintana, *Tesoro del Parnaso Español*.)

ARKWRIGHT, SIR RICHARD, one of those extraordinary men whose ingenuity has exerted a most powerful influence upon the condition of civilized society, was born at Preston, in Lancashire, on the 23rd of December, 1732. His parents moved in an humble walk of life; and as he was the youngest of thirteen children, we may suppose that the amount of school learning which he received was exceedingly scanty. About the year 1760 he quitted business as a barber, which he had previously carried on in the town of Bolton, and became an itinerant dealer in hair. The profits of this business were increased by means of a secret which he possessed for dyeing hair and preparing it for the use of wig-makers. In reference to Arkwright's pursuits at this period of his history, Thomas Carlyle in his characteristic manner says, "Nevertheless in stropping of razors, in shaving of dirty beards, and the contradictions and confusions attendant thereon, the man had notions in that rough head of his! Spindles, shuttles, wheels, and contrivances, plying ideally within the same; rather hopelessly looking, which however he did at last bring to bear. Not without difficulty."

His first effort in mechanics has been supposed to be an attempt to discover the perpetual motion, but Dr. Ure conjectures that Arkwright, alive to the importance of his cotton spinning apparatus, may have during his earlier experiments disguised the real character of his mechanism under that name.

Up to the time we have mentioned, the cloths of English manufacture called calicoes, from Calicut, the place of their original production, were formed by a mixture of linen and cotton; the warp was composed of linen and the weft of cotton, it being found impossible, by any means then known, to spin the fibres of cotton into a thread sufficiently strong to be used as warp. The demand for the cloth soon became so great, that the females in the weaver's family by whom the carding and spinning processes were performed, could not prepare sufficient weft to keep the looms employed, and the weaver was obliged to engage additional hands for preparing the cotton. The limit to which this species of employment could be carried was soon reached, and if some more productive mode of spinning than that by the one-thread wheel, then the only machine known, had not been discovered, the progress of the cotton manufacture must have been stopped, or at best would have been extremely slow. Mr. Guest, in his 'History of the Cotton Manufacture,' tells us, that at this time "it was no uncommon thing for a weaver to walk three or four miles in a morning, and call on five or six spinners, before he could collect weft to serve him for the remainder of the day."

Some have called in question the talents of Arkwright, and his merits as an inventor; and he has sometimes been considered as a plagiarist or pirate of other men's ideas. If however the evidence is carefully weighed, this charge will be seen to rest on very slight grounds, while the proofs which he exhibited of possessing talents of the very highest order in the management of the vast concerns in which he was afterwards engaged, are unquestionable. A patent for spinning by means of rollers was taken out in the year 1768, by Mr.

Charles Wyatt, of Birmingham, in the name of Lewis Paul, a foreigner, with whom Wyatt had formed a partnership. The specification of Wyatt's invention has been published, and there can be no doubt that it contains the principle of Arkwright's patent to some extent. Wyatt's contrivance had been tried in Birmingham and at Northampton in 1741, but was so far from being successful, that the machinery was sold in 1743, and it is not known what became of it. In the 'Case' which Arkwright drew up to be presented to Parliament in 1782, he makes mention of the fact in these words:—"About forty or fifty years ago, one Paul and others of London invented an engine for spinning of cotton, and obtained a patent for such invention; afterwards they removed to Northampton and other places. They spent many years and much money in the undertaking, but without success: and many families who had engaged with them were reduced to poverty and distress." This 'Case' was drawn up at a time when his patent-right was being constantly invaded, and it is incredible, that, if he had possessed a knowledge of the particulars of Wyatt's patent, he should have thus drawn public attention to it, since he must, in that case, have known that the production of the specification would at once have deprived him of every ground upon which he attempted to establish his own rights as an inventor.

To assist him in making the movements for his first projected machine, Arkwright employed a clockmaker, named Kay, first at Preston and afterwards at Nottingham. From the year 1767, Arkwright gave himself up completely to the subject of inventions for spinning cotton. In 1768 he set up his first machine at Preston. At this time Arkwright's poverty was such, that, being a burgess of Preston, he could not appear to vote during a contested election, till the party with whom he voted gave him a decent suit of clothes. Shortly after, apprehensive of meeting with the same kind of hostility which had a short time previously been shown to a man named Hargreaves, who also had invented a machine for abridging labour in cotton-spinning, Arkwright went to Nottingham, where he made arrangements with Messrs. Wrights, bankers in that town, for obtaining the necessary supply of money; and soon after entered into partnership with Mr. Need, a stocking manufacturer, and his partner, Mr. Jedediah Strutt, the ingenious improver and patentee of the stocking-frame invented by Mr. Lee. Several improvements suggested by Strutt were adopted by Arkwright, and in 1769 he obtained his first patent for spinning by rollers. The validity of this patent was contested in 1772, on the ground of Arkwright not having been the original inventor of the process, but a verdict was given in favour of the patent, which no one afterwards attempted to disturb.

The most important feature of this machine was the use of two pairs of rollers, technically called drawing-rollers, the first pair revolving slowly in contact with each other, and the second pair revolving in like manner, but with greater velocity. The lower roller of each pair was fluted longitudinally, and the upper one covered with leather, and the two were pressed together with a gentle pressure by means of weighted levers, in order that they might take sufficient hold of the soft-cotton passed between them. The fibres of the cotton-wool were first laid smooth and straight, by carding or combing, so as to produce a soft loose ribbon or cord called a sliver, the end of which was introduced between the first pair of rollers. In passing between them it received no further change than a slight compression, but as from them it was conducted to the second pair of rollers, moving with twice, thrice, or more times the velocity of the first pair, it was extended or drawn out to two, three, or more times its original length, its thickness being reduced in like proportion. As this action is effected by the sliding of the fibres upon one another, the distance between the two pairs of rollers must be so adjusted, in relation to the average length of the fibres, that the two pairs may never have hold of one fibre at the same time. By these processes the thick soft sliver or carding is converted into a fine, hard, and compact yarn or thread.

Arkwright's spinning-machine was, in the first instance, worked by horse-power; but in 1771 the partners built a spinning-mill for working by water-power at Cromford, in Derbyshire, from which establishment, "the nursing-place," as it has been styled, "of the factory opulence and power of Great Britain," the machine took the name of the water-frame, and the yarn produced by it that of water-twist.

Although previous to this time no establishment of a similar nature had existed to which the same system of management was applicable, Arkwright at once introduced a system of arrangement into his works which has since been universally adopted by others, and which, in all its main features, has remained unaltered to the present time.

The great invention, which has been described above, was followed up by various improvements and combinations of machinery, for which a second patent was obtained in 1775. His right to this patent was disputed in 1781, on the plea that some of the contrivances which it comprehended were not original; and his monopoly was invaded to such an extent by other cotton-spinners, that to maintain it he was obliged to bring actions against nine different parties. The first of these actions was tried in July, 1781, when he was non-suited, on the ground that the specification or description of the invention which he had enrolled, did not contain a sufficiently full and particular account of the invention.

The result of this trial occasioned Arkwright not only to abandon

the other eight actions which remained to be tried, but also, for a time at least, to forego the rights derived from his second patent. It was on this occasion that he drew up and published a pamphlet, to which allusion has already been made, and which he called his 'Case.' The object of this pamphlet was to impress the members of the legislature with the propriety of interfering for his protection.

Having in the beginning of 1785 obtained the testimony of several competent persons in favour of the sufficiency of his specification, Arkwright then commenced a new action, which was tried in February of that year, and decided in his favour, thereby reinstating him in the possession of his monopoly. The Lancashire cotton-spinners formed an association for the purpose of contesting the point, and cancelling the patent. They also engaged scientific gentlemen to discover the technical defects of the patent and to arrange the evidence for its overthrow. On this occasion Kay was brought forward to show that, previously to his having been employed in 1767 to make a model for Arkwright, he had been similarly engaged by another person, who was likewise called to corroborate the fact, and upon this evidence the jury found a verdict for the crown, and thereby annulled the patent. A new trial was applied for in the following term, on the ground that Arkwright had procured evidence to rebut that upon which the verdict was grounded, but the motion was refused by the court.

Although the yarn which Arkwright made was so far superior to that produced by the old method of spinning that it could be used for warp, the manufacturers combined to discountenance its use. A very considerable stock lay upon his hands in consequence, and he and his partners were driven to undertake the conversion of this yarn into manufactured goods. They first used it with perfect success in making stockings, and soon after established the manufacture of calicoes, such as they are made at the present day. But here another difficulty assailed them. Their orders for this description of manufacture, then new to England, were exceedingly great, but could not be complied with, on account of the demand on the part of the officers of excise of a duty of sixpence per yard, as being calicoes similar to those imported, and upon which a like duty was levied, while other English-made cloths were subject to only half that rate. It was not until application for relief had been made to parliament that this obstacle was removed, and a large accumulated stock of cloths was disposed of. An Act of Parliament was passed, declaring the cotton-manufacture "not only a lawful but a laudable manufacture," and fixing the duty at "threepence per square yard on cotton printed, painted, or stained with colours."

Five years expired from the first establishment of the works at Cromford before any profit was realised, but after that time wealth continued to flow in abundantly to the proprietors. The establishments were greatly extended, several new ones were formed, and, in many cases, Arkwright took a share with other persons in the erection and working of cotton-mills. This prosperity continued, notwithstanding the adverse decision of the courts in regard to his patent. For several years, the market prices of cotton twist were fixed by Arkwright, all other spinners conforming to his scale. His partnership with Mr. Strutt terminated in 1783, after which time he retained the works at Cromford, which were subsequently carried on by his son, while Mr. Strutt continued the works at Belper, which were founded about 1776. How greatly the cotton-manufacture was extended by Arkwright's improvements may be conceived from the fact that the imports of cotton-wool, which averaged less than 5,000,000 lbs. per annum in the five years from 1771 to 1775, rose to an average of 25,443,270 lbs. per annum in the five years ending with 1790. In 1845 the imports of cotton-wool from all parts amounted to 713,020,161 lbs.; in 1849 to 755,469,012; in 1850 to 663,576,861 lbs.; and in 1853 to 895,278,720 lbs.

Arkwright was a very early riser; devoted himself most assiduously to business; was a severe economist of time; was exceedingly sanguine in his disposition; and entertained an unbounded confidence in the wealth-producing powers of machinery and manufactures. To his credit it is recorded that when upwards of fifty years of age he made strenuous efforts to retrieve the deficiencies of his early education; redeeming time from the hours usually devoted to sleep in order to apply one hour a day to grammar, and another to writing and orthography. In 1786, on occasion of presenting an address to George III. after the attempt on his life by Margaret Nicholson, he received the honour of knighthood; and in the following year he served as high sheriff of Derbyshire.

Notwithstanding the increasing inconvenience which he experienced from a severe asthma, with which he had been occasionally afflicted from early life, Sir Richard continued to give the most unremitting attention to business, and superintended the daily operations of his large establishments, adding from time to time such improvements to the machinery as were suggested by experience and observation. He sunk at length under a complication of disorders, accelerated if not produced by his sedentary habits, and died in his house at Cromford, on the 3rd of August, 1792, in the sixtieth year of his age, leaving behind him a fortune estimated at little short of half a million sterling.

Considering the difficulties in which he was placed by the deficiency of his early education and the unfavourable tendency of his early employment, Arkwright must be acknowledged to have been a very

extraordinary man. Even without claiming for him the honour of having been an original inventor,—an honour which, upon the best consideration we can give to the conflicting evidence brought forward, we are still inclined to award him,—we may certainly ascribe to him the possession of a clear and comprehensive mind, as well as the most unerring judgment. His plans were laid with skill, and pursued with energy; he displayed the most unwearied perseverance in pursuit of his object under difficulties which would have borne down most men; and he forms one among the bright instances afforded by the annals of this country, that talent, when allied with patient energy and persevering industry, will not fail to ensure ultimate success to its possessor.

Our information concerning Arkwright's private or personal history is of limited extent. In early life he married Patience Holt, of Bolton, who, in December, 1755, became the mother of his only son Richard. After her death he married again, either in 1760 or 1761, his second wife being Margaret Biggins, of Pennington, in the parish of Leigh; and from this wife, who is the only one mentioned by most biographers, he separated, but when or under what circumstances, is not very certain, although according to some accounts it would appear to have been in consequence of some disagreement arising from his adventurous scheming disposition. By his second wife he had one daughter, who married Charles Hurt, Esq., and inherited part of his property. He left directions to his son, the late Richard Arkwright, Esq., for the completion of a church which he was erecting at Cromford, and also of Willersley Castle, which he was building as a family mansion. That gentleman inherited his father's sagacity and aptitude for business, and became, it has been asserted, the wealthiest commoner in England. He died on the 23rd of April, 1843, in his eighty-eighth year, leaving a large family; and his property was sworn, on the proving of his will, to exceed 1,000,000*l.*, that being however merely a nominal sum, taken because the scale of stamp duties goes no higher. The probate bore a stamp of 15,750*l.* Further information respecting the controverted points in the history of Arkwright and his inventions, may be found in the works of Baines, Guest, and Dr. Ure, on the 'History of the Cotton-Manufacture,' and in a copious memoir in the 'Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.'

ARLAUD, JACQUES ANTOINE, a distinguished miniature painter, born at Geneva in 1688, acquired a great reputation at Paris and at London. In Paris he was the instructor of the Regent Duke of Orleans, and had apartments in the palace of St. Cloud. He came to England in 1721 with letters of introduction to the Prince of Wales, afterwards George II., and returned in 1729 to his own country with a fortune of 200,000 francs: he died at Geneva, in 1743, and bequeathed many books, works of art, medals, and various curiosities to the library of that place. Part of his bequest were some pieces of a drawing of a Leda, which he made in Paris, said to have been copied from a basso-relievo by Michelangelo. Arlaud was originally educated for the church; he was a man of general acquirements, and was well versed in languages. While in England he formed a friendship with Sir Isaac Newton, who corresponded with him after his retirement to Geneva.

(Descamps, *La Vie des Peintres Flamand, &c.*; Walpole, *Anecdotes of Painting in England.*)

ARMAGNAC, COUNTS OF, were descended from the ancient dukes of Aquitaine and Gascony, and took their title from the county of Armagnac. John I. increased the importance of his family by marrying a daughter of the House of Bourbon. He was one of the powerful chiefs, in the south-west of France, strongly opposed to the claims of the English, and for this reason highly trusted by the French king, by whom he was made governor of Languedoc. Although we find him accompanying the Black Prince in his Spanish expedition against Peter the Cruel, he was still the prince's enemy when France and England renewed the contest. He died in 1373. His grandson, John III., who married the heiress of the House of Comminges, led an army of adventurers into Italy, where he laid siege to Alessandria, and fell under its walls in 1391. Bernard, younger brother of John III., succeeded him: he became the most celebrated of his family, and gave his name to the great party which he headed in opposition to the Burgundians. His aunt married the Duke of Berry, one of the French princes; and Bernard, in 1410, gave his daughter in marriage to the Duke of Orleans, then too young to head his party, and the task consequently fell to the Count of Armagnac. The cruelty with which his rude Gascon bands treated the court and the people round Paris, inspired them with horror for the cause of Orleans, and contributed in no small degree to give that character of atrocity to the civil wars of the time in which they stand unequalled. The Armagnacs were composed of a rustic or pastoral population: the Burgundian cause was chiefly supported by the burghers of the north of France and Flanders; and thus the mutual hatred of citizen and peasant increased the animosity between the opposite parties.

In 1412 both Armagnacs and Burgundians courted the alliance of England. The former made the higher offers, and stipulated to restore Aquitaine to Henry IV. of England, in return for his support. In the following year, however, the excesses of the Burgundians having disgusted the Parisians, the Armagnacs obtained for the first time superiority in the capital, and indeed throughout the kingdom.

The accession of Henry V. to the throne of England, his alliance with Burgundy, his invasion of France, and the victory at Agincourt, changed the face of affairs. The Count d'Armagnac, who hurried from the south with a small army to defend the capital, was now the sole reliance of the dauphin. He was accordingly created Constable in the last days of 1415, and he soon showed himself an active and severe leader. Towards the citizens, especially of Paris, he acted in an extremely tyrannical manner. In the field however he was not successful. The Earl of Dorset, with very inferior forces, put an army of Armagnacs to disgraceful flight; and the count, in his rage, had no other satisfaction but that of hanging some of his own runaway soldiers. His cruelties and his defeat weakened his party, and his harshness made an enemy of the queen, who meditated on making use of the authority of the dauphin to shake off the Armagnac yoke. The dauphin, John, son of Charles VI., soon expired, it was said by poison; and at the same time the death of other foes or rivals directed suspicion against the count.

Queen Isabel, whom the Count of Armagnac had confined at Tours, was not however without her revenge. She communicated to the Duke of Burgundy her wish to escape from the bondage in which she was held; and an expedition undertaken by that prince rescued Isabel from the hands of the count. The Burgundians soon drove the soldiers of Armagnac from the open country, and compelled the count to concentrate his force in Paris, where the Burgundians, with the co-operation of the populace, mastered him, but not without a struggle. At first the persons of the count and the chief members of the Armagnac party were respected, but after a few days the populace, being exasperated by past struggles, and excited by recollection of the tyranny of the Armagnacs, burst open the prisons, and massacred all within, their proceedings being characterised by great barbarity. This took place on the 12th of June, 1418. More than 3000 persons are said to have perished in this revolution.

John, count of Armagnac, grandson of the preceding count, though less powerful as a party chief, was equally notorious for his crimes and his turbulence. An incestuous intercourse with his sister, which he avowed, and sought to cover by a marriage, first drew upon him the indignation of the Pope Pius II., and of his sovereign, Charles VII. He was excommunicated, and forced by the royal troops to take refuge in exile. A prosecution was commenced against him before the parliament of Paris: he first appeared to answer the charges, but upon his again taking to flight, he was condemned, and his domains confiscated. The count, by repairing to Rome, contrived to soften the pope's anger, and procured the reversal of his sentence of excommunication. Under Louis XI., in 1461, the Count of Armagnac obtained possession of his fiefs, but soon joined in the revolt against that prince, which the Burgundians abetted. Louis XI. purchased the cessation of his enmity at the price of 10,000 crowns—a sum bestowed in vain. For several years Armagnac seemed an enemy in every sense worthy of Louis XI.,—revolting, defending himself bravely, when overcome at last vowing submission once more, and again acting the traitor. Cardinal d'Albi, who was sent against him by the king, entered into negotiations with him, and concluded terms of peace. Relying on the cardinal's good faith, Armagnac relaxed in the vigilance of his guard; and the soldiers of the cardinal found means to introduce themselves into the fortress of Lectoure, and to massacre the count and his followers in 1473. The king's commands required the total extermination of the Armagnac race. Jeanne de Foix, the legitimate wife of the count, who was pregnant, was compelled to swallow a draught of poison. His brother Charles was seized, tortured, thrust into an unwholesome dungeon, but survived, and was liberated after the death of Louis XI.

A descendant of the family was created cardinal under Francis I.; he was known as an upright administrator and a patron of letters. He died in 1585, at a very advanced age. [MEMOIRS, DUKES OF.]

ARMFELT, GUSTAF MAURITZ, a descendant of Carl Armfelt, and the eldest son of a Finnish nobleman, Baron Armfelt, major-general in the Swedish service, was born at Juva in the government of Abo, on the 1st of April, 1757, and educated in the college of cadets at Carlskrona. In the Memoirs of Armfelt, written by himself, he states that in his youth, when an officer of the guard, he was looked upon so unfavourably by Gustavus, who commanded the regiment in person, that he solicited permission to travel, and went to Paris, where he remained till hearing of the arrival of the King of Sweden at Spa, travelling incognito under the name of the Count of Haga, he went thither to wait upon him, and so won upon Gustavus's favour that he was invited to return to Sweden. He was soon appointed to a post in the service of the Crown Prince, whose birth three years before had disappointed the ambitious hopes of Charles, duke of Sudermania, the king's brother, who had till then been looked upon as heir presumptive. By the king's influence he obtained to wife the heiress of the noble family of De la Gardie, one of the first in Sweden, and the numerous letters addressed to him, which are given in the published correspondence of Gustavus III., show that he enjoyed a high place in the favour of the king. When the war with Russia was commenced by Gustavus in 1788, Armfelt was appointed commander of one of the three divisions of the army. At Summa, near Fredrikshamn, he defeated a Russian force. The successes of the Swedes were neutralised by the confederation of Anjala, a conspiracy of the officers in

the Swedish army, who sent to the king a letter, in which they announced that they had dispatched Major Jägerhorn to the Empress Catherine with proposals for an armistice, and instructions to request the empress to restore the Swedish constitution of 1720, which had been overthrown by Gustavus in 1772. Two or three days after, the news of a Danish war arrived, and before the confederates had time to seize his person the king returned to the capital. To Armfelt was committed the task of arousing the Dalecarlians, who in all the revolutions of Sweden have taken such a distinguished part; and he had raised the country against the Danes, who after a few successes had advanced considerably into the interior, when, much to his disappointment, an armistice was concluded between the two countries by the mediation of England and Prussia. He soon after succeeded in bringing a large body of the Dalecarlians to perform military duty near the capital, ostensibly to supply the want of regular troops near Stockholm, but in reality to overawe the states whom the king had convoked, and in which he was apprehensive that his opponents would have the upper hand. Armfelt's peasant allies were so unruly that he describes his joy at getting rid of them as almost equal to that he felt at seeing the states break up without having done anything against the king. The war with Russia was resumed with vigour in the campaign of 1789, when Armfelt surprised the pass of Karnakoski in Finland, and defeated the Russians in an attempt to recover it. In the next year he was severely wounded in an attack on Savitaipal, and the Empress Catherine ordered the Russian general Igelstrom to send and offer him whatever might be useful for his recovery. This offer led to an exchange of letters, in which Armfelt, who knew that the empress would see the correspondence, opened the way to negotiations, and his design succeeded. The recent successes of the Swedes, and in particular their victory at Svenskaund, enabled them to obtain more favourable terms than would otherwise have been practicable, and the treaty of Verela, signed by Armfelt and Igelstrom on the 14th of August, 1790, was on the basis of restoring affairs to the same state as before the war. The peace was no sooner made than the English regretted to have made no better use of so favourable an opportunity of diminishing the power of Russia, and proposed an offensive and defensive alliance with Sweden for a fresh war, which was only broken off by Gustavus demanding more than Pitt was willing to concede. A treaty of alliance between Russia and Sweden was signed by Armfelt at Drottningholm in August, 1791, during the absence of Gustavus, who had gone to Aix-la-Chapelle and Spa to concert measures for opposing the French revolution, against which this alliance was principally directed. Affairs after these events were going on more prosperously than for a long time before, when on the 16th of March, 1792, Gustavus was mortally wounded by the hand of an assassin.

Armfelt was named Governor of Stockholm, and was also one of the provisional government nominated on the morning after by the king, who was with the utmost difficulty prevailed upon to include in the number his brother, the Duke of Sudermania. On the morning of his death, the king having learned that he only had six hours to live, drew up a codicil to his will, in which he directed that all affairs during the minority of his son, then a boy of twelve, should be carried on by a council, whose opinion the regent, his brother, should on every occasion be bound to ask in the presence of the young king himself, and that all the transactions of this council should be placed on record for the inspection of the young king when he had attained his majority. In a final interview with Armfelt, after signing the codicil, the king made him promise to be the friend of the son as he had been of the father. On the same afternoon, when the will was opened, the Duke of Sudermania expressed his surprise and dissatisfaction at the want of confidence in him shown by Gustavus, and talked of declining altogether in consequence the post assigned him. It was only after a long conversation, in which Armfelt dissuaded him from taking this step, that he agreed to accept the regency with all the obligations attached to it, on the condition that the codicil should not be made public. The document was handed over to Lagerbring, a secretary of state, who was afterwards gained over to the duke's interest, and it disappeared. Armfelt was treated with apparent friendliness; but the conditions of the will were ill-observed, and he was allowed few interviews with the young king. He solicited permission to travel to Aix-la-Chapelle for the recovery of his health, which was still suffering from the wound received in Finland, and he was afterwards named Swedish ambassador to Naples. Before his departure, on the 15th of July, 1792, he had a secret interview with the young king by night, in which he cautioned him against the supposed designs of his uncle, and they both parted with tears.

While in Italy, Armfelt, who found that immediately after the day of his leaving Stockholm a considerable alteration had been made in the ministry, and that Reuterholm, a friend of the French Jacobins and a declared enemy of the late king, was now all-powerful with Duke Charles, heard that a scheme was on foot for declaring the young king unfit to reign from mental incapacity, and began to concert a counter-scheme for shortening the regency of the duke, by inducing the states to declare Gustavus of age to govern. With this view he entered into correspondence with the Empress Catherine, as well as with the Countess Rudensköld in Stockholm, and Ehrenstrom, one of the royal secretaries. The whole was discovered by Duke Charles, who in 1794 dispatched a vessel to Naples, to demand that his ambas-

sador should be delivered up to him as a traitor. The Neapolitan government gave Armfelt warning in time, and he fled first to Poland, and afterwards to Russia, where he lived under a feigned name at Kaluga. Some papers which he had left at Naples in the charge of his friend Lord Hervey, the English ambassador, were abstracted from the chest without Lord Hervey's knowledge, and on the evidence afforded by these and by some correspondence seized at Stockholm he was tried during his absence for high treason. The Countess Rudensköld, who was brought to trial for the same offence, was one of the most beautiful women in Sweden, and eighteen months before had rejected the dishonourable offers of Duke Charles, who is reported to have repeated them on the eve of her imprisonment, with a promise of pardon if accepted, and of a terrible revenge if refused. The issue of the proceedings, which were disgraceful to the duke and to the nation, was that Armfelt was condemned to death as a traitor; that he was declared an outlaw, and that it was decreed that his name should be inscribed on the pillar of infamy, which is set up in the principal Swedish towns. The Countess Rudensköld was declared infamous, and condemned to be publicly exposed on a scaffold surrounded by four executioners, and imprisoned for life in the house of chastisement or public bridewell. She sunk down after an hour's exposure apparently dead from excessive agony, and the indignant mob of Stockholm was only prevented from rescuing her by the strong body of soldiers who guarded the scaffold. Ehrenström, who was sentenced to death, received at the place of execution a commutation of punishment into imprisonment for life. Armfelt, who appears to have composed his memoirs shortly after these events had taken place, concludes them by protesting, that "if righteous Heaven should ever afford him the means of revenge, the author of these atrocities should not die before he had tasted in this world the torments of hell."

Armfelt left Russia, and resided in Germany till 1799, when Gustavus IV., on attaining his majority at the age of 18, received the crown from the hands of the regent, and immediately ordered a revision of the trials for treason. The whole proceedings were annulled, Armfelt restored to all his former dignities and his military rank, and the countess and Ehrenström set at liberty. Armfelt was afterwards appointed ambassador to Vienna, and in 1805 governor-general of Finland. In 1807 he commanded a portion of the Swedish army in Pomerania, and defended Stralsund against the French; in 1808 he was appointed to the command of the western army of Sweden, which was intended to conquer Norway. The attempt entirely failed; and Sweden was itself invaded by the Norwegians, under the command of the Prince of Augustenburg. Armfelt was recalled and deprived of his command, and appears to have been living in private life when the revolution of 1809 took place, by which Gustavus IV. lost the crown, and Duke Charles of Sudermania assumed it under the title of Charles XIII. No explanation seems to be given of the fact, that from this prince, the very man whom Armfelt had sworn to pursue with the "torments of hell," he again received the high command of which Gustavus IV. had deprived him, and was also named President of the Military Council. Their friendship however was not of long duration. The death of the Prince of Augustenburg, who had been elected successor to the throne of Sweden, was attributed by the populace to poison, and their suspicions fixed upon the Countess Piper, Count Fersen, and Armfelt. Fersen, as he followed in the funeral procession of the prince, was torn to pieces by the mob, apparently with the connivance of Charles XIII., whose soldiers did not attempt to defend him. An order was issued for the arrest of Armfelt, who escaped by the back door of his house, and fled to the residence of the Russian ambassador, whose protection he claimed as a native of Finland, which had in the preceding year been torn by Russia from the Swedish crown. The protection was given, and Armfelt spent the rest of his life in the Russian service, in which he was treated with distinguished honour. He was raised to the dignity of count, made chancellor of the university of Abo, a member of the Russian senate, and president of the Board of Finnish Affairs at St. Petersburg, while his countess was appointed one of the ladies of honour to the empress. After this life of strange vicissitudes Armfelt died at Tzarskoe-Selo, on the 19th of August, 1814.

Armfelt wrote some memoirs of himself, which were printed in Swedish in 1830, in the 'Handlingar rörande Scandinaviens Historia,' and in a German translation in the fourth volume of the third series of the 'Zeitgenossen.' The narrative supplies some explanation of his course of action by the disclosures which it gives, but these disclosures only render more mysterious his subsequent career, some parts of which will hardly admit of an explanation honourable to Armfelt. Indeed he seems throughout the whole of his life to have had a decided propensity to intrigue, and more than one circumstance proves that he cannot have been a man of high principle.

ARMIN, ROBERT. The Bodleian Library contains the only known copy of a tract entitled 'A Nest of Ninnies. Simply of themselves without compound. Stultorum plena sunt omnia. By Robert Armin, 1608.' The Shakspeare Society has reprinted this work, "unwilling that any volume of this description, of which no other exemplar is known, should be exposed to the slightest risk of loss, however remote or improbable." The tract thus snatched from "Time's devouring

man,* for a brief period, contains very little that we should be anxious to preserve. It is a collection of very dull anecdotes of the domestic fools of the author's own period, which indeed has this value in connection with the writings of the dramatist who has informed his fools with wit and sense that it affords evidence that he drew nothing of these qualities from the recorded sayings of the fools of real life. Armin was a player in Shakspeare's company. His name occurs with that of Shakspeare in a certificate of 1589, and in King James's patent to his players in 1603. He is mentioned by Nash, in 1592, as a writer of ephemeral stories and ballads, and in 1609 his name appears to a translation of a little novel, 'The Italian Taylor and his Boy.' Subsequently he published a dramatic piece, entitled, 'The History of the Two Maids of More Clacke.' The authorship of a play called 'The Valiant Welchman' has also been assigned to him. Armin is among the names in the original list of the performers in Shakspeare's plays, given in the first folio edition; and he is held to have been the successor of Kempe in the representation of the most popular of Shakspeare's clowns. (*Pools and Jesters; with a Reprint of Robert Armin's Nest of Nancies*. Printed for the Shakspeare Society, 1842.)

ARMINIUS. [HERMANN.]

ARMINIUS, JACOBUS, from whom the system of doctrine called Arminian has received its name, was born in the year 1560, at Oudewater, a small town of Holland, through which the little river Isael flows. His real name in Latin was Jacobus Hermanni, which in Dutch is Jacob Harmensen. For Harmensen he adopted the Latinised form Arminius, evidently at an early period of his life. As Oudewater means in Dutch 'Old Water,' *Veteres Aquæ*, Arminius is generally surnamed in his works *Veteraquinas*. He lost his father, Hermann, who was a cutler, in his infancy; and his mother, Angelica, was left with two sons and a daughter in very straitened circumstances. But the young Arminius found a protector in Theodorus Æmilius, who had once been a Roman Catholic priest, but had renounced his religion because he considered the sacrifice of the mass idolatrous. Æmilius took Arminius with him to Utrecht, and sent him to the school of that place. In his 16th year Arminius lost his kind patron by death; but another protector, a native of Oudewater, named Rudolph Snellius, took him under his care, and removed him to Marburg, the capital of Upper Hesse (1575). Arminius had scarcely arrived at Marburg when he heard that his native town had been sacked by the Spaniards and the inhabitants put to the sword. Hurrying back to Oudewater, he found that his mother, sister, brother, and his other relations had been killed. He returned to Marburg on foot. He went thence to Rotterdam, and was received into the house of Peter Bertius, the pastor of the Reformed Church in that town. In the same year (1575) he was sent, with Peter Bertius the younger, who afterwards pronounced his funeral oration, to the University of Leyden, which had just been founded. After he had studied at Leyden for six years, "the directors of the body of merchants" of Amsterdam undertook to bear the expenses of his future education for the ministry, Arminius agreeing that after he had been ordained he would not serve in the church of any other city without the permission of the burgomasters of Amsterdam. In 1582 he was sent to Geneva, which was then the great school of theology for all the Reformed Churches, and where the doctrines of Calvin were then taught in their most rigorous shape by Theodore Beza. At Geneva, Arminius formed that close friendship which united him through life with Uyttenbogaert of Utrecht.

During his residence at Geneva he gave great offence to some of the Aristotelian teachers of the Geneva school, by advocating in public and lecturing in private to his friends on the Logic of Ramus. He had imbibed a love for the philosophical and logical principles of Ramus from his patron Snellius. Thinking it advisable to leave Geneva for a short time, he went to Basle, where the faculty of divinity offered to confer upon him the degree of Doctor gratis; but he declined it, considering himself too young, and in 1583 returned to Geneva, where he continued his theological studies for three years more. In 1586 the fame of James Zabarella, who was professor of philosophy at Padua, induced him to take a journey into Italy in the company of a friend. They first went to hear the professor at Padua, and from Padua proceeded to Rome. After spending seven months in this journey, Arminius came back to Geneva, and soon received an order from the burgomasters of Amsterdam to return to that town. He had taken this journey without their knowledge, and rumours had spread abroad that he had kissed the pope's slipper, held intercourse with the Jesuits, and especially with Cardinal Bellarmine—that, in short, he had become a Roman Catholic. The testimony of his friend cleared him from these charges. Arminius used afterwards to say that he derived no little benefit from this journey, as "he saw at Rome a mystery of iniquity much more foul than he had ever imagined." He was ordained minister at Amsterdam on the 11th of August 1588, when he was twenty-eight years old, and he soon became distinguished as a preacher.

In 1589 Theodore Coornhart of Amsterdam published several works, in which he attacked the doctrine of predestination, which was taught by Beza and the Geneva school. To obviate Coornhart's objections, some ministers of Delft proposed a change in Beza's doctrine. They agreed with Beza that divine predestination was the antecedent, unconditional, and immutable decree of God concerning the salvation or damnation of each individual; but whereas Beza represented that

man, not considered as fallen or even as created, was the object of this unconditional decree, the ministers of Delft made this preceptory decree subordinate to the creation and fall of man. They thought this hypothesis would do away with Coornhart's objection, that the doctrine of absolute decrees represented God as the author of sin—as such decrees made sin necessary and inevitable, no less than damnation. Arminius was requested to refute the work of the ministers of Delft. He consented to do so, but as he examined the arguments of Beza and the ministers, he began to doubt which of the two views to adopt, and at length became inclined to embrace those views of the doctrine which he had undertaken to refute. He therefore laid aside the design of writing any answer. Meanwhile, on the 16th of September 1590, he married Elizabeth Reael, daughter of Laurent Reael, a judge and senator of Amsterdam.

In the course of his sermons at Amsterdam, Arminius commenced an exposition of St. Paul's Epistle to the Romans, in which some of the new views which he had adopted found expression, and led to keen disputes with those who defended the Calvinistic views. In 1593 the consistory of Amsterdam gave an audience to the contending parties, and ordered them to cease all controversy, until a general synod could be summoned to determine the subject of the dispute.

Arminius however did not publicly propound those peculiar doctrines on predestination and grace which constitute Arminianism, as distinguished from Calvinism, until the year 1604, when he was professor of divinity in the University of Leyden. As early as 1591, soon after he had read the works of Coornhart, he expressed doubts as to the Calvinistic doctrine, but his election to the professorship at Leyden proves that he had not yet openly proposed his whole theory. A general suspicion of his heterodoxy had gone abroad, but he either had not systematised his views, or he was afraid to express them fully.

In 1602 a pestilential disease raged at Amsterdam and the neighbouring towns, during which Arminius showed the greatest courage and kindness in visiting the sick. The disease carried off two of the professors of the University of Leyden, Lucas Trelocatius, the elder, and Francis Junius, professor of divinity. The curators of the university turned their eyes upon Arminius as a fit successor to Junius; but it was only after repeated applications on the part of the university that the authorities of Amsterdam consented to give him permission to leave on the 15th of April 1603. As he was suspected of holding heterodox opinions, before he was finally appointed he held a conference with Francis Gomar, who was also professor of divinity at Leyden, and who became afterwards his capital enemy, at the Hague, the 6th of May 1603, and the result was, that Gomar declared the suspicions entertained of Arminius to be groundless. He underwent another examination, a private one, conducted by Gomar, for the degree of Doctor of Divinity, which he received the 11th of July 1603. Arminius was the first on whom the University of Leyden conferred the degree of Doctor.

On the 7th of February 1604, Arminius propounded certain theses on predestination, of which the sum was this:—"Divine Predestination is the decree of God in Christ, by which he has decreed with himself from eternity, to justify, adopt, and gift with eternal life, to the praise of his glorious grace, the faithful whom he has decreed to gift with faith. On the other hand, Reprobation is the decree of the anger or severe will of God, by which he has determined from eternity, for the purpose of showing his anger and power, to condemn to eternal death, as placed out of union with Christ, the unbelieving who, by their own fault and the just judgment of God, are not to believe." On the last day of October, Gomar openly attacked these positions of Arminius, and from this day may be dated the long series of tumults which ensued. In 1605 Arminius was created Rector Magnificus of the University, which office he quitted February 8th, 1606. Meanwhile the disputes continued. Festus Hommius, a minister of Leyden, Janus Kuchlin, principal of the Theological College, and the uncle of Arminius, were among his warmest adversaries. Deputies from the churches of all the provinces of Holland, and deputies from the Synod of Leyden, required from him a conference on the subject of his opinions. Preachers attacked him from the pulpit as a Pelagian, and worse than a Pelagian. A National Synod, which had not been held for twenty years, was demanded, to settle the disputes about predestination. The States-General granted permission, on the 15th of March 1606, to convoke the synod. On the 22nd of May 1607, an assembly was held at the Hague, at which Arminius was present, to settle the manner in which the synod was to be held. In 1608, Arminius himself and his friend Uyttenbogaert applied to the States of Holland to convoke a synod, that these grave controversies might be settled. In the same year Arminius and Gomar held a conference before the Supreme Court of the Hague, which declared in its report that these two professors differed on points of little importance, and unessential to religion. Arminius gave in an account of his opinions to the States at the Hague on the 30th of October 1608.

Before the proposed synod could be held Arminius died. All these disputes embittered his life and hastened his end. The disease which carried him off at last had long lain latent. It broke out on the 7th of February 1609; but he recovered so far as to resume the usual duties of his professorship, though still weak. At last he sunk under his disorder and expired 19th October 1609. His death was most

painful; and to bodily pain was added mental anguish at the misrepresentations, as he deemed them, of his religious opinions. Seven sons and two daughters survived him. The curators of the University of Leyden allowed his wife and children a pension.

In 1610 the followers of Arminius, who had become numerous, presented a petition to the States of Holland and West Friesland, which was called a 'Remonstrance.' They were named Remonstrants in consequence; and as the Calvinists presented a 'Counter-Remonstrance,' they were called Contra-Remonstrants. After the death of Arminius the controversy between his disciples and their opponents raged more fiercely. Attempts were made by the authorities to reconcile the two contending parties, by a conference between them at the Hague in 1611, a discussion at Delft in 1613, and also by an edict in 1614, enjoining peace. At last the States-General issued an order for the assembling of a National Synod. It met at Dort, in Holland, and opened on November 13th, 1618, and its sittings continued through that and the following year. This famous Synod condemned entirely 'five Articles' in which the Arminians expressed their opinions. These articles had been drawn up in 1610, presented in the conference at the Hague in 1611, and finally laid before the Synod of Dort. To fix the sense of the passages in the Scriptures which related to the dispute, a new Dutch translation of the whole Bible, from the original Hebrew and Greek, was undertaken at the command of the synod. This new version was published in 1637. The Arminians being dissatisfied with the version of the New Testament, made another version of the New Testament from the Greek, which was published at Amsterdam in 1680. The Arminians were subjected to severe penalties. They were all deprived of their sacred and civil offices, and their ministers were forbidden to preach. Many retired to Antwerp and France: a considerable body emigrated to Holstein, upon the invitation of Friederich, duke of Holstein, and built the town of Frederickstadt in the duchy of Schleswig. After the death of Maurice in 1625, the Arminians were allowed to return by his brother and successor, Friederich Heinrich. The exiles from France and the Spanish Netherlands came back and established congregations in various places, particularly at Rotterdam and Amsterdam. At Amsterdam they founded a school, in which Simon Episcopius was the first professor of theology.

The works of Arminius show that his followers expressed his sentiments on the points of predestination and grace in the famous Five Articles. These articles are drawn up almost entirely in words which may be found in his writings. The following is a literal translation of them:—

1. God, by an eternal and immutable decree ordained in Jesus Christ, his Son, before the foundation of the world to save in Christ, because of Christ, and through Christ, from out of the human race, which is fallen and subject to sin, those who by the grace of the Holy Spirit believe in the same his Son, and who by the same grace persevere unto the end in that faith and the obedience of faith; but, on the contrary, to leave in sin and subject to wrath those who are not converted and are unbelieving, and to condemn them as aliens from Christ, according to the Gospel, John iii. 36. 2. To which end Jesus Christ, the Saviour of the world, died for all and each one, so that he has gained for all, through the death of Christ, reconciliation and remission of sins; on this condition however, that no one in reality enjoys that remission of sins except the faithful man, and this, too, according to the Gospel, John iii. 16, and I John ii. 2. 3. But man has not from himself, or by the power of his free will, saving faith, inasmuch as in the state of defection and sin he cannot think or do of himself anything good, which is, indeed, really good, such as saving faith is; but it is necessary for him to be born again and renewed by God in Christ through his Holy Spirit, in his mind, affections or will, and all his faculties, so that he may be able to understand, think, wish, and perform something good, according to that saying of Christ in John xv. 5. 4. It is this grace of God which begins, promotes, and perfects everything good, and this to such a degree that even the regenerate man without this preceding or adventitious grace, exciting, consequent, and co-operating, can neither think, wish, or do anything good, nor even resist any evil temptation: so that all the good works which we can think of are to be attributed to the grace of God in Christ. But as to the manner of the operation of that grace, it is not irresistible, for it is said of many that they resisted the Holy Spirit, in Acts vii. 51, and many other places. 5. Those who are grafted into Christ by a true faith, and therefore partake of his vivifying Spirit, have abundance of means by which they may fight against Satan, sin, the world, and their own flesh, and obtain the victory, always however by the aid of the grace of the Holy Spirit; Jesus Christ assists them by his Spirit in all temptations, and stretches out his hand; and provided they are ready for the contest, and seek his aid, and are not wanting to their duty, he strengthens them to such a degree that they cannot be seduced or snatched from the hands of Christ by any fraud of Satan or violence, according to that saying, John x. 28. "No one shall pluck them out of my hand." But whether these very persons cannot by their own negligence desert the commencement of their being in Christ, and embrace again the present world, fall back from the holy doctrine once committed to them, make shipwreck of their conscience, and fall from grace; this must be more fully examined and weighed by the Holy Scripture, before men can teach it with full tranquillity of mind and confidence.

The last proposition the Arminians afterwards so completely modified as to assert explicitly that it is possible for a true believer to lose his faith and fall from grace. The Arminians at first explained these five propositions, in such manner that they taught the Lutheran doctrine. But their adversaries asserted that they were Pelagians and Socinians at heart. It cannot be denied that, after the Synod of Dort, the chief Arminian teachers gave these propositions such an interpretation that they seemed to differ very little from those who say that men do not require divine aid to be converted and lead a holy life; and some of their teachers, undoubtedly, incline towards Socinianism.

Up to the time of the Synod of Dort these five points alone constituted the differences between the Arminians and the Calvinists. After the Synod of Dort, Arminianism became a very indefinite thing, and the Arminians had no system of theology. They point to the 'Confession,' which was drawn up by Episcopius, as their formula and rule of faith: but it is capable of various interpretations, and their several teachers interpret it in different ways; nor are they bound down to it by any oath or promise. The only doctrine to which the Arminians have adhered throughout is this—that the merits of the Saviour extend to every one, and that none perish by any fixed and inevitable decree of God, but all by their own fault. But even this doctrine of the universal love of God to man is variously explained by their different doctors. On other, and the most weighty, doctrines of Christianity, their teachers advance very different opinions. The great object which the Arminians openly professed after the time of the Synod of Dort, was to unite into one family the various bodies of Christians, excepting the Roman Catholics, however they may differ in points of doctrine or church government. With this view the leading principle which they laid down is—that very few things are necessary to be believed for salvation; and that every one may think as he pleases concerning God and religion, provided he lives a pious and virtuous life. Some suppose that the Apostles' Creed is the test which they offer for communion; but "they are mistaken," says John le Clerc, one of the most distinguished among the Arminians; "the Arminians offer communion to all who receive the Holy Scripture as the sole rule of faith and manners, and who are neither idolators nor persecutors." ('Bibliothèque Ancienne et Moderne,' tom. xxv. p. 119.) The Arminians excluded the Roman Catholics from their communion, because they held the Roman Catholics to be persecutors.

The man who drew up this system, and who was the greatest Arminian teacher, was Simon Episcopius. But that the aim of Arminius was to unite all sects of Christians, with the exception of Roman Catholics, into one community, is manifest from a passage in his will, where he says, "I have studied to inculcate everything which might contribute, according to the word of God, to the propagation and increase of truth, of the Christian religion, of the true worship of God, of general piety, and a holy conversation among men; and finally, to that tranquillity and peace which befit the Christian name, excluding Papacy, with which no unity of faith, no bond of piety, or of Christian peace can be maintained." His enemies allowed that his life was irreproachable. He fasted frequently. His motto was, "A good conscience is Paradise."

The works of Arminius do not show any great knowledge of the Fathers or ecclesiastical antiquity; but they contain evidence of a clear and vigorous mind. His manner is exceedingly methodical and rather scholastic, but his style is characterised by that simplicity and clearness which his followers have always regarded as one of the chief excellencies of a theologian. No rhetorical ornaments are to be found in the sermons, academical discourses, and treatises of Arminius. Arminius either could not use them, or he considered them inconsistent with the simplicity of the Gospel. He was acquainted with Hebrew and the Oriental languages, which he considered of great importance for a theologian. He also wrote Latin verse. To obtain a knowledge of his theological views, 'Disputationes Publicæ et Privæ' should be particularly consulted. The opinion of Arminius as to the divinity of Christ was, that he was *ἀὐτὸ θεός*, if that word was understood to mean 'true and real God,' but not if it meant 'God of himself.' This last opinion, he says, was contrary to Scripture and to antiquity, which taught that the divinity of the Son was derived from the Father by eternal generation. He always repudiated all charges of Pelagianism and Socinianism.

The earliest authority for the Life of Arminius is Petrus Bertius, 'De Vita et Obitu J. Arminii Oratio.' The fullest and most accurate account is given by Caspar Brandt, a minister of the church of the Remonstrants at Amsterdam, in his 'Historia Vitæ J. Arminii,' Amsterdam, 1724, 8vo., a posthumous work, which was published by Gerhard Brandt, the historian, who was the son of Caspar. It was republished, with a preface and some notes by the historian Mosheim, Brunswick, 1725, 8vo. The chief historians of the whole controversy between the Arminians and Calvinists are as follows. The Arminian writers are Gerhard Brandt, 'Historie der Reformatie,' &c., which is the most copious account extant, and of which there are many epitomes in English and French; Phil. Limborch, 'Historia Vitæ Sim. Episcopii,' Amsterdam, 1701, 8vo., and 'Relatio Historica de Origine et Progressu Controversiarum in Fœderato Belgio de Prædestinatione,' &c., which last work is subjoined to the later editions of his 'Theologia Christiana'; Joannes Uytendogaert, 'Kerckelijcke Historie,' &c., p. 1071, &c., Rotterdam, 1647, fol. On the Calvinistic side

the chief works are, Jac. Trigland, 'Den recht-ghematichden Christen,' Amsterdam, 1615, 4to.; Jacobus Leydeker, 'Eere van de Nationale Synode van Dordrecht,' Amsterdam, 1705-1707, 4to.; 'Acta Synodi Nationalia,' &c., Dort, 1620, 4to. The writers on the Council of Dort are enumerated by Fabricius, 'Bibliotheca Græca,' lib. 6, c. 4, vol. xi. p. 723. Burnet, on the Seventeenth Article of the English Church, makes some judicious remarks on the question how far its Articles and Formularies are Calvinistic or Arminian. Mosheim ('Ecclesiastical History') had well studied the whole controversy, and his account is impartial. Professor Stuart, of Andover, published a favourable and able treatise on 'The Creed of Arminius, with a brief Sketch of his Life and Times,' in the 'Biblical Repertory,' Andover, 1831, vol. i. No. 2, p. 225-308.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARMSTRONG, JOHN, was a native of Roxburghshire, being born at Castleton in Liddesdale. The date of his birth is generally placed about 1709. His father was a clergyman of the Scotch church. He completed his education at the University of Edinburgh, where he studied physic, and took his degree in 1732. During the course of his professional education he wrote verses, as most boys of talent have ever done, and amused himself with drawing and flute-playing. Armstrong soon laboured to obtain professional reputation by various publications; and in this walk he did not wholly confine himself to dry disquisition, but attacked the ignorance of the apothecaries in a satire entitled 'An Essay for Abridging the Study of Physic.' This was published anonymously in 1735. He was then settled in London as a physician. His practice, it would appear, was very small; and probably he did not take the wisest course for professional success. About 1737 he published the 'Economy of Love,' a poem which could not be published in our days, and which was an outrage upon decency a hundred and twenty years ago. The author probably thought that he was justified in putting the drapery of elegant language and harmonious versification upon a physiological subject. He was mistaken. His second poetical production, 'The Art of Preserving Health,' which appeared in 1744, redeemed his name from the somewhat just charge of being a pander to licentiousness. It is upon this work that the reputation of Armstrong rests. His medical dissertations are obsolete, and it may be doubted if they ever possessed any great merit. His satires, whether in prose or verse, have lost their point. But 'The Art of Preserving Health' still finds a place in those ponderous collections of verses called 'The English Poets.' Until the commencement of the present century it was held to be one of the finest didactic poems in our language. It is creditable to our own age that didactic poems are not read. A didactic poem is a species of composition that professes to describe and explain, with inversion and circumlocution, with pompous epithet and long-drawn simile, something that might be told with much greater force and clearness in plain prose. The production of such poems at all, and especially the success of them, are proofs of the anti-poetical tendencies of the age in which they appear. There is no doubt considerable vigour in some of Armstrong's best passages, as in other productions of the same class; but as a work of art to be regarded as a whole, 'The Art of Preserving Health' is worthless. Armstrong appears to have continued in London till 1760, when he was appointed physician to the army in Germany. This appointment he held until the peace in 1763. It is said that he owed his advancement to the interest of John Wilkes. He had the merit of subsequently quarrelling with this profligate demagogue; and perhaps it is creditable to him that Churchill was also amongst his enemies. On the other hand, he enjoyed and retained the friendship of Thomson. Whatever might be Armstrong's abilities and acquirements, he chiefly owed his want of professional success to his imprudence and his indolence. In his later years he was preserved from indigence by his half-pay as physician to the army; and such was the extreme frugality of his habits, that he was found, at his decease in 1779, to have saved upwards of three thousand pounds. Armstrong's shorter poetical pieces were collected under the title of 'Miscellanies,' in 1770. Under the name of Lancelot Temple he published, in 1758, a collection of 'Sketches or Essays;' and 'A Short Ramble through France and Italy,' in 1771. His last publication was a quarto volume of 'Medical Essays,' 1773. The immediate cause of his death, in 1779, was an accident which he met with in getting into a carriage. (Aikin, *General Biography*; Chalmers, *British Poets*; Watt, *Bibliotheca Britannica*; Armstrong's Works.)

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARMSTRONG, JOHN, was born on the 8th of May, 1784, at Ayres Quay, near the united towns of Bishopwearmouth and Sunderland in the county of Durham. His father was the superintendent of some glass-works, and was an uneducated man, but especially esteemed for his abilities and integrity. John was the only survivor of several children. His education was neglected till he was eight years of age, when he was put under the care of a good master, and pursued his studies with ardour and success. He early manifested an inclination for the medical profession, and accordingly, on his leaving school at the age of sixteen, he was put on trial with a surgeon and apothecary at Monkwearmouth. This situation he soon quitted, contrary to the wishes of his parents, and for the next two or three years led a desultory life at home. At the age of eighteen or nineteen the savings of an

affectionate mother furnished the means for his entering as a medical student in the University of Edinburgh, where he passed three seasons absorbed in his professional pursuits. In June 1807 he took the degree of M.D., his thesis being 'De Causis morborum hydropticorum, rationeque iis medendi.' In the same year he settled in lodgings at Bishopwearmouth, and there commenced the practice of his profession. Such was his success that at the end of four years we find him physician to the Sunderland Infirmary, living in a large house, setting up his carriage, and marrying the daughter of a gentleman of his native county. He had become the popular physician of his town and neighbourhood.

His first appearance as an author was in a paper communicated to the 'Edinburgh Medical and Surgical Journal for January 1813,' on 'The Brain-Fever produced by Intoxication;' and this was soon followed by a volume on 'The Puerperal Fever,' which at once gained for its author a reputation beyond the limits of his own neighbourhood. Forty-three cases of puerperal fever had occurred within a few months in the practice of five medical men of Sunderland, and of these cases only five had terminated fatally. The unusual success of the treatment was attributed by Dr. Armstrong to the bold and novel measure of very free bleeding and purging in the stage of excitement.

In 1816 he published his work on 'Typhus.' It became immediately popular, passed through three editions in three years, and made his name well known, so that a contemporary reviewer writes, "there is scarcely a practitioner even in our most sequestered villages who has not read Dr. Armstrong, or who does not profess to act upon his maxims." ('Edinburgh Med. and Surg. Journal.') These maxims consisted chiefly in recommending active depletion in the early stage of typhus, a practice which had been previously gaining ground among well-informed physicians, but possessed all the attractions of novelty and boldness for the profession in general. His advice was probably good at the time it was given, but he erred in laying down absolute rules of treatment, instead of restricting their application to the then prevailing epidemic. No judicious physician in the present day would treat typhus as Dr. Armstrong recommended, and he himself lived to see a fever prevail in which active depletion was quite inadmissible. A lasting benefit was conferred on medical science by his distinction of the simple, inflammatory, and congestive forms of fever, and by his clear description of their successive stages. The same volume contains a chapter on Inflammation, in which he applies the term sub-acute to those forms of inflammation where the symptoms and effects are milder than in the acute, while the duration of the disorder is not such as to entitle it to the term chronic. This distinction, one of practical importance in reference to the treatment, had been previously established by Corviart in inflammation of the pericardium, but had not been stated with respect to inflammatory diseases in general.

His professional ambition keeping pace with his growing reputation, Dr. Armstrong repaired to London in February, 1818, and established himself in lodgings in Great James-street. This was a trying period of his life, for he was living alone, having left his wife and children behind him at Durham. Nevertheless, his success was as remarkable, and almost as rapid, as it had been in Sunderland, and that in spite of an event which would have very differently affected the fortunes of most men. On commencing practice in London it was necessary to become a licentiate of the College of Physicians. Dr. Armstrong accordingly presented himself for examination, and to the surprise of every one he was rejected. It seems strange that a distinguished writer and practical physician should have been unable to produce the little knowledge which was usually required on these occasions; yet there is no doubt that such was the fact. The mode of conducting the examination orally in Latin may partly explain the failure of an imperfectly educated man; but no circumstances have transpired which can justify the resentment subsequently entertained by Dr. Armstrong, however natural the feeling may have been in one possessed of so large a share of self-esteem. It is probable that this rejection rather promoted than retarded his professional success; for the College of Physicians was unpopular among those medical practitioners whose support is most valuable to a young physician, and the event was attributed rather to unworthy motives on the part of the examiners than to any imperfection in the knowledge of so popular an author. Thus it happened that he was, soon afterwards, elected Physician to the Fever Hospital, the trustees suspending, on his account, one of their bye-laws which required the physicians to be members of the Royal College.

In 1821 he joined with Mr. Edward Grainger in establishing the Webb-street School of Medicine, where he lectured on the practice of physic, and contributed no little to the success of the school. His lectures were exceedingly popular. He was confident and earnest in his manner; his language was fluent and expressive; and his general arguments well illustrated by reference to particular facts. Such merits were marred however by occasional bursts of egotistical and bombastic declamation. He regarded himself as a great discoverer—a great reformer—of medicine; and lectured in such a spirit as he conceived to be becoming in a modern Sydenham. He professed the utmost contempt for medical learning, and indulged in an unmeaning ridicule of schools and colleges. He spoke of Cullen and other writers in terms which displayed more ignorance of their works than fairness

of criticism. Besides his lectures on the practice of physic he delivered a course on the *Materia Medica*. These pretensions of Dr. Armstrong to new and more enlightened views in medical science were much discussed among his professional brethren, and not the less keenly as his practice rapidly increased, and very opposite opinions were entertained of his merits. As a practical physician Dr. Armstrong was deservedly valued. Exclusively devoted to his profession, kind and attentive to his patients, acute in observing and prompt in acting, he well earned his extraordinary professional success. In private life he was retiring, and seems to have been most amiable. In the summer of 1824 his health had been seriously affected, but the signs of confirmed disease did not appear till December 1828. He rallied under the influence of country air, and returned to his extensive practice; but he gradually declined, and died of consumption on the 12th of December 1829, at the age of 45 years.

Besides the work on 'Puerperal Fever' and 'Typhus,' mentioned above, Dr. Armstrong published three separate medical works, and contributed several papers to the 'Edinburgh Medical and Surgical Journal,' the 'Medical Intelligencer,' and the 'Transactions of the Associated Apothecaries of England and Wales.' He also published Annual Reports of the Fever Hospital, alternately with Dr. Cleverley.

His lectures appeared in the 'Lancet,' 1825; and again, after his death, in a separate form, edited by one of his pupils—'Lectures on the Morbid Anatomy, Nature and Treatment of Acute and Chronic Diseases,' by the late John Armstrong, M.D., edited by Joseph Rix, 8vo. London, 1834. (*Memoir of the Life and Medical Opinions of J. Armstrong, M.D., &c.*, by Francis Boott, M.D., 2 vols. 8vo., London, 1834.)

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge*.)

ARNALDO DE BRESCIA was born in the town of Brescia about the beginning of the 12th century. He studied in France under the famous Abelard. Having returned to Italy, he became a monk. The corruption of the clergy was very great at that time, and Arnaldo, endowed with an impassioned mind and a great flow of oratory, began to hold forth in public against the ambition, the temporal power, and the luxurious life of abbots, prelates, and cardinals, not sparing the pope himself. Arnaldo maintained that ecclesiastics as well as laymen ought to be subordinate to the civil power; that the disposal of kingdoms and principalities did not belong to the church of Christ; and that the clergy ought to be satisfied with their tithes and the voluntary oblations of the faithful, and not to hold, as they then did, sovereign lordships and feudal estates. To these doctrines he added others of a mystical character about the Trinity and the nature of the soul, which were eagerly laid hold of and perhaps distorted by his enemies. By preaching against the temporalities of the church, Arnaldo had excited the passions of the people; Brescia revolted against its bishop, the fermentation spread to other towns, and complaints against the author of all this poured in at Rome. Arnaldo was banished from Italy, and forbidden to return without the Pope's permission. (See Mosheim's 'Ecclesiastical History,' translated by Dr. Murdock, and the translator's note on the subject of 'Arnaldo.') He proceeded to France, where he met with an unrelenting adversary in St. Bernard, the zealous and vehement abbot of Clairvaux, who denounced Arnaldo, wrote against him, and forced him to seek refuge at Zürich, where he remained five years. He there resumed his preaching against the abuses of the clergy, and found many favourable listeners. But St. Bernard traced him there also, and caused the bishop of Constance to banish him from his diocese. Arnaldo upon this returned to Italy, and hearing that the people of Rome had revolted against the pope, he repaired there, and put himself at the head of the insurrection. Lucius II. had died of the wounds received in a popular affray, and Eugenius III., a disciple of St. Bernard, succeeded him in the papal chair, but was driven away from the city by the people and the senate. Arnaldo exhorted the Romans to re-establish the Roman republic with its consuls, to reinstate the equestrian order, and to emulate the deeds of their glorious ancestors. The multitude, thus excited, hurried on to excesses which Arnaldo probably had never contemplated. They attacked and demolished the houses of the cardinals and nobles of the papal party, killed or ill-treated the inmates, and shared the plunder among themselves in the name of Brutus and Cato, Fabius and Paulus Emilius. Arnaldo however still remained poor; he really despised wealth, his morals were irreproachable, and it seems that he judged of others by himself—a common delusion among honest popular leaders.

Rome continued for ten years in a state of agitation little differing from anarchy. Eugenius III. died in 1153, and his successor Anastasius IV. having followed him to the grave shortly after, Adrian IV. was elected pope in 1154. He was a man of a more determined spirit than his predecessors. A cardinal having been attacked and seriously wounded in the streets of Rome, Adrian resorted to the bold measure of excommunicating the first city in Christendom—a thing without a precedent. The Romans, who had set at nought the temporal power of the pope, quailed before his spiritual authority. In order to be reconciled to the pontiff, they exiled Arnaldo, who took refuge among some friendly nobles in Campania. When the emperor Frederic I. came to Rome to be crowned, the pope applied to him to have Arnaldo arrested. Frederic accordingly gave his orders to the Margrave or

Viscount of Campania, and Arnaldo, being delivered into the hands of the Prefect of Rome, was strangled, his body burnt, and the ashes thrown into the Tiber, in the year 1155. [ADRIAN IV.]

ARNAUD, HENRI, the pastor and military leader of the Vaudois, was born at the town of La Tour, or La Torre, in Piedmont, in the year 1641, and was educated at the Latin school there. It is said that before entering the Church he was in the military service of the Prince of Orange, afterwards William III. of England. Little is known of his personal history until the commencement of the renowned expedition of the Vaudois for the recovery of their possessions in Piedmont, of which he was both the military leader and the historian. Victor Amadeus II. of Savoy was induced to imitate within his dominions the principles on which Louis XIV. had revoked the Edict of Nantes, and thus to adopt a harsher rule of compulsory conformity to the Roman Catholic faith than that which had been followed by his immediate predecessors. According to Arnaud's account he imprisoned 14,000 of the Vaudois Protestants in the dungeons of Turin, of whom 3000 were afterwards allowed to emigrate, leaving 11,000, who are said to have perished from the effects of thirst, cold, and hunger, and the other evils incident to captivity. The number said to have so perished is a manifest exaggeration. Of the 3000 permitted to emigrate, the greater part found an asylum in the west of Switzerland and in the German states of the Upper Rhine; the remainder accepted the protection of the Elector of Brandenburg. It would appear that at the commencement of Arnaud's expedition there were about 2000 of the Vaudois dispersed through the districts from which his followers were collected. Before they were united under the command of Henri Arnaud, these people had made two unsuccessful efforts to return to their native valleys. The first was a very rash enterprise; but the second appears to have been partially directed by Arnaud, who in the end however recommended the giving up of the attempt, and encouraged his followers to a better-arranged effort, by preaching to them from the text, "Fear not, little flock." In the meantime he made a journey to Holland, and communicated his project to the Prince of Orange, who approved of it, and probably furnished the money with which it was conducted.

The revolution of 1688, and the accession of William to the throne of England, seemed to Arnaud the fit time for the commencement of his enterprise. He was one of those men in whom religious enthusiasm is united with great sagacity, and his arrangements for concentrating his dispersed followers were designed with wonderful skill, and executed with corresponding success. Their rendezvous was the great forest of the Pays de Vaud, between Nyon and Rolle. There they remained in concealment for some time. Before they embarked, their retreat having been discovered by their neighbours, Arnaud turned this circumstance to his advantage, by seizing for the use of his followers the boats of those who were led by curiosity to visit the spot. The expedition embarked on the Lake of Geneva to the number of between eight and nine hundred, on the night of the 16th of August, 1689, headed by Arnaud, who, in his military capacity, adopted from his native town the name of La Tour. They debarked between the towns of Nernier and Ivoyre, and were formed by their leader into nineteen companies, under so many captains. After meeting with many obstacles, and encountering a good deal of opposition, they entered the valley of San Martino on the 16th of September, the thirty-first day of their march. On their way they had been harassed by a body of French troops, about 3000 in number, and towards the close of their march had been exposed to attack from a French force of 12,000 men on the one hand, and a Piedmontese army of 10,000 on the other. When they halted, it was their leader's first business to draw up a memorial to the court of Turin, representing the injustice of the removal of the Vaudois from their ancient possessions, their peaceful and inoffensive disposition, and their loyalty to the House of Savoy. On a table-land at the top of a rock called in the narrative 'La Balsille,' they constructed a strong line of fortification against the French troops, who remained in their vicinity all winter, and harassed them with repeated attacks. In 1690 a general assault was commenced on the 2nd of May. The French were completely repulsed, and we are told the almost incredible circumstance, that though the besieging army consisted of 22,000 men, of whom a multitude were destroyed, not one of the Vaudois garrison received even a wound. In pursuance of their system of extermination and defiance, the garrison stuck the heads of their prisoners on palisades within sight of the enemy. One prisoner, however, Mons. de Parat, the commander of the assaulting detachment, was too valuable to be sacrificed. He was wounded, and as there was no surgeon in the camp of the Vaudois, he was told that he must send for one to his own army. He did so; a surgeon came, and as Arnaud wanted the services of such a person, he was of course detained. At the expiration of a week after their defeat, the French returned to the siege of 'La Balsille,' and took the place, but found it empty. Arnaud, whose spirit and sagacity seem to have been equal to every emergency, had drawn off his forces in the night, conducting them down precipitous banks and through wild ravines, the dangerous character of which prevented such a project from being suspected. With numerous and exasperated enemies at their heels, Arnaud's band proceeded to Angrona, and when they had arrived there, at the moment when every chance of their further safety seemed to be exhausted, they received the gratifying intelligence that, owing to the exacting and

domineering conduct of Louis XIV., Savoy and France were at enmity, and that Victor Amadeus, who had taken up arms in favour of Austria, was prepared to grant them an amnesty, and court their assistance against his enemies. Thus ended this remarkable enterprise, of which the leader and historian says, that in eighteen battles only thirty of his followers were killed, while their opponents lost 10,000 men.

The Vaudois, after their reconciliation with Amadeus, had still to encounter their exasperated enemies of France in several smart engagements. The duke released the Vaudois who were imprisoned at Turin, and allowed the whole people to re-establish themselves in their ancient possessions, and to follow their own religion. William III. gave Arnaud a colonel's commission. In this capacity he headed a party of 1200 Vaudois, who, in the breaking out of the war of the Spanish succession, performed material services for the allied troops, and assisted them in accomplishing the manœuvres which led to the victory of Blenheim. When the plan for attacking France from the side of Piedmont was formed, Arnaud and his Vaudois were placed at the outposts of Eugene's army; and when he withdrew his troops by the passes of the Tyrol to join Marlborough, they had the perilous duty of masking his retreat, and keeping the French in check. Notwithstanding these services, the Duke of Savoy in 1698 concluded a peace with France, one of the conditions of which was, that, in consideration of his retaining undisputed possession of the valleys of San Martino, Perosa, and some other portions of territory, he was to dismiss the Vaudois who inhabited them. It is said that the exclusion was intended to apply solely to those who were not natives of the valleys, but it made 3000 exiles. After a negotiation with the Duke of Wurtemberg, in which he was aided by the representatives of England and Holland, Arnaud prevailed on that prince to give the exiles an asylum in his dominions. They were however subjected to many hardships. Arnaud, after falling under the displeasure of the Duke of Savoy, had pressing invitations to accept the patronage of William III. and Prince Eugene; but he preferred to remain the pastor of his devoted flock, and he took up his residence among the exiles at the village of Schönberg. He appears to have permanently joined them in the year 1709, and to have remained with them to the end of his days. In this retirement he wrote the history of his enterprise, under the title 'Histoire de la glorieuse Rentrée des Vaudois dans leurs Vallées,' printed in 1710, and dedicated to Anne, Queen of Great Britain. The French edition of this work is very rare: it has been twice translated into English.

Arnaud died at Schönberg in the year 1721, having accomplished his eightieth year. The rude church in which he officiated, a monument within it beneath which his bones rest, and his dwelling-house, were all preserved with pious care by the exiles and their descendants. By an inventory and division of his property, preserved in the parish church of Schönberg, it appears that he was twice married, and left behind him three sons and two daughters: one of his sons succeeded him in his clerical charge, and another studied law in London. The whole property left by him amounted to 226*l.* 8*s.* 2*d.* in English money. He was in the receipt of a pension of 122 florins, about 10*l.* 15*s.*, from England.

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ARNAULD, ANGÉLIQUE, whose religious name was *Angélique de Saint-Jean*, abbess of Port-Royal, and niece of the elder Angélique, was born on the 23th of November, 1624, and was the fifth child of Robert Arnaud d'Andilly and Catherine de la Boderie. At the age of six she was placed by her father at Port-Royal, to be educated by her aunts, Angélique and Agnès. At the age of twelve she gave such indications of a determined character, that her aunts said of her, "she will do much evil, if she does not do good." She took the vows on the 25th of January 1644. Towards the close of 1653 she was made sub-prioress and mistress of the novices at Port-Royal-des-Champs. In 1659 she removed to Port-Royal-de-Paris, where she held the same office. During the persecution which the nuns of Port-Royal endured from 1661 till 1664, when they refused to sign the 'Formulary of Alexander VII.' without some explanation expressive of the sense in which they signed it, the nuns directed themselves by the advice of Angélique de Saint-Jean. At last the enemies of Port-Royal determined that twelve of the most refractory members should be removed, and disposed in various convents. On the 26th of August 1664 Angélique was sent into the convent of the nuns called Annonciades, at Paris, where she was kept a prisoner for more than ten months in a state of complete solitude. She received no news of any of her friends. The Annonciades, being under the spiritual guidance of the Jesuits, were exceedingly prejudiced against Port-Royal; but while the other nuns of Port-Royal continued to be harassed by solicitations to sign the Formulary, no such attempts to induce Angélique were made, as they were considered useless. On the 2nd of July 1665 the nuns were sent back, by order of the Archbishop of Paris, to the monastery of Port-Royal-des-Champs. Angélique de Saint-Jean was thus reunited to her friends; but they had to endure a new kind of captivity in their own monastery. On arriving at Port-Royal-des-Champs they were surrounded by soldiers. Guards had been sent by the Archbishop of Paris to watch the house, with strict orders to prevent the nuns from holding any communication with persons out of the convent. Port-Royal was thus garrisoned for three years and seven months, from

the 3rd of July 1665 till the 18th of February 1669. During all this time the nuns were forbidden to partake of the Holy Communion, and religious worship was in a great degree interdicted; but towards the close of 1663 appeared the edict of Clement IX. for the "peace of the Church," as it was called, and the persecution of Port-Royal terminated for a time. By an ordonnance dated the 17th of February 1669 the Archbishop of Paris freed the nuns from the surveillance of their guards, permitted them to partake of the sacraments of the Romish Church, and to exercise the privileges of a religious community. One of their first acts was to elect an abbess. Marie de Sainte-Magdeleine du Fargis was elected abbess, and Angélique de Saint-Jean prioress. This office she held for nine years. On the 3rd of August 1678 she was elected abbess. On the 15th of April 1679 the Duchesse de Longueville, the great protectress of Port-Royal, died, and the persecution recommenced. From this time till her death Angélique, in her position of abbess, had much to endure. She had to console and support the courage of her nuns. She wrote letter upon letter to the various authorities, and endeavoured in every way to avert the destruction which was impending upon Port-Royal. One of the steps taken for its destruction was this—no more novices were to be admitted into the community, and the young girls who had been sent to the convent for education were removed.

The office of abbess was at this time triennial. When her first three years were ended, Angélique was re-elected abbess (8th of August 1681), but she died before the second period of three years was completed. She had suffered much at the death of her aunt Agnès (19th of February 1671), and her father, D'Andilly (27th of September 1674); but when her spiritual father, De Saci, died on the 4th of January 1684, she sank under the blow. De Saci was buried at Port-Royal-des-Champs. Every day after the ceremony was performed Angélique went to shed tears over his tomb. At the end of three weeks she was seized with a mortal sickness. She died on the 29th of January 1684, aged fifty-nine years and two months. The Port-Royalists speak in the highest terms of her piety and capacity. They extol her knowledge of scripture and ecclesiastical history, her humility and charity, her severity towards herself and her kindness towards others, the penetration of her mind, and the resoluteness of her character. When her father, D'Andilly, spoke of her, he used to say, "All my children and myself are fools in comparison of Angélique."

Angélique de Saint-Jean was remarkable for the facility with which she spoke and wrote. She has left several works. Of these, one, perhaps the most valuable work relative to Port-Royal, is entitled, 'Mémoires pour servir à l'Histoire de Port-Royal, et à la Vie de la Révérende Mère Marie Angélique de Sainte-Magdeleine Arnaud, Reformatrice de ce Monastère,' Utrecht, 1742, 12mo., 3 vols. While the 'Mémoires' of Du Fosé, Fontaine, and Laucelot detail the external history of Port-Royal, these 'Mémoires' represent its internal history, with the mind and habits of its members, particularly of the elder Angélique. The idea of writing these 'Mémoires' was conceived about the year 1652. Angélique de Saint-Jean may be said to be the author of the work, for she wrote a considerable part of the various 'Relations' of which it consists, and revised those written by other nuns. The 'Mémoires' were edited by Barbeau de la Bruyère in 1742. The originals, from which Barbeau de la Bruyère printed the 'Mémoires,' were preserved in the library of Saint-Germain-des-Près at Paris. Angélique de Saint-Jean took a great part in the composition of the 'Nécrologe de Port-Royal-des-Champs,' Amsterdam, 1723, 4to., and wrote other works in defence of the monastery. (*Mémoires pour servir à l'Histoire de Port-Royal, &c.*, tom. iii., p. 498, &c.; Quéard, *La France Littéraire.*)

(Abridged from the *Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.*)

ARNAULD, ANTOINE, a French theological and philosophical writer of the 17th century, was born at Paris in 1612. His father, named also Antoine Arnaud, was a distinguished advocate, and a great antagonist of the Jesuits. The Jesuits met with an opponent in the younger Arnaud as determined as his father had been. Arnaud, after being ordained priest, was made Doctor of the Sorbonne in 1641. He exhibited an early disposition for theological controversy, by writing the 'Théologie Morale des Jesuits,' in which he exposed the dangerous casuistry adopted by several moralists of that order. Soon after the disputes which broke out among the French clergy, about Jansenius, bishop of Ypres, and his book 'Augustinus,' several propositions of which concerning the intricate questions of grace and free will had been condemned by the pope, gave Arnaud a fresh opportunity of exercising his polemical talent. [JANSENIUS.] Arnaud took the part of Jansenius in two letters, which were condemned by the Sorbonne, and the writer, on his refusing to retract his opinions, was expelled from that learned body. He then withdrew to Port-Royal-des-Champs, a convent of nuns, not far from Paris, of which his sister, Angélique Arnaud, was the abbess, and where Pascal, Nicole, and other learned men of that time, who were friends of Arnaud and shared his opinions, resorted for quiet and studious retirement. There they wrote various works on literature, philosophy, and religion, which bear the name of the works of M.M. de Port Royal. Arnaud wrote parts of several of these works, such as the 'Grammaire Générale Raisonnée,' 'Klémens de Géométrie,' and 'L'Art de Penser.' He also had a share in the famous letters written

by Pascal against the Jesuits, which are known by the name of 'Lettres Provinciales.' After the peace of Clement IX., which for a time allayed the Jansenist controversy, and to which Arnauld contributed by an eloquent memorial to the pontiff, he was presented to the pope's nuncio, and also to Louis XIV., who received him graciously, and invited him "to employ his golden pen in defence of religion." His next work, in which he was associated with his friend Nicole, 'De la Perpétuité de la Foi de l'Eglise Catholique touchant l'Eucharistie,' was dedicated to the pope. This occasioned a warm controversy between Arnauld and the reformed minister Claude, in the course of which Arnauld wrote 'Du Renversement de la Morale de J. C. par la Doctrine des Calvinistes touchant la Justification,' Paris, 1672. Arnauld at the same time continued his war against the Jesuits, and wrote the greater part of the work styled 'Morale Pratique des Jésuites,' 8 vols. 12mo, in which many authentic facts and documents are mixed up with party bitterness and exaggeration. That powerful and ambitious society did not bear this patiently, and they represented Arnauld as a dangerous man. Harlay, the archbishop of Paris, assisted in prejudicing the king against Arnauld, and Louis XIV. issued an order for his arrest. Arnauld concealed himself for some time at the house of the Duchess of Longueville, who esteemed him and appreciated his talents; but in 1679 he repaired to Brussels, where the Marquis of Grana, the Spanish governor of the Low Countries, assured him of his protection. There he published in 1681 his 'Apologie pour les Catholiques,' which is a defence of the English Catholics against the charges of Titus Oates's conspiracy. In this work he undertook the defence of his old antagonists the Jesuits, whom he considered as having been calumniated in those transactions. Another work, not so creditable to Arnauld's judgment, is one against the Prince of Orange, William III. of England, whom he styled a new Absalom, a new Herod, and a new Cromwell (8vo, 1689). It was published anonymously, like most of Arnauld's works, and many persons did not believe it to be his; but it seems now ascertained that he was the author.

From his retirement at Brussels, Arnauld made several excursions into Holland. His reputation had spread everywhere, and he was kindly received. About this time he entered into a controversy with his old friend Father Mallebranche, who, in his metaphysical works, had announced some peculiar doctrines on the subject of grace, predestination, and other theological problems. In refutation of Mallebranche's opinions, Arnauld wrote his 'Traité des Vraies et des Fausses Idées,' Cologne, 1683; and afterwards, 'Reflexions Philosophiques et Théologiques sur le Nouveau Système de la Nature et de la Grace du Père Mallebranche,' 1685; besides nine letters addressed to the Father on the same subject. He continued to the last, although past 80 years of age, to carry on his various controversies with the Jesuits, with Mallebranche, with the Calvinists, and with the sceptic philosophers, among whom was Bayle. His last work was 'Réflexions sur l'Eloquence des Prédicateurs,' 1694. He died in his exile at Brussels, on the 8th of August of that year, after receiving the sacrament from the curate of his parish. His works, which filled more than 100 volumes of various sizes, were collected and published at Lausanne and at Paris, in 50 volumes, 4to, 1775-83. The last volume contains the author's biography. Arnauld was one of the most learned men of his age, a sincere but enlightened Catholic, pious without superstition or hypocrisy, exemplary in his conduct, and disinterested and simple in his habits and manners. His brother, Henri Arnauld, bishop of Angers—where he died in 1694, at the age of 95—bore the character of a most benevolent and diligent pastor. Another and an elder brother, Robert Arnauld d'Andilly, filled several offices at the French court, but at the age of 55 retired to Port Royal, where he died in 1674. He wrote several religious works. Robert's son, Simon Arnauld, marquis of Pomponne, was employed in several diplomatic missions under Louis XIV., and was made Secretary of State for Foreign Affairs in 1672. He died in 1699.

ARNOLD, JOHN, was born December 2, 1555, at Ballenstedt, at the foot of the Harz Mountains. He first studied medicine, but afterwards applied himself to theology, and became a clergyman of the Lutheran Church. Being grieved at the relaxed state of morals among the Protestants of Germany, he wrote a book 'On True Christianity,' with the object of giving the study of religion a practical influence on the moral conduct of its followers. This work, first published in German, has been translated into several languages, and has been highly praised by Mosheim, Professor Frank of Halle, Dr. Spener, and other distinguished divines. John Wesley, in his 'Christian Library,' gives a copious extract from it. It has been called the Protestant à Kempis. An English translation was published in 1815 by William Jaques—'True Christianity, or the whole Economy of God towards Man, and the whole Duty of Man towards God,' 2 vols., 8vo, London. Arnd was minister at Quedlinburg, and afterwards at Brunswick. In the latter place, his success as a preacher made him enemies, and he was obliged to leave the town and to withdraw to the village of Isleb, where he remained for some years. In 1611, George, duke of Lunenburg, presented him to the church of Zell, and afterwards appointed him general superintendent of all the churches of the duchy. Arnd died at Zell in 1621. He must not be confounded with Josiah Arndt, also a Lutheran clergyman, born in 1626, who was a professor at Rostock, and who published several works on philosophy, divinity, and history;

among others, 'Lexicon Antiquitatum Ecclesiasticarum,' 4to, Griefswald, 1669. He died in 1685.

*ARNOLD, ERNST MORITZ, a distinguished German political writer, was born at Schoritz, in the Isle of Rügen, December 26, 1769. Here in the old-fashioned house of his father, who was steward to the lord of the manor, the boy was trained in the austere mode then not unusual in many of the more retired parts of Germany. After passing through the gymnasium of Strasbund, he entered as a student of theology and philosophy at Griefswald, and proceeded thence to the university of Jena. On the completion of his collegiate studies he adopted the ecclesiastical calling; and then travelled during a year and a half through Sweden, Austria, Hungary, France, and Italy. It was in accounts of his observations made during these journeys, and published at intervals from 1797 to 1804, that Arndt first appeared before the world as an author. In 1806 he was appointed a professor-extraordinary at Griefswald, where he had already delivered historical lectures. Here he wrote a history of the system of serfage which then prevailed in Pomerania and Rügen ('Geschichte der Leibeigenschaft in Pommern und Rügen'), in which he sternly denounced the excessive privileges of the nobles in those provinces. His next work was however of a far bolder character, and at once placed him high among the literary leaders of the young Germans who were burning with indignation at the state of thralldom into which Napoleon I. was fast reducing their country. It was entitled the 'Spirit of the Time' ('Geist der Zeit'), and appeared originally in 1806 in a single volume, but was subsequently expanded into four volumes (Berlin, 1813-18). The freedom with which he in this work spoke of Napoleon, and that at a time when most of the literary men of Germany had been reduced to silence, and the fervour of his appeals to German patriotism, produced a great effect in Germany, and gave so much offence to the French emperor that Arndt found it necessary to seek refuge in Stockholm. Here his anti-gallican zeal soon after involved him in a quarrel with a Swedish officer, the result of which was a duel, in which Arndt was severely wounded.

He soon after returned under an assumed name to Germany, and became one of the most active and successful literary members of that patriotic organisation of which Baron von Stein was the head, and which had for its object the uniting of the German people in a common league for the deliverance of Germany from the foreign yoke. To arouse the national feeling, Arndt wrote a large number of singularly spirited songs and short poems, pamphlets, &c., which had almost unbounded popularity, being circulated throughout Germany, and everywhere read with the greatest avidity. Among the most popular were, his famous song 'Was ist der Deutschen Vaterland,' his 'Der Rhein, Deutschlands Strom,' his 'Soldaten Katechismus,' and especially the pamphlet entitled 'Ueber Landwehr und Landsturm,' which he wrote in support of Stein's project for a general levy. After the peace, Arndt edited, at Cologne (1815-16), a journal called 'The Watchman' ('Der Wächter'). In 1818 he was appointed by the king of Prussia Professor of Modern History in the University of Bonn; but he held that office for little more than a year, having in 1819 fallen under the suspicions of the police, and been subjected to several domiciliary visits, examinations, &c., with a view to implicate him in the charge of democratic conspiracy. It was found impossible to sustain a legal accusation against Arndt; but he had inveighed with his usual plainness of speech against the breach of the royal promise to grant constitutional reforms, and he was suspended from his professorship; but, in consequence perhaps of his protests against the legality of the proceedings, he was suffered to retain his salary. It was not until twenty years had passed that the tardy justice was done of restoring him to his professorial chair, with permission to resume lecturing. These twenty years had been spent in studious retirement; and among other fruits of his industry had appeared his 'Nebenstunden, eine Beschreibung und Geschichte der Schottland, Inseln, und der Orkaden' (Leipzig, 1820); 'Christliches und Türkisches' (Stutg., 1828); 'Die Frage über die Niederlande, 1831, Belgien, und was daran hängt' (Leipzig, 1834); 'Schwedische Geschichten unter Gustav III. und Gustav IV.' (Leipzig, 1839); and his 'Mährchen und Jugenderinnerungen.'

After the revolution of 1848, the aged patriot was called once again to take an active part in public affairs, having been elected a member of the National Assembly at Frankfurt; but he withdrew from the Assembly with the rest of the Constitutional party represented by De Gagern. In 1851 he published at Leipzig a pamphlet entitled 'Anklage einer Majestätsbeleidigung des grossen dänischen Volkes aus dem Jahre 1845.' A characteristic idea of the genius, principles, and labours of Arndt may be obtained from the 'Erinnerungen aus dem äussern Leben' (Leipzig, 1840); and a biographical sketch of his life, with considerable selections from his prose and poetry, forms volume 32 of the 'Moderne Klassiker: Deutsche Literaturgeschichte der neuen Zeit,' published by Ernst Balde, at Cassel: this volume is entitled 'Ernst Moritz Arndt: Eine Biographie, von W. Neumann.'

ARNE, THOMAS AUGUSTINE, Doctor in Music, born in 1710, was the son of an upholsterer in King-street, Covent Garden, and educated at Eton, having been intended for the profession of the law; but his bias towards music was strong, and finally prevailed. He secretly practised on the spinnet, and took lessons of Michael Festing, an eminent person in his day, on the violin, and the first intimation

his father had of his musical progress was at an amateur party, in which young Arne was discovered playing the first fiddle most skillfully. His father now supplied him with the means of continuing his favourite pursuit in an advantageous manner. He soon imbued his sister with a love of the vocal art, and qualified her to appear in Lampe's opera, 'Amelia,' in which her debüt was of so promising a kind, that her brother, though then only eighteen years of age, set for her Addison's 'Rosamond,' in which she represented the heroine, and shortly after became the celebrated Mrs. Cibber. In 1738 Arne produced his 'Comus,' which established his reputation. In 1740 he married Miss Cecilia Young, a pupil of Geminiani, and a performer of eminence. In 1742 he went with her into Ireland, where both were engaged by the Dublin manager, the one to sing, the other to compose. In 1745 he acceded to the request of the proprietor of Vauxhall, who thus added Mrs. Arne to the list of his vocal performers, her husband at the same time becoming his principal composer. Subsequently, he wrote his two oratorios, 'Abel' and 'Judith,' after which the University of Oxford conferred on him the degree of Doctor in Music. His greatest work, or that which has most contributed to his fame, 'Artaxerxes,' was composed in 1762, in imitation of the Italian opera, and to prove the English language not so repugnant to recitative as many had imagined. The attempt was bold, but triumphant; the decided approbation which crowned the composer's labours, and the judgment pronounced on it by posterity, prove beyond dispute its many and great merits. The drama is a translation, by Arne himself, of Metastasio's 'Artaserse.' Dr. Arne also produced, in 1765, an entire Italian opera at the King's Theatre, Metastasio's 'Olimpiade.' The production entitled 'Love in a Village,' is a 'pasticcio,' or compilation from various composers, but many pieces in this still pleasing ballad-opera are by Arne, and among these 'Gentle youth, ah! tell me why!' can never become antiquated. Warren's collection of canons, glees, &c., contains several of Arne's compositions, of which 'Come, shepherds, we'll follow the hearse,' in Cunningham's elegy on the death of Shenstone, must charm as long as vocal harmony retains the power to please. His song and chorus, 'When Britain first at heaven's command,' or 'Rule Britannia,' need hardly be mentioned as the offspring of his genius; it may be said to have wafted his name over the greater half of the habitable world. Dr. Arne died in March, 1778, and was buried in St. Paul's Church, Covent Garden.

ARNOBIUS, according to Hieronymus ('De Viris Illustribus,' c. 79), was a rhetorician and afterwards a presbyter of Sikka in Numidia, in the reign of the Emperor Diocletian. His work 'De Rhetorica Institutione' is not extant. Lactantius, the Cicero of the Fathers, was the most distinguished disciple of Arnobius, the Varro of the ecclesiastical writers. Arnobius was as much superior in genius to this pupil as he was surpassed by Lactantius in elegance of diction. Hieronymus informs us, in his 'Chronicle,' that Arnobius was in the habit of attacking Christianity, until he had some remarkably impressive dreams, which induced him to wait upon the Bishop of Sikka, who, however, did not trust him, knowing his former enmity to the gospel. Arnobius wrote his seven books of 'Disputations against the Heathen' in order to convince the bishop that he was really converted. In the 'Disputations' Arnobius shows a thorough acquaintance with the literature of his age, and thus describes (l. i. c. 39) his change:—"Oh, blindness! A short time ago I worshipped images coming out from the furnace, and gods made with the hammer on the anvil. When I saw a smooth and anointed stone I spoke to it as to a living power, and prayed to the senseless stone for benefits; and thus unwittingly blasphemed even the false gods, by taking them for stocks, stones, and bones, or fancying that they inhabited such things. Now, I know what all those things are, since I am led by a great teacher into the ways of truth." It appears that Arnobius came to a knowledge of the truth by carefully reading the New Testament, especially the Gospels.

In his 'Disputations' he also refutes that accusation which had excited the Diocletian persecution, namely, that the public calamities of the empire were a consequence of the spread of the Gospel, which caused a general neglect of the gods. Arnobius replies to this accusation:—"If men, instead of relying upon their prudence, and following their own propensities, would try to obey the doctrines of Christ, which bring peace and salvation, the whole world would be soon changed, and the iron taken from the service of war would be employed in the works of peace." (l. iv. c. 36.)

Only one manuscript codex of Arnobius is known to exist; this is now at Paris. The first edition of the 'Disputations' of Arnobius is that by Faustus Sabæus, Rome, 1542, fol. The editor has subjoined the 'Octavius' of Minutius Felix as an eighth book, mistaking Octavius for Octavia. Numerous editions have since been published at Basle, at Paris, at Antwerp, at Rome, at Geneva, 1597, and elsewhere. The best edition of Arnobius is that published by Conrad Orelli, Leipzig, 1816, in two volumes, 8vo. The 'Disputations' of Arnobius were translated into Dutch by Joachim Oudaer, Harling, 1677, 8vo.

The works of the Semi-Pelagian Arnobius of Gaul have sometimes been erroneously ascribed to Arnobius Afer. Arnobius of Gaul wrote, about A. D. 460, a commentary on the Psalms, edited with a preface by Erasmus, at Basle, 1537; at Paris, 1539; at Basle, 1560. The 'Annotations in Locos Evangelistarum e recognitione Andrea Schotti' were printed with the preceding. He wrote also the following:

'Conflictus cum Serapione, de Deo trino et uno; de Duobus Substantiis in Unitate Personæ et de Concordia Gratia et Liberi Arbitrii, cum Notis Feuardentii, Col. Agrippinae,' 1596.

ARNOLD, BENEDICT, was born in Connecticut in North America, of parents in very humble life. Having been unsuccessful in business as a horse-dealer, when the revolutionary war broke out he took up arms, threw himself into the contest with great ardour, and raised a company of volunteers at Newhaven, in his native state. His activity, boldness, and skill, soon brought him into notice; and when in the summer of 1775 it had been determined to attempt the capture of Quebec, he and General Montgomery were fixed upon by Washington to conduct the expedition. The march of Arnold across a then unknown and pathless region at the close of the year, is one of the boldest military exploits on record. The troops, consisting of about 1100 men, set out about the middle of September from Boston for Newbury Port, at the mouth of the Merrimack; from which point they were conveyed by water to the mouth of the Kennebeck in New Hampshire, a distance of 40 leagues. On the 22nd they embarked in 200 boats on the Kennebeck at Gardener's Town, and made their way up the river in the face of great difficulties. After reaching the head of the river, they had to pass the mountainous ridge which now divides the territory of the United States from Canada. After crossing these desolate heights they reached the river Chaudière, down which they proceeded to the St. Lawrence, into which it falls. When they at length reached a house, on the 3rd of November, they had been thirty-one days without the sight of a human habitation.

Arnold distinguished himself greatly in the military operations that followed; and was severely wounded in the leg in the unsuccessful assault upon Quebec on the 31st of December, in which General Montgomery fell. On his return from this enterprise he continued in active service. In one of the actions which immediately preceded the surrender of General Burgoyne at Saratoga on the 16th of October, 1777, he was again wounded; and being thence unable for some time to take the field, he was appointed by Washington to take the command of Philadelphia, which the English had evacuated. In this situation he was guilty of such acts of rapacity and oppression, in order to support the ostentation and luxury in which he indulged, that he was brought to trial by a court-martial, and on the 20th of January 1779 was sentenced to be reprimanded by the commander-in-chief. On this dishonour Arnold threw up his commission. The embarrassment of his affairs however was so great, and the demands of his creditors became so pressing, that he soon found it necessary to attempt something to repair his broken fortunes. He resolved to make an offer to the British General, Sir Henry Clinton, of his services in betraying his country and the cause for which he had hitherto fought, and his proposals were accepted. It was arranged that he was to obtain the command of the important fort of West Point on the Hudson, and then deliver it up to the enemy. He attained the command in July 1780, by affecting a zealous patriotism, Washington generously forgetting his former delinquencies. We refer to the article ANDRÉ, for an account of the manner in which this treasonable scheme miscarried. Major André, the officer intrusted by Clinton with the active management of the negotiation with Arnold, was sent up the Hudson in a sloop of war from New York, the head-quarters of the army, and had an interview with the American general on the bank of the river, near West Point, on the morning of Friday the 22nd of September. The next day, on his return to New York by land, André was taken by two Americans when he had nearly reached the British lines, and the plot was detected by the discovery in his boots of the plans and other papers which he had received from Arnold. André found means to convey an intimation of his capture to Arnold, by whom it was received on the morning of the 25th, just in time to permit him to make his escape. Taking a hurried leave of his wife and infant child, he instantly rushed to the river, and leaping on board a barge which he had in readiness, he ordered himself to be rowed to the English sloop, which he reached in safety. He was allowed to retain in the British army the rank of brigadier-general, which he had held in that of the United States. In the beginning of the following year he was sent with an expedition into Virginia, where he committed great devastation. After this he made a still more destructive incursion into Connecticut, his native state. He served afterwards in Nova Scotia, and also in the West Indies, where he was taken prisoner by the French, from whom however he made his escape. After the conclusion of the war he took up his residence in England. In July 1792 a duel was fought near Kilburn Wells, between General Arnold and the late Earl of Lauderdale, in consequence of certain expressions which the latter had used at a public meeting, and would not retract. Arnold was attended by Lord Hawke, and Lord Lauderdale by Mr. Fox. His lordship declined to return his adversary's fire, but said, that if he was not satisfied he might fire on till he was. On this the parties separated. Arnold died in London, in 1801.

ARNOLD, JOHN, one of the greatest improvers of the marine chronometer, was born at Bodmin in Cornwall, in the year 1744. He was apprenticed to his father, who was a watchmaker in Bodmin: but, having quarrelled with him, he went to Holland, where, being found in very destitute circumstances by a person who took pity on him, and interested himself in his behalf, he obtained employment for

several years at the Hague. Arnold returned to England, and obtained a scanty living as an itinerant mechanic, by repairing watches, clocks, guns, &c. Being at St. Albans, he was recommended to a gentleman from London to put his repeater in repair. This gentleman, seeing his superior talent, induced him to remove to London, where he established him in business in Devereux-court, near the Temple, and introduced him to the notice of George III., who presented him with a sum of 100*l.* to enable him to commence experiments for the improvement of chronometers. He was subsequently assisted by several sums from the Board of Longitude for the same purpose; and he made many chronometers for the East India Company, who then used in their ships a far greater number than were required for government vessels.
